Traditionally, support of higher education in America has been left to private, local, and State revenue sources. I do not have the exact figures at hand, but I know that private sources of support for higher education have been drying up in recent years. But as for State appropriations for higher education, I can tell you exactly what the situation is. State appropriations for the support of the land-grant colleges, for example, contributed only 40.3 percent of total income in 1948–49. More significantly, comparing this last school year, 1948–49, with the first postwar year of 1945–46, income from student fees increased by 147 percent, while State support decreased by 5.1 percent.

This trend is the same in both the land-grant colleges and the other State-supported colleges and universities as well. A recent study by the University of Michigan disclosed that while enrollments in State-supported colleges in 20 selected States increased by 154 percent in the 20 years since 1929, State appropriations per student in terms of 1948 dollars decreased by 14 percent. I am not proud of Michigan when I report that in our State, legislative appropriations per student have declined by 35 percent over that period, compared with the over-all average decrease in the Nation of 14 percent.

The significance is plain: The burden of paying for higher education is slowly being shifted from the States to the individual students and their families. The end result, if the trend is not halted or reversed, is equally plain: Fewer and fewer of our capable young men and women will be able to attend college in the years immediately ahead.

Those seeking an easy answer may say: "Too many young people go to college, anyhow." It is an easy answer, but not the correct one. The report of the President's Commission on Higher Education has made it painfully clear that we have not come anywhere near providing universal equality of educational opportunity. Every year, thousands upon thousands of our most talented and capable young men and women graduate from high school with the certain knowledge that college educations are beyond their reach, simply for lack of the necessary dollars.

Even more serious is the fact that we have regressed to the point at which the income of the family pretty much determines the course of study to be followed by even those so lucky as to go to college. This means, in plain language, that we are nearing the point at which the well-to-do parent can make a lawyer, a dentist, a doctor, or an engineer of his son, and his less-well-to-do neighbor will have to restrict his son's ambitions to the less-remunerative fields. It is almost impossible to earn ones way through college in 1950. Why? The high cost of room and board away from home.

These are matters of serious implication to our social system—the American way of living together. These are matters not reflecting great credit upon the richest country in the world, able to spend billions on the underprivileged abroad, billions on the physically, mentally, and morally deficient at home, and still more billions on nonessential pleasures and luxuries.

The danger signals have been observed by a great many thoughtful persons, both in and out of the educational field. That explains why, after surveying sources of income available to the States, they have begun to ask whether the time has come to ask the Federal Government for assistance. Federal aid for edueation has become a question of the day, and it is not news to you here in Washington that the question is debatable, to say the least.

I have no intention of espousing the cause of Federal aid to education here tonight nor of opposing the current proposals. I would, however, like to make a few general observations in the hope that they may be of some value in the months immediately ahead when this question is being debated in and out of the Congress.

My first observation, based on historical fact, is that it is possible to extend Federal aid to education without risking Federal dictation of educational policies within the States. The land-grant colleges have received subsidies from the Federal Treasury for more than 80 years, and I have yet to hear of one of them surrendering its proud independence to Washington.

Even so, my second observation is that the extension of Federal assistance to education would have to be done carefully to insure independence of action for the colleges. The current dispute between the land-grant universities and the Veterans' Administration is an excellent example of the danger of leaving important matters to the discretion of a Government official. As the Michigan Members of Congress know, the Veterans' Administration recently ruled that many of the land-grant colleges and universities, including Michigan State College, should repay to the Treasury comparatively large sums of money received in past years for the education of veterans. To our way of thinking, this is a capricious and arbitrary ruling, and we are looking with great confidence to the Congress for relief. The issue is too complicated to be discussed here tonight, but I recommend it to you for study and as a warning that the method of disbursement of Federal funds should always be carefully spelled out in statutory law.

My third observation is that it is extremely unfortunate that proposals for extending Federal support to education have already become embroiled in political and religious feuds. These proposals are of sufficient importance to the welfare of our Nation to be debated and decided on their own merits. There is every reason to insist that they should be so considered.

The issue is whether there are to be opportunities in the future for capable young men and women to acquire college educations so that they may contribute their full share to the continued development of this country.

Here is a question on which clear thinking is demanded, and for that reason it should be set apart from the arena of political and religious controversy. Either is enough to sway men's emotions to the point at which they do not think clearly and this is a question to be settled with our heads, and not our hearts.

Personally, my principal regret is that the proposal to extend Federal financial assistance to higher education is being made a part of the President's controversial social welfare program. As a result of that unfortunate entanglement I fear that those who debate this controversial program are almost certain to overlook a major distinction.

That distinction is, in my opinion, that most of the President's proposal is for social-welfare changes seeking to provide benefits for those who are unable, for one reason or another, to repay the sums to be invested in them. Federal assistance to students capable of doing college work could be a good investment. As a group, educated persons are better producers, better consumers, and better citizens.

Regardless of our individual opinions on some of the President's proposals, I am sure that we can all agree that there is a great and fundamental difference between an old-age pension to a retired worker and a scholarship payment to a gifted young man just on the threshold of his life's work. One is a payment to insure a decent minimum standard of existence; the other is a payment to lift the maximum standard of opportunity.

There is a difference between a slum-clearing project financed with Federal funds and a college building program financed with Federal funds. One is a program to do for others; the second is a program to enable others to do for themselves.

I would like to see proposals for Federal aid to higher education debated on their own merits without reference to partisan politics or religion, because I want the American people to be able to make an informed decision on a matter affecting most seriously their future and that of our Nation. Americans have always favored education, and every generation has been willing to sacrifice in order that the next generation might have greater educational opportunities. There is no evidence that they have lost faith in education. All the evidence is to

UNIVERSITY OF MICHIGAN LIBRARIES

the contrary. All I ask is that the issues be set forth clearly, for I have the greatest confidence in the ability of Americans to make the right decision when all the facts are available to them.

It is probable that if they had an opportunity to study all the facts, they would decide to support education with Federal funds. If such were the decision, would it be naive to suggest that the Federal Government reliquish to the individual States one of its existing excise taxes, say on tobacco or liquor, with the specific requirement that such funds be spent exclusively on the education of our gifted youngsters? I do not pretend to be an authority on taxation or the Federal Government, but I venture to predict that such an arrangement would find universal favor with the people.

I hope you will forgive me if I have talked too long on a topic about which I am naturally seriously concerned. You who deal day to day with problems of world importance may not agree that the future of higher education in our own country is a matter of the great importance I consider it to be. It is my personal conviction that we soon will have to make a decision on a fundamental question touching on our deepest national interests—the decision whether we are to continue providing college educations at public expense for the most talented and ambitious among our young men and women, as we do now for our veterans of World War II.

It may be that we have reached the point in this country at which we turn away from our historic philosophy that there should be opportunities for every American to accomplish just as much as his own ability and ambition enable him to accomplish. Perhaps we are turning toward the philosophy that safety and security should be guaranteed to everyone by the Government, irrespective of individual ability and effort. Perhaps public investment in higher education will have to be whittled down in the years ahead because we as a people will have become more interested in security than in opportunity. I have no desire to debate the issues involved. I want to say only that before we take too many steps on the road leading away from the system of education we have used successfully for a century we should look at some of the probable consequences of such steps.

These are among the questions that must be answered:

Would the result of diminishing public investment in the education of qualified young people mean a return to the old days in which those without money and social advantages were barred from college as effectively as though barred by law?

Would this foreshadow a development of fixed class lines within this country? Do we want in America a pyramidal caste system with those caught helplessly below in constant revolt against their more privileged fellow citizens above them?

Do you believe for a moment that we could preserve our democratic traditions in America if we doomed each succeeding generation to the same levels of income and opportunity as the generation which came before?

The answers, I believe, suggest themselves. It is because they do suggest themselves that I would like to have the questions presented fairly to the American people. I would like to have the people told what education has done for this country, and what it is capable of doing in the future if given the support it deserves. I would like to have everyone know of the efforts of our colleges and universities to develop tough-minded young citizens, capable of making intelligent decisions on the great problems now before us, capable of making them on the basis of reason, and not emotion. I would like to have them understand that to a great degree, the kind of a nation we are to be in the latter half of this century will be determined by what is taught, and who are taught, on the campuses of America.

I would like to have them know that the great majority of the colleges and universities of the United States subscribe to the eloquent definition of the role of higher education recently written by the president of one of our oldest and greatest private universities. I quote from President Conant of Harvard:

"The primary concern of American education today is not the development of the appreciation of the 'good life' in young gentlemen born to the purple. Our purpose is to cultivate in the largest number of our future citizens an appreciation both of the responsibilities and the benefits which come to them because they are American and free."

Once our fellow citizens understand that to be the purpose of education, I have faith that they will not let our public colleges and universities languish and do less than the maximum of which they are capable in preserving the advantages and opportunities for all of our people that have made America the envy of all of the peoples of the world.

I would close with a couplet written by Edwin Markham:

"We are blind,
Unless we see that in the human plan
Nothing is worth the making
If it does not make the man.
Why build these States glorious
If man unbuilded goes.
In vain we build the Nation
Unless the builder also grows."

Civil-Rights Program

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Friday, January 27, 1950

Mr. ADDONIZIO. Mr. Speaker, at this time when there is so much controversy over FEPC legislation and the remainder of the civil-rights program, I am proud and happy that the Board of Commissioners of the city of Newark, N. J., have passed the following forthright resolution in behalf of civil rights for all Americans:

Whereas the denial of any civil rights is unjust and undemocratic and contrary to the fundamentals upon which this Nation was founded; and

Whereas there is now pending before the Congress of the United States a civil-rights bill which would favorably affect many people in this Nation, who are now denied their civil rights because of their race, creed, or color; and

Whereas the FEPC bill, which prohibits discrimination in employment, will assure all Americans an equal opportunity to make a living on the basis of equality: Therefore be it

Resolved by the Board of Commissioners of the City of Newark, That we hereby request and urge the United States Senators and Congressmen from New Jersey to vote for and support legislation for (a) abolition of the poll tax as a voting requirement; (b) establishment of a Fair Employment Practice Commission; (c) enactment of antilynching legislation; (d) Prohibition of segregation in any transportation facilities; and be it further

Resolved, That we memorialize the United States Senators and Congressmen from New Jersey, to give their full aid and support to the civil-rights program as outlined and requested by the President of the United States; and be it further

Resolved, That a certified copy of this resolution be forwarded to each of the United States Senators and Congressmen from New Jersey.

STEPHEN J. MOREN,
M. ELLENSTEIN,
RALPH A. VILLANI,
JOHN KEENAN,
LEO P. CARLIN,
Board of Commissioners of the City of Newark, N. J.

Secretary of Defense Louis Johnson Keeps Ahead on His Pledge To Provide More for Less Money—Within 12 Months He Would Be Providing as Much or More Military Strength for $1,000,000,000 a Year Less, and by 18 Months for $1,500,000,000 a Year Less

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Friday, January 27, 1950

Mr. BOYKIN. Mr. Speaker, every fair, impartial, and sincerely economy-minded Member of this Congress must have thrilled when Louis Johnson, Secretary of Defense, was awarded a citation of merit just a few weeks ago for the magnificent work he is doing in the Department of Defense by the members of President Hoover's committee on the Hoover Report.

The story of that award was told in full in the extension of remarks made by my good friend, Congressman HAROLD PATTEN, of Arizona, as disclosed in the RECORD of Thursday last.

Having read the wonderful speech of Congressman PATTEN, I had hardly set aside the RECORD before I came upon the fourteenth in a series of articles in which Blair Moody and financial experts in Congress analyze the 1950–51 Federal budget.

Blair Moody is the well-known feature writer of the Detroit News and moderator of the program, Meet Your Congress. Upon this nationally known and popular NBC program many members of both houses have appeared during recent years.

The article was headed "Johnson keeps ahead on pledge to provide more for less money." The Members of this House are interested in all that Blair Moody either speaks or writes because of his terse, clear, lucid, and factual interrogations as well as his factual unbiased reporting of the news.

This article is written in a spirit of decency and fair play about one of the finest men and certainly one of the ablest officials that our Nation has ever

had. It needs no vocal embellishment by me.

Mr. Speaker, I know if our good friend, Louis Johnson, were here he would tell us all that "it is the team which he is heading that deserves all the credit for the tremendous savings effected," men like the Honorable Stu Symington, Secretary of the Air Force; Hon. Gordon Gray, Secretary of the Army; Hon. Francis Matthews, Secretary of the Navy; General Bradley; and the three grand Chiefs of Staff.

I commend this article by Blair Moody to the reading of every Member of this Congress, and on both sides of the Capitol.

All hail from this Congress to Louis Johnson on the coming of his first anniversary as Secretary of Defense.

The article reads as follows:

JOHNSON KEEPS AHEAD ON PLEDGE TO PROVIDE MORE FOR LESS MONEY

(EDITOR'S NOTE.—This is the fourteenth in a series of articles in which Blair Moody and financial experts in Congress analyze the 1950–51 Federal budget and offer suggestions for cuts which, if adopted, should not only balance the budget but permit a moderate reduction in taxes. The final article will appear tomorrow.)

(By Blair Moody)

WASHINGTON, January 23.—The demand for economy in Government sweeping across Capitol Hill and the Nation has been emphatically answered by the Department of Defense.

In the first determined, intelligent, effective drive for really major savings in American political history, Secretary Louis A. Johnson is ahead of schedule on his pledge, made to Congress when it passed the Unification Act last August 10, that within 12 months he would be providing as much or more military strength for $1,000,000,000 a year less, and by 18 months for $1,500,000,000 a year less.

This is quite aside from the question of whether President Truman's budget program provides strength enough to meet present world conditions, a question bitterly disputed wherever military, naval, and air men meet in private.

But there can be no question that we are paying less for what we do get. Assistant Secretary Wilfred J. McNeil, right bower to the late Secretary Forrestal and now Johnson's chief ball-carrier in this field, reports that the Military Establishment is already reflecting a saving of $1,200,000,000 a year.

The most widely-publicized part of Johnson's crash dive for economy, of course, is the removal of 147,000 civilians from the pay rolls, a total expected to approach 160,000 by June. But underneath—and quite aside from the controversial reductions and shifts in Navy, Air Force, and Army strength—there has taken place a remarkable tightening up in many fields. Not least responsible for the results is the drive by Johnson to make officers at all levels realize that saving money is important.

A NEW APPROACH

Johnson's approach was different. Just 2 weeks after the unification law was enacted he faced in his office at 9 o'clock one morning more than 100 Senators and Congressmen, including many of Capitol Hill's most prominent battlers for economy, and told them that at 1 o'clock the same day he was announcing a drastic curtailment of Army posts, Navy yards, and Air Stations from coast to coast, making it possible to eliminate 135,000 civilian employees.

He had called them in, he said, because the reductions were taking place in their districts and he wanted them to know before they saw it in the newspapers.

When he read the list, angry protests came from some of the great economizers. But it quickly developed that Johnson was not asking them, he was telling them. They had been asking for economy and here it was.

"I'll have to give your Senator FERGUSON credit," Johnson says now. "He got up and backed us."

Obviously, Johnson had had the lists of spots that were to be hit nearly ready when Congress gave him the power to act. As Assistant Secretary of War in the late 1930's—and, incidentally, one who chafed noticeably at the lethargy of some colleagues and superiors—he had seen where the waste was.

He knew Army, Navy, and Air operated parallel systems of communications all over the world, at vast duplicated expense. He saw money draining away by millions through pro forma flying time for air officers, surplus civilian employees who would have to wait for another war to find enough to do.

FINDS ARMY FLEET

He found that the Army was operating a big fleet of ships, chiefly transports, bigger by tonnage than the entire Navy. He knew of old the feeling among the little "empire-building" minor executives that one way to make their jobs seem more important and raise their pay is to have more, not less, subordinates.

Forrestal already had ordered a survey by a committee of industrialists, headed by General Motors' Thomas C. Archer. McNeil had moved for a performance military budget in which all costs could be identified by activity, instead of having the budget of an air base or a navy yard obscured in 5 to 30 different long item lists under different labels.

This had brought a conference between Forrestal and Senator LODGE, Republican, Massachusetts, that broadened into the resolution creating the Hoover Commission. Now Johnson called in an industrial efficiency firm, Robert Heller and Associates.

Johnson used Heller as a spur, rather than a whip. He knew that if economy were imposed only from without it would not last. But when the proud Army, Navy, and Air officers saw Heller coming they moved on their own.

Sometime later, when Frank Elmandorf, Heller's top man, come in to superintend the crash, he told McNeil: "You two Scotsmen have left nothing to crash on."

The other Scotsman is Gen. Joseph T. McNarney, holder of many high fighting, staff, and administrative posts, who was named head of Johnson's management committee.

TASK FORCES MOVE

Each service set up task forces to move in on areas where cuts were possible. Heller pointed to places where money is always saved in an industrial reorganization—overuse of automobiles, motor maintenance—a score of ideas which would in no way affect the fighting structure of any service.

Meanwhile McNarney and McNeil reprogramed the plans of all operational services. They found hundreds of items like "new baskets for quartermaster's commissary, $60,000," which came out.

Services like printing in effect were made separate businesses and told if they could not sell their work to the National Military Establishment as cheaply as private concerns they would be wiped out. The result: 77 fewer employees in Washington alone and a sharp drop in costs. Passenger cars were cut 20 percent.

Staffs were cut all across the country, roughly 1,000 civilians being dropped in Michigan, including two-thirds of the personnel at the tiny air base of Oscoda.

"Better work and more defense for less money," says Johnson.

But enough defense to insure the safety of the United States? Economy aside, that is the real issue. It will be discussed tomorrow in the concluding article of this series.

General Eisenhower's Reputed Speech

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 27, 1950

Mr. O'SULLIVAN. Mr. Speaker, I received from Longmont, Colo., the other day, a clipping taken from the editorial page of the Longmont Ledger published by George L. Bickel, which directs my attention to a recent speech claimed to have been made by General Eisenhower, which is so shocking, to put it mildly, that I feel that it should be given Nation-wide publicity at this time, even though the reactionary press of the Nation has carefully avoided making any reference whatsoever to it.

This editorial is as follows:

LET THEM EAT CAKE

Italy has the word for it—"stupidino"—and General Eisenhower coined the phrase to fit the word when he stated last week that "the common people ought to stop thinking about pensions and get back to a 'beer and hot dog' diet instead of looking to the Government for an illusory thing called security."

"If all Americans want is security," he said, "they can go to prison. They'll have enough to eat, a bed, and a roof over their heads," he added.

This arrogant attack on the natural longing of human beings for security in their old age will probably go down in history as the most stupid remark since Marie Antoinette's statement of "Let them eat cake" when she was informed that the peasants of France were without bread.

The general failed to tell his audience just one thing, that the Government, whose social-security programs he mistrusts, has guaranteed his own security for life with the very liberal pension of $18,000 a year.

Pensions for the aged and a sound social-security program are among the Nation's most important problems. Students of government and thinking citizens realize that contributory insurance is democratic and sound, that ultimately we will have replaced outright pensions with a sound insurance plan. These problems are real and close to the hearts of many millions of Americans. They can't be flippantly discarded, general.

CCC Food Bargains Listed

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, January 27, 1950

Mr. MURRAY of Wisconsin. Mr. Speaker, the Honorable John Flannagan, former chairman of the Committee on Agriculture, called the attention of the House in the Seventy-ninth Congress to

UNIVERSITY OF MICHIGAN LIBRARIES

the fact that the world price, plus the import duty, was less than the support price of many agricultural products. The following is from the Sunday Washington Post:

CCC FOOD BARGAINS LISTED—EXPORT ONLY

(By John W. Ball)

The world's biggest dealer in food commodities last week advertised Irish potatoes for sale at 100 pounds for 1 cent.

Similar bargains in canned meat, eggs, edible beans, peanuts, flaxseed, etc., were made public by Ralph S. Trigg, President of the Commodity Credit Corporation, Uncle Sam's agency for operating the Government's farm price support program.

These prices, however, are only for export. The goods can't be bought for use in this country.

The sacks in which the potatoes will be sold cost from 10 to 15 cents apiece, or 10 to 15 times as much as the Government asks for them filled with the world's best potatoes.

NEW CCC POLICY

The low prices accompanied announcement of a new CCC policy to encourage export of surplus farm commodities bought by the Government to keep prices in this country high and farmers prosperous.

Americans will still be charged several hundred times the export price. Similar potatoes retailed in Washington this week at 3¼ to 4 cents a pound. In other words, the Government is selling potatoes at 100 pounds for 1 cent that are costing American housewives from $3.50 to $4. The potatoes cost the Government about $2.10 a bag.

The entire operation was ordered by Congress in its series of laws for the benefit of the Nation's twenty-odd million farmers.

In addition to the potato bargains, CCC is offering to sell to exporters:

1. Thirty million pounds of Mexican canned meat at 15 cents a can. This was bought from Mexico at about 30 cents a can. These purchases were made to reimburse Mexican cattle raisers whose markets were shut off when this country put an embargo on the importation of Mexican cattle, because of a hoof-and-mouth disease epidemic in Mexico. This meat is not permitted to be sold in this country under the pure food and drug laws because it comes from areas infected with the dreaded hoof-and-mouth disease.

2. Dried whole eggs, 73,000,000 pounds, at 40 cents a pound. These cost Uncle Sam about $1.20 a pound.

3. About 4,750,000 100-pound bags of beans. Pinto beans are offered at $7 a bag (cost about $9), red kidney at $8 (cost about $9.50) and great northern, $6 a bag (cost about $8).

4. Thirteen million bushels of flaxseed at $4.45 a bushel that cost the Government $6 a bushel in 1948.

5. About 50,000,000 pounds of shelled peanuts at 8⅛ cents a pound, or just half the 16¼ cents CCC paid for them.

OATS, BARLEY, AND CORN

Trigg also offered 13,579 bushels of oats, 20,000,000 bushels of barley, and 100,000,000 bushels of corn at not less than market price on date of sale.

Sales will not be made to buyers using ECA dollars or other Government funds. Other methods, such as subsidies, are provided for such sales. Sales of potatoes are restricted for export to areas not normally supplied by United States exporters.

Similar announcements will be made monthly, Trigg said. The prices named last week will prevail until March.

The announcement was met by a sharp break on the Nation's commodity exchanges. Most of the losses were regained later.

"From now on," Trigg said, "exporters will know in advance the commodities and quantities that are available, and the prices for a fixed period ahead. Thus, they will be in a better position to negotiate sales abroad."

LOSSES ABSORBED

The loss the Government takes on such sales is absorbed in several ways. Much is replaced from section 32 funds. Section 32 of Public Law 320 sets aside 30 percent of the Nation's customs receipts. Such sums the law states, shall be used by the Secretary of Agriculture to:

1. Encourage the export of agricultural commodities by benefits to the exporter, or payment of losses in connection with the exportation or by payments to producers to encourage production of commodities needed domestically.

2. Encourage domestic consumption of farm commodities by increasing their use through benefits, donations, etc., among persons in low-income groups.

Under the first provision, CCC is making the following subsidies available:

1. Four million dollars to exporters of fall and winter apples and winter pears. These may be shipped to ECA countries, and to any Western Hemisphere countries except Cuba, Canada, and Venezuela. They also may be exported to Israel, Egypt, and the Philippines.

These funds may be used to pay half the cost of the commodities.

2. Fifty thousand dollars, to permit payment of 10 cents a bale to exporters of cotton.

3. Seven and a half million dollars to exporters of surplus dried peaches, prunes, and raisins. These funds are to be used to reimburse the exporter up to 50 percent of the cost of the commodities.

4. One million dollars for dried-egg exports.

5. Two million dollars for flaxseed or linseed oil sold for export to any agency * * * furnishing relief to foreign countries.

6. Forty thousand dollars to encourage use of concentrated orange juice abroad.

7. Five million dollars to encourage use of peanuts abroad, to be paid to any Government agency administering relief to foreign countries.

8. Five million dollars to wheat exporters to meet the difference in price between the current domestic price and the International Wheat Agreement price of $1.80 a bushel.

9. Two million dollars for export sales of packed fresh oranges, and canned single-strength orange juice, to be used to meet half the cost of such exports.

Let us consider the above surplus foods:

First. The $4,000,000 worth of apples purchased by the ECA does not equal the $5,800,000 worth of apples imported the last fiscal year.

Second. The $50,000 for subsidizing cotton is small in comparison to the $36,319,000 worth of cotton imported. Over $30,000,000 of the cotton imports were on long-staple cotton as there is a near embargo on short-staple cotton imports.

Third. The $7,500,000 for subsidized fruit exported must be considered in the light imports of $52,644,000 worth of fruit and fruit preparations, not including the $50,657,000 worth of banana imports.

Fourth. The $1,000,000 for dried-egg imports is small in comparison to the $2,198,000 worth of eggs and egg products imported the last fiscal year. Eggs are only 39 percent of parity for the farmers in the Midwest today.

Fifth. The $2,000,000 for subsidized flaxseed and linseed-oil exports is questionable when we imported $3,493,000 worth of flaxseed the past fiscal year.

Sixth. The $40,000 for subsidizing orange juice covered by third paragraph above.

Seventh. The $5,000,000 to subsidize peanut exports when we imported $3,000 worth of peanuts and a total of $55,783,000 worth of nuts and nut preparations the past fiscal year, this does not make economic sense. No one seems to be able to figure out what the peanut subsidies are really costing the United States taxpayers.

Eighth. The $5,000,000 to subsidize wheat exports must be compared to the $2,924,000 worth of wheat imports not including the $6,740,000 worth of wheat milled in bond. The total imports of all grain and grain products was $55,126,000 in value, the past fiscal year.

Ninth. The $2,000,000 for subsidizing exports up to 50 percent in value of canned single-strength orange juice should be considered in connection with third paragraph above.

The total imports of competitive agricultural products was $1,532,000,000, without adding fur imports which are also a competitive agricultural product.

The above shows that the value of subsidized exports of competitive agricultural products does not equal the imports of competitive agricultural products. In other words, we are in pounds, bushels, and tons importing competitive agricultural products faster than we are exporting and giving them away. The CCC should not be held accountable for this situation. While we are subsidizing the exportation of millions upon millions of dollars worth of soil-depleting crops we imported a total of $497,163,000 worth of livestock and livestock products. While we imported millions of pounds of wool, we subsidized or gave away millions of pounds of cotton and then hear much conversation about soil conservation. Unless some kind of an agricultural agreement, like the international wheat agreement, is made these volumes of competitive agricultural imports are going to create a greater and greater loss to the CCC and the American taxpayer.

The Secretary of Agriculture stated before the Agricultural Subcommittee that the support program has cost $1,000,000,000. Assuredly one must realize that this cost has a direct relationship to the $1,532,000,000 of competitive agricultural imports.

Amending the Rules of the House

EXTENSION OF REMARKS

OF

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, January 20, 1950

Mr. JACKSON of Washington. Mr. Speaker, there appears to be a division of opinion among the supporters of House Resolution 133, as to why they

wish to restore to six members of the Rules Committee their dictatorial veto powers over the other 429 Members of the House.

One group continues to cling to the threadbare argument that the Rules Committee is the only single committee through which the flood of legislation pouring out of the standing committees must flow. As such, they say, it should act as a floodgate or a traffic cop. They cite the billions of dollars in authorization bills voted out of standing committees in the Eightieth Congress. They seem to claim that it was the Rules Committee and its veto power that prevented these billions from resulting in an enormous Federal deficit.

The hard facts of actual House procedure easily deflate this argument. Authorization does not mean expenditure. Every year billions of dollars in projects are authorized, but no appropriation is made for them. The expenditures are controlled by the Appropriations Committee—and appropriations bills do not go through the Rules Committee at all. They go directly from the Appropriations Committee to the floor of the House. The picture of the Rules Committee acting as a floodgate to check the flow of costly legislation looks pretty silly when you find out that the water really flows around the floodgate and never passes through it at all.

This group carries the argument one step further. It claims that the expected Federal deficit for this fiscal year is caused by the change in the rules voted by the House at the beginning of the last session. It is true that one-third of the increase over the deficit originally anticipated is due to higher expenditures than planned. But these were largely costs fixed by existing statutes—such as the GI education bill—which no one could anticipate. But the other two-thirds was caused by a decline in revenues as a result of last summer's recession. If the Rules Committee feels it has the power to anticipate and to prevent recessions, I shall be happy to reconsider my position in this matter, and I think the country will be happy to know that recessions can be avoided.

The members of the other group are, at least, honest in setting forth their reasons for favoring this rule change. They very frankly state that they want to use any device they can to block what they call a "socialistic" program, even if it means minority rule—a principle contrary to everything America stands for. What kind of people are these who are afraid to allow legislation to be debated by all the representatives of the people—who are afraid that a majority of those representatives might vote this legislation through? What kind of people are these who believe that a minority of six is wiser than a majority of the American voters?

I respect their right to oppose a bill—provided they do so by trying to convince a majority of the Representatives in open debate that their side has merit. That is the American way of deciding issues.

As I understand it, the Rules Committee was never meant to pass on the merits of legislation. That is the proper function of the standing committees, whose members and staffs are the experts in each of the many technical fields of legislation. I do not see how anyone can reasonably expect 12 men to consider intelligently the merits of hundreds of separate pieces of highly specialized and technical legislation.

Perhaps time and experience will tell us that the rule we passed last year needs to be modified in some minor respect. But I hope that time will never tell us that the decisions of a minority of six are better than the decisions of a majority of the whole House. If we are to make mistakes, let them be all our mistakes, and not the mistakes of a tiny few. That, in my opinion, is the basis of the American system.

Compulsory Health Insurance

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES

Friday, January 27, 1950

Mr. DAVIS of Georgia. Mr. Speaker, the Georgia Congress of Parents and Teachers has a membership of 120,000 members. This organization is a branch of the National Congress of Parents and Teachers, and is one of the outstanding organizations in Georgia.

The organization's executive committee, on January 11 in Macon, Ga., adopted a resolution opposing any form of compulsory health insurance or any system of political medicine designed for national bureaucratic control.

I concur in the sentiments expressed in this resolution, and I attach a copy of it herewith for the information of Members:

Whereas the Georgia Congress of Parents and Teachers expresses sincere interest in the health of all of the people of Georgia as set forth in the Health Services Act of 1949 and urges enactment in 1950 of similar legislation; and

Whereas the United States has the highest standards of health, of medical care, and of scientific medical facilities of any country in the world, as a result of our system of free enterprise; and

Whereas compulsory health insurance, wherever tried, has caused a decline in national health and deterioration of medical standards and facilities; and

Whereas wherever the Government has assumed control of medical services, the result has been tremendous multiplication of costs over original estimates, extreme tax burdens and national deficits, and gradual extension of socialization into other activities of national life: Now, therefore, be it

Resolved, That the Georgia Congress of Parents and Teachers does hereby go on record against any form of compulsory health insurance or any system of political medicine designed for national bureaucratic control.

That a copy of this resolution be forwarded to the President of the United States, to each Senator and Representative from the State of Georgia, and that said Senators and Representatives be and are hereby respectfully requested to use every effort at their command to prevent the enactment of such legislation.

BLANCHE S. HOBBS,
President.
CORINNE L. DALLMUS,
Secretary.

Workers and Farmers Fight for CVA

EXTENSION OF REMARKS
OF
HON. HUGH B. MITCHELL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Friday, January 27, 1950

Mr. MITCHELL. Mr. Speaker, in a well-illustrated, attractive, two-page story of the fight for the creation of a Columbia Valley Administration, the Butcher Workman, publication of the Amalgamated Meat Cutters and Butcher Workmen of North America, attests once again to the widespread Pacific Northwest interest in the CVA. It follows:

WORKERS AND FARMERS FIGHT FOR CVA

(By Joe Miller)

The cynics who don't believe that the workers and farmers of America can work together to put across liberal issues had better think again. Out in the Pacific Northwest workers and farmers are pulling as one for the creation of a Columbia Valley Administration, the TVA-type agency which will develop the region's vast resources for the benefit of all its people.

The victory hasn't been recorded on the scoreboard yet, but the farm-labor team has pushed the ball down within the 20-yard line. They expect to run it across early in the 1950 sesssion of Congress, and the Northwest's people are rooting hard for them to do so.

The victory will be a terrific blow to the well-heeled private-power lobby, which has been fighting like crazy to stop the CVA. When President Truman sent a special message to Congress asking for CVA last April 13, the cries of rage that were sounded by the Nation's private utilities were as earth shattering as the major earthquake that rocked the region the same day. Howled Purcell Smith, the Nation's top-dog lobbyist at $65,000 per:

"We must do everything in our power to stop the CVA."

Purcell and his cohorts have been doing just that. Thousands and thousands of dollars have been poured into a campaign to smear the CVA throughout the vast region known as "America's last frontier." Private power interests have set up "front" organizations (borrowing a tactic from the Communists, incidentally) to attack the CVA. Modern-day carpetbaggers have been touring the region denouncing CVA as "communism," "fascism," "statism," and whatever other names they can think of.

Gov. Arthur Langlie, of Washington, continually attacks the CVA as "fascism," thereby branding almost 1,000,000 workers and farmers in his own State as fascistic.

(Langlie and the two other Republican Governors who oppose the CVA will not debate this pressing issue, however. Challenged to debate by leading Northwest liberals, they say they're "too busy" or "don't want to get involved in politics.")

Yet, despite the slanderous attack, the CVA forces march steadily closer to their goal, with every major farm-labor organization in the Northwest leading the way. Four years ago these groups organized the League

UNIVERSITY OF MICHIGAN LIBRARIES

for CVA to promote a valley authority for the Northwest, and it has done a notable job.

The grass-roots support for CVA is so strong that Mr. Truman placed it No. 1 on his list of valley authority legislation—ahead of the better-known Missouri Valley Authority plan.

It is not only the workers and the farmers of the region who favor the CVA. Many businessmen noting what the TVA did for private enterprise in the Southland, have taken a stand for CVA—despite the cries of the power lobby.

One of these is the area's leading businessman, E. B. McNaughton, president of the Portland Oregonian and chairman of the board of Portland's First National Bank. A lifelong Republican, McNaughton told a luncheon of amazed Portland businessmen that CVA "has tremendous possibilities for our region." Admitting that he and practically every Northwest business leader had been against Grand Coulee and Bonneville Dams, McNaughton said:

"If Roosevelt hadn't given us these dams, where would we be today?"

It is a question that the enemies of CVA can't answer. The two massive structures, in addition to saving the region's economy, helped produce almost half the Nation's merchant marine and the aluminum for one-third of the wartime Air Force, among other things. They also proved the complete wisdom of Franklin D. Roosevelt's western development policy.

Now Harry S. Truman wants to follow in the footsteps of his former chief. And he has a mandate from the people of the West to do so. With CVA and public power as his prime issues, the President ran up an electoral vote majority of 59 in the Far West.

The reasons behind the region's demand for CVA are obvious, even to the tourist who visits the Pacific Northwest. The failure of the Eightieth Congress to go ahead with the region's resource development has helped create some of the worst problems it has faced since the days of "54-40 or Fight." Here's how they line up:

Floods: The 1948 disaster which struck from out of nowhere took 60 lives, cost $2,000,000.000 in soil losses and $75,000,000 in property damages. And every year the Northwest is hit by severe floods, which ruin homes and destroy crops. Oregon's Grange master, Morton Tompkins, tells the story when he says, "These floods are getting worse instead of better."

(But the present Government agencies have done nothing to halt future floods. The Army engineers-Bureau of Reclamation plan for the Columbia contains no provision for reforestation in the headwaters, where floods start.)

Power shortage: It is unfortunate but true that the Northwest, with 42 percent of America's total hydroelectric potential, is the only area in the Nation with a power shortage. Every winter the Northwest has to brown out, and the shortage has greatly hindered the region's needed industrial growth.

Unemployment: This has cost jobs too. Last winter 155,000 men were thrown out of work by the power shortage, and thousands of jobs have been lost because the Northwest didn't have the power required by industries that wanted to locate here.

With population up 36 percent since 1940, the region's unemployment rate is three times the national average. It hasn't been so bad since the depression.

Yet private power interests continue to curtail development of the region's mighty rivers by telling people the power isn't needed. The president of one company said, "We'll have kilowatts running out of our ears if we build these dams."

Erosion: The Northwest, with all its new soil, has the second worst erosion problem in America and loses 100,000,000 tons of topsoil yearly.

Sure, these are dull figures to many perhaps. But they mean a lot to the general welfare of the Pacific Northwest in particular and of the Nation in general. The crying need of the Pacific Northwest is for a CVA which will accomplish these tasks:

Fully develop the Northwest's vast source of hydroelectric power. This power not only is of mighty value to national defense, as seen by location of the atomic plant at Hanford, Wash.; it is the basis of the region's hope for a diversified industrial economy.

Prepare some 9,000,000 acres of sagebrush land for agricultural development. Reclamation of this land will provide hundreds of thousands of family size farms for new settlers.

Develop a river transportation system which will provide the region's hinterland with cheap and easy access to the sea.

Explore the area's untapped mineral wealth.

Protect and stabilize the Northwest's valuable fishing and lumbering resources, which have suffered from boom and bust exploitation.

Produce an adequate flood-control system like the TVA's.

This is the program the farm-labor groups have brought near reality, despite the opposition of the power lobby, the region's absentee-owned newspapers and eastern capital. The reason for their success is simple. Joseph D. Keenan, director of labor's league for political education, recently told western politicians that "they can no longer afford to do small favors for the land companies and private power lobby no matter how large their campaign contributions." Further Keenan said:

"The little people won't stand for it, and they are watching your voting records. And the little people have the votes."

Thus, the unity that the workers and farmers of the Pacific Northwest have shown in the CVA fight is a hopeful sign for the future. If the farm-labor organizations throughout America pull together as well as they have here, the resources of our Nation will be developed for the benefit of all and not just a selfish few.

Reveals Newsmen Knew of Alger Hiss' Communist Link 10 Years Ago

EXTENSION OF REMARKS

OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 27, 1950

Mr. DAVIS of Georgia. Mr. Speaker, a lot of shallow thinkers in this country, masquerading as liberals and progressives, aided and abetted by Communists and Communist sympathizers, were able to laugh off for a long time warnings given by sensible and well-informed people that our Government was being infiltrated by Communists and Communist sympathizers.

The truth has now been established by such overwhelming evidence, that this danger is obvious now to the most skeptical, whether the disbelief was occasioned by plain dumbness or by honest skepticism.

In the Atlanta Journal of January 25, 1950, there appears a very interesting and informative article by Victor Riesel. I believe it is worth while to place it in the RECORD, and under leave previously granted, I insert this article herewith:

REVEALS NEWSMEN KNEW OF ALGER HISS' COMMUNIST LINK 10 YEARS AGO

(By Victor Riesel)

NEW YORK.—The same emotionless Communist lawyers who snared Alger Hiss out of a proud but rather impoverished and suicide-laden Baltimore family, and either for love or money got him to pass vital documents on to a Red courier ring, today are casually doing business as usual just a few streets from where this is being written. And they are whipping into shape a new network to help cripple the Nation if we go to war with—guess who?

How do I know? Well, it would be nice to pass on the vision of Riesel, the demon newsman, in Hollywood fashion climbing into dark places, filching files and planting microphones. It would be nice. But it's more mundane than fire-escape clambering at midnight.

There are many of us who know—and it goes back to the years when our crowd was a lonely hearts club and we belonged to each other because we knew the secrets of who was spying on what and who was keeping this country from putting guns and warplanes into the hands of young soldiers and kid pilots in trenches and in the air around Nazi Germany.

FEW WOULD LISTEN

But few in the Government listened to us, so we talked to ourselves.

Now that jury after jury comes in with verdicts confirming what we've been saying for almost 15 years, this little group of newsmen, magazine writers and former foreign correspondents can sit back and say the Nation's catching up—and hope the people will listen next time. What made us so all-wise? No great talents.

There's Hiss, for example. Some 10 years ago, our circle knew every detail of his activity. I ran into it at a small strategy session of newspapermen fed up with having their guild run by Communist-party members.

We met, I recall, in the home of a radio editor whose father had been a leading Communist himself, before he broke personally with Joseph Stalin. Someone introduced a chap named Whittaker Chambers, from Time magazine. And we listened carefully as he told us of Communist techniques and how to counter them.

Later we walked for hours along New York's East Side and slowly, sensitively he told the story of his break with the spy ring and about Hiss and other Government officials, some still living, some dead, who secretly had terrific impact on the writings and thinkings of the highest administration leaders. Chambers saw to it that we got on our way home and then disappeared into the crowds. Some of us tried to get action, but no one would listen.

Then, in 1945, at San Francisco, I saw Hiss with Secretary of State Stettinius and Truman—and knew whom the heavily guarded V. Molotov invited to his new fashionable soirees, all under surveillance of trigger-happy OGPU agents.

I knew, too, that I would be marked as nutty if I tried to tell Chambers' story about the slim young man on the platform of the gilded San Francisco Civic Opera House as the UN held its first sessions. So, I, like the few others who knew, had to watch this Nation get the oldest doublecross in the world.

There were literally hundreds of such cases. One day, early in the war, we learned the entire Communist section of CIO was whoop-

ing it up for a strike at the four-motored bomber plant in Inglewood, Calif.

AN ICY CORRUPTION

We knew that some pro-Communist Los Angeles CIO men worked closely with Hans Dieble of the German-American Bund there in distributing isolationist literature—and when we said this was the logical conclusion of the Russian-Nazi pact we were howled at. Then investigators proved we were right.

Each time we made charges, we did so on the basis of disclosures by men like Chambers, who could no longer stand the iciness of Stalinist corruption of their revolutionary sentiments. And so they broke and sought us out, told us what they knew, even as it happens today and every day.

Therefore, it's worth heeding the warning that the same Communist lawyers who first moved into the Government service back in 1934 and migrated in waves from department to department are now working on creation of a new labor network for industrial sabotage and espionage.

They've subtly approached Albert J. Fitzgerald, head of the United Electrical Workers (Independent) to lead it. But he won't fall for this secret maneuver. So they're looking for another innocent. And when they find him they'll be in business again.

Address by Senator Kefauver at Roosevelt Day Dinner

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, January 30 (legislative day of Wednesday, January 4), 1950

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered Saturday night before a meeting of Americans for Democratic Action, in the city of Louisville, in the home State of our distinguished Vice President.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, it is with particular pleasure that I come to Louisville to take part in this occasion. There is a peculiar kinship between us Tennesseans and the citizens of the great Commonwealth of Kentucky. This relationship with me has come to be a very personal one through long friendship with such of your distinguished citizens as Mark Etheridge, Wilson Wyatt, and Albert Kling who live here in Louisville.

And I have enjoyed, first in the House of Representatives, and having the chance of passing the time of day on happy occasions since then, with your distinguished Governor Earle Clements. I have high admiration and enjoy my service in the Senate with your capable Senators, VIRGIL CHAPMAN and GARRETT WITHERS. You know VIRGIL and I were in the House of Representatives together and moved over to the Senate at the same time. I sit next to him on the Armed Services Committee and when I go up to the Judiciary Committee, there by my side is GARRETT WITHERS.

And, of course, one of the big reasons all of us love and esteem the great State of Kentucky is that this State has given the Nation and the world a foremost gentleman, statesman, and friend of all mankind—our Vice President—ALBEN W. BARKLEY.

The history of Kentucky is replete with famous and well-known men such as Henry Clay and Irvin S. Cobb but none have more nearly fitted the hour and none have brought more joy and smiles to task-laden people than our own great Vice President. The democratic world, young children, and old people everywhere, are thankful for ALBEN W. BARKLEY.

I am glad to come here under the sponsorship of Americans for Democratic Action. The ADA has shown remarkable leadership and ability in carrying on effectively the cause of progressive government and sound world leadership. The ADA has shown much initiative in sponsoring this meeting. For ADA's substantial work for a great cause, we are all grateful.

This meeting—coming, as it does, at the outset of our midcentury year—assumes a special significance.

We meet tonight to honor the memory of a man who richly deserves the title of "Man of the Half Century."

It is well that we pause to measure the record of Franklin D. Roosevelt—to measure both the man and the time in which he lived and served. These past 50 years have been turbulent years, fruitful ones for mankind in many respects, but tragic years, too. The next 50 years of the twentieth century will be even more challenging and exciting; and as we approach them, it is appropriate that we examine the heritage which Franklin Roosevelt left us. His life and his faith will fortify us as we approach the grave problems which demand solution today, if mankind is to survive.

Numerous candidates have been advanced for the "man of the half century" distinction. The editors of Time magazine named Winston Churchill.

No one will deny that this living symbol of British courage and determination is one of the heroic figures of this, or any age.

Some have suggested Lenin or Stalin, the founder of Russian communism, and his chosen disciple.

No one will deny that either of these masters of aggression and terror have influenced the world's destiny in the past 50 years.

The Wright Brothers, Henry Ford, Albert Einstein, and a score of others have changed our lives profoundly through their inventions and discoveries.

But no individual surpassed Franklin D. Roosevelt in his vast achievements for the happiness, well-being, security, and freedom of men everywhere. He symbolized, more than any public figure, the strength and vitality of democratic institutions. In the global combat between the forces of light and of darkness, Roosevelt brought inspiration, more than any other, to those who fought the battle for freedom. The death of no leader in modern history brought a keener sense of personal loss than that experienced by millions, the world over, one April afternoon 5 years ago.

We have only to recall crisis after crisis which Roosevelt met and mastered, to acknowledge the depth of his influence or the supremacy of his leadership.

Roosevelt entered the Presidency of the United States in the midst of our most crippling depression. Under his leadership we brought order from the chaos of that time. Although millions of our people were jobless and homeless, our industrial plant was at a standstill, and hunger and discontent were rampant throughout the Nation, our free-enterprise system later emerged stronger and more productive than ever before.

Long before most of us, Franklin Roosevelt foresaw the danger of aggression across the seas. He warned us and other freedom-loving nations to be prepared.

When war came, it was Roosevelt who guided us in the total mobilization of our manpower, industry, and resources. The production goals he set seemed fantastic then, but we met them. We soon challenged, on equal terms, great war machines unrivaled in world history. In 4 years, backed by our industrial might, the Allies brought Germany, Japan, and Italy to their knees.

Franklin Roosevelt did not live to witness the complete triumph to which he had contributed so much, but he had witnessed at first hand, the folly of our course in the aftermath of World War I. He had resolved that America would not again withdraw into its shell. Long before the end of the conflict we had laid the foundations of a world organization to preserve peace.

The most devoted follower of Franklin Roosevelt will concede that he made mistakes, that he was subject to the failings and foibles of any human being, but in the long-range perspective, against the background of magnificent accomplishment for good, the mistakes somehow become dim in their significance.

However, we are not met to eulogize him, nor do we need to do so.

A nation free from poverty and despair, a world saved from Nazi slavery, are eloquent testimony of his good works.

The crisis we face today presents the opportunity—and the necessity—for great accomplishment again. Within the next few years we shall learn if men can harness the mighty hidden powers of the universe to build the most abundant life ever known; or we shall learn if these powers will be utilized for the destruction of civilization as we know it. A Communist tyranny, more devastating and complete in its scope than its departed predecessors, has entered the equation of world politics to threaten our peace and freedom. The specter of atomic and biological warfare thus lends a terrible urgency to our thinking and action in this hour.

We are compelled to examine the qualities of mind and heart and spirit with which Franklin Roosevelt challenged the crises of his time.

We must demand those qualities of ourselves today.

One predominant characteristic of Roosevelt was courage.

Without courage, who could have conquered the tragic affliction which struck Roosevelt down in the prime of life?

Who can forget the moral and psychological "lift" a nation felt when this once helpless cripple dramatically asserted that "we have nothing to fear but fear itself"?

Too many of our people are troubled today by something approaching the blind, unreasoning, paralyzing fear which Franklin Roosevelt described in March, 1933.

While we must acknowledge the danger of an advancing communism abroad, we must not dissipate our total energy in conducting witch hunts at home.

And while we can foresee the terrible consequences of another depression, we must not permit a slight decline in economic activity to throw us into panic.

We cannot afford to approach any decision or crisis, in international affairs or domestic policy, with the idea that nothing can be done.

We cannot afford to throw up our hands in despair.

We cannot afford to be timid.

The times demand bold and resolute action, and the firm conviction that no problem is insoluble.

Franklin Roosevelt, in private and public life, demonstrated that high courage has its reward.

Roosevelt was blessed with vision too.

He once told a group of Young Democrats: "You ought to thank God tonight if • • • you are young enough in spirit to dream dreams and see visions—dreams and visions about a greater and finer America that is to

UNIVERSITY OF MICHIGAN LIBRARIES

be; if you are young enough in spirit to believe that poverty can be greatly lessened; that the disgrace of unemployment can be wiped out; that class hatreds can be done away with; that peace at home and peace abroad can be maintained; and that one day a generation may possess this land, blessed beyond anything we now know, blessed with those things, material and spiritual, which make man's life abundant. If that is the fashion of your dreaming, then I say 'Hold fast to your dream.' America needs it."

These objectives were the fashion of Roosevelt's dreaming.

His vision of a prosperous and contented nation, and of a free, democratic, peaceful world set the sights for all America during the 12 years he led us.

We must not lose nor obscure that vision today. We must not become enmeshed in petty quarrels over details or methods if we thus forget the larger objectives we seek.

With courage and vision, Roosevelt had faith, faith in the supremacy of freemen and free institutions over all who would challenge them; faith in the ultimate triumph of righteousness; faith that man could achieve the dignity intended for him by his Creator.

We dare not falter in that faith, or all will be lost.

However, it was not through these qualities alone, nor through his ability to inspire them in millions of others, that Franklin Roosevelt left such an indelible mark upon his era.

His greatest contribution was that he gave new vitality to our concept of democratic government.

More clearly than any previous American political leader, Roosevelt saw the new role government must play as the guardian of the people's total interest.

The principles of democratic government have not changed since the time of Jefferson who first enunciated them.

We still believe, as Jefferson did, in equal rights for all and special privileges to none.

We still believe that governments are not the masters of the people but their servants.

We still believe that the interests of the majority must not be submerged to the greed of a minority.

We still believe that the protection of property in its legitimate rights is essential, but that in any conflict between property and men, the rights of men come first.

These beliefs are embedded deeply in the faith of the party of both Jefferson and Roosevelt—the Democratic Party.

Yet through the years we found our political leadership attempting to reconcile these principles with another declared by Jefferson—"that government is best which governs least."

When Roosevelt approached political maturity, civilization had grown far more complex. New production techniques, new methods of communications and transportation had contributed to the growth of mammoth industrial organizations. The industrial society had grown so large under laissez faire that neither the society nor the individuals within it could be secure in their rights. Under the leadership of Harding, Coolidge, and Hoover, the laissez faire system of private enterprise reached its inevitable collapse. America stood at the crossroads. Either we had to revitalize our concept of democratic government or to cast it aside for totalitarianism of the left or the right.

Roosevelt saw that government could not give meaning to the basic theory of Jeffersonian democracy if we carried to the extreme the notion that the less government, the better.

He conceived of government as the one instrument through which our people could achieve a balance of the complex economic forces of modern society.

Thus the New Deal was born, and the New Deal put our Nation on the road to recovery because its fundamental philosophy was the only sound and workable one for our age. The New Deal provided our only hope, both for democratic government and preservation of the profit system.

Its theory was that the vitality of free enterprise depends primarily upon the welfare of those who produce and consume its goods and services, that is, workers and farmers; that through a wise use of its inherent powers, Government could effectively insure a steady flow of purchasing income.

There followed a coordinated program of public works, wages-and-hours regulation, unemployment insurance, soil conservation, crop controls, and farm subsidies to bulwark the worker and farmer against economic uncertainties. The social-security system was adopted to guarantee the worker an income when age would impair his usefulness. Restrictions on credit and security transactions were designed to prevent the wild speculation of the boom-and-bust era.

This program succeeded. Miraculously enough, it raised the income and standard of living of every group of our people without impairing the personal freedom of any group. Its cost was infinitely small when compared to the total expenditure we made for World War II. The money we have spent, in any two postwar years, to preserve the peace would be the approximate equal of all our domestic expenditures in the first 8 years of Franklin Roosevelt's administration.

Even if we should discount his world leadership in war, Franklin Roosevelt's triumphant effort to enlist Government in the people's service would stamp him as one of the great statesmen of history.

Roosevelt always insisted that government must be adapted to the needs of the time.

If bold action was necessary to make government responsive to the will of the people or to protect them in their basic rights, Roosevelt dared to take such action.

If new government techniques were essential to strengthen and preserve our free-enterprise system, Roosevelt dared to experiment.

Roosevelt never committed the cardinal political sin of repudiating imagination as a component of the art of government.

Today our Government is called upon for action, experimentation, and for service to the cause of human dignity on a scale beyond that of the wildest dreams of the founding fathers.

As never before, we need imaginative political leadership.

We are fortunate to have at the helm today a man in whom Franklin Roosevelt imposed utmost confidence—a man who has valiantly carried forward the Roosevelt program, who has given us imaginative leadership in foreign and domestic policy, and who is worthy of our confidence and trust—Harry S. Truman.

Always within the limits of realistic action, the Truman administration has sought to develop a broad strategy for winning the peace, and for establishing favorable conditions for the growth of democratic government throughout the world.

We have given full support to the United Nations, which provides a world forum for the foes of oppression—even though we have not seen it reach full effectiveness.

We halted the march of communism into the Balkans through timely aid to Greece and Turkey.

Through the Marshall plan we countered Communist infiltration in western Europe.

We entered the North Atlantic Pact, drawing ourselves closer into the fellowship of a freer Europe.

Honesty should compel us to admit that we have made mistakes in the conduct of foreign affairs in this postwar period—but the over-all record is one in which we may have pride and confidence.

Thus in our foreign policy we have seen significant examples of imaginative action by Government to meet the challenges imposed by new conditions and events.

No less imaginative decisions must be made in the field of domestic policy.

All Americans are properly concerned that, in fulfilling our world-wide obligations, we do not threaten the way of life we seek to preserve. We dare not wreck our own economy in order to sustain democracy overseas; and to strengthen our defenses. Simultaneously we must initiate necessary programs for the welfare and opportunity of our own people, many of whom are denied the benefits which they should rightfully enjoy.

Each of these objectives—foreign economic aid, military preparedness, and higher domestic living standards—is costly in its own right.

Our dilemma is to discover a satisfactory method for financing the biggest job our people have ever undertaken.

The only solution lies in the increasing productivity and vitality of our free-enterprise system, which is the keystone in the arch of world peace.

President Truman and the Democratic Party believes that the American people must have assurance against economic insecurity; that they must have adequate health, housing, and educational facilities; and greater protection of human rights to enlist our full moral and material resources in the cause of peace.

President Truman holds the attainment of these ends essential to the preservation of productive free enterprise.

The President believes it to be the Government's duty to maintain conditions which will permit us to reach these goals.

The Truman Fair Deal is the logical successor to the Roosevelt New Deal.

The Fair Deal is not a revolutionary concept.

It is not a radical departure from previously accepted techniques of Government action.

It seeks simply to provide what its name implies—a fair deal for every American, whether he or she be investor, businessman, worker, farmer, or housewife.

The Fair Deal was not devised in hostility to the interests of any of our people, but to advance the prosperity and security of all.

The Fair Deal concept is that the economic interests of all our people are interdependent—that the businessman cannot sell his product unless the consumer can buy at a reasonable price, that the farmer will suffer if the workingman's wages are cut, and that the social consequences of inadequate housing, health, and of failure to conserve our natural resources must be shared by all our people in equal measure.

The same forces which conspired to obstruct the New Deal of Franklin Roosevelt are prepared today to fight the Truman Fair Deal to the last ditch.

The representatives of special-interest groups are no less militant today than 15 years ago; perhaps they are more confused, uncertain that they can thwart the desires of the great body of the people for a fuller, richer life.

But their tactics remain the same.

The opponents of Harry Truman advance no alternative program to assure an expanding economy and a higher standard of living for every citizen.

They resort solely to the bitter denunciations, hysterical attacks, and gloomy predictions which have fallen on deaf ears since 1932.

They are inventing a few new scare words to frighten the people and their representatives in Congress.

They are circulating the same brand of myths that were prevalent in Roosevelt's time.

There is the myth that a monstrous bureaucracy in Washington is enclosing its vast tentacles about the American economy and is squeezing the lifeblood therefrom. This frightening creature apparently was not spawned until 1933 when the Democratic Party moved into Washington. Yet after 17 years of Democratic administrations, the American enterprise system has reached record levels of production, income, and employment.

There is the myth that Franklin Roosevelt and Harry Truman have saddled the American people with an enormous debt either because they were spendthrifts, and knew no better, or because they harbored some insidious design to wreck the national economy. About 89 percent of the national debt directly reflects the cost of World Wars I and II—but it is difficult to acquaint some individuals with the truth.

It is easy to loose a flood of distorted propaganda about any legislative issue—a flood limited only by the imagination of the author, the slush funds at the disposal of the lobby which employs him, the durability of its mimeograph machines, and the receptiveness of the press to such hand-outs.

It is even easier to examine the facts.

There is no phase of the Fair Deal which has not been devised to provide a maximum amount of local governmental responsibility, a maximum amount of freedom for private enterprise, a minimum of Federal regulation in view of the task to be accomplished.

There is little danger that we will pay heed to these harbingers of doom who stanchly resist every item of liberal legislation which is placed before the Congress.

There is great danger, in this campaign year of 1950, that the people who do believe these impassioned warnings will outvote those of us who do not.

It happened in 1946, when the forward liberal march of the American people was interrupted for 2 years because more than two-thirds of the eligible voters in the Nation stayed home on election day.

This must not happen again. The consequences are too great to elect again a Republican Congress with a do-nothing leadership, which is sure to welsh on every obligation to improve the welfare of the people.

Those of us who believe in liberal action know that we will achieve it only through the Democratic Party.

Our task is to send more Democrats to Congress, and to seek greater unity of purpose among those Democrats who sit in the Congress.

We must press on ahead to implement, with imaginative action, the goals of progress and peace which have been charted for us by Franklin Roosevelt and Harry Truman.

We must work—and fight—for the liberal program of President Truman.

We must protect the millions of small-business men who form the backbone of our enterprise structure.

We must seek a fair labor-management relations act.

We must give the necessary protection to our farmers, through workable price-support legislation.

We must continue the gains we have made in improving the housing of our people, and erasing the Nation's slums.

We must vigorously fight those who would exploit our precious natural resources for private gain.

I do not want us to ever adopt socialized medicine but we must try in other ways to extend to more of our people the miraculous advances we are making in medical science.

We must work for immediate action to strengthen our educational system. What a heavy price the Nation pays for the tragic waste in human resources and talents which is fostered by inadequate schools.

In achieving all these objectives, our Government has a large responsibility. It has asserted this responsibility in the past, and will do so again, without restricting the personal freedom of any American.

If our Government moves ahead along these lines, it will certainly enlarge the liberty and well-being of every American.

Here is a program which is worthy of the man we honor tonight—the man who first dramatized and gave life to the principle that Government is a positive instrument to be utilized in the people's behalf.

Here is a program which is worthy of our best energies and talents. Its accomplishment demands of us the same courage and faith which Franklin Roosevelt summoned to lead our Nation in troubled times of depression and war. It requires of us something of the same tireless, devoted effort which broke Franklin Roosevelt's health and struck him down in his finest hour.

We cannot deny that the effort will be worth while.

Our Nation has the opportunity today to move into a new era of human well-being.

As President Truman pointed out, we have the resources and the manpower to increase our national production 400 percent in the next 50 years—to expand our average income 300 percent.

We have the opportunity to realize Franklin Roosevelt's vision of a "generation which will possess this land, blessed beyond anything we now know, blessed with those things, material and spiritual, which make man's life abundant."

In our ability to seize this opportunity—to move forward to the fulfillment of our national promise—lies the destiny of generations of men the world over. If we accept our responsibility, all mankind will find renewed faith that a strong and stable America is beside them yet in the eternal quest for freedom and peace.

Happenings in Washington

EXTENSION OF REMARKS
OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, January 30 (legislative day of Wednesday, January 4), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address broadcast by me on January 30, under the headline "Happenings in Washington." This was program No. 17 in a series of broadcasts.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HAPPENINGS IN WASHINGTON

(Program No. 17)

This is ED MARTIN, speaking to you from the Nation's Capital, and bringing you another discussion of happenings in Washington.

Today I want to direct your attention to the effect of the Government's present spending policies on the value of your money.

I want to show you how the high cost of big government, deficit financing, excessive taxation and increasing debt reduces the purchasing power of your dollars.

That means you are able to buy so much less with your salary or wages than you could only a few years ago.

At this time, when the administration in Washington is predicting that in the year 2000—50 years from now—the average family will be earning $12,000 a year, I think it behooves sensible, hard-headed people to sit down and analyze just what that means.

You see, it is mighty sweet bait. Everybody would like to earn $12,000 a year. Everybody thinks of $12,000 in terms of what it can buy today.

But years of deficit financing by this and previous administrations have brought—not stability—but inflation. The dollar buys less and less.

Inflation may sound like a dull word. But don't be fooled.

Inflation is like a thief robbing every one of you. Inflation makes your savings worth less and makes your money buy less. Inflation reaches into the pockets of every working man and woman in Pennsylvania to steal some of the real value of the dollars they work for.

Let me give you one example of what has happened over the years.

Fifty years ago, in 1900, you could buy 6½ dozen fresh country eggs in most cities for $1. Today you will get about 1 dozen and a quarter for $1. Fifty years ago, a quart of milk was a nickel and you could get a good suit of clothes for $10.

Today, in terms of food and clothing, a dollar buys only a fraction of what it bought then.

Now I'm not suggesting that the figures of 50 years ago have any real meaning today, but let us look 50 years ahead, to the times of wealth and luxury for everybody predicted by Mr. Truman.

If things keep going as they have been, the same dollar which now gets you about 15 eggs, should buy you two, or perhaps three eggs, in the year 2000.

And so on with the other items—meat, bread, milk, clothing, building materials, household furnishings, and all the rest.

That is what is happening. The high-taxing and loose-spending program in Washington, is mainly responsible.

Let me paint the picture for you another way.

Millions of Americans own Government savings bonds. Undoubtedly many of you listening to me now went to the bank or the post office in January 1940, and purchased a baby bond for $18.75. The Government promised that if you held your bond for 10 years it would pay you $25—a good, sound, investment.

This month you redeemed your bond and received the $25 in cash as promised. In other words, your money increased by $6.25.

But did your money really increase in value?

The answer, I regret to say, is "No."

It actually decreased.

You can buy less goods with $25 today then you could with $18.75 back in January 1940. You can buy fewer eggs, less butter, less meat, less clothing.

This means that you lent the money to the Government, did without it for 10 years, and what the Government gave you in return had less real purchasing value than the money you lent in the first place.

That is what comes from depreciating the value of the dollar—from inflation.

In our State of Pennsylvania, many elderly, retired people depend upon fixed incomes. They live on pensions or annuities purchased with dollars which had the real buying power of 10, 15, and 20 years ago.

Today those dollars buy only half as much as the aged expected when they invested their savings.

The devaluation of your money, coupled with high taxes and deficit spending in times of great prosperity, can have only one end. It can only weaken America at a time when our country needs to be strong.

The President tells you that it is necessary for the Government to go into the red in years of greatest prosperity when we should be reducing our debt. He says he is

UNIVERSITY OF MICHIGAN LIBRARIES

doing it for national defense and to buy prosperity for the western European nations.

He says what he is doing will win the cold war for us and that it will prevent any shooting war.

On the contrary, we are not discouraging the Communists; we are doing exactly what they want us to do. Many of you remember that Lenin and other philosophers of communism predicted that the United States would spend itself into destruction.

The Russians work hard to create situations which stampede our Government into spending beyond its means. Thus, in years of prosperity and dollar income greater than anything we ever had before the war, we are going five, and five and one-half billions a year into the red.

This heavy drain on the resources and productivity of our people must make us progressively weaker.

Any businessman can understand this. Any businessman knows that in good years he must reduce his business debt and set aside a surplus to meet emergencies. He knows that if he operates in the red during the years of good business, he must surely go out of business in bad times.

Any housewife understands it. She knows she must save money when her husband has a good job at good wages.

That is elementary economics.

Everybody seems to know it but the administration in Washington.

This administration is merely building up new spending programs, which mean more deficit financing, more taxation, and further depreciation in the purchasing power of your dollar.

It is pushing forward more of what has been described as foot-in-the-door spending. That kind of spending program doesn't cost too much the first year. But thereafter, year after year, the bills mount sharply.

Let me call attention to just a few of these.

Mr. Truman calls for a National Science Foundation which would cost only $400,000 the first year. Very inexpensive. But the cost builds up so that eventually the annual outlays will exceed a hundred million dollars.

Another Truman proposal is for the St. Lawrence seaway which would be so destructive to the important port of Philadelphia and to much of Pennsylvania's business. This calls for a Government outlay of only $4,000,000 the first year. Then it shoots up to a minimum of eighty-two millions annually for the next 7 years.

There is the controversial Federal-aid-to-education bill, under which Pennsylvania would be taxed to support schools in other States. The first year it will cost you $290,000,000. But that is just a start. Experts estimate that the annual cost will mount to close to $2,000,000,000 in a relatively few years.

One fancy foot-in-the-door proposal is the Brannan plan of agricultural support. This one is the most dangerous of all. The administration does not even dare to estimate publicly what that will cost. But other official sources have figured that the bill will be several billion dollars a year.

These are all new programs. They are all inflationary. They will all affect the value of your dollars.

What shall we do to curb the policy of spending and spending which has lessened the value of your money and which threatens to make your dollars worth even less in the future?

A number of different approaches have been suggested here in Washington. I commend them for your consideration. I suggest that you let your Members of Congress know how you feel about them.

In my opinion, each of them will serve a useful purpose in getting the Nation's spending policy back to an even level, to the kind of stability which will make your dollars buy at least as much food and clothing next year and the year after as they can purchase now.

One suggestion has come from several Members of Congress. It is to have a single appropriation bill. This would enable Members of Congress who vote these appropriations to see the entire spending picture in detail and to make cuts intelligently and fairly.

I wonder how many people realize that now the administration departments send their spending requests to Congress one at a time. Thus, we have a situation where money for some departments is voted through before Congress has even seen what other departments need.

This is poor business policy. But that is the way we have been required to legislate in Washington.

Congressman JOSEPH W. MARTIN, the Republican leader of the House, has appointed a committee to put a price tag, as he expresses it, on all new spending proposals. This committee will study all bills providing for new spending. It will seek to determine what they will cost the taxpayers.

By pointing out that some things will cost more than believed, and much more than they are worth, the committee may halt such proposals.

Now let me call your attention to the suggestion of Mr. Daniel W. Bell. Mr. Bell was Budget Director under President Roosevelt for 5 years. Then for six more years he served under Mr. Roosevelt and then Mr. Truman as Under Secretary of the Treasury.

Mr. Bell, let me add, was a career man in Government who started in the Treasury Department in 1911 as stenographer and then bookkeeper. From that humble beginning he worked himself up to the high positions he held in the Roosevelt and Truman administrations.

So I think you will realize that he talks with authority and with considerable friendliness toward the administration.

In a very recent speech he suggested that there should be no new Government spending for the next 2 years. He suggested that the Federal Government should not take on any new functions and that it should not expand any of its present functions.

During this period of moratorium, he added, Congress should look over what has been done. It should correct mistakes of the past and tighten up the machinery of Government.

Congress should, in a word, seek to create a condition of stability. It should halt the runaway spending which is causing inflation and is weakening the spending power of your dollars.

That is from Mr. Bell. It is one of the soundest proposals I have heard in a long time in Washington. It will protect your savings bonds, your bank accounts, your life insurance, and all forms of annuities and pensions.

It is a good thing to make yourself clear about that to your Congressmen.

This is ED MARTIN, speaking to you from the Nation's Capital. I will be with you again in 2 weeks. Thank you for your attention.

The All-American Conference Against Communism

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, January 30 (legislative day of Wednesday, January 4), 1950

Mr. MUNDT. Mr. President, yesterday in New York City there was launched a significant movement against communism by the All-American Conference Against Communism. I ask unanimous consent to have printed in the Appendix of the RECORD, at this point, some remarks of my own relative to the conference, the resolutions adopted by it, and also the report about the conference appearing in today's issue of the New York Times.

There being no objection, the statement, resolutions, and article were ordered to be printed in the RECORD, as follows:

NEW ORGANIZATION DEVELOPING FOR ALL-OUT FIGHT AGAINST COMMUNISM AND ITS RELATED COLLECTIVISTIC CONCEPTS

STATEMENT BY HON. KARL E. MUNDT, OF SOUTH DAKOTA

Mr. President, communism cannot be curtailed by conversation. Since communism is an international conspiracy which advances its creed by tightly organized units forming the nucleus of a whole matrix of cooperating front organizations it follows that it requires equal effort and equal organizational genius and gumption if America is to defeat the program of communism. As a consequence of the 2-day sessions of the All-American Conference Against Communism concluding yesterday in New York City it appears that at long last this country is to have an all-American, pro-American organization solidly enough supported and with tight enough cohesion among its cooperating associations and groups so that an effective program can be devised and promoted at the grass-roots level on a community-by-community basis to defeat the pagan poisons of the godless Communist conspiracy.

The American Legion takes the lead

The All-American Conference Against Communism on Saturday featured addresses by Lt. Gen. W. Bedell Smith, former United States Ambassador to Russia; George Sokolsky, syndicated columnist and foreign correspondent; Frank H. Gordon, assistant in Communist conspiracy prosecution; James B. Carey, national vice president of the CIO; Matthew Woll, national vice president of the A. F. of L.; and Hon. Jack B. Tenney, State senator of California. The opening address of the conference was delivered by George N. Craig, of Indiana, the national commander of the American Legion, under whose sponsorship this first All-American Conference Against Communism was conducted. At the banquet Saturday night, addresses were delivered by Msgr. Fulton J. Sheen and Rev. Daniel A. Poling.

Sunday morning's session, Mr. President, began with an all-faiths' religious service lead by Rabbi Benjamin Schultz, of New York City, Rev. Daniel A. Poling, of New York City, and Edward J. Carney, O. S. A., national chaplain of the American Legion. The concluding addresses of the conference were delivered by Dr. Francis L. Bacon, of the University of California, and by the present speaker, the junior Senator from the State of South Dakota. A press release containing a digest of my remarks is being inserted in the RECORD at the conclusion of this statement.

Mr. President, I am greatly fortified in my conviction this morning that communism is going to be turned back in America and that our citizens are going to reject the centralized political controls which so frequently precede and which so invariably accompany communism by the fact that out of that conference this last week end came some constructive, concrete action. A 17-member committee was appointed in conformity with resolutions adopted at the conclusion of the conference calling for another meeting within 90 days and authorizing this committee to prepare an agenda for the next meeting and to do the spade work preliminary to the creation of a permanent anti-Communist

central organization with a definite and detailed program of action to be undertaken not only at the community level but also at the State and National levels.

The resolutions adopted and the identity of the members of the committee will appear following this statement as a part of these remarks. It should be noted, however, that this 17-member committee brings into focus on this problem such varying but important groups as the CIO, the A. F. of L., the Chamber of Commerce, Lions International, the General Federation of Women's Clubs, the Business and Professional Women's Clubs, the National American Legion Auxiliary, the State legislatures, the Congress of the United States, and religious, and fraternal orders of significant size.

Mr. President, we can win against communism if we work at it but we must work as a team and every community in the land must put into action a program to protect the integrity and the formula of freedom of its own area. If any of you have further thoughts on what can be done by this about-to-be-created permanent national anticommunism organization, I hope you will send them to Commander George N. Craig of the American Legion, care of Legion Headquarters, Indianapolis, Ind., so we can bring to bear on this problem the best constructive thinking of us all. America has no more important problem before it today than to curtail communism abroad and to defeat it at home.

RESOLUTIONS AND STATEMENT ADOPTED AT ALL-AMERICAN CONFERENCE, NEW YORK CITY, JANUARY 29, 1950

The following statement was adopted by the first All-American Conference at its closing session as expressing the determination of the 60 participating national organizations to pool their efforts to stamp out communism:

"We, the officially designated representatives of 60 major national patriotic, religious, labor, business, civic, service, professional, educational, fraternal, veteran, and social organizations representing the overwhelming majority of the American people, assembled in the first All-American Conference in New York City, January 28, 29, 1950, under sponsorship of the American Legion to form a united front against a common enemy—world communism.

"We assembled as free Americans. We have the right and do assert it, to hold our own and perchance differing views and opinions on problems involving economic, educational, political, religious, and social issues. But here in New York, as free Americans all, we find ourselves in complete accord and agreement that:

"1. World communism is the greatest present threat to domestic security and peace on earth and that its No. 1 targets are God and our American way of life in the United States, the last—a great stronghold of undiluted human freedom.

"2. The steady infiltration of communism into our schools and colleges, into our press, radio, and screen, into our labor and business and into our Government itself has reached a stage where it constitutes an immediate, serious, and growing menace to the very existence of the America that we know and love.

"3. Communism, as practiced in the United States, is not an economic or political philosophy, but it is in fact a deliberate revolutionary conspiracy inspired, directed, and financed by an alien power. It seeks to accomplish the overthrow of our constitutional form of government through force and violence. It seeks to achieve its unholy end through deceit and lies, to divide our people through vicious propaganda, to set class against class, race against race, and creed against creed. It denies the existence of God, seeks to extirpate all forms of religion, and aims to set up the police state as the supreme authority: Now, therefore, be it

"*Resolved*, That the chairman of this All-American Conference, George N. Craig, national commander of the American Legion, be, and hereby is, directed to designate a committee representative of a cross-section of the organizations in attendance at this conference to formulate plans to stimulate and coordinate the efforts of the organizations here represented and others of like mind, to encourage and enlist active public interest in combating the infiltration, influence, and activities of the Communists and all other subversive elements and to act as a clearing house and information center, through which the various organizations may be informed and advised of the activities and experiences of other organizations, all upon the understanding that such committee shall recognize the full independence of the various organizations and shall not attempt to control or supervise them; and be it further

"*Resolved*, That another meeting of the All-American Conference shall be called by the commander of the American Legion within 90 days to establish a permanent pro-American, anticommunism, unified and cohesive organization."

This resolution was submitted to the All-American Conference by a special committee of the delegates, named by National Commander Craig of the American Legion. Members of the committee which drafted the statement and signed it follow:

Harry Reed, CIO, Washington, D. C., chairman.

Dr. Francis L. Bacon, college of education, University of California, Los Angeles, Calif.

Senator Karl E. Mundt, of South Dakota.

Mr. Don Belding, president of Freedoms Foundation, Valley Forge, Pa.

Paul Wamsley, Buffalo, N. Y., representing the National Education Association.

Hon. Jack B. Tenney, Los Angeles, Calif., State senator.

Alexander T. Wells, New York, N. Y., past international president of Lions International.

Miss Olive H. Huston, New York, N. Y., executive director, the National Federation of Business and Professional Women's Clubs, Inc.

The All-American Conference at its closing session on January 29, approved a report of a drafting committee representing a cross-section of the meeting, which recommended that a permanent united front against communism be established.

Upon this authority, National Commander George N. Craig of the American Legion, who presided over the conference, appointed a committee of 17 members for forming a permanent organization and fixing the place of the next meeting to be held within 90 days.

THE COMMITTEE FOR PERMANENT ORGANIZATION

Harry Read, CIO, Washington, D. C., chairman.

Dr. Francis L. Bacon, Westwood, Calif., UCLA College of Education.

Mr. Paul Wamsley, Buffalo, N. Y., National Education Association.

Hon. Jack B. Tenney, Los Angeles, Calif., California State senator.

Alexander T. Wells, New York, N. Y., past International Lions president.

Hon. Karl E. Mundt, United States Senator from South Dakota.

Miss Olive H. Huston, New York, N. Y., executive director, National Federation of Business and Professional Women's Clubs.

Mrs. Marie L. Sheehe, Rockford, Ill., national president of the American Legion Auxiliary.

Mrs. J. L. Blair Buck, Washington, D. C., president, General Federation of Women's Clubs.

Rabbi Benjamin Schultz, New York, N. Y., executive director, American Jewish League Against Communism, Inc.

Lewis Hines, Washington, D. C., Philadelphia, American Federation of Labor.

Rev. Daniel A. Poling, New York, N. Y., editor, the Christian Herald.

Rev. John F. Cronin, Washington, D. C., assistant director, Department of Social Action, National Catholic Welfare Conference.

Dr. Louis H. Bauer, Hempstead, N. Y., chairman of the board of trustees, the American Medical Association.

Jackson D. Holtz, Boston, Mass., B'nai B'rith.

Donald Marcellus, Washington, D. C., manager, northeastern division, United States Chamber of Commerce.

A representative, to be named, of the National Association for the Advancement of Colored People.

Mr. President, I now call attention to the press release containing a digest of the address I delivered yesterday to the concluding session of this first All-American Conference Against Communism:

PRESS REVIEW OF ADDRESS GIVEN BY HON. KARL E. MUNDT, OF SOUTH DAKOTA, BEFORE AMERICAN LEGION ALL-AMERICAN CONFERENCE

"Senator KARL E. MUNDT, Republican of South Dakota, in an address before the national All-American Conference sponsored by the American Legion, proposed that the 78 participating organizations form—under Legion leadership—a national phalanx-for-freedom.

"The Senator's address concluded the 2-day conference sponsored by the Legion's National Americanism Commission at the Hotel Astor which was called to develop a united national front against communism and subversion and to preserve the American way of life.

"Asked to appear on the program representing the viewpoint of Congress toward the challenge of communism and its related creeds, Senator MUNDT proposed the phalanx-for-freedom to coordinate the efforts of all groups desiring to do something practical and effective at the grass-roots level in helping to influence constructive State and National legislation.

"The Senator's talk was given before delegates from 78 national organizations who were invited to attend the conference by George N. Craig, national Legion commander.

"Senator MUNDT, who was a member of the House Committee on Un-American Activities under all four of the chairmen who have headed that group, told the conference that 'the battle to protect our Christian civilization, our American formula of freedom, and our established principles of private ownership and political independence calls for an all-out effort by God-fearing, loyal, and patriotic citizens of every race, class, and creed in this Republic.'

"The South Dakota solon, who served as acting chairman of the Un-American Committee at the discovery of the so-called pumpkin papers which led to the espionage activities of Whittaker Chambers and Alger Hiss, said to conference delegates that 'Victory in this fight against tyranny and the nationalization of both our economic and our political freedoms means as much to the farmer in his field, the workman in his shop, and the professional man in his office as it does to the big banker on the corner, the corporation president, or the very rich with their lush yachts and limousines.'

"He went on to say: 'In truth, this is a peoples' fight against a political plot to centralize our lives under the control of a few political overlords devoted to an alien creed and differing from the autocrats of ancient times only because they believe it is the Kremlin instead of the King that can do no wrong.

"'It is not alone the card-carrying Communist that we must guard against,' Senator MUNDT stated. He explained that 'we must be equally on the alert to restrain and defeat those who would give aid, comfort, and strength to the Communist cause by creating

UNIVERSITY OF MICHIGAN LIBRARIES

political monopolies in the field of economic, social, and political controls.'

"He pointed out these monopolies 'can then be taken over by a Communist cabal and thus deny freedom to the people by a coup d'état or a storming of the power centers without even giving the people an opportunity to beat back their power-hungry attempts by rejecting their blandishments at the polls.'

"The South Dakota Senator outlined a step-by-step, community-by-community program which he recommended for consideration and active promotion by the phalanx-for-freedom which he urged the conference to sponsor.

"He recommended sponsorship on a basis to include all organizations 'willing to devote time, energy, money, or talent to the hallowed cause of freedom and to the practical task of educating ourselves and our children to the importance of maintaining in America the irreducible concepts of freedom and independence which are essential if liberty is to thrive and tyranny be turned back at our outer gates and stamped out of our own backyards.'

"Senator MUNDT suggested a local action committee in every American city, town, and county, and his list of recommendations for activities to be sponsored and promoted by this phalanx-for-freedom included the following items:

"Legislative action: Support and enactment of national legislation requiring the registration of all Communist organizations and members, annual financial reports to Congress by all Communist groups, and specific statutory provisions denying Communists the privilege of Federal employment and punishing equally those who deceptively obtain such employment and those Federal officials who knowingly appoint Communists to office.

"Legislation should also be enacted denying Communists American passports to travel abroad, compelling them to identify clearly all literature sent through the mail and all radio programs as to their Communist source, and extending to at least 10 years the statute of limitations on all crimes against the security and defenses of the Government.

"Senator MUNDT also recommended that similar legislation be enacted by each State legislature in order that both Federal and State law-enforcement agencies would have authority to 'keep from the public pay roll those who would use their official positions to deny freedom to others and to sabotage the functions of political and economic freedoms in this country.'

"Community-action programs: Senator MUNDT recommended that a special short course on What's Right With America be added to the curriculum of every high school of America so that 'each high school graduate will clearly know the basic principles of freedom which have so long and so well provided us with a success formula in America which has been unrivaled and unequaled anywhere else in the world in any era of history.'

"The South Dakota Senator also recommended that every community have 1 week each year set aside for a community-wide program and educational observance to be labeled 'Know Your America Week.' Senator MUNDT recommended that the week's observance start with sermons in every church praising the good features about America and 'to thank God that the United States—with all of its deficiencies and with all its never-ending need for continued improvement—still offers every church of every creed a better opportunity to render its great service than any other country in the world offers to any church in Christendom.'

"Senator MUNDT also urged that there be oratorical and essay contests for school children on the theme 'What Makes America Great'; that there be window displays in the stores; exhibits in the exposition halls and public auditoriums; radio broadcasts, editorials, cartoons and newspaper features stressing the values of private ownership, individual initiative, free enterprise, political independence and the cherished freedoms guaranteed in our American Bill of Rights.

"The Senator further recommended that 'special motion pictures be made and displayed during this commemorative week and that street parades, public programs, pageants, posters and all other publicity and educational media be mobilized to the end that by Saturday night every citizen, old and young, rich or poor, can go to bed with a full realization and appreciation of the great privilege that is his in living in America and with a clear knowledge of how well he lives and how richly he is rewarded by comparison with similar citizens under any other creed or living in any other country in the world.'

"A third community objective of the phalanx-for-freedom movement Senator MUNDT proposed as being a continuing effort in every locality to 'project the dividends of freedom in increasing amounts to steadily expanding circles of citizens so that every individual in every community will grow more enthusiastic in his Americanism and more sturdy in his opposition to false and alien creeds by virtue of the fact that freedom is meaning more and more to him in terms of better living, better health, more security, greater opportunity, and a richer and fuller life.'

"Finally, Senator MUNDT recommended that every community 'maintain an outpost to stand guard against tyranny or trickery to make certain its flank in the global battle against communism and national socialism in any form is well-manned, alertly staffed, and adequately prepared so that those who would deceive our youth, betray our freedoms, and destroy our American success formula do not weasel their way into our schools, our church groups, our business, farming, labor, or professional organizations.'

"The Senator warned against allowing these persons to 'supply "packaged thinking" and "pink pills for mental usage" by our women's clubs, our youth groups, or other organizations of any kind.'

"Senator MUNDT recommended exposure in the community itself by alert and active citizens as an effective way to defeat the Communist agitators and propagandists 'since I am convinced that 90 percent of all our Americans of every political party, race, creed, color, and locality would reject the pagan poisons of the Communist conspiracy and its odd assortment of fellow-travelers, witness dupes, and sentimental soulmates if once the true identity and purposes of this army of alien-minded organizations and individuals was exposed to the light of day and the relentless rejoinders of public opinion and patriotic citizens.'

"Included on the speaking program for the All-American Conference with Senator Mundt were: Gen. W. Bedell Smith, former United States Ambassador to Moscow; George Sokolsky, noted columnist and former Moscow correspondent of the New York Times; James B. Carey, of the CIO; Matthew Woll, of the A. F. of L.; Msgr. Fulton J. Sheen, Rev. Daniel A. Poling, and Frank R. Gordon, assistant Federal prosecutor in the successful trial resulting in conviction of 11 Communists in the United States."

Finally, Mr. President, I call the attention of the Senate to the news article in this morning's issue of the New York Times on this important conference. William R. Conklin of the New York Times covered the conference in detail and his news report appearing in today's issue summarizes its program and its purposes.

GROUPS WITH 50,000,000 MEMBERS UNITE TO COMBAT UNITED STATES COMMUNISM—PERMANENT BODY, SPONSORED BY THE LEGION, IS COMPOSED OF CIVIC, LABOR, BUSINESS, PROFESSIONAL, AND RELIGIOUS ELEMENTS

(By William R. Conklin)

Representatives of national organizations with a combined membership of 50,000,000 voted unanimously yesterday to establish a permanent organization to combat communism in the United States.

The action was taken on the closing day of a 2-day All-American Conference at the Astor Hotel sponsored by the American Legion. George N. Craig, national commander of the Legion, stressed the role of religion in the fight on communism and invited all loyal Americans to join in. He named a 17-member Nation-wide steering committee to direct the anti-Communist drive.

Before the conferees set up their permanent committee Senator KARL E. MUNDT, of South Dakota, told them that Russia could "knock out the United States in 90 seconds" with atomic bombs. Discussing Communist infiltration of the Federal Government, he said:

"Since Yalta, 151 Communists and fellow-travelers have been fired from the State Department, and the distressing thing is that not one of them ever spent a day in jail."

RESOLUTIONS BLASTS CONSPIRACY

In their resolution the 100 conferees said:

"World communism is the greatest present threat to domestic security and peace on earth, and its No. 1 target are God and our American way of life.

"The steady infiltration of communism into our schools and colleges, into our press, radio and screen, into our labor and business, and into our Government itself, constitutes an immediate, serious, and growing menace to the very existence of America.

"Communism as practiced in the United States is not an economic or a political philosophy, but is in fact a deliberate revolutionary conspiracy inspired, directed, and financed by an alien power.

"Communism seeks to overthrow our constitutional form of government through force and violence. It seeks to achieve its unholy end through deceit and lies, to divide our people through vicious propaganda, to set class against class, race against race, and creed against creed.

"It denies the existence of God, seeks to extirpate all forms of religion and aims to set up the police state as the supreme authority."

CIO MAN IN EXECUTIVE POST

Harry Read of the Congress of Industrial Organizations was chairman of the resolutions committee. Other members included Don Belding, president of Freedoms Foundation in Los Angeles; Dr. Francis L. Bacon of the University of California in Los Angeles; Paul Wamsley, of Buffalo, of the National Education Association; State Senator Jack B. Tenney, of California; Alexander T. Wells, of New York, past president of Lions International; and Miss Olive H. Huston, of New York, executive director of the National Federation of Business and Professional Women's Clubs, Inc.

The permanent committee named by Commander Craig has Mr. Read as chairman. Mr. Craig appointed Dr. Bacon, Mr. Wamsley, Senator Tenney, Mr. Wells, and Miss Huston as members.

Other members are: Senator Mundt, Mrs. Marie Sheehe, national president of the American Legion Auxiliary; Mrs. J. L. Blair Buck, president of the General Federation of Women's Clubs; Rabbi Benjamin Schultz, director of the American Jewish League Against Communism; Lewis G. Hines of the American Federation of Labor; the Reverend Daniel A. Poling, the Reverend J. Francis Cronin of the National Catholic Welfare Federation; Dr. Louis H. Bauer, American Med-

ical Association; Donald Marcellus of the United States Chamber of Commerce, and Jackson Holtz of B'nai B'rith.

Another committee member is to be designated by the National Association for the Advancement of Colored People, which was not represented at the conference.

Under the resolution the committee recognizes the full independence of various organizations and will not attempt to control or supervise them.

MUNDT CALLS FOR ACTION

Senator MUNDT proposed a phalanx-for-freedom movement to coordinate the anti-Communist campaign.

"We live in a world where Russia is stockpiling atom bombs which, in effect, could be labeled 'Made for the U. S. A.'," he declared. "If dropped on 25 or 30 major cities, they could knock out the United States in 90 seconds. This country is blandly permitting Russia to build up its bomb stock piles, and we are doing nothing more than mildly deploring it."

As practical steps Mr. MUNDT recommended Federal legislation to compel Communists to register with the Attorney General and to identify their literature.

He said this legislation should deny Federal employment to Communists and should punish superiors who hired them knowingly. He urged the conferees to support the Mundt-Ferguson-Johnston bill now before the Senate Judiciary Committee.

"The bill will pass in the House, as it did in the Eightieth Congress" Senator MUNDT said. "Whether or not President Truman will sign it, I don't know. I suppose it depends on what he hears from Dean Acheson. But hiring a Communist in the Federal Government is like hiring a kidnaper as a baby-sitter."

Mr. MUNDT also recommended regular community programs to emphasize the benefits of American life and a special week each year devoted to Americanism.

"If a functional organization is developed here, this meeting may go down in history as one as important as the tea party given in Boston many years ago," he added.

Dr. Bacon, faculty member of College of Education in the University of California, discussed Communist infiltration of American colleges and universities. He said the country spent less than 3 percent of its national budget on education last year and called for increased appropriations in that field.

Assistance to Small Business Enterprise

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, January 30 (legislative day of Wednesday, January 4), 1950

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the junior Senator from Connecticut [Mr. BENTON] at the annual banquet of the Norwich (Conn.) Chamber of Commerce. In his address the Senator from Connecticut very ably discussed the problems of independent business enterprises, and made specific recommendations for necessary legislation which I think were very enlightening, and which should be very helpful to the Congress.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am told by my congressional colleague, Mrs. WOODHOUSE, that crossing the Connecticut River into eastern Connecticut is like scaling the Great Divide. On my side, the side where the sun sets, is a darkly mysterious civilization of commuters, station wagons, and advertising men. We have replanted our forests with factory chimneys and our land has been tilled into golf courses. Our sons go to Yale, our wives go to art school, and our towns go solidly Republican.

It goes without saying, of course, that none of this has been applied to me. Today I crossed the Rubicon at Hartford with no challenge whatsoever after I had paid my head tax of a dime. And as I rode into the clear air and broad meadows of your countryside I felt not unlike the returning prodigal son.

Not far from here, up in Tolland, are the gravestones of many generations of Bentons. These eastern Connecticut Bentons never were corrupted by money. My mother, who was not born a Benton, says it was because the Bentons couldn't find any in Connecticut that my father ended up in Minnesota. He didn't find much there, either.

The Bentons were Congregational ministers, school teachers, and farmers. I never see the rows and rows of stone fences that are so characteristic of Connecticut without marveling at these folks, and those like them, who scratched a living from this rugged farmland. The monuments of their determination, I often suspect, will outlast the Travelers' Tower or the Merritt Parkway.

They were little people and humble, too. They attached no importance or significance to their way of life. They had to work too hard just to live. But their lives, nevertheless, were eloquent expressions of independence.

This is a point worth recalling tonight before this audience of eastern Connecticut businessmen because the independent, small-business man today is a builder of stone walls in our modern economy. It is about him that I shall talk tonight. He represents the leadership and initiative which have helped this country survive the cold winters of depression and war. Independent small business is the core of our Connecticut community life.

It is a matter of record that over 90 percent of the 4,000,000 business enterprises in this country have fewer than 50 employees. It is also a matter of record that the thinking segment of this huge proportion of our business community feels itself in danger. The independent, small-business man in many respects is the "forgotten man" of this mid-century decade in our national history. He is in danger of a squeeze play that may deprive him of his independence as well as his profits.

On one side, the independent manufacturer, retailer, and serviceman must wage a continual battle for survival against his larger, more powerful competitors. It is true that the keen independent keeps bigger business on its toes by developing new products, improved designs, and advanced methods of sale and distribution. It is also true that as fast as some good independent demonstrates this kind of spunk all too often a bigger fellow comes along and gobbles him up.

The business which is independent and big is not a problem. Unhappily, there are all too few of these in the sense in which I use the word "independent." The real problem is how we can protect and promote the business which is independent and small. The independent business, big and small, is the business which supplies the yeast in our economy. It is the one which continues to provide the competition which gives to our economy the freedom of which we boast. It is the one which we should foster as a matter of national policy.

There is more than one way to collectivize an economy. It can be done by force from without, as we have seen with Czechoslovakia. It can be done by tyrants from within, as Hitler learned from Mussolini. But it can also come through business monopoly practices within any country or any economy. Such practices are the foe of enterprise and of new and independent business. They are a most important part of the problem today in England—and the Labor government can hardly be held responsible for the decline of competition in England and the steady growth of monopolistic business practices over the last several decades.

I believe the English economy again demonstrates the need for the strict and fair enforcement of our antitrust laws. They are the best friend we have of free competition in the United States. They are the best friend of new and independent business. They are the friend and supporter of those who foster enterprise in our economy. They would be a still better friend if they were still further strengthened.

The independent, small-business man has grown to feel, not without reason, that his National Government has not always treated his problems with the attention and sympathy they deserve. You may recall the statement contained in the recent report of the President's Council of Economic Advisers. "The businessman believes," the Council says, "it is futile to influence public policy, because he is outnumbered by workers and farmers—and because he believes the Government counts, not thinks."

I recommend this report to your attention as well as the President's own economic message to Congress. They represent a significant, and encouraging, change of attitude toward the busness community at the highest level of national policy making. They are most cheering reports to those of us who have pioneered in the development of a more sympathetic understanding by Government of the problems of the business community in the preservation and strengthening of our free-enterprise system. The pioneering, I may say, has also included the development by business of some understanding of the problems and responsibilities of government; for our Government does, indeed, play a decisive role in the determination of the climate in which we as businessmen may thrive and prosper or wither and die. Some of us at least are more willing to admit this crucial and, indeed, indispensable role of business than we were a decade ago.

I like to think that I see in these two recent economic reports many of the ideas which Paul Hoffman, RALPH FLANDERS, and I helped to evolve when we helped organize the Committee for Economic Development, ideas with which many of you must be familiar. Here are a couple of samples contained in these most important documents which have just come from the administration. This is a new kind of language to encourage the independent businessman who believes in enterprise and competition. This isn't the language of the thirties. It is, gentlemen, the language of the fifties. I commend it to the business community. This is from the report of the Council of Economic Advisers:

1. "During the depression years a significant body of thought held that the forces of business expansion had spent themselves and that Government must provide the dynamic force for renewed growth * * * today the doctrine of secular stagnation has been replaced by the firm conviction that our business system, and with it our whole economy, can and should continue to grow."

UNIVERSITY OF MICHIGAN LIBRARIES

And again:

"The new generation of Americans should always remember that the depression breakdown resulted from errors on the part of both Government and business; that both joined in forging some of the most practical measures for recovery; and that both must admit imperfection because the recovery was incomplete until the war restored maximum production and employment."

Quoting the President:

"This effective teamwork between free enterprise and Government confounded the enemies of freedom, who waited eagerly during 1949 for the collapse of the American economy. * * * Our economy can and must continue to grow! * * * The enterprise and imagination of private businessmen will be a crucial factor in achieving the upward growth of which our economy is capable."

As one Washington reporter put it, "The fire-eating, dragon-slaying approach to business of 10 years ago has been replaced by a concept of government in the role of facilitating and promoting business expansion and welfare."

I think you will agree with me that this is a most sound and healthy development. Further, it is one reason I am optimistic about that future. We have come a long ways, even though we still have much to learn about the proper role of government in our economy. (This is a subject to which I shall dedicate myself in some other speech.)

It is fair to say, I think, that there is usually far less proportional risk and boldness involved in operating our largest capital enterprises than, for example, in opening a new tavern, a new drugstore or laundry, or in launching a new product on the market. The risks to the men who strike out on their own, and how better to guard against some of them, are of vital concern not only to them but to the rest of us as well.

The President of one of our largest steel companies once told me of his experience with the most promising young man in the senior class of a great eastern university.

"Although they were all eager to work for us," he said, "we discovered that they were not so much interested in the steel business as in the security offered by a big company. They didn't mind starting at the bottom of the ladder, but they wanted someone else to hold the ladder."

In a recent issue of Life magazine (and I know you will not attach any political significance to the fact that I subscribe to a Luce publication) the young cartoonist Bill Mauldin cited a poll of 150,000 college graduates in the class of 1949. The poll showed that only 2 percent had any desire to go into business on their own.

"The fact is," says Mr. Mauldin, "that most people would rather work for a steady salary. They can depend on it, plan on it, and turn their attention to things that interest them more than their jobs."

Bill Mauldin may be right. But 5 years ago I wrote a short article for Reader's Digest called Young Man, Be Your Own Boss. After that article was published I received 5,000 letters and 400 telegrams. I have never written an article or made a speech which struck a chord anywhere nearly so responsive. And I continue to believe that there is no economic opportunity which offers such rewards in the form of personal growth and personal satisfaction as starting one's own independent business.

I do not mean to imply that there is anything ignoble about the aspirations of our young people to secure the protection for themselves and their families often offered by the big companies. All of us have always feared the economic hazards of old age and death. Young people have always wanted protection against these hazards. It is only recently, however, that they think they can get the protection. If I had thought I could get it 30 years ago, when I graduated from Yale, I am not one to claim that my own career might not have been quite different. Alas and alack, I might indeed have stayed with that $100-a-month job in the National City Bank.

You may guess from this that I firmly believe in the principle of what we loosely call social security. I believe that some form of assured security income is essential to the sustained welfare, freedom, and dignity of the American citizen.

How can we give the social security which our people want—and which our young people seek—without forcing them into the big companies in order to get it? It is in their interest to step out on their own—to provide enterprise and competition in our economy—to develop new products and new services. Yes, it is in their interest. Even more, it is in the interest of all of us.

I have reached the opinion that our small independent businessman is not only entitled as much as anyone else in our society to the protection offered by social-security laws, but that it is even more important to the rest of us that we have it.

In the last analysis, the security of every individual depends on the success of industry and agriculture in producing an increasing flow of goods and services. Without this increasing flow, an adequate social-security program would bankrupt us all. A system of security insurance for the small-business man will reinforce this drive toward greater production and maximum economic progress. It will encourage him to get going, and it will support him and keep him going in the inevitable days of discouragement. It should indeed cut down on the terrible mortality rate in the small business community.

There is now a bill before the Senate Finance Committee which would extend the Social Security Act to cover about 4,500,000 self-employed, independent, small-business men—storekeepers, retailers, garagemen, contractors, taxicab owners, and insurance brokers. I endorse the principle of extending this protection to the man who has the pride and the ambition to work for himself. By extending it, we shall get more such men.

Complete security, however—like happiness—is not to be had for the asking. More often than not, it is simply the byproduct of some other goal. We do not always find happiness just by searching for it. Similarly we rarely feel secure when we seek only to avoid taking risks.

The Yankee peddlers who trudged out of this State into the wilderness of the American backwoods were drawn by a sense of adventure as well as mere dollars and cents. It might be said they took what our military men would call a calculated risk when they left a sharpshooting, frontier housewife with a supply of wooden nutmegs.

In recent years, it seems to me, Government policy has overburdened small business with an unfair proportion of uncalculated risk in relation to the possibilities of profit. Social-security protection only goes part way toward converting the uncalculated into a reasonable calculation.

I do not think that it was either fair or prudent to retain in peacetime the high rate of excise taxes which were imposed during the war to curtail production in certain areas. These taxes have seriously reduced the volume of business in many lines of retail trade and have caused unemployment in several different kinds of New England industry—in many independent, small businesses of the kind I have been talking about tonight.

The President has now recommended reductions. I concur in this policy, and I look forward hopefully to the eventual elimination of all excise taxes except those on liquor, gasoline, and tobacco.

In his tax message this week the President also recommended the removal of the so-called notch tax on small-business income between twenty-five and fifty thousand dollars a year. The rate is now 53 percent, whereas on General Motors $500,000,000 profit it is only 38 percent. This is manifestly absurd as well as unjust.

The President has also proposed an increase from 2 to 5 years in which losses can be carried over and deducted from profits. I regard this as much more important than the removal of the notch tax. An enterprising new business very often loses money for several years and should have a better chance to get it back again before the taxes begin. Most new businesses are struggling, and it is a rare one which goes quickly into the black.

These two tax measures have been recommended by the Committee for Economic Development. Now the President has urged them on the Congress, they should be enacted promptly. I do not favor holding them up for a general tax review or for any other purpose.

In his economic message the President promised that he would recommend a program for encouraging private financial institutions to furnish small business with equity capital.

There are grave dangers inherent in direct loans and subsidies from Government to business. But I believe the powers of our Federal Reserve System can justly be used to stimulate and educate our commercial banks to better serve the needs of small business. This is a matter of highest importance. I know. I've been to the banks too many times.

The Senate is again studying the possibility of establishing a standing or a special committee on small business. Such a committee would study and investigate a sound program to foster and safeguard the place of independent, small business in the American economy.

Such a committee might study, for example, whether or not small business in obtaining its fair share of basic materials or if the prices it pays for these materials are equitable in comparison to those charged to large competitors. How can the morass of laws affecting business be consolidated and clarified and simplified so that a small-business man can understand them without wasting his substance on high-priced lawyers? What are the special labor problems of small business? What studies by Government or by universities can lead to better business methods in such areas as marketing or accounting? What can the Department of Commerce legitimately do? Should the development of State departments of commerce be encouraged? What about right here in Connecticut? Do our Government procurement agencies sufficiently include small business in their purchasing programs? Is American small business properly represented abroad by our consular services, and is it participating fully in our foreign-aid programs?

More important than the establishment of such a committee is the prompt action by present legislative committees on needed legislation. We don't need more propaganda. What we do need is more action. Congress through its present committees should also press for action from the laggard and reluctant executive departments.

When we talk about small business we are talking about the firms that employ 65 percent of all commercial and industrial wage earners and produce 45 percent of our entire industrial output.

As the CED's own report put it nearly 2 years ago:

When we talk about small business we are, in effect, talking about the American business system.

When we talk about small business we are, in effect, talking about the peace of the world, because this now depends on a strong and prosperous United States, which in turn

depends on our business system. When we talk about small business we are talking about our American goal of equality of opportunity for every individual and for every type and size of business.

Such equality of opportunity is vital in preserving a healthy, growing, and productive system of business enterprise, and, by the same token, in preserving the well-being of this country. More important, it is vital to remember that independent, small business produces men as well as goods. The fabric of American life is held together by the local businessman who knows his community, has a personal stake in it, and is eager to make that community a better place in which to work and live.

Address by Hon. Edward Martin, of Pennsylvania, at Concert by the Army Band

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, January 30 (legislative day of Wednesday, January 4), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD remarks made by me at a concert given by the Army Band in honor of Pennsylvania, under the auspices of the Sesquicentennial Commission of the District of Columbia, on Wednesday, January 25, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Boykin and my fellow Americans, I am deeply grateful for the honor conferred upon the Commonwealth of Pennsylvania in the splendid program we are enjoying so much tonight.

I welcome this opportunity to bring you most cordial and friendly greetings from the people of Pennsylvania. It is a real pleasure to express to you their sincere thanks and appreciation of this notable event.

In the magnificent structure of the States of the Union, Pennsylvania holds a place of pre-eminence. It has been rightfully called the keystone in the arch of the American Republic.

Pennsylvania is the birthplace of American independence. Its leadership for human rights, equal justice, and freedom of the individual had its beginnings 250 years ago—under the guidance of William Penn.

In establishing his holy experiment in government, the founder of Pennsylvania recognized social, political, and religious freedom as God's greatest blessing upon mankind.

Within the boundaries of Pennsylvania were framed and adopted two immortal documents of freedom—the Declaration of Independence and the Constitution of the United States.

Upon its soil patriots and heroes gave their lives in battle that men might be free. Fort Necessity—scene of Washington's first command—Brandywine, Germantown, and Valley Forge are shrines of patriotic inspiration.

Gettysburg—where the Union was preserved—is a monument to the valor of gallant men of the North and the South.

Pennsylvania is justly proud that three of its cities—Philadelphia, York, and Lancaster—have been Capitals of the United States.

Yes, Pennsylvania is rich in historic association with the glories of America.

Its tradition of faith in God, tolerance, and good will has been strengthened through the years by work, self-reliance, sacrifice, and loyalty to the principles of true Americanism.

Those qualities are so important today when evil forces work ceaselessly to undermine and corrupt our system of individual freedom.

Above all else we must be courageous and vigilant to protect and safeguard our precious heritage and all that we hold sacred.

Again I thank you on behalf of the people of Pennsylvania.

The Crisis in the Displaced-Persons Program

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, January 30 (legislative day of Wednesday, January 4), 1950

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by the Honorable Harry N. Rosenfield, Commissioner of the Displaced Persons Commission, on January 15, 1950, at the Hotel Astor, New York City, at a gathering of the United Service for New Americans, Inc., a fine organization dedicated to the education and adjustment of immigrants to Americanism and to life in America. It is an extremely thoughtful and provocative address, and discusses the operation of the Displaced Persons Act and its inadequacies. I hope every Member of the Senate will have occasion to read this address prior to the consideration of H. R. 4567 and the amendments proposed by the Senate Judiciary Committee.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CRISIS IN THE DISPLACED-PERSONS PROGRAM

One of the obligations of public office is the duty to keep the people informed upon the progress of public programs. Having just returned from a 2 months' trip of inspection of the Commission's operations overseas, perhaps I can speak with some more intimate knowledge of developments which affect the success of the displaced-persons program.

There are three crises, not one, which jeopardize the successful completion of the job started by the people of the United States when the Displaced Persons Act of 1948 was enacted:

Crisis 1: The brazen and deliberate effort being made in some quarters to besmirch the displaced persons and the displaced persons program, on the basis of alleged facts which an objective investigation would show either to be untruthful or completely warped out of significant proportions;

Crisis 2: The vicious and cruel effects which the present discriminatory and unfair law causes to innocent and helpless displaced persons who are caught by the law's spider web of arbitrary and capricious restrictions and limitations;

Crisis 3: The unhumane and callous disregard exhibited by some people toward the quarter million IRO displaced persons who will be left in the displaced-persons camps and areas on June 30, 1950, if the present law is not liberalized and extended.

The first crisis touches upon the very fundamentals of a democratic society, the right of the people to have the facts, unvarnished by personal prejudice. The Displaced Persons Commission has consistently sought to provide the people with full and accurate information, through the statutory method of its semiannual reports to the President and the Congress, through the normal and customary channels of appearing in public hearings before committees of the Senate and the House of Representatives, and through national and regional meetings with State commissions and voluntary agencies. It is perhaps well to point out that despite the majority vote in the full Committee on the Judiciary of the Senate for action last year, the Senate subcommittee which has been considering this program's operations for over 1 year and which has called people into hearings from all parts of the country, has never once given the Displaced Persons Commission the opportunity to state its side of the story in public hearings.

There have been reckless and false charges leveled against the displaced-persons operation which affect not only the Displaced Persons Commission, but a whole coordinated team of hard-working, loyal, and patriotic Americans in and out of Government. You must remember that the Displaced Persons Commission is only one part of the administration of the displaced-persons law; the Counter Intelligence of the United States Army, the Foreign Service of the State Department, the Federal Bureau of Investigation, the Public Health Service, and the Immigration and Naturalization Service, on the Government side, as well as America's most distinguished voluntary agencies, which render so signal a role in our national life in war and in peace, are all part and parcel of the administration of this law. Charges of dishonesty, maladministration, and fraud affect all of these agencies as well as the Displaced Persons Commission.

One of the techniques employed by these crisis makers is to utter broad and unspecified charges of wholesale and willful corruption, maladministration—and even disloyalty to our country—which produce a prompt and categorical denial. Then a very few isolated cases are alleged though they are the exceptions and not the rule, to discredit the denial and presumably support the original broadsides. If the isolated cases had been presented along with the original charges it would be like saying everything stinks by pointing to an onion.

What are some of these unfounded charges? First, it is alleged that the gates are down for subversives to enter the United States under the program. There has been such loose talk before, and the Displaced Persons Commission has never been able to get specific cases. Take, for example, the most recent outbursts in this vein; did you see any cases mentioned? If there is anything to the claim, why cannot it be documented? The answer is simply that it is not true. Has the FBI complained that the program is bringing in subversives? No. Has the Attorney General made any such charge? No. Has the CIC of the United States Army (which is responsible for security screening overseas) made any such charge? No; and they know what they are talking about, since all these agencies are engaged in the actual process of security screening.

The fact is that the Displaced Persons Commission has instituted the most comprehensive and thorough security screening ever organized in any immigration program in American history, and that this program is in addition to the normal security screening by the consular service and the Immigration and Naturalization Service, which

UNIVERSITY OF MICHIGAN LIBRARIES

prevails in this program as in normal immigration. In fact, informed and responsible observers overseas, including one of our veteran consul generals, complained to me in Europe that the Commission's security screening was too rigid and caused too much of a slow-down in the arrival of displaced persons in the United States.

Another phony charge is that the program has been riddled by false documents. This, too, is untrue. In any program of this size, and you must bear in mind that over 130,000 visas have already been issued, which means many more cases examined, since 30–35 percent of all cases are rejected or disqualified, there are bound to be some examples of false documents. But the fact is that we are catching such efforts. Apparently, the situation is something like this: if we catch some false documents, that proves that the whole program is riddled with them; if we don't catch them, that proves it too. Thus far some 10 cases of false documents have been alleged, in a program in which over 130,000 visas have been issued. Doesn't that sound like a pretty good batting average to you?

Still another trumped-up claim is that the coordinated team of Government and private agencies have been violating the law. This is merely another example of the loose talk in which some people have been indulging. Again you will look in vain for particulars, for details, for examples, for cases. It's talk, more talk, and more talk. Let me give you an example. At a public hearing in the Senate a claim was made on September 1, 1949, in this same general vein. I officially and respectfully demanded proof and documentation. Receiving none, I wrote to the Senate committee on September 7, reiterating my demand for proof. Today is January 15, 1950, 4½ months after the claim, and we have not yet received one iota of proof, or detail, or even an acknowledgment of my letter. I believe any reasonable jury would come to the conclusion that there is not one scintilla of evidence to substantiate the phony claim. I said then, and I repeat now, that any public official, whether he be in the legislative or the executive branch, commits a breach of public trust if he willfully conceals evidence which he believes would enable a Government agency to prevent or discontinue a violation of law. I can only come to the conclusion that the charge is as unfounded now as it was 4½ months ago. The Commission is always ready to rectify mistakes. We are not perfect. No human agency is. But the Commission always stands ready to investigate any alleged irregularity and cause swift correction if the allegation is proved to be true. Wouldn't you think it strange if people claim to have proof of such irregularities and deliberately conceal it, and thereby prevent corrections, for 4½ months, and—in a more recent incident—for 1 year? Is it not fair to assume that such people themselves do not trust the reliability of the alleged information?

Other similarly baseless charges have been made. I want to be understood quite clearly. I am not saying that the people who have made these charges are telling lies, but rather that in many cases they have been deceived by purported evidence which would have been proved groundless had they taken the trouble to investigate such claims. Perhaps, however, some people are so anxious for the wish to become the thought that they prefer not to check the reliability of so-called info-mation conveyed to them.

I might add at this point that part of the campaign which seems to be building up against the Commission—as a means of discrediting displaced persons—is to seek to isolate one member of the Commission by engaging in a personal vendetta with him and exchanging recriminations. This is not a personal feud but a question of broad public policy. We on the Commission—all three of us—all hope that this discussion can be restored to the high level which the importance of the subject deserves. No one of us ever intended it should be otherwise.

CRISIS 2

Of a different character, but somewhat in the same tone is the second crisis, which arises out of the vicious and cruel results of the present discriminatory and unfair law which is causing thousands of people to wait needlessly for visas.

Under the law, 30 percent of all visas must be issued to people who not only are coming to farm jobs here but held such jobs previously. Unfortunately, the American people have not been asking for farmers in the proportion of 30 to 70 percent, at a time which would make it possible for the maintenance of an even operation. The major farm organizations have shown steadfast approval of the displaced-persons program, as such, and displaced persons have been making great contributions to our agricultural economy. But, as you know, farm labor is hired at given times in the year, varying with different areas of the country. The Commission informed the Congress that if this provision remained in the law, it would cause an almost catastrophic drop in our shipping, and a consequent serious decline in the number of people coming into the United States. Some Members of the Senate thought we were kidding them, but let the facts talk for themselves. Prior to the institution of controls to achieve the 30-percent ratio, the consuls were issuing visas at an average of between 3,000 to 3,500 per week with a high of 4,400 visas in 1 week. Last week it was only 879 visas. Prior to the institution of these arbitrary controls required by the law, we reached a shipping schedule of 15,000 and 16,000 persons per month. Now we shall have difficulty in maintaining an average of 6,000 per month for the next few months, and this we can do only because of an accumulated backlog developed prior to the arbitrary controls.

Today we are holding back almost 10,000 displaced persons, ready and anxious to be visaed, in order to achieve the 30-percent ratio. This number of people held back needlessly will increase by some 2,000 additional people each month. Why? Because the law says that 30 percent of all visas must go to farmers, and there aren't enough farmers being requested in the United States at this time of the year to reach that proportion. In other words, displaced persons who are being requested by Americans are being held back to await preferential treatment for displaced persons who have not yet been requested by Americans. As many as 20,000 displaced persons may be held up in this way.

This is a cruel effect of the law, and is completely inconsistent with the demands of the American people for the displaced persons being thus ruthlessly held back. I regret to have to tell you that if the present provision for 30 percent remains in the law there is a serious likelihood that, despite the availability of thousands upon thousands of fine assurances for fine displaced persons, the Displaced Persons Commission will not be able to comply with demands upon it to fill the full 205,000 authorized by the law.

CRISIS 3

One-quarter of a million International Refugee Organization displaced persons will remain stranded and deserted in Germany, Austria, and Italy on June 30, 1950—that is, if the present law is not extended and liberalized along the lines of H. R. 4567, which has already been passed by the House. We shall be sabotaging the task we started in the Displaced Persons Act of 1948, a solution of the IRO displaced-persons problem.

There are some people who will tell you that these people are hard-core cases and undesirable. That is not so. I just brought back with me from Geneva, IRO's headquarters, the most recent data. IRO estimates that on June 30, 1950, there will still be some 243,500 displaced persons in Germany, Austria, and Italy. And of this number, only 18,600 are expected to be hard-core cases. Apart from the human tragedy in this unfinished job, most of these displaced persons would still remain on our hands, since they will be the charges of the American occupation forces in Germany. Thus, we would be denying to Americans in the United States the opportunity to sponsor displaced persons whom they sorely need and still continuing a heavy and unnecessary financial burden to the American taxpayer by requiring these displaced persons to remain in these displaced-persons areas.

America hates a quitter. A job worth doing is worth finishing and doing well. This job finished will bring to the United States a larger number of highly desirable and useful persons. This job unfinished will only add fuel to the already serious crisis which exists in the displaced-persons areas.

The Displaced Persons Commission believes that the public should have all the facts. The three crises endanger the successful completion of one of the most magnificent international humanitarian ventures undertaken by this country. I heartily agree with the recent invitation issued to the American people by one of our distinguished Senators that the people express themselves on this problem. It is time now for the people who know the truth to speak their minds and make themselves heard in all parts of the land. If ever it were true that "knowledge is power," this is the time.

The people of the world are looking to the United States. Are we going to let them down? If we know the people of America, the answer will be: These crises are artificially created and must be stopped, and the displaced-persons program must be permitted to go on to a successful conclusion. I am convinced that the overwhelming sentiment of the people of the United States and of the Congress will not permit a small band of willful people, acting contrary to the best interests of the United States, to thwart the will of the American people to see this task completed in the noble American tradition which prompted its initiation.

Freedom Isn't Free

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, January 30 (legislative day of Wednesday, January 4), 1950

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very stirring and enlightening address delivered on January 20, 1950, at Knoxville, Tenn., by Mr. Maurice R. Franks, of Chicago. Mr. Franks is president of the National Labor-Management Foundation and editor of its official publication, Partners. His description of a Socialist is "one who has nothing, and is willing to divide it with everybody," or "a Communist with a haircut." The address is replete with many thought-provoking statements.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FREEDOM ISN'T FREE

Mr. Chairman, distinguished guests, ladies and gentlemen of Knoxville, I feel deeply honored to be with you tonight, and I am

grateful for this opportunity to speak to you on a subject of vital concern—vital to every man, woman, and child in these United States—yes, vital to our American way of life.

Now I wonder just what this audience would do were an abrupt announcement to be made over this same speaking system at this very moment that war No. 3 had just been declared. I venture to say that there wouldn't be many peaceful minds among us. Instinctively, our first thought would be as to the outcome. With stunned alarm we would wonder if our defenses were adequate to meet the onslaught. We would swiftly count the cost in men and money—and the greater cost of everything we would lose in the event of final defeat. For all of us would know very well that if we were to lose this war we would also lose at the final crack down all the liberties which presently belong to us as citizens of a free Nation. We would know that our very freedom was at stake.

All this would cross our minds in a single sickening flash if the news were suddenly to break in our ears that a new war had just been declared.

Well, ladies and gentlemen, that new war has been declared. We, the American people, are at war, and our present enemy is more ruthless, and I may add, more cunning than any other enemy we have yet encountered in our entire history. His weapons, by comparison, make the atomic bomb look like a cap pistol. For the atom bomb, when exploded, can destroy only a given area, a city, a certain spot of countryside—whereas our present enemy has devices which are capable of destroying our entire Nation overnight.

Now this may sound like a highly exaggerated statement, but I respectfully submit that it is nothing of the kind. For the target here is not a physical one. The target in our midst is the minds, not the bodies, nor the physical faculties of men—and a nation whose mind has been conquered will surely perish.

Who, then, are our opponents? Strange as it may seem, our immediate enemies are not the Communistic Russians, but a growing army of socialistically inclined Americans. These are the foes who are waging a dastardly war against the citizens of the United States and against everything our citizenship stands for. These are the enemies who are working day and night to wrest from us our most treasured possession—our freedom.

Indeed, the hour is one of great national crisis, and it is much later than many of us may think. The situation calls for some good hard knocks at our enemies, and I can think of no better group to do the job than this new organization, Fighters for Freedom. And, incidentally, I can think of no better place to get in some good hard knocks for our side than right here in Knoxville, Tenn.

We all in this country, especially we of the present generation, have become so accustomed to the American way of life that we make the easy assumption that the treasure of human freedom has always been ours to enjoy, and that it is by its very nature a permanent possession, one we don't have to fight to keep. To harbor such a notion is downright folly, for it is based upon anything but fact. The freedoms we enjoy today, and which are guaranteed us by the Bill of Rights of the Constitution of the United States, were not handed to our forefathers on a silver platter. A terrific price was paid for these freedoms. Our freedom was purchased by the blood of sacrifice, than which no greater price is possible. No, freedom isn't free. It didn't come to us as the result of a hand-out. Nor is it self-perpetuating. Let's keep that well in mind.

Freedom isn't free. It never was, and it never will be. It requires constant guardianship and a willingness to pay the price of eternal vigilance. This means that we of this generation must be awake to every threat and be prepared to fight off the array of forces which have arisen to deprive us of our most precious heritage—freedom.

THE ENEMY IS SOCIALISM

There is a great tendency these days to take the Socialist lightly, to set him down as a fair-haired child whose greatest sin is that he is simply badly mistaken. "Oh, the Socialists don't mean much," many of us are telling each other today. "They're just a bunch of silly idealists who don't quite know their way around. They're really good eggs at heart. Certainly, they don't mean to harm anybody"

To which I shout, "Baloney!" I've spent better than a quarter of a century in the labor movement. As a labor leader, I've bumped shoulders with Communists and I've bumped shoulders with Socialists. I've met plenty of both in every branch of organized labor, in union meetings and on the job, when the sailing was smooth and when the sailing was rough, and this much I say with the conviction born of experience: The only actual difference between a Socialist and a Communist is a hair-cut!

A Socialist, I have found, is no more than a slicked-up Communist, with a book instead of a bomb. He is just as vicious as his Communist pal, only somewhat more subtle and cunning. His social objective is precisely that of the Communist: In the holy name of the people to enslave the people; in the name of security to deprive them of all security; in the name of redistributing wealth to redistribute poverty; in the name of governmental operation to impose governmental domination; in the name of a planned democracy to inflict a damned autocracy; in the name of the New Utopia actually to create a new Siberia * * * In a word, the final aim and aspiration of the Socialist, like the final aim of the Communist, is to deprive you of your freedoms: your right to worship God in your own way; your right to own your own home; your right to live your own life in your own way, with due regard for the rights of your neighbor; your right to a job of your own choosing, and your further right to change that job when and as you yourself desire.

THE SOCIALIST WOULD DEPRIVE

The Socialist would deprive the farmer of his right to till his own soil in the manner he himself sees fit. The Socialist would deprive the teacher of the right to teach fact instead of fiction. The Socialist would deprive the doctor of the right to practice his profession in accordance with the dictates of his own conscience. The Socialist would deprive the union of its full right of collective bargaining. The Socialist would deprive the manager of the right to manage. In short, the Socialist would deprive. Period!

At the very outset, then, it should be obvious to all of us that the objectives of the Socialist are just about identical to those of the Communist, namely, the establishment on these shores of a government above the people, beyond the people, and against the people.

But what is more important is the fact that these Socialists—these Communists who have been to the barber shop—through their genteel appearance thus created have been able to gain full entrée into numerous segments of society, and are therefore in an excellent position to do a job of wrecking from within that cannot be done by their unkempt henchmen from without. * * * Which, may I suggest, accounts for the twinkle we detect in Uncle Stalin's eye. For Joe just wants a job done—and he doesn't give a hoot who does it, how it's done, or under what name it is perpetrated—whether the objective is reached via the road of communism, socialism, social planning, a planned economy, the welfare state, social democracy, or even perverted unionism. For Joe, too, knows that Bill Shakespeare was a pretty smart guy—and that communism, like the rose, by any other name is still his pet flower.

INVASION OF THE LABOR UNIONS

These Socialists of ours, in their war against Americanism, have mapped out some very clever strategy, and their generals are meeting with no small measure of success. They are particularly successful in their invasion of the labor unions of this country—many of which, knowingly or not, have practically surrendered to the Socialists.

Now far be it from me to stand upon this platform and accuse such men as Bill Green, Walter Reuther, Philip Murray, or John L. Lewis of being avowed enemies of our American form of government. And far be it from me to assert that any of these gentlemen would consciously lift a finger to aid or abet our national enemies, within or beyond our boundaries. In fact, it's a safe bet that all four of them would jump sky high if ever they were so accused. I can almost hear them shout in unison: "Certainly I'm not a Socialist. I'm an American. I hate socialism."

Well, if these big-time labor leaders, and dozens more in their class have not in fact surrendered to the Socialists, I wonder what they think they are doing when they seek to make of organized labor a political force? If they have not in fact put themselves in a position to serve a growing Socialist machine, I wonder what they think they are doing when they seek to solidify the labor vote and lend it without reservation to a political movement in every way contrived to foist the book of socialism—from A to Z—upon the people of this country? What do these gentlemen mean by "political action"? What is the political effect of the militant doctrines they preach day in and day out? What is the political significance of the class consciousness and class hatred which is their unwavering theme song? Are not the standardized antics of our big-time labor leaders but an accurate reflection of the antics of Britain's labor leaders, a few years back, when they surrendered lock, stock, and barrel to socialism and brought it into power in England?

ORGANIZED LABOR'S POLITICAL MESS

Certainly Messrs. Green, Reuther, Murray, and Lewis have pulled pretty far away from the teachings of Samuel Gompers, the patron saint of organized labor, who on many occasions warned the union men of this Nation against mixing up in party politics or selling out to any political faction which would use the labor movement as a stepping stone to political power. So long as Gompers was the leader of our Nation's union workers, he kept the unions out of politics and regarded collective bargaining as an economic and not a political issue. At every turn, Gompers applied the instrumentalities of collective bargaining, independent of governmental coddling.

Sam Gompers never forked over to any politician a half-million dollars of his union members' funds, as did John L. Lewis to Franklin Delano Roosevelt. Nor did Gompers on any occasion get his union into a mess by committing it to any political party, as Lewis endeavored to do on at least two important occasions. Gompers was smart enough to know that what the gods of politics create, the gods of politics can, and generally do, destroy. Had the labor leaders of Britain followed the example of Samuel Gompers, Great Britain today would still be the great economic force it was for centuries. When the British labor unions went political, they lost their souls to socialism and under governmental domination became nothing more than so many puppets on a string, and incidentally played a prominent part in reducing the British Empire to a condition of national and international poverty.

UNIVERSITY OF MICHIGAN LIBRARIES

Walter Reuther, I have said, would be vociferous in his denial of any Socialist leanings. All right, Walter, let me ask you this: Where did you get the notion that the automobile manufacturers—such as General Motors, Ford, Nash, Studebaker, and the rest—can be operated by the Government except in a Socialist state? Whoever gave you the idea that the Government should build and operate steel plants? That the Government should erect and administer housing for workers? And whoever gave you the screwball notion that, if ever the Government did take over such industries as the automotive, steel, and housing, this economy of ours could possible hold together? Don't you know, Walter, that the moment such a situation comes to pass, the day of the investor will be a thing of the past—and that without stockholders, there can be little or no new enterprise? And with enterprise at a standstill, don't you also know, Walter, that you will have hordes of idle members, and that these present constituents of yours will of necessity degenerate into mere wards of an expanding Socialist government?

Where did you get this crackpot philosophy of yours, Walter? From the teachings of Samuel Gompers? Or did you pick it up over in Russia back in 1934, when you had a job in a Russian factory in Gorky?

No, Walter, you may not call your ideas socialism—you may have some fancier name for them, such as a "planned economy," or "the welfare state"—but no matter what you call them, they add up to nothing short of socialism. And, as such, they run counter to the best interests of this Nation—to say nothing of your own constituents whom you were elected to serve.

And now for you, Philip Murray. You don't look to me like a Socialist, or a Communist. But I'd be a coward if I didn't come right out and say that you do nevertheless look to me very much like a tool in their hands. Certainly the dogs of the collectivist program, both the long-haired and the short-haired breed, must be licking their chops as they study your maneuvers and manipulations which have repeatedly pushed the entire steel industry toward the brink of disaster—in the form of governmental control and eventual ownership. Probably you're not a Socialist, in either name or fancy, but for many a year you broke bread with gents of the Marxist stripe. Wasn't Lee Pressman, for example, an avowed Communist? And for several years didn't you accept his unholy guidance in matters economic as well as political? Possibly, then, some of the stain from those unwholesome contacts has remained with you. Possibly some of their foul teachings have stuck to your subconscious mind and, on important occasion, have influenced you to commit acts against the best interests of this Nation. Indeed, it appears that you have not always been content to let your unionism play second fiddle to your Americanism. Or am I wrong?

THE PRINCIPLE OF SAMUEL GOMPERS

As for me, I'll take a man of the Gompers type, a union leader who advanced the cause of organized labor immeasurably but always without sacrifice of a single iota of true Americanism—and with statutory odds against him. The principle of unionism as enunciated by Samuel Gompers was in its essence, "An honest day's pay for an honest day's work, and an honest day's work for an honest day's pay." And unless the labor movement gets back to this fundamental principle, the time is not far distant when unionism in this country will be as ineffectual as it is in Socialist Europe—where workers work on assigned jobs and where a change in job without specific permission from the powers that be may lead to a change in residence—behind bars, if you please—and where a strike is regarded as an act of treason punishable by death to the perpetrators.

And so—when the fancier ideas of governmental planning, welfarism, and more and greater securitism are dropped in our ears—by a labor leader, a college professor, or even a minister of the cloth—let's not stop to purr over the components. Let's consider the total package, which is, by accident or positive intention, communism pure and simple. Between us and the misty mirage of the Socialist utopia lie all the pitfalls of death to independence.

THE WEAPONS ARRAYED AGAINST US

Thus far, we have identified the enemy and spotted his main objective: the overthrow of our American form of government, our American way of life. Next, let's have a look at his weapons, the armament he is bringing to bear against the minds of our people:

First, there is his air force; the propaganda he drops to the effect that capitalism is outmoded and that the capitalist is the enemy of the people. His artillery is the falsehood he discharges to the effect that private enterprise creates business monopoly and human privation. The booby traps he lays before the unsuspecting are the enticements of a new security from the cradle to the grave: such as full employment, free pension, free medicine, and a long string of public welfare services. Finally, there is his big atomic bomb, which explodes upon the minds of the people and radiates the irresponsible doctrine that it is possible to loaf our way to prosperity.

All this is powerful ammunition in the war for the minds of our people. For who among us wouldn't desire the maximum standard of living for the minimum expenditure of effort? Who wouldn't love to live in the finest of homes, eat the finest of food, drive the slickest of cars, and wear the grandest of clothes; all with the greatest of ease? The promise of something for nothing makes a powerful emotional appeal, an appeal so strong that very frequently it cripples our better judgment.

But common sense should tell us that food doesn't fall like manna from heaven, that houses don't sprout from the ground, that cars don't grow on trees, and that clothes aren't the gift of the sun and the wind and the stars—that, in fact, nothing for man's use and enjoyment is in any way available to win without the expenditure of considerable effort both mental and physical—and that the most initiative we put forth, the more comforts and luxuries we can secure for ourselves. In a word, work is the basis of man's estate.

THE AMERICAN PEOPLE ARE OUR CAPITALISTS

Capitalism, free enterprise, the profit motive, these are but expressions of individual initiative striving for tangible incentives. And it was the free play granted by our form of government to this spirit of initiative which created this great capitalistic economy of ours and enabled it to progress to the point where our American standard of living has become the envy of the world. The philosophy upon which our dynamic economy is traditionally based is that he profits most who serves best.

Now this capitalism of ours, to be truly understood, certainly does not apply solely to the owners of industry, to our businessmen big or small, or to the financiers of Wall Street; it applies in comparative measure to every individual among us who has in his possession more than the bare necessities of life; it applies to the men and women who own their own homes, drive their own cars, can boast a change of raiment, and, if only moderately thrifty, have money in the bank, bonds, and insurance policies in the safe-deposit vault, and a personal plan of action in their minds.

Thus any attack upon capitalism here in the United States is not by any means an attack just upon Wall Street; it is no less an attack upon Main Street, and Home Street; yes, upon my street and your street, whoever we may be.

For we, the people of the United States, are the capitalists of this Nation, and it is against us that this war has been declared.

THE NATURE AND ORIGIN OF SECURITY

Curiously enough, the war cry of our enemies is "security." By hook or by crook, they would foist upon the minds of our people the erroneous belief that incentive and initiative are wrong; not only morally wrong, but also mathematically wrong in working out a formula for providing more and more things for more and more people. And this is the most insidious phase of their entire campaign against our way of life. For the principle of the free lunch—provided all citizens by the hand of a fond but costly bureaucracy—may be attractive to individuals not endowed by nature with gumption, but it is bum economics and a phony substitute for the authentic freedoms which render free lunches unnecessary.

Accepting the obvious fact that, by horizontal comparison, the standard of living of the American people under capitalism far exceeds the standard of living of any people under socialism, the fighters for a planned economy nevertheless invariably haul out their books of geography and triumphantly point to the fact that the North American Continent was blessed with an incomparable store of natural resources. Our magnificent standard of living, they argue, is due to those inexhaustible resources—and not to the dynamics of capitalism. But this is a phony of phonies, as we can see at a glance by making a vertical comparison.

For thousands of years, before the white men came to America, the red man held sway on this continent. For thousands of years before the white man arrived and set up his system of capitalism, the socialistic way of life was in full flower on these shores. But, although the American Indian had access to the iron ore of Minnesota, the oil of Pennsylvania and California and the great Southwest, the timber of limitless forests, prairie lands of stupendous fertility, together with the entire inventory of natural resources too numerous to mention, this socialistic-fed man of ours nevertheless lived out the total of his days ill-fed and ill-housed. Throughout the centuries, he was in practical effect a Socialist—without incentive, without the goads of personal ambition, without the rewards of initiative. He was and remained to the end a pauper in a treasure house, a beggar on the doorstep of paradise.

It took the capitalist, with his profit motive, to appreciate the significance of this abundance of natural resources. It took the capitalist, with the energy born of his ambition, to develop them fully—not only to the benefit of himself, but to the benefit of the multitudes as well. Yes, it took the capitalist to create for the first time on the North American Continent a platform for the ideal of real human security to rest upon.

SOCIALISM PARASITICAL

Socialism is therefore not a step forward, it is in reality a step backward into the unenlightened past. And in the event we lose this ideological war to the collectivists, I venture to say that it may not be too many years before the American people can just as well start painting their faces and sticking feathers in their hair—symbolically, at least—for their standard of living under the hand-to-mouth provisions of a planned economy will be rapidly collapsing to that of the redskins.

For socialism is not creative. It is not, as its promoters so loudly assert, paradisical—it is in its truest sense parasitical. It is not a system of give and take, it is a system of just plain take. Which suggests the true definition of a Socialist as a fellow who has nothing himself and is willing to share it with everybody.

Against the tide of progress, thus, the Socialists of this country would tear our system apart and give it back to the Indians. That is the nature of the war they are conducting against us. And that is why there is a job at hand for all fighters for freedom to perform.

If anyone were to step upon this platform tonight and right before our eyes were to attempt to tear this American flag of ours to shreds, it is doubtful he would leave this hall alive—for such an act would make every one of us fighting mad. But, ladies and gentlemen, this very thing is truly happening today—only not here in this particular hall, and not in a manner so crudely obvious. It isn't the American flag, as a piece of colored cloth, that the Socialist enemy would desecrate; the target of his sabotage is the main principle Old Glory stands for: Your freedom and mine.

I thank you.

Morocco Violates Treaty in War on American Traders

EXTENSION OF REMARKS
OF
HON. RICHARD B. RUSSELL
OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Monday, January 30 (legislative day of Wednesday, January 4), 1950

Mr. RUSSELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Morocco Violates Treaty in War on American Traders," published in the Saturday Evening Post of January 28, 1950. The editorial deals with a matter which was under discussion when the ECA measure was before the Senate for consideration.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[Editorial from Saturday Evening Post of January 28]

MOROCCO VIOLATES TREATY IN WAR ON AMERICAN TRADERS

It is a strange commentary on the strength of American diplomacy that an individual citizen should be forced to put on a one-man campaign to preserve the right of Americans to do business in a country in which this right is guaranteed by treaty.

Nevertheless this is what Robert E. Rodes, an American businessman and war veteran, has been doing for almost a year. He leads a group of thirty-odd veterans who set up export-import businesses in Casablanca, Morocco. Since 1836 Morocco has had a treaty with the United States according us unrestricted trading privileges equal to those of any other "Christian nations." Treaties signed in 1880 and 1906, countersigned by France, reaffirmed equal treatment of our trade in Morocco with that of France. Morocco looked like a good place for American businessmen to perform a useful function.

However, France has a protectorate arrangement in Morocco which seems to be interpreted in Paris as giving monopolistic commercial rights in Morocco to French businessmen. At any rate Mr. Rodes and his associates were soon subjected to various discriminations admitted by ECA Administrator Paul Hoffman to include "inequitable administration of certain exchange-control regulations, discriminatory valuation of imports for customs purposes, the application to Americans of a number of laws and regulations to which this Government has not given its assent," and to involve what Mr. Rodes calls an illegal embargo on many imports of American goods. The upshot of it all is that the Americans are being compelled to quit the field while their French competitors enjoy an unprecedented prosperity.

Inasmuch as France, which is thus acquiring economic monopoly in Morocco, is receiving a considerable sum from the United States under the European recovery program, it might be assumed that we had enough leverage to conduct a spirited defense of American commercial interests. The reality has been just the opposite. As Demaree Bess pointed out in the Post for June 18, 1949, the introduction of ECA money into the situation was taken to imply American support of French "exploitation" in Morocco, which we had opposed for many years.

Until ECA became a factor the State Department had protected American treaty rights, at least formally, and had protested Moroccan acts in defiance of them. But the fact that we had advanced money for French recovery apparently ended official concern for the right of American citizens to do business abroad. French authorities on December 30, 1948, issued a decree setting up embargoes and restrictions on our products, the result of which has been to turn over almost all our trade in Morocco to French cartels and other favored interests. The State Department first protested this action, then yielded to French pressure and accepted it for a 3-month period. After three other "temporary" periods the Department extended its assent indefinitely on December 31, 1949.

In continuing its approval of the French decree the State Department is ignoring repeated criticism in the Senate and is ignoring the evidence of discrimination to the State Department by Mr. Rodes and other businessmen and trade organizations at a public hearing. This hopeless attitude by a nation which is shelling out billions of dollars to promote the revival of trade among nations bodes ill for whatever success is to be expected from point 4—that is to say, the Truman plan for investment of American capital and know-how in undeveloped areas. If we can't protect the clear treaty rights of a small group of ambitious Americans to do business abroad, what is likely to happen to the billions we export under the chaperonage of bureaucrats and do-gooders?

Editorial Comment on Bill To Restrain Unreasonable Actions of Labor Monopolies

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, January 30 (legislative day of Wednesday, January 4), 1950

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD three editorials—one from the Washington Evening Star, one from the New York World-Telegram and the Sun, and one from the Tampa Morning Tribune—commenting on Senate bill 2912, to restrain unreasonable actions of labor monopolies, which I introduced in the Senate on January 23.

[From the Washington Evening Star of January 25, 1950]

THE PEOPLE COME FIRST

The bill to amend the anti-trust law which has been introduced by Senator WILLIS ROBERTSON can be traced not to a desire to destroy unions, but to a growing realization that there must be some more effective legal protection of the public interest against abuse by the unions of their great power.

It seems to the Star that the introduction of this bill is a development of some importance. It may not have any immediate prospect of passage. Perhaps there is some better legislative approach to the problem. But here, at least, is a recommendation which has been carefully thought out, and which is based on a painstaking study of the facts and the present state of law as it applies to those facts. There will be some who will deny that there exists a need for such an amendment. But John L. Lewis is proving to be a persuasive witness on the other side of that proposition.

Senator ROBERTSON's proposal has to be appraised against the background of the immunity which labor has acquired by virtue of the laws and decisions of the Supreme Court.

The Sherman Act was passed in 1890. Congress did not intend in enacting that statute to sanction unreasonable restraint of trade by unions, and the Supreme Court so held. Then, in 1914, the Sherman Act was amended by adoption of the Clayton Act. In its pertinent sections, the Clayton act provided that labor organizations were lawful under the Sherman Act, and, further, that certain specific labor activities, such as peaceful picketing, could not be enjoined by the Federal courts. Neither of these enactments, however, gave unions immunity when they engaged in unreasonable restraints of trade or sought other illegitimate objectives.

The big departure came in 1932, when the Norris-LaGuardia Act was adopted. This act was an absolute prohibition, except in the narrowest circumstances, against any Federal injunction applicable to labor unions. Finally, in 1941, a five-man majority of the Supreme Court announced the decision in the Hutcheson case. The effect of this extraordinary decision was to go far beyond even the sweeping immunities extended by the Norris-LaGuardia Act, and to hold, for all practical purposes, that neither the criminal sections nor the treble-damage provisions of the Sherman Act could be invoked against any union activity arising out of any kind of labor dispute.

This was the green light. A period in which the injunctive power had often been flagrantly abused to the detriment of unions and reasonable union activity was succeeded by a period in which unions were put beyond the reach of any effective regulatory power. And it was not long before consequences which should have been foreseen began to be painfully evident. It soon became apparent that union leaders were not much different from industrial leaders. Given great and uncontrolled power, some of them would abuse it. And as the abuses grew it also became clear that all of the people, not just the big industrial bosses, were being made to suffer.

Senator ROBERTSON wants to bring this situation back into balance by amending the antitrust law. His amendment is not designed to interfere with the pursuit by unions of legitimate objectives. What it would do is best summed up in his own words: "The bill which I have offered would in plain and simple language remove the immunizing effect of the Clayton and Norris-LaGuardia Acts from (union) conduct which up until 1941 had been almost universally branded as illegal and against the public interest, and which had always been regarded as outlawed by the Sherman Act. It would

UNIVERSITY OF MICHIGAN LIBRARIES

leave the Government free to go into a court and it would leave the court free to put a stop to labor-union practices which are so detrimental to the national welfare that some remedy, beyond the temporary stopgap remedy of the Taft-Hartley Act, is essential to protect the people of this country. The Sherman Act would then again serve, as it originally served, as a brake on unions which seek to put their own activities ahead of the national welfare."

This, to many, will seem like a drastic proposal. It will seem increasingly less drastic, however, as the American people, whose welfare should come first, continue to suffer at the hands of irresponsible and uncontrolled unions and union leaders.

[From the New York World-Telegram and the Sun of January 25, 1950]

LABOR MONOPOLIES

Senator ROBERTSON, Virginia Democrat, sponsors a bill intended to protect the national economy, health, and safety against unreasonable use of monopoly power by labor unions. It merits earnest consideration by Congress.

In days when organized labor was weak, court interpretations of the Sherman antitrust law gave powerful employers an unfair advantage over unions. The Scripps-Howard newspapers were among labor's supporters in a long battle to correct that situation.

The 1914 Clayton Act, meant to serve that purpose, proved not fully effective. The 1932 Norris-LaGuardia Anti-Injunction Act went much further toward protection of unions. And, in 1941, a United States Supreme Court decision went too far.

It held that Congress, in the Norris-LaGuardia Act, intended union activities—licit or illicit, wise or unwise, right or wrong—to be exempt from antitrust prosecution if unions acted in self-interest and not in combination with nonunion groups.

By then, organized labor was no longer weak. Government, under President Roosevelt, had promoted vast growth of unionism in size and power. In many cases the power is monopolistic.

Union leaders can, and do, use it to restrain trade by restricting or stopping the national supply of commodities and services essential to public welfare, health, and safety. Because of it, John L. Lewis can decree that coal shall be mined only 3 days a week, or no days a week. And, because of that 1941 Supreme Court decision, Mr. Lewis and his rivals and imitators in the labor movement can do such things without fear of the antitrust laws which would crack down on employers if they dared to do them.

Senator ROBERTSON'S bill proposes, in effect, to repeal the 1941 decision and to say that union activity undertaken for the purpose of restricting commerce to control production and prices is subject to, and can be punished by, the antitrust laws.

Legislating in this field is a difficult and delicate task. The need is to protect the public interest by curbing abuses of labor's monopolistic power while at the same time preserving labor's necessary rights.

The Robertson bill may not be the best possible approach to the problem. But the problem is real and pressing. Whether through the Robertson bill or otherwise, we believe, it is the duty of Congress to deal with it decisively and soon.

[From the Tampa (Fla.) Morning Tribune of January 24, 1950]

THE PINCH IS THE SAME

A new threat to John L. Lewis's iron-fisted control of the coal industry is contained in legislation proposed by Senator ROBERTSON, Democrat, Virginia, to make labor unions subject to antitrust action under certain conditions.

The bill would permit antitrust proceedings against unions when their actions constituted "unreasonable" restraint of trade affecting industries essential to the national economy, health or safety.

There is logic behind Senator ROBERTSON'S proposal. Under the autocratic rule of Lewis, the United Mine Workers are enforcing the tightest monopoly of a major industry whichever has afflicted this Nation's economy. Lewis lifts his hand and the mines shut down. He crooks a finger, and they open up again. He winks a cynical eye and the normal production of coal is cut 40 percent.

The recognized right of collective bargaining is not at issue here. The undisputed fact is that Lewis is deliberately restricting coal production—rationing the output of an essential product—in order to make coal scarce and thus force mine owners to grant higher pay.

Would the mine owners be permitted to create an artificial scarcity in this manner for the purpose of boosting prices? Certainly not. If they tried it, Government attorneys would slap an antitrust suit on their heads quicker than you could say Harry Truman.

Then are we as a Nation to have two kinds of justice—one for the union and another for the operators? Under present Federal laws, exempting unions from all monopoly restrictions, that is the situation. It doesn't follow the rules of fair play. It doesn't take into account the public welfare. It doesn't make any sense.

Senator ROBERTSON'S proposal may not get anywhere in an election-year Congress keenly conscious of labor's organized vote. It will, however, have the endorsement of a great part of the public. To the politicians, a monopoly operated by labor doesn't seem nearly so awful as a monopoly operated by capital, but to the consumer caught in the vise, the pinch is the same.

Depletion Allowances

EXTENSION OF REMARKS

OF

HON. PAT McCARRAN

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Monday, January 30 (legislative day of Wednesday, January 4), 1950

Mr. McCARRAN. Mr. President, in view of the President's disturbing tax-message recommendations that depletion allowances for the mining industry be discontinued, I ask unanimous consent to have printed in the Appendix of the RECORD the National Minerals Advisory Council's report on tax revision, submitted to the Secretary of the Interior on December 7, 1949.

This heretofore unpublished report, prepared by an official advisory group representative of mineral producers and metal consumers, reasserts my previously expressed views that the mining industry if it is to survive and prosper must not have its tax burden increased as the President would suggest. Conversely, the tax load must be decreased, as the recommendations of the report set forth.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

NATIONAL MINERALS ADVISORY COUNCIL REPORT ON TAX REVISION OF DECEMBER 7, 1949

The exploration for and development of nonferrous and strategic metal and mineral deposits in the United States by individuals and smaller corporations has declined alarmingly. Work by larger corporations is principally in extending the initial enterprise of many individuals and small units. But even these corporations must consider the effect of their taxes and the taxes on their stockholders in determining whether the risk in new endeavor is worth while.

The members of the National Minerals Advisory Council have been selected by the Secretary of the Interior as representative of the industry and acquainted with its problems. It is their unqualified opinion that excessive taxation is a principal cause of the lack of interest in exploration for and development of new mineral reserves. Reduced tariffs and imports from depreciated-currency nations and other conditions have their effect, but our present taxation is such that the individual and the corporation qualified to carry on have little opportunity to recover their investments and still less possibility to realize a profit.

Incentive for mining exploration, development, and operation comes from hope of a gain sufficient to warrant the risk, the effort, and the investment involved. If gains are too greatly impaired by taxation, or if gains are taxed without full allowance for losses, there can be little incentive for new exploration, development, and investment.

The prospect of capital recovery free from tax will not in itself provide incentive. There must be the prospect of gain. But the taxation of capital recovery as if it were income, or the denial or limitation of losses as effective deductions from taxable income, greatly increase the risk and can virtually destroy incentive for finding and developing new mines. This is the situation under the tax provisions and high rates of our present laws.

To remedy these conditions the following changes in the tax structure as applied to mining must be made:

1. Allowance for depletion should be made to the stockholder as well as to the corporation.

Each distribution to stockholders should be considered to represent depletion to the same extent that depletion is allowed against income to the corporation.

2. Tax exemption should be granted to a mine for a period of at least 3 years after beginning of profitable operations.

Such an exemption would be most important in stimulating new development and discovery, as it has in Canada.

3. Development costs after discovery should be recognized as operating expenses.

Such development costs should not be treated as capital expenditures, recoverable through depletion. Their nature and purpose is for operation of and production from the known deposit. The taxpayer should have option to charge them off currently or to treat them as operating costs when the ore related to such expenditures shall be mined.

4. Adequate allowances for percentage depletion should be made.

The present percentage of gross income and the present limitation in reference to net income for mines should both be increased.

5. Losses from unprofitable ventures should be allowed corporations, partnerships, or individuals as ordinary deduction against current income.

When a mine is abandoned or becomes unprofitable or when exploration or development work has not proven the existence of a profitable mineral deposit, or when a shareholder sustains a loss on liquidation of the

corporation, the loss should be allowed in full as a deduction from income.

6. Income should not be taxed without full allowance for losses of loss years.

A carry-back for 2 years and a carry-forward of 5 years should be allowed. Depletion and other deductions and credits should be allowed as if the loss year and the income year were a single taxable period.

The Council recommends that Federal tax laws be modified to include the changes outlined in this report as approved at its meeting of December 7, 1949.

The Red Peril of the National Debt

EXTENSION OF REMARKS
OF
HON. JAMES P. KEM
OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, January 30 (legislative day of Wednesday, January 4), 1950

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial recently published in the St. Louis Star-Times entitled "The Red Peril of the National Debt."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE RED PERIL OF THE NATIONAL DEBT

A study by the Brookings Institution proposes that the present patterns of old-age and survivors' insurance be replaced with a genuine pay-as-you-go system. Many people who have seen the deductions on their pay checks may be surprised to learn that the present system is not a genuine pay-as-you-go.

Well, it's not.

It started out on a sound actuarial basis in 1937. But since then Congress has been increasing the benefits and including more people, because this is popular. But it has not been raising the contributions at a rate equal to the obligations undertaken, because to do so would be unpopular. Congress is able to do this for a while, because at first the people who pay into the fund are more than those who take out of it. But eventually, and relatively soon now—1955, 1960, depending on management of the fund in the meantime—the pay-off will come. In view of that pay-off, the Social Security System's present deficit is more than $8,000,000,000, and it is growing every year.

A social-security system that prepared to meet future costs by adequate present contributions, the way a sound private insurance program does, would make sense.

A social-security system that paid for current costs out of current taxation, the way the Brookings' study proposes, would make sense.

But the present so-called Social Security System does neither. It is crazily backward. It is counting on future taxation to meet obligations assumed in the present.

The American people do not know how much the future costs will be. The Brookings study estimates that if the recommendations of Mr. Truman's administration are adopted, the total costs of old-age and survivors benefits, compulsory health insurance, public assistance, and veterans' benefits will range between $26,000,000,000 and $41,000,000,000 annually by 1970, and between $33,000,000,000 and $55,000,000,000 annually by 2000.

Will the productive people of those generations be able to pay for this?

Without adding up the costs of his program, President Truman assumes that they will. He is counting on a continually expanding national income.

If the increase in income merely expresses a decrease in the purchasing value of the dollar, then the dollars received by the aged and their survivors will buy less. If the increase in income expresses an increase in real income, it must be brought about by greater productivity. This can come about only by a sound economic system.

In a speech before the Economic Club of New York, Tuesday, Dr. Edwin G. Nourse, former chairman of the President's Council of Economic Advisers, said that the soundness of our economic system is threatened by continued deficit financing.

In his tax message, President Truman vaguely promised that his present program would lead to a balanced budget, because, he said, a number of present expenditures could be reduced in the future.

Which ones?

The military? This item is likely to increase.

Foreign aid? This item also is likely to increase when the program of developing undeveloped areas is started.

Social-welfare programs? President Truman is urging that they be expanded.

And just over the horizon is looming the day of reckoning when the obligations of the present social-security program have to be met out of current taxation.

The American Government has no obligation to its citizens or to its allies that takes priority over the obligation to try to maintain a healthy economy. For the ability of fulfill all other obligations rests upon this.

The best way for the Government to promote the security both of the Nation and of the individual citizen is for it to adopt what Dr. Nourse calls for—a specific and hard-headed plan of getting back to black ink.

A Cut for Soldiers' Home

EXTENSION OF REMARKS
OF
HON. ROBERT C. HENDRICKSON
OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, January 30 (legislative day of Wednesday, January 4), 1950

Mr. HENDRICKSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Cut for Soldiers' Home," published in the Washington Times-Herald of today.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A CUT FOR SOLDIERS' HOME

Harry Truman and his deficit-financing cronies are still wailing that they can't balance the national budget unless they boost taxes. They shrink with horror at the suggestion that Government expenses be cut.

That is, they do when their pets like foreign spending and farewell state projects are mentioned. But when they get down to something that ought to be none of their business, boy, can they cut.

MESS RATION SLASHED

For example, the Budget Bureau has ordered a 16-percent trim in the daily mess and dairy rations of the veterans of Soldiers' Home.

The present daily mess ration is 74 cents. The Budget Bureau wants to cut it to 61 cents next year.

The home is maintained by funds paid in fines and assessments by the men in the Regular Army, and a lot of the food is raised right on the big farm on which the home is situated.

Col. D. C. Cordiner, deputy governor of the home, points out that the Army's ration has been cut only 3 percent.

What kind of sense does this make, Harry? Let the old soldiers eat their own food.

Government Silver Purchases

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, January 30 (legislative day of Wednesday, January 4), 1950

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Deseret News, of Salt Lake City, Utah, on January 25. The article is entitled "Government Silver Purchases and Sound Hard Money Policy."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GOVERNMENT SILVER PURCHASES AND SOUND HARD-MONEY POLICY

The Government's silver-purchase program is under attack by several Congressmen. Senator GREEN, Democrat, of Rhode Island, constant silver foe, has again introduced his perennial bill to repeal the Silver Purchase Act, and a Joint Subcommittee of the Committee on Economic Report has recommended abandonment of the program.

Admittedly, the silver-purchase program is far from perfect and it may not be wholly sound from a fiscal or monetary standpoint. Under it, silver is a sort of freak hybrid, neither quite all commodity nor wholly money, but having some of the characteristics of both.

Even so, neither the substance nor the motives of much of the attack on the silver program should go unchallenged. First, it seems only fair to mention that the perennial ringleader of the opposition, Senator GREEN, hails from New England, headquarters of most of the big silver manufacturers. Naturally, they would like to see silver wholly as a commodity and dirt cheap, so that they could make more profit on their articles.

But reports indicate that most of the big silver-manufacturing companies already are fabulously rich, and many of them are owned by families or groups that are so small they deem it unnecessary to issue annual reports.

Against their narrow interest of bigger profits is balanced, not just the interest, but the very survival of much of the country's nonferrous metal mining industry, one of the cornerstones of the entire western economy. On which side does the public interest rest?

These critics of the purchase program complain that it is a costly subsidy to silver producers. There are those who will debate that charge, but suppose for a moment that it is true. You don't hear these same Congressmen cry out against Government subsidies on farm products, air-mail haulage, public housing, education, etc., and the proposed subsidies on medicine and nearly everything else. So why is prostrate silver

UNIVERSITY OF MICHIGAN LIBRARIES

mining and its thousands of dependents such a beam in their eye?

But is the silver-purchase program nothing but a costly subsidy? It is true the act directs the United States Treasury to purchase all newly mined domestic silver at the fixed price of 90.5 cents a fine ounce, a figure that is often, but not always, above the world price. But it must not be forgotten that Uncle Sam coins some of this silver and issues currency against most of the remainder at the rate of $1.29 cents per ounce. In other words, the Government makes a seigniorage profit of 38.5 cents on every ounce of domestic silver it purchases, and, in the aggregate, this profit exceeds the total profit made by the owners of the underground mines producing silver. How do the critics figure a loss out of that?

The opponents also complain that the silver program is continuously expansionary and that it is not needed because all the paper money necessary can be issued by the Federal Reserve banks without the silver backing. That argument is inconsistent. Surely silver-backed currency is less expansionary and inflationary than currency backed by nothing. Down through the years the production of silver, as well as gold, and the production of the two metals, has held to a fairly constant pattern. But there has been nothing dependable or constant about printing-press currency.

To be wholly consistent, silver's antagonists would have to attack gold purchases and the entire idea of backing paper money with precious metal. But the soundest economists on both sides of the political street today are thumping for a return to the gold standard as a means of taking currency manipulation away from Government and providing an automatic check on currency inflation.

After the present orgy of Government spending, currency inflation, the trend certainly should be back to, instead of away from, hard money.

Why Should American Soldiers Live Like Pigs?

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, January 30 (legislative day of Wednesday, January 4), 1950

Mr. MUNDT. Mr. President, the Februrary 14, 1950, issue of Look magazine carries an article entitled "Why Should American Soldiers Live Like Pigs?" dealing with the housing conditions in our outposts in Alaska and in the southern Pacific. I ask unanimous consent to have the article published in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHY SHOULD AMERICAN SOLDIERS LIVE LIKE PIGS?—WITH THE THERMOMETER IN ALASKA AT 60 BELOW ZERO, SERVICEMEN AND THEIR FAMILIES ARE LIVING IN HOVELS. IT'S THE RESULT OF TOO LITTLE TOO LATE, AND IT IS A SERIOUS THREAT TO MORALE ON OUR FIRST LINE OF DEFENSE

(By Dr. Daniel A. Poling)

A few days ago I received the following letter from Alaska:

"DEAR DR. POLING: You probably won't remember me, any more than you remember any of us up here—but you visited our shack last May and said you were going to do something about it. My husband is a sergeant and we have a boy and girl. The four of us are still living in the one-room shack you visited. We are still carrying water in buckets across those muddy fields in all that slush that got your shoes and socks wet. We still use oil lamps and we still take turns emptying our toilet (a galvanized pail) in the ditch my husband dug out near the trees on the other side. And we are still paying $140 a month rent.

"Any day now the temperature will go to 60 degrees below zero. We've had a hundred visitors like you promise that something would be done before winter sets in, but now it's too late. I still believe that if Americans knew we are living like wharf rats up here, they would do something about it. Why haven't you told them?

"As far as I can see, the only money they raise in Washington is for Europeans. We Americans who are defending the frontier up here in Alaska should have been born in Italy or Germany. Then we would be eligible for the Marshall plan.

"Yours truly,

"——— ———."

This letter fills me with a deep sense of humiliation and personal condemnation. When I returned from my 6 weeks' flying trip through the Pacific, I made a lengthy and documented report. Then, speaking as a private citizen, I wrote letters, I talked to all who would listen—and still nothing was done. Now, so help me God, I shall cry to high heaven.

Comfortable living quarters for our armed forces and their families are a responsibility which we have failed to meet. The result has been broken homes, lowered moral standards and a general weakening in our defenses. In Alaska and Okinawa, particularly, we have failed. Living conditions in Anchorage and Fairbanks are worse than those in shack towns on city dumps. The barracks in Fairbanks at Ladd Air Force Base, originally constructed for 2 years' occupancy at the most, are powdery inflammables now. An engineer told me: "If an over-heated stove ever blows up in subzero weather, those boys wouldn't have time to roll out of their bunks."

Promises were made to these boys that living quarters would be provided with only reasonable delay. What is reasonable delay? It was September 2, 1945, when Japan signed the final surrender papers. Today, the families of servicemen in Alaska are still living in abandoned railway cars, in cellars, in plywood boxes without even the most rudimentary facilities.

A DANGEROUS SITUATION

Small wonder that morale is deteriorating and that a dangerous situation exists. Governor Ernest Gruening of Alaska states: "The high command in Alaska—Army, Navy, Air Force—is very seriously concerned. It is obvious that, in the event of war with Russia, Alaska would be the first point of attack. But it has been impossible to get Congress to make the appropriations urgently recommended by the military. As it is, Alaska could be taken tomorrow by even a minor scale airborne invasion. * * *"

The services themselves are doing all they can—with too little help from churches and agencies at home—to keep morale high. But without such minimum essentials as decent housing, they are severely handicapped.

True, Congress did finally pass a bill authorizing appropriations for Alaska. But it was an inadequate one, influenced by the hue and cry for economy, and it was not put through until just before adjournment of the last session of Congress. Then it was too late to get the work done. Meantime, winter closed down relentlessly and our boys—your boys—were still wretchedly housed.

Yes, I know what it costs to get a bag of cement to Alaska. But I also know that whatever the cost of cement, men, women, and children are even more costly. We cannot afford to waste and embitter these people.

However acute conditions are elsewhere—and they are acute in many places—Alaska is the No. 1 spot.

Last April, flying from Honolulu to Johnson Island, I met an Air Force captain who had just completed his year with the airlift in Germany. With his wife and two children, he was going to Johnson, a tiny thumb spot in the Pacific for 12 months' duty. He was looking forward to a very happy and profitable year. "Extra pay, no income tax and no chance for the kids to get lost," he said. "Now we'll really get acquainted." Johnson Island is remote, to be sure, but it has just about everything, including radio, movies, and climate. Compared to Alaska, Johnson is a little bit of heaven.

I spent Palm Sunday on Guam, where a truculent major said: "We've paid a thousand dollars for each coconut tree here. The per capita wealth of Guamanians is $7,000 against our $600. They don't need to produce copra any longer."

He was paying $120 a month rent for his house while the same quarters to a civilian were $45. Yet the civilian drew $2,000 a year more in salary. There was a 50 percent housing shortage on Guam. On Okinawa, it was a 70 percent shortage, with hurricanes to complete the picture. But Guam and Okinawa at their worst are definitely better than Alaska.

APPALLING COSTS

I know that overseas construction costs are appalling. The most primitive type of house on a Pacific island or in the Philippines represents an investment of $50,000 or even more.

Civilian construction workers are another problem. The turn-over is rapid; few of them stay more than 6 months. But considering the inadequate food and billeting provided for them by the construction companies, this is not surprising.

Still, if we could act with the speed and determination we showed in the early days of the war, we could keep faith with our servicemen in Alaska and elsewhere.

When I visited Alaska in May, the commanding officer expressed the opinion that if a civilian contractor in the United States were put on the job of building housing units immediately, there would be some hope of relieving the situation. But that was 9 months ago. Even the appropriation was not authorized until October.

Nine months ago in Anchorage, I saw skeleton steel that had been gathering rust for 2 years. I was told that more than $25,000 would be required to get rid of the rust before work could proceed on barracks to house 4,000 men. But that rust still accumulates and waste adds a staggering amount to the already great need. Only one of the proposed structures was ready before January 1.

GYMNASIUMS NEEDED

Not only living quarters are needed, but recreation buildings as well. Gymnasiums, swimming pools, bowling alleys, and the like are much more imperatively needed in places like Okinawa, Alaska, and the Philippines than they are in training camps in the States.

For it must be remembered that few American boys, removed from their communities in peacetime and assigned to duty in a pioneer area, are psychologically, culturally, or spiritually equipped for their new life. Without the dangers and diversions of a shooting war, they are at a loss to occupy their time. Without intending to, most American communities have developed a parasitic type of human who allows other people to provide his entertainment and diversion. We are radio-listening, game-at-

tending, movie-going, auto-riding, television-watching creatures. We are rarely called upon to operate under our own power.

Thus, when boys and young men are confined for 2 years or more within the tiny boundaries of Clark Field in the Philippines or on Okinawa or in Alaska, they simply don't know how to occupy their time. This leads to excessive drinking and other problems.

The problem of drinking is nothing new to the services. Yet in 6 weeks' traveling throughout the Pacific and the Far East, I did not see a single man in uniform under the influence of liquor on the street or in a public place. This does not, unfortunately, hold true for clubs and private parties. Certainly, the services should require that soft drinks be make available everywhere, including all social functions. General MacArthur insists upon this in all areas under GHQ jurisdiction. There is no stigma to soft drinks, and the nondrinker is not unpopular unless he is otherwise a bore. The major criticism regarding the handling of hard liquor overseas is its ready availability—to officers, at least—and its low cost. Too many young men assigned to overseas posts for 2 or 3 years have too much time on their hands. With bourbon at $1.50 a bottle, too many turn to liquor.

PEACETIME PROBLEMS

During wartime, we had millions of men overseas, but we were accustomed to a greatly reduced peacetime force. Thus when our armed forces began to expand in 1948, we were unprepared for the needs of these men who, free from war's stimulation of both fear and patriotism, still must stay abroad for an indefinite period of time.

On my trip, I found that practically all commands favored USO traveling shows or their equivalent. But they also wanted to make sure that such shows did not deteriorate in quality after leaving New York and become loose and bawdy by the time they reached the post. All were agreed that commanding officers should have direct and unquestioned control over these troupes.

Leadership of the USO in the field of hobbies and special interests is even more vital. But much is needed in the way of equipment and facilities—not to mention capable men and women to direct such activities. I talked with one sergeant in Hawaii who was so interested in his outfit's local theatrical program that he hadn't been to fabulous Honolulu for 2 months. He was too busy to go.

THEY DESERVE BETTER

Every command I visited spoke in the very highest terms of the service rendered overseas by the American Red Cross. In spite of this, there are occasional disappointments and even tragedies. Too often in the Pacific, men approved for emergency furloughs could not get planes to take them back. Operation "Vittles" in Germany was making heavy demands on our aircraft. But none of the men, no matter how tragically deprived of a last sight of a loved one, blamed the Red Cross. They suffered inconveniences and sorrows, but this was not the fault of the services. And it is precisely because the spirit of the men is so determined and so willing that I say they deserve better—far better—than we are giving them, particularly in housing.

I am only a civilian, and it would be impertinent for me to recommend how the services should be run. Our own failures right here at home shame me and I feel uncomfortable about offering suggestions to anyone. But I know what I saw in Alaska and elsewhere, and I must speak out.

The young wife and mother who wrote me that letter is making a desperate attempt to hold her family together in spite of terrible conditions. There are thousands like her. While the divorce rate in the United States remains disgracefully high, these young families on our military frontiers are fighting against enormous odds to maintain family life.

In spite of their courage and determination, some fine families have been broken as the indirect result of bad housing—or no housing at all. Character-guidance councils are doing fine work in the services, but they cannot win against squalor and constant discomfort.

Many marriages are broken, of course, when the wife and husband are separated by regulations barring wives—or when there is simply no place for them to live. When divorce becomes inevitable, the services do their best to protect the men.

Everywhere, I found the Army, Navy, and Air Force seriously concerned with promoting character guidance. Commanding officers and departmental chiefs are cooperating to step up information and education programs. Results today may be modest, but there has been far more progress than our home communities have shown. Character guidance is no longer merely VD control.

TOO FEW CHAPLAINS

Another powerful influence in keeping morale at a high level—in spite of separations and filthy living conditions—is the chaplain. He has assumed a place in military life which he never before enjoyed. But there are, alas, still too few chaplains and too many things for the few to do.

Chaplains at Clark Field in the Philippines, and the character-guidance council, suggested that an effort be made by local church councils in America to encourage young seminary graduates to prepare for a tour of duty in the chaplaincy. There would be no better way to give a clergyman a proper lifetime perspective. Living and working with troops for at least a year, preferably just at the conclusion of seminary training, would be helpful for all concerned.

What the services are doing in a spiritual way should make all of us at home ashamed of our own negligence. Home churches of all faiths seldom seem to show much interest in the spiritual and moral well-being of their young men overseas. A chaplain on Okinawa told me that 12 men of his command had been baptized and united with the church while under his guidance. In each instance, he wrote the home church and also the boy's parents. Only one clergyman acknowledged his letter.

Chaplains are deeply concerned with the problem of morals, particularly among teenage GI's. It is almost unanimously agreed that an 18-year-old boy is too young for overseas duty. I was told that 85 percent of the VD cases in Korea during 1947 and 1948 were among the 17- and 18-year-olds. If this is true, it is an indictment of community indifference at home and of the failure of the American people—the American churches, particularly—to support the moral safeguards and the religious guidance opportunities recommended by the Compton Commission.

THE CHURCHES' FAILURE

The religious press and religious leaders had much to say in opposition to what they called peacetime conscription. But they did little or nothing to support a program for safeguarding the morals of youth and for giving young servicemen comprehensive religious guidance. In these particulars, the armed services and commanding officers generally, with their chaplains, have done far more than our leaders at home.

Last summer, I wrote that civilization had pushed the legalized bawdy houses and the "line" back as far as Fairbanks, Alaska. But with the issuance of a new Army order declaring all houses of prostitution "off limits," the situation should improve. There was never any justifiable reason to allow a "line" of wide-open bawdy houses to operate 2 miles from a large military installation which is the principal support of Fairbanks itself. Hard-headed and realistic Gen. Dale Gaffney of Ladd Air Force Base had already made progress on the problem before the blanket order was issued. The churches had also made constructive efforts to meet the situation.

UNNECESSARY SHIFTING

While the services are doing fine work in maintaining morale, I feel that in one department a more realistic policy is needed. This is in job assignment. In an attempt to give every man a "well-rounded background," men are sometimes moved from positions to which they are suited to less compatible work. I an officer is a genius in automotive maintenance, I question the advisability of taking him from that job for 2 or 3 years to give him experience in personnel management, for which he may have not the slightest aptitude or inclination. We do not do it in civilian life. Why should we do it in the services?

One other problem remains for the services to solve. This is the problem of equalizing standards of treatment. Inequities exist, not only between civilian and military standards (as in the case of the major on Guam), but also among the services and the ranks within them. The balance does not always favor the civilian. A $6,000 civilian Army employee living in Tokyo without his family is entitled to a tiny, shabby room in a second-rate hotel. A full colonel gets a large and comfortable house, with three servants, free of charge. These standards and others comparable to them are established by Washington, not by theater commanders. An officer in Alaska gets 10 percent extra pay, a civilian 25 percent. An officer assigned to the University of Alaska gets additional pay allowances, while an officer living next door, but not assigned to the university, does not.

Cigarets are sold by the Navy for one price, and across the street by the Army for another. Navy movies are free, but soldiers and air men have to pay for theirs. An air man in Alaska must stay 15 months, a soldier 18. Some of these things are small, but they often add up to the difference between contented and discontented men and women.

There are great distinctions between the various units of the Army command on Okinawa, and even greater distinctions between Air Force and Army installations. Changes can't be made in a day, but they are needed. Some of them may be speeded by the unification program, and I believe unification is imperative.

BOLD EXPERIMENT

One experiment in unification is worth noting. Three services in Hawaii have combined their MP units. The MP's work in teams of two, one from each service. The sailor MP (shore patrol) can arrest soldiers, and the Army or Air Force MP can arrest sailors. Besides realizing a great saving in personnel, money, and vehicles, the experiment is significant psychologically. It seems to be paying off.

The services can, however, do just so much themselves. The rest is up to Congress and the American people. Unless decent living quarters are forthcoming, all the work of chaplains, Red Cross, post commanders, and all the others connected with remote bases will be largely in vain.

At its last session, Congress authorized $133,400,000 for Alaska, but much of this was for radio and radar installations. Now the summer is past, the harvest is ended, and I am not saved from a sense of personal failure with regard to my promises to the wrechedly housed families in Alaska.

"We thought you'd do something about it," said my letter from Alaska. Well, little lady up there under the Arctice Circle, with more courage and loyalty in your soul than I

UNIVERSITY OF MICHIGAN LIBRARIES

have been able to find in mine, we don't deserve it, but forgive us if you can.

And to the gentlemen on Capitol Hill. God pity us all for not doing even the impossible—putting that young mother and hundreds like her in decent, safe quarters before the thermometer in Alaska dropped to 60 below.

Army Engineers Earn Praise

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1950

Mr. BROOKS. Mr. Speaker, under leave to extend and revise my remarks, I set forth a splendid editorial entitled "Army Engineers Earn Praise," which appeared in the Shreveport Journal, of Shreveport, La., under date of February 1, 1950:

ARMY ENGINEERS EARN PRAISE

Reports from Washington convey the impression that the retention of flood control, inland waterway improvement and kindred projects and service as the privilege and responsibility of the United States Army engineers is being threatened. The threat, which appears dangerous, is contained in the Government reorganization plan of the national administration. The proposed divorcement of authority now held by the Army engineers would be unwise especially because it would place the work under a civilian agency, which obviously would have political handicap. Such handicap now is not in existence. The Army engineers do their work without regard to politics but with the idea of planning and accomplishing bank protection, flood control, and other such tasks from which the people will gain the largest measure of benefits. These engineers, as shown by their long period of successful performance of duty, meet their responsibilities as soldiers in combat against military foes. They accept their assignments, and loyally strive to fulfill them.

Recently we had the privilege of hearing an informal talk by one of the Army engineers of this district, during which he mentioned various projects developed, under way and planned for the territory including all of Louisiana. Millions have been expended on these projects, resulting in untold benefits to the public. The engineers have met their responsibility satisfactorily. There has been nothing political involved. Every citizen having the facts given in that talk would oppose plans to put others in charge.

Among the many groups protesting against the national administration's plan to transfer this service from the Army engineers to a civilian authority is the Red River Valley Improvement Association, through which much of the waterway improvements hereabouts have come about and been promised. Members of this organization, many of them Shreveport citizens, realize the potential hazards resulting from political authority in determining projects, how they are to be built and other operations now having the capable, unhampered attention of Army engineers, men of proved ability and reputation, who do their duty as they see it regardless of what this or that political representative may say or wish to say.

Had the plan now being urged at Washington been in effect some of the projects serving this territory would probably not have been authorized. The proposed transfer from the Army group to those under civilian direction would offer abundant reason for speculation and doubt. By all means, the existing setup, with the Army engineers continuing inland waterways service they have been in charge of for many decades, should go unchanged.

The Red River Valley Improvement Association and other protestants are doing a thoughtful service to this section and others in the great river valleys in trying to prevent the materialization of the national administration's plan to order cessation of the Army engineers' control.

Inconsistency of Government Planning

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1950

Mr. POULSON. Mr. Speaker, the legislation before us known as the cotton bill is supposed to set up the machinery for establishing quotas to the various cotton growers throughout the United States. In other words, it is limiting the amount of cotton which can be grown. The Department of Agriculture has estimated that cotton growers of the United States will receive at least $750,000,000 from the Government this year, either as price-support payments or for export cotton purchased under the Marshall European-aid plan.

My purpose in speaking now is not to criticize that plan but to call to your attention the fact that we have a most serious threat of overproduction of farm crops staring us in the face. In view of these facts, we find the Department of Interior, and particularly the Bureau of Reclamation, advocating the authorization of a project known as the central Arizona project, a project which is not only not economically feasible but would supply water to an area which would raise more cotton and other farm products which are surpluses today, and they are doing this also in the face of facts wherein this Congress is attempting to cut down all new lands to 9 percent of previous quotas and, in fact, eliminating any new land.

Yes, the Bureau of Reclamation is advocating the central Arizona project which proposes to use water which it does not own, lift it nearly twice as high as the Washington Monument, convey it farther than from Washington to New York at a cost to the Federal Treasury of from three quarters of a billion dollars to a billion and a half dollars, to irrigate 200,000 acres of privately owned war-boom desert land which would not be required to repay any of the construction cost, for raising crops which are now surplus in this country.

I might go still further and say that not 1 cent of interest will be paid on this project and the cost of interest to the Government for the money for which it will have to borrow will be $465,000,000. Surely there should be some consistency between the Department of Agriculture and the Bureau of Reclamation.

Why Was Hiss Protected?

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1950

Mr. VELDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in the January 26, 1950, issue of the Peoria Star, entitled:

WHY WAS HISS PROTECTED?

Alger Hiss, once a confidential adviser to a President of the United States, once an important personage in the Department of State, and secretary of the conference which wrote the United Nations Charter, stands convicted of perjury. Since the perjury involved matters pertaining to espionage, the conviction brands him also as a spy.

Whittaker Chambers' revelations which led to the conviction of Hiss are not new. They were given to high officials of the United States Government 11 or 12 years ago. A lot of powerful protection in higher places was necessary in those years to keep Hiss out of trouble. Why was he protected?

President Roosevelt knew the story. He either refused to believe it or didn't care.

Two Justices of the United States Supreme Court appeared at the first Hiss trial as character witnesses for Hiss. Justice Felix Frankfurter, who recommended Hiss as a law clerk to the late Justice Oliver Wendell Holmes; and Justice Stanley F. Reed, for whom Hiss worked in the Department of Justice, took the stand to praise Hiss' character.

Secretary of State Dean Acheson long ago knew the story but it is not recorded that he was influenced one way or another by it.

Gov. Adlai Stevenson, of Illinois, allowed his name and influence to be used to try to establish a good character for Hiss.

The Federal judge who conducted the first Hiss trial was assailed in Congress for showing partiality to Hiss, and impeachment proceedings were mentioned in the House.

Probably a long list of other influences which were brought to bear in Hiss' favor could be added. Certainly no spy ever had such an impressive group of powerful friends.

Even President Truman sneered that the trial of Hiss was nothing but a "red herring" being dragged across the trail of the mistakes of the House Committee on Un-American Activities.

We think that many Americans, outraged by the spectacle of 11 or 12 years of official protection for Hiss, are going to be morbidly unhappy unless an effort is made by Congress to explain that protection.

The protection of Hiss is a worse scandal by far than the revelation of his crime. It is a gross offense against the American people. They are right in demanding that every individual who had a part in the protection of Hiss be called upon to explain. Let the whole sordid story be brought out in the open, just as the wartime graft and the 5 percenters stories were.

Let each citizen now ask the Members of Congress who represent him, "Why was Hiss protected?" And let him continue asking until the question is answered.

Cooperative Housing Projects Called Pattern of Future

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1950

Mr. MULTER. Mr. Speaker, the House Banking and Currency Committee today commenced its public hearings on the Spence bill, H. R. 6618, to assist cooperative and other nonprofit corporations in the production of housing for families of moderate income.

The article which appeared in the Sunday, January 29, 1950, New York Herald Tribune by Joel W. Schenker could not have appeared at a more propitious time.

Mr. Schenker is an expert in the cooperative housing field. His building firm, the Roth-Schenker Corp., pioneered in the construction of the Bell Park Gardens mutual project for 800 families in Queens, N. Y.

His article follows:

COOPERATIVE HOUSING PROJECTS CALLED PATTERN OF FUTURE

(By Joel W. Schenker)

Broad lawns, trees, and shrubbery, spacious play areas. On the green expanse attractive garde· apartment buildings. In these apartments happy families enjoying a degree of living few of them dreamed of having—at carrying charges of only $14 a room.

This is not to wnx lyrical. At the Roth-Schenker Corp. we believe this back drop is basic in any discussion of middle-income cooperative housing.

For when we discuss housing we discuss people. And when we discuss people in relation to housing there is this inescapable fact to be faced: that there are people earning from $3,000 to $5,000 a year for whom there is little or no housing. There are people who find themselves in the unhappy position of earning too much to be eligible for public housing projects, and of earning too little to permit them to buy or rent adequate and decent houses or apartments at present prices.

These are the people who obviously need cooperative housing. Housing that is decent, and is the kind they can afford.

BELL PARK GARDENS CITED

Bell Park Gardens, which has been called the pilot project in the 1949–50 era of cooperative housing, was erected by the Roth-Schenker Corp. As the builders, we were afforded the opportunity of studying mutual housing from the inside out, rather than from the outside in.

Without exploding any bombshell we can say frankly that this observation at first hand has convinced us of the need for cooperative housing as the only means of easing the situation in which the lower middle-income group finds itself.

From an academic viewpoint this so-called finding as it relates to the need, was not new to us, nor will it be to others in the industry. It always has been known. Over the years there always has been a shortage. Not in terms of units perhaps, but in terms of adequate and decent housing. Shortages in terms of housing at the right price.

From another viewpoint, however, the findings were startling. Working with these people we were struck with the cold, hard reality of their situation. It is one thing to know in an academic fashion that a need exists. It is quite another thing to experience it as something real.

PARADISE REGAINED

Individually and collectively the Bell Park cooperators are a testimonial to mutual housing—to its need and at the same time to its benefits. For these people came out of what might be called a housing hell where they were doubled up and tripled up, or living in substandard dwellings, and into a housing heaven where they can breathe their own air, live the good life, and realize the dream of Home, Sweet Home.

But these Bell Park families are only 800 families. There are hundreds, thousands more here, and North, South, and West. What about them?

The answer, of course, is mutual housing on a large scale, on a scale never before blueprinted. We know of no other way of solving or even coming close to solving the problem which besets America's lower middle-income families.

Mutual housing enables these families to enjoy better apartments priced at levels they can afford. Well planned mutual housing does not demand a disproportionate amount of their monthly income. Mutual housing takes these families out of the rut of old hand-me-down apartments. Mutual housing provides a healthier environment that aids not only the one family, but eventually accrues to the benefit of the community as a whole.

If there is any other way whereby the lower middle-income group can gain such advantages it has escaped us.

The builder and the industry as a whole have much to gain through cooperative housing. And again we can speak from experience In agreeing to erect Bell Park we acceded to a contract limiting profits. This was an experiment for us. It has turned out to be eminently fair for all concerned. We received a fair return out of this arrangement, and the cooperators will share e ·ess profits, adding them to their reserves and thereby reducing their charges.

This is one economy in mutual housing, but perhaps the greatest economy comes about through a centralization of effort in that builder who combines, as we did with Bell Park, "know-how," background, and experience with financial resources. Combined, these are the factors that take a mutual housing development over the humps in the many stages of putting one together.

Far from being socialized housing as some would tag it, cooperative housing symbolizes democracy in action. It gives a group of families what they so urgently require—at their price level, and it permits the industry to enjoy a continual flow of fair profit housing construction instead of a spasmodic risk pattern.

With tax exemption, where it is required, or without tax exemption, as it also can be achieved, cooperative housing is, we think, Americ·a's new housing economy.

Tempest in the A. & P. Teapot

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, January 30 (legislative day of Wednesday, January 4), 1950

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD a very able analysis of the Government's case against the Atlantic & Pacific Tea Co., which has been the subject of widespread interest and debate in the country.

This article is written by Mr. A. G. Mezerik, the author of a number of important articles on economic subjects. Mr. Mezerik examines the evidence and defines the issues in this important litigation with the utmost impartiality.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TEMPEST IN THE A. & P. TEAPOT

(By A. G. Mezerik)

The housewife, doing her shopping at A. & P., has never worried much about whether A. & P. is a monopoly or an economic force for good or evil. She has known only the end product of A. & P.'s bigness: comparatively efficient distribution and low prices. Together, these have been more effective in creating favorable public opinion than any propaganda which could have been invented by public relations experts. A. & P., in its tremendous advertising campaign, is presently using those low prices as its major line of defense against the Government's antitrust suit.

The Government, however, steadfastly maintains that it is after A. & P. neither because it sells food at low prices nor because it is big. The antitrust lawyers are going down another street. They are building their case around practices of which, they say, A. & P. has already been found guilty, practices which, in the main, do not directly penalize the A. & P. customer but which, since they spell injury and future danger to the rest of the businessmen in the food field, are against the public interest.

Behind the Government action against A. & P. is a theory which has been expressed in these words by the Supreme Court: "The material consideration in determining whether a monopoly exists is not that prices are raised and the competition is excluded, but that power exists to raises prices or to stifle competition when it is desired to do so." In this context the fact that A. & P. prices are low is relevant only when considered with its power and ability to up those prices at will or to sell products far below cost to kill off competition.

Whether or not the record contains proof that A. & P. has the power and ability to manipulate prices and stifle competition, it does show that A. & P. is truly big. Over its 90 years, since the first Hartford opened his little gas-lit tea store in downtown New York's Vesey Street, A. & P. has grown vertically and horizontally. It is a giant of giants. Its 6,000 stores are everywhere and 4,000,000 customers shop in them every day. One hundred and ten thousand A. & P. employees dispense enough canned goods, dairy products, and soap to supply a nation the size of Holland.

A. & P. is its own canner, packing much of the tinned goods it sells under labels such as Sultana, Iona, and Sunnybrook. A. & P.'s meats are purchased and assembled by one of its many subsidiaries, National Meats. Its national bakery division is the country's second largest baking operation, smaller only than Continental. One hundred and forty million dollars' worth of Jane Parker pie, cake, and bread is taken out of A. & P. ovens each year.

A. & P.'s American Coffee Corp. is the world's largest factor in the coffee business, roasting and selling 140,000 tons of Bokar, Red Circle, and Eight O'Clock coffee annually, bought by its own offices in Brazil and

UNIVERSITY OF MICHIGAN LIBRARIES

Colombia. A. & P.'s Quaker Maid Co. is a huge producer of baking powder, mayonnaise, beans, puddings, and cereals. In turn, Quaker Maid's subsidiary packs White House evaporated milk. Ann Page preserves and jellies are still another A. & P. business of great size.

That this greatest of all food operations truly reaches from the Atlantic to the Pacific is easy to see. National Fish is a heavy buyer of fillets and whole fish on the Boston wharves. Seafood buyers in New Orleans comb the Gulf Coast. Nakat Packing cans salmon on the Pacific Ocean. The vast continental stretch in between is covered by a network which, in addition to those enumerated above, include A. & P.'s National Butter and the National Egg and Poultry agencies. Finally, the Atlantic Commission Co. (ACCO), a main objective in the Government's antitrust case, purchases, through its 70 field offices, over 2,000,000 tons of fresh fruit and vegetables each year. Connected with the New York headquarters by 9,300 miles of teletype, the ACCO men are in Maine for the potato crop, in Michigan when the cherries are ripe, in Texas when the onions are ready.

This bigness in production and purchasing backs up almost $3,000,000,000 in ultimate retail sales over A. & P.'s counters annually, which is more than twice that of its nearest competitor, Safeway ($1,200,000,000) and nearly three times as much as Kroger ($825,000,000), the third grocery chain in point of size. The entire operation, the Government maintains, makes the A. & P. the largest purchasers, manufacturers, processors, and retailers of food in the United States—which is not only self-evident but makes the total A. & P. operation bigger even than that of the Ford Motor Co. The A. & P. thereby wins another distinction, being the largest family controlled corporation in the world. Ninety-nine and ninety-seven one-hundredths percent of A. & P. is owned by John A. Hartford and his brother, George L. Hartford, 77 and 85 years old, respectively.

The Hartfords didn't talk when the Government, 7 years ago, started its successful action against A. & P. in Danville, Ill. The Hartfords still are not talking now, though the Government, acting on a complaint brought by the National Association of Retail Grocers, is seeking—on the basis of the Danville decision—to break up A. & P.'s subsidiary plants and agencies into individual holdings and to dissolve the retail outlets into six regional independently owned chains, along the lines of the seven divisions into which A. & P.'s operations are now separated.

But if the Hartfords aren't talking personally, A. & P. advised by public relations expert, Carl Byoir and his subsidiary, Business Associates, Inc., are very vocal indeed. In a campaign unprecedented in history of litigation, A. & P. has taken to the barricades of advertising. The familiar red store fronts are plastered with slogans and posters. Countermen stuff leaflets into 4,000,000 market baskets. More than 2,000 newspapers carry full-page advertisements setting forth the A. & P. position, which is that Government success in breaking up the A. & P. empire would mean the end of low-food prices for consumers.

The Government is bound to be on the defensive on this low-price issue. Its entire brief includes only one allegation that A. & P.'s prices to its own customers are not as low as they appear on the price tags. The simple charge reads: "The A. & P. officials, from Mr. John A. Hartford down to unit employes, admitted that their stock gains were abnormal in amount and the result of illegal practices. They recognized repeatedly that such gains were due to manipulative practices such as short weights and measures and overcharging of customers." Representative WRIGHT PATMAN, implacable congressional enemy of chain biggies, declared that the A. & P. gleaned, from these practices alone, nearly $2,000,000 in 1941 and that between 1935 and 1941, its take totaled $21,714,000.

DOES A. & P. USE COERCION?

However, neither the antitrust lawyers nor Representative PATMAN could believe for a moment that this alleged deception, of itself, is sufficient to up the whole range of A. & P. prices above that of competition. On the contrary, they admit that A. & P. prices are low. They come to the nub of their contention that A. & P. has the ability and power to stifle competition, when they state their reasons why A. & P. prices are low.

The Government says that A. & P., using its tremendous buying power as leverage, coerces its suppliers into maintaining a secret two-price system, that this system—because of special prices and concessions—is low for A. & P. and high for every other buyer. One example used by the Government is in the charge that the Bowman Dairy Co., Chicago, paid A. & P. a $50,000 rebate in 1942 and later agreed to pay A. & P. 11 percent of sales prices for the 1942-48 period, a total of $355,000. The Government contends that kick-backs of this type and other elements of the price system serve two purposes for A. & P. The first is obvious: It results in A. & P. obtaining the lowest possible price for itself. The second purpose, alleged by the Government, is to further the elimination of A. & P.'s competitors who when purchasing from the same supplier are thereby forced to pay two profits, one on the merchandise which the competitor buys for himself and one on the products sold by the supplier at a loss to A. & P.

Pursuing this same theory—that A. & P. is demonstrating its power and ability to restrict and eliminate competition—the Government points to the use to which A. & P. puts the profits of its far-flung subsidiary operations. These profits, which in 1941, amounted to 40 percent of A. & P.'s total earnings, are, the Government charges, used by A. & P.'s retail divisions to subsidize loss selling in whole territories where A. & P. is seeking to undercut all its competitors in the region.

A. & P.'s alleged use of its subsidiaries to damage competition becomes more complicated in the case of ACCO, A. & P.'s produce brokerage agency. ACCO was the target of emphatic rebuke by the trial judge at Danville. He castigated the double-barreled arrangement in which ACCO acts as buying agent for A. & P. at the same time that it is the selling agent for the farmer, not only in sales to A. & P. but to the general market. By using this special relationship to both A. & P. and the grower, ACCO is accused of diverting the best of the produce which it receives to A. & P., thereby forcing its competitor, who buys produce from ACCO in its capacity of agent for the grower, to accept inferior quality. ACCO is the target of another allegation, to the effect that, by bribery and other means and for its own ends, it has grabbed control of cooperatives, that are of course suppliers.

Throughout, these specific allegations do not question A. & P.'s low prices to customers. They all are directed to the point of proving that the practices which make them low are a danger to other businesses in the food industry and against the public interest. Legally, there cannot be much debate about whether or not A. & P. is involved in these practices. All were part of the allegations in the Danville suit in which the A. & P. was found guilty as charged, and fined $175,000. A. & P. without taking advantage of its right to appeal to the Supreme Court, paid the fine in July 1949, when the Court of Appeals upheld the Danville trial judge. In this new antitrust case the Government is seeking to enjoin A. & P. permanently from continuing these practices. To guarantee the discontinuance of these practices, the Government is asking the court—as a means of destroying A. & P. power and ability to control prices and stifle competition—to break the A. & P. into separated companies under separate ownerships as was done previously to Standard Oil, International Harvester, and other great combines.

Whatever the merits for breaking up A. & P., dissolution has not been a fate worse than death for those other companies. Single units of Standard Oil are now bigger by far than the original company. Since A. & P. is a holding company, the recent report of the Securities and Exchange Commission on the experience of the separate units into which utility-holding companies were broken, is pertinent. The total value of the securities of the separated units is today much more than the market price of the holding company securities were 14 years ago when the death sentence on holding companies became law.

The buyer of foods at retail, built up as the victim or beneficiary, depending on whether A. & P. or the Government is talking, is definitely not the main issue in all this. A Government victory, according to Attorney General McGrath, should "result in lower prices for over 90 percent of the public who buy from other grocers who, because of A. & P.'s practices, are required to buy their supplies at higher prices." The A. & P. counters this with a flat statement that a Government victory would put the A. & P. out of business and mean higher prices for you.

But underneath this and a tremendous volume of other language in this vein, all directed at the consumer, are other equally basic questions. If it seems to the Government that independent businessmen, farmers, middlemen, and other small operators are, or can be, forced to the wall by the actions of a large integrated operation, should it, in the public interest, step in? The Antitrust Division seems to be convinced that the Government has such a duty even when, as in the case of A. & P., the action is outside the classic pattern of trust busting. In the past, antitrust action has always been synonymous with trying to break up companies and combinations which, because they are monopolistic, limit production and keep prices high. Obviously, A. & P. policies do not fit that rule. Moreover, the traditional concept of a monopoly was a business which controlled more than 20 percent of an industry. A. & P.'s share of the Nation's food business is less than 7 percent. In none of these three ways does the case against A. & P. follow the accustomed path.

Nevertheless, the issue—the power and ability of large-scale integrated operations to affect the rest of the economy—has now been raised, and whether or not it follows orthodox antitrust patterns is not the most relevant point. More important is a quick determination as to whether the Government has, or should have, the right under the present law to undertake this type of action, and if so, where such issues should be decided. Up to now antitrust actions have been handled by lawyers and courts. Involved here may well be a question of national policy which ought to be decided by congressional policymakers.

One thing is clear: Business has stakes in the real issues behind the A. & P. case, stakes which are more vital than those held by the housewife to whom A. & P.'s tremendous advertising campaigns are now directed and to whom the Attorney General is speaking. The A. & P. case is opening up the fourth dimension of bigness. Modern technology, mass production, integration, and wide-area marketing—all the techniques which make for product quality at lower costs are in themselves the children of bigness. Since monopoly is only a matter of degree, these are also the attributes of monopoly.

Bigness and monopoly have given us automobiles, locomotives, telegraph, electric light bulbs, radios, steel, and many other products.

In some of these areas, the results show that bigness and monopoly are the more efficient modes of economic organization. How to achieve, preserve, and harness such bigness to promote the general welfare merits the most critical attention and it is in this field that the A. & P. case has opened the questions.

Perhaps, in untangling the threads of the A. & P. case, this country can find out for itself what it values most. It faces into the problem of creating a scale in which low prices and the other fruits of integrated operation are weighed against an ever-greater political centralization in Washington, forced into being to counteract economic centralization. The true effect of such concentrations as that of A. & P. on the independent businessman is also up for some research in which facts will take the place of opinions. The independent businessman is the heart of the American middle class which is in turn credited with being the backbone of democratic institutions.

All these are problems raised by the A. & P. case. They must be recognized as having importance at least equal to and probably far beyond the questions of low prices and size.

Let's hope, instead of vague talk about America being a wonderful country on the one hand and big speeches about trust busting on the other, the New Year brings light on the real issues underlying the A. & P. case.

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1950

Mr. SADLAK. Mr. Speaker, this afternoon, House Joint Resolution 371, relating to income taxes of life-insurance companies for 1948–49, will be the business of the House. A pertinent editorial referring to the subject matter of this resolution appeared in yesterday's Hartford (Conn.) Courant and I include this under extension of my remarks in order that it might be available to my colleagues in the House. The editorial follows:

LIFE INSURANCE A FAVORITE TARGET

The life insurance industry has been much in the news lately. Its top executives have been streaming to Washington to testify in separate congressional inquiries into monopoly and investment practices. Representative CELLER, of New York, heading the monopoly investigation, has been a particularly outspoken critic of the industry.

James G. Patton, president of the National Farmers Union, last week leaped into the fray. He urged Federal regulation of all interstate insurance business, the breaking up of all companies with more than $250,000,000 in assets, and an end to the control of insurance in New York and eastern financial centers.

In this week's tax message President Truman also singled out the life insurance companies for none-too-friendly attention. He referred to efforts by the House Ways and Means Committee to arrange now for retroactive taxes for the past 3 years, and urged Congress to pass a new tax law to remove the inequities of undertaxation in this field without impairing the ability of individuals to acquire life insurance protection.

All this hullabaloo, even if much of it comes to nothing, does the industry no good. Mr. CELLER's broadsides create no good will for life insurance, even though he has conspicuously failed to convince Congress of the need for a thorough investigation of the industry. Mr. Patton's gratuitous suggestions about breaking up the business are based on erroneous assumptions. Among them are that State regulation of insurance is slipshod and ineffective; that concentration of many home offices in the East necessarily makes the companies less than national institutions; and that credit for small businesses is less readily available now than it would be if the large companies were arbitrarily subdivided.

Even if the assumptions are false, the proposals will damage the reputation of a vital industry, unless they are effectively answered. The tax situation, too, lends itself to distortion. In 1947 and 1948 life insurance companies paid no Federal income tax, a fact that has given rise to a good deal of ill-informed criticism. The point is that a new formula for income taxation of life companies was adopted back in 1942, with the approval of the Treasury and of Congress. Implicit in that formula was the understanding that if the rate of investment earnings fell below a specified point, there would be no taxable income, and therefore no tax.

That was what happened in 1947 and in 1948. It was the low rate of return per dollar on investments, a direct result of Government fiscal policy, that caused it. If the 1942 formula was unrealistic, it should be revised. Whether it should be done retroactively is another question. Why should it be? In any case the attempt to imply that the insurance companies have somehow been cheating, or have hoodwinked the Government, is ridiculous. You might as well charge the Treasury and Congress with collusion in approving a tax formula that made the industry's virtual exemption possible. It's a pity that some people can't resist sniping at a big and inviting target, no matter what the facts are.

National Children's Dental Day

EXTENSION OF REMARKS
OF
HON. HENRY O. TALLE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1950

Mr. TALLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Des Moines Register of January 29, 1950:

CONGRESS ACTS—FOR DENTAL DAY

WASHINGTON, D. C.—After 4 weeks, Congress has sent just one bill to the White House—a resolution authorizing President Truman to proclaim February 6 as National Children's Dental Day.

The Pressure Goes on Again

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1950

Mr. VELDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in the January 26, 1950, issue of the Peoria Journal, entitled "The Pressure Goes on Again":

THE PRESSURE GOES ON AGAIN

Victorious in the Far East, where the Chinese Communists have consolidated their control of that sprawling country, Soviet Russia once again is turning her attention to the west—more particularly the sore spot at Berlin.

Once again she is setting up road blocks and blockades and hampering free access by American, British, and French soldiers and officials into the German capital. While the blockade hasn't been made very effective, it still is a nuisance and a hindrance and it has led to speculation as to whether or not it might be necessary to reinstitute the air lift that kept Berlin operating for so many months at so high a cost.

Our plans for an air lift to Berlin are still in existence. They could be put into operation again with little loss of time if it proves necessary. But renewal of the air lift would be a tremendous drain on the pocketbooks of the people of the United States.

There is considerable debate as to why Russia is putting the pressure on again now after letting the operations in Berlin continue unhampered for so long a time. One explanation seems more apt to be right than the others. The United States, under the ineffective leadership of Secretary of State Dean Acheson has just backed down in China and Formosa. Mr. Acheson has just justified our Nation's refusal to aid Formosa on the ground that such action might lead to war. The Russians might be feeling us out to see whether that same attitude pertains to Berlin and whether we can be made to back down there. When George Marshall was Secretary of State we showed them that we couldn't be bluffed by setting up the air lift. But a weaker man is now at the helm of our State Department and it might be possible, in Russian thinking, that we could be forced to step backward in order to avoid a conflict at Berlin.

The policy of the State Department ever since Acheson became Secretary has been one of softness and backing down. We have knuckled under to the Communists in China; we have feared to oppose them in Formosa; Acheson even proposes that we back down on the stand that we took against Francisco Franco in Spain. We are following a policy of appeasement and knuckling under that has always led to disaster in the past.

The reason is not hard to find. Our State Department is full of "brilliant, young men" like Alger Hiss, who stands convicted of treason in the eyes of his countrymen even though his trial actually was only for perjury. The State Department and other departments of our Government have been filled with just such "brilliant young men" as Hiss and Acheson ever since Franklin Roosevelt first was elected President. Their sympathies for the enemies of this Nation and their vacillating policies have betrayed us into the hands of our enemies.

The United States needs, as much as anything else, a complete housecleaning of the departments of Government, and the Department of State, the haven of Acheson and his good friend, Hiss, would be a good place to start.

Incongruous Conduct

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1950

Mr. O'SULLIVAN. Mr. Speaker, I wish to place in the Appendix of the CONGRESSIONAL RECORD a very timely and

UNIVERSITY OF MICHIGAN LIBRARIES

enlightening editorial written by a great, old-time, Democratic newspaperman, Mr. George Woodward, Sr., who is the editor of the Farm-Labor Press of Council Bluffs, Iowa.

Heretofore I have been very sympathetic to the plight of China, Formosa, and the other far eastern countries, but now I have great doubts about the wisdom of my former sentiment.

I am sure that everyone will be interested in reading this potent editorial and after reading the last eight paragraphs of same, they will begin to understand, perhaps, why many people outside of the Congress are now shedding crocodile tears, allegedly for humanity's sake, over the lost cause of Nationalist China and the recent decision of President Harry S. Truman not to lend our aid, of money and men, in the defense of Formosa.

It is now very apparent to me that many persons not in the Congress are in the fight as pressure groups to work on their Congressmen in an endeavor to secure aid to China and Formosa, et al., because American capital has made tremendous investments in China, Formosa, and other far eastern places, and most assuredly are now anxious to have American men and dollars save their investments for them.

I know that every Member of Congress has not heretofore and will never take up the legislative cudgel for any such group but will be motivated to act by better sources and for more proper reasons, and anything which I have to say will not be taken, I am sure, to apply to any of my colleagues.

I know that many people have wondered why so many of our citizens seem always to be continually living abroad mentally—at the present time in China and Formosa and the Far East.

The first intimation which I had that all was not real grief which crieth and sobbeth was when I read the CONGRESSIONAL RECORD, at page A357, under date of January 18, 1950, where there appears certain data presented by the gentleman from Massachusetts, Hon. THOMAS J. LANE, entitled "Formosa." It was pointed out that Charles J. O'Malley had stated in the January 10 issue of the Boston Traveler of Boston, Mass., that Boston investors were part owners of Formosa, because the people of Boston and New England have greater ownership interest in Formosa than the Chinese or Japanese and that the real facts were that when Japan defeated China, China sold the Island of Formosa to the Taiwan Electric Light & Power Co. for a sum equal to about $5,000,000 American. The Taiwan Electric Light & Power Co. was the most important industrial development in Japan. It owned and controlled the electric light and power all over the empire and the taking over of Formosa was one of its activities. When this was accomplished it was decided that America would pay for it, and bonds, equivalent to $22,800,000 were issued. These bonds were sold in Boston, New England, New York, and other parts of the United States. In order to accomplish this the company secured the services of J. P. Morgan & Co., Kuhn Loeb & Co., the National City Co., the First National Bank of the City of New York, and the Yokohama Specie Bank, Ltd. When this was accomplished, through the Yokohama Specie Bank, which was the interest involved in Japan, practically all the leading brokerage houses in this country were engaged in the sale of these bonds. Hayden Stone & Co. sold a great many of these bonds in Boston.

Is this why we are asked to help defend Formosa now?

The editorial which I have heretofore mentioned of my good friend, George Woodward, Sr., is as follows:

INCONGRUOUS

The incongruous attitude of the isolationists previous to and during the war, and their attitude of aggression against the administration's hands-off policy in Formosa is the most shameless exposé of political chicanery that could be conceived in the minds of so-called statesmen when the destiny of their country and the lives of their countrymen are at stake.

The isolationists were opposed to our preparation for war against Hitler. They stumped the Nation for Hitler and against the Commander in Chief of the Army and Navy of their own country. They lauded the infamous speech of Charles Lindbergh in which he made the seditious statement: "The only danger of war in the United States rests in the Jews and President Roosevelt." When war with Germany was imminent, the isolationists voted against lifting the embargo; against lend-lease; against the Selective Service Act; against war mobilization of industrial plants. In fact, they voted against every war measure proposed by the administration, and the treacherous Japanese attack on Pearl Harbor served only to drive the isolationists under ground to carry on in secret their obstruction to the progress of the war.

The isolationists did not want war then; were willing to compromise with Hitler upon Hitler's terms. When we became involved in war, they would not fight or support the Government's policies in the blackest hours of doubt and distress. Why?

Then there were no atomic bombs. Then, all we had to lose was life, property, resources, and time. Then, it was often suggested but never seriously contended that civilization was in peril. However, World War II was climaxed by the dropping of two atomic bombs, one on Hiroshima and the other on Nagasaki, capable of destroying all life and practically all property within a radius of 19,000 feet, and now scientists are awaiting the go-ahead signal to build a hydrogen bomb that could destroy all life—perhaps millions of people—and all property within a radius of 100 miles. We know that Russia our potential rival for world power, has the atomic bomb. We do not know how far behind, or that she is not ahead of us, in pursuit of building deadly weapons, or that she is not already at work building the incalculably more destructive, more devastating, and more dreadful hydrogen bomb.

In view of such possibilities, it would seem that no man whose power of reason rests securely upon its throne would risk fomenting the shallow stream that separates the cold war from boiling over into a shooting war by loudly criticizing the administration's hands-off policy in Formosa. And, who does? Nobody but the isolationists of World War No. 2!

They say we have betrayed China; that we have sold out to Stalin; that Dean Acheson should resign and that President Truman should be impeached, when all the world stands terrified in dread of the smouldering spark of contention that may ignite the explosion that will destroy all the hopes of mankind, all his achievements and the loftiest development of civilization to which man has ever attained.

There has never been the remotest hope of establishing a democracy in China; freedom, human or equal rights among man. Chinese destiny and doom was sealed in 1927 when Chiang Kai-shek sold the working class, the poor and the humanitarian intellectual people into slavery. When that great military leader accepted an initial loan of $25,000,000 from Shanghai bankers and industrialists, assisted by foreign capitalists (not excluding American vultures), to disarm and dissolve trade unions and peasant leagues; purge the Kuomintang of Communists, and establish a new government in Nanking as rival to the government in Hankow, and Chiang Kai-shek carried out his part of the agreement to the letter.

Thousands of factory workers and intellectuals were slaughtered in Shanghai and other cities, without trial or hearing. In the interior, military governors, army commanders and landlords began killing peasants. Rivers of blood divided the earth of China. Foreign powers called it good and recognized the government at Nanking as the only government in China.

No more despotic, savage, ruthless, murderous, and inhuman government ever existed than the Nationalist Government of China under the regime of Chiang Kai-shek and, the isolationists of World War II, are entitled to all the applause and glory they shall receive from the calloused hearts of big business for their criticism of the administration's attitude toward Formosa and deserve all the contempt organized labor and the common people of America can heap upon them.

The Chinese people, like all the peoples of the world, have always hoped to attain their God-given right to freedom of thought, individual liberty, equal opportunity, and the pursuit of happiness. The intellectuals of China are endowed with human sympathy and reason and capable of statesmanship. If some way could be found to curb the corruption of international bankers and the power of money to bribe the highest and the lowest officials, there is no reason to suppose that China would not establish a free government comparable to our own government.

"What's in a name? That which we call a rose would smell as sweet by any other name." If we laboring people of America demand moral legislation giving us a more equitable standard in social economy, we are called Communists by the arrogant rich, their big newspapers, their commentators, and their political parasites, knowing full well that freedom and liberty to us is worth fighting for, while the rich are content to sit back, rake in the profits of war and sick us on to victory or to death.

In China the war is between the poor down trodden people against the autocratic murderous rich—a subjugated people fighting and dying to throw off the yoke of despotism, and call them whatever name you choose. If the people have a voice in the establishment of a new government, it will not be communism, socialism, or any other than a government of, for, and by the people. The Nationalist Government in China is finished—is as dead as the the dodo bird, and whatever influence our country may have in support of a new government in China should be directed toward the people of that nation and against the rich.

The rich, everywhere, can be depended upon to get along quite well without suffering from want and destitution.

End Excise Taxes

REMARKS
OF
HON. R. WALTER RIEHLMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1950

Mr. RIEHLMAN. Mr. Speaker, there is a buyer's strike on in America of tragic proportion. Inspired by an administration dangling a cut in excise taxes before the noses of the American people, the buyer's strike is affecting and economically damaging and bankrupting thoughts of small-business men in 48 States.

People are holding back from buying goods bearing heavy wartime-imposed taxes—and they are waiting for congressional action. Congress is waiting for a bill to vote upon.

I submit that virtually all wartime-imposed taxes can be eliminated without turning to new and dangerous levies on business to offset tax loss. I submit the removal of excise taxes will so inspire consumer demand and thereby production and employment and pay rolls that the income loss of excise levies will be more than offset by increased income from business and individuals during the year.

I also suggest that we refrain from thinking that every removal of tax depends upon the addition of new taxes. And especially should we refrain from the imposition of additional taxes until the time has come when we have exhausted every means of establishing a sound and economical operation of our Government.

It is a fact that if the measures recommended in the Hoover report were effected the Government could save enough to remove four billions of dollars in tax levies.

It is a fact that the reduction or ending of certain taxes would aid in bringing to our people a full enjoyment of a greater prosperity and at the same time not affect the efficiency or lessen the services of the Government.

More than 1,000 of my constituents have taken time in the past 10 days to write me personal letters protesting continuation of wartime-imposed excise taxes. They have also tied up their request with an urge to effect economies in Government operation which are obviously extravagant and admittedly ridiculous.

To add to that voice of impassioned protest of the public, I am urging businessmen throughout the country to let Congress know how seriously the excise taxes and the resulting buyers' strike is hurting them. I have suggested to businessmen everywhere that they protest further delay in congressional action in a telegram to the Ways and Means Committee on Thursday, February 2. That day, Mr. Speaker, is End War Tax Day, and it is a day when businessmen will take the only possible avenue of protest open to them.

Each business organization in the country should request its members to join this telegram "blitz" of the committee which has before it approximately 50 bills concerning excise taxes. Perhaps if such response is great enough the committee will appreciate that not only the public at large is against the excise tax imposition, but that business is solidly united in its knowledge that our economic structure is being damaged by war taxes continuation.

In my county of Onondaga, in upState New York, more than 20,000 persons are wearing lapel buttons protesting continuation of the war taxes and asking for an end of Government waste. They are not wearing buttons asking for more taxes on business. Because any thinking person knows that additional taxes on business will be relayed to consumers.

The mothers who deplore taxes on their baby's powder—know well that if corporation taxes are increased the baby powder will cost just as much as it does now but that all the new and old taxes on it will be hidden.

The politically remunerative policy of taxing the rich and levying heavily against business is the aim of the present administration. But we, in Congress, must be wise enough to see through this grim political devise and appreciate that every tax against industry is a tax against the public.

The people pay the taxes that industry is forced to assume. They pay it in every purchase and are told to blame high cost on industry. The laborer who is laid off because business is reduced by Government action, pays Government taxes with privation and denial and a loss of his hard earned benefits.

Wartime-imposed excise taxes were justified once when we were attempting to discourage consumption of goods deleterious to the war effort. They helped put business into war production—they helped channel dollars into Government bonds—they helped reduce demand for certain goods which it was felt weakened the Nation's strength of purpose needed for all-out war.

Now those same taxes have the same effect in peacetime. They reduce consumption of goods and reduce production. They deny each man the right to enjoy the fruits of his labor. They make a mockery of prosperity and high wages and labor's benefits.

I call upon this Congress to demand in a single voice that wartime-imposed excise taxes be removed immediately and that the Congress stand firmly against the imposition of additional taxes on the people.

When we have eliminated the tragic and costly waste in Government operation; and when we have removed the political pump-priming expenditures of the administration; and when we have tried sound economic programs of business encouragement to raise Government tax income through currently levied taxes, then we will find that new taxes are not necessary.

In fact we will find that even more old taxes can be reduced or ended.

Let's be the Congress which removed that tax—not the Congress that fell for the kindergarten philosophy of replacing a business deterent tax with another tax on the people.

This is the time to dedicate ourselves to ending the war—tax-wise.

Sabine River Development

EXTENSION OF REMARKS
OF
HON. LINDLEY BECKWORTH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. BECKWORTH. Mr. Speaker, there are two rivers which are partly in the Third Congressional District of Texas—the Sabine and Neches Rivers. When I first came to Congress, I contacted various authorities of our Government to ascertain what could be done to develop in practical ways these rivers. Too, as a member of the House Flood Control Committee several years ago, I constantly worked to direct attention to the feasible development of these two rivers. The late Senator Morris Sheppard, of Texas, did much work in connection with the prospective development of these streams.

More recently there has been evidence of renewed interest along the line mentioned. A forward step has been the formation of the Sabine Watershed Association, of which Mr. John Ben Shepperd, of Gladewater, Tex., is president. It is hoped the authorities of our Government will help us to complete in the near future the study or survey which currently is being conducted.

One of the most outstanding newspaper writers in Texas is Mr. Robert M. Hayes, who works with the Dallas Morning News; his office is in Tyler, Tex. Mr. Hayes recently wrote a series of articles on the Sabine River development possibilities. They are timely and to the point, in my opinion. Under unanimous consent, I include in the CONGRESSIONAL RECORD these articles, along with some communications:

A WATER SUPPLY FOR EAST TEXAS

(A series of articles on Sabine River development possibilities)

(By Robert M. Hayes)

I. TO AVERT WATER FAMINE

LONGVIEW, TEX., September 17.—All this talk about a threatened water famine—

Is it a real or imaginary danger? Can industry expand with its present source of supply? How long will cities be able to meet normal domestic demands? What is the solution?

Plagued by the fear of a water crisis, East Texans along the Sabine River watershed have organized to fight what alarmed geologists call "a creeping paralysis that threatens the entire Southwest."

East Texas already has felt the pinch. Bids for industries have been turned down because of inadequate water. Lawns and garden plots have become parched because of

UNIVERSITY OF MICHIGAN LIBRARIES

the shortage. In a few instances even drinking water supplies dropped to dangerously low levels.

Ample potential supply

Yet water engineers say the potential supply of water in East Texas is ample. There's enough not only for present needs but for all demands of the foreseeable future.

Then why all the alarm? Because the major part of this area's fresh water supply is flowing unused down East Texas streams.

The Sabine River alone empties into the Gulf of Mexico an average of 5,800,000,000 gallons a day. That is enough for a thousand cities the size of Tyler.

Thus the threat in East Texas resolves itself into a problem of conservation and utilization. That's why the newly organized Sabine River Watershed Association has launched a crusade to arouse lethargic East Texans to the necessity of prompt action.

The watershed association is headed by John Ben Shepperd, energetic young Gladewater lawyer and past president of the United States Junior Chamber of Commerce. Its sphere of operations extends from Greenville to Orange and takes in an area of 9,703 square miles.

Shepperd's group will work hand-in-glove with the Sabine River Authority, a State agency headed by John W. Simmons, of Orange. In fact the watershed association expects to do much of the spade work for the long-range program and help finance the organizational activities.

The Sabine River Authority has received a State appropriation of $25,000. This, obviously, will not go very far in a program of such magnitude. Then, too, a restricted membership—nine directors appointed by the governor—tends to limit its functions.

It was largely to overcome these handicaps that the private group was formed. The watershed association has set a goal of 100,000 members and hopes to raise $100,000 a year.

How will the association funds be spent? A statement from Shepperd's office gives the answer:

1. To organize an all-embracing development program for the river and its tributaries.

2. To sell the sprawling watershed area on the urgent need of water conservation.

3. To work with the Sabine River Authority and, if necessary, provide funds for investigation and surveys of practical development projects.

"If our program is to succeed," says Shepperd, "it will be necessary for the great majority of our people to throw their active support to the Sabine River Authority."

The association maintains offices in the East Texas Chamber of Commerce Building in Longview. There is only one paid employee—Byron Tinsley, of Greenville, the executive secretary.

The board of directors is made up of 45 civic leaders from throughout the watershed. There are three vice presidents representing the upper, central, and lower regions. They are Col. Hal Horton, Greenville; Judge Earl Sharp, Longview; and George S. Colburn, Orange. Hugh Sawyer, of Longview, is secretary-treasurer.

A fourth region, across the river in Louisiana, is in the process of organization. A little less than a third of the watershed area lies in Louisiana.

What are the objectives of the long-range program? Heading the list is water conservation. Scores of cities and towns have been warned they are drawing from their underground water supply faster than nature can replenish.

Then there's flood control. Periodical overflows take a heavy toll both in crops and property. Only a few years ago a Government engineer, in reporting on a survey, said: "Floods in the Sabine Basin cause damages principally to crops and, to a lesser extent, to oil properties, railroads, highways, and public utilities. These damages, both direct and indirect, are estimated to average $268,300 annually."

A third objective is the reclamation of overflow lands. By controlling the floods it would be possible to restore approximately 500,000 acres to agricultural production. This, it is estimated, would add $3,000,000 annually to the area's net revenue.

Still other aims include recreation, public health, reforestation, wildlife conservation, and river navigation.

Even though work has not yet begun in earnest, association officials have a tentative answer to the question: How much time will the program require?

If sufficient funds are raised the survey could be completed in 1951. The construction of dams and the straightening of channels should take about 8 years.

"It is highly possible," says Shepperd, "that the over-all project can be brought to a successful conclusion within the next 10 years."

That, engineers believe, would be long before the "creeping paralysis," now centered in the more arid States of California, Arizona, and Nevada, has time to reach east Texas.

II. FOR INDUSTRIAL GROWTH

GLADEWATER, TEX., September 18.—The man with the green eyeshade and a desk littered with funny-looking maps and charts put it this way:

"Suppose you own a small business and have a working capital of $100,000. With money in the bank you feel secure and are not worrying too much about building up a reserve.

"Your withdrawals have been greater than your deposits. But prospects appear rosy and you want to expand. Then you suddenly discover you can't swing the deal with the dwindling balance you have left.

"What are you going to do—go bankrupt or get out and rustle up more business? There's plenty of money in circulation but it won't come to you without an effort."

That's how the water engineer and the city planner eye the problem that confronts most of east Texas today. For the past decade industrial expansion in the area has been spectacular. The trend is gaining momentum and the future would look rosy if the threat of a water shortage could be thwarted.

As a solution to the problem the newly organized Sabine River Watershed Association has undertaken a long-range problem designed to harness and utilize the 6,000,000,000 gallons of water the stream is pouring into the Gulf daily. The association will coordinate its effort with those of the Sabine River Authority, a State agency.

Charts and statistics prepared by State and Federal engineers do not make pleasant reading. Water tables (levels at which ground water is found) are dropping fast. The surface water situation is not bad, but currently only a third of the domestic water supply comes from above ground. And less than 10 percent of the available surface water is impounded.

Prior to World War II, east Texas gave little thought to the water problem. True, it was known that water demands of the State at large had increased more than 7,000 percent from 1890 to 1940, though the population gain had been only 287 percent. But east Texas was not in the drought area and had plenty of live streams. So, why worry?

The Nation's unprecedented program jarred the area out of its complacency. There was a mad scramble for war plants. When applications poured into the War Department the first question asked was: Do you have plenty of water?

Deep wells helped many communities meet the war emergency. Contracts for material were spread relatively thin over the area, and despite handicaps, east Texas plants made a sizable contribution to the war effort.

When peace came, east Texas leaders, spurred by their success, trained their sights on a huge industrial expansion program. Figuratively speaking, their foot was in the door and they were determined to take full advantage of the situation.

During the past 5 years Gregg County has set the pace in its bid for heavy industries. Lake Cherokee, a 4,000-acre reservoir near Longview, has played a vital part in the city's spectacular industrial growth. Engineers say it will care for the needs not only of Longview but of neighboring cities and communities as well.

Tyler, too, has become a busy industrial center. Since 1940 its population has jumped from 28,279 to 42,500. A new water supply, Lake Tyler, will have an important bearing on the city's future growth. The lake covers 3,000 acres.

But how long will these reservoirs meet the demand? What about the demands of 1960? Of 1970?

Here again the water engineer, fortified with maps and charts, comes up with the answer.

During the next 20 years, according to his forecast, the population of the major centers in the Sabine River watershed will increase from 50 to more than 100 percent. The drain on the municipal water supplies will increase proportionately.

Smith County, for example, now has a population of about 57,000 persons who depend upon municipal water supplies. Consumption runs 5,100,000 gallons. In 1960 the population will be 74,704 and the water consumption 6,646,000 gallons. By 1970 the population will have reached 92,058 and the water consumption 8,165,000 gallons.

These figures were taken from tables prepared by J. M. Lloyd, Tyler water engineer, for the East Texas Water Conference.

Gregg County's growth, Lloyd predicts, will be even greater than Smith County's. He says Gregg's present urban population of approximately 49,000 likely will reach 90,200 by 1970 and the water consumption will jump from 4,079,000 to 12,273,000 gallons.

During the same period Wood County's population and its water consumption are expected to increase approximately 100 percent. Panola County, which takes in the world's largest natural-gas field, will show an even greater gain.

Lloyd called attention to the almost limitless possibilities for industrial expansion in east Texas if the water problem can be solved.

"In the east Texas oil field," he said, "there are approximately 27,000 oil wells. In Panola County there is a vast gas potential of 3,000,000,000,000 cubic feet of high B. t. u. gas. These natural resources make possible a huge industrial and manufacturing program. Gas is readily available as a fuel, replacing the more expensive coal.

"Several cities, deeply concerned about their future growth, have decided the only feasible solution to their water problem lies in the construction of reservoirs. It must be understood, however that these steps will only meet the needs for a few years and will not provide for many large industries which consume vast amounts of water."

The late Governor Beauford Jester sounded a similar warning in Tyler last year.

"Prior to 1940," he said, "many of our towns and cities were racking along with just enough water to meet current requirements. When the war came, with its urgent needs for quick action, many of these communities failed to obtain their share of war industries because they lacked the necessary water. They now may fail to obtain their quota of postwar industries for the same reason."

But the Governor's warning was tempered with optimism. East Texas, he said, is more fortunately situated than other parts of the State.

"Stream-flow records," he asserted, "show that the average annual run-off for each major stream of this region is sufficient to supply ample quantities of water for a greatly expanded population. But this future water demand cannot be supplied by the unregulated flow of our streams."

III. A FACTOR IN CONSERVATION

CARTHAGE, TEX., September 19.—Approximately 625 square miles of overflow lands in east Texas will be reclaimed and put into production if the Sabine River Watershed Association's long-range improvement program attains its goals.

That's the equivalent of more than four counties the size of Rockwall, or about three-fourths the area of Dallas County.

Crop production on the reclaimed land should yield a net revenue of $3,000,000. Pumped into the channels of commerce, the added income would mean a sharp rise in employment, increased sales, and the construction of new homes. It would also mean greater tax revenue to build new schools and highways.

These are the figures of John W. Simmons, 37-year-old president of the Sabine River Authority, a newly created State agency. The SRA and the watershed association have joined forces in an effort to harness and utilize the waters of the 578-mile stream.

"The future of east Texas," says Simmons, "depends on water conservation and flood control."

He estimates that agricultural benefits from the projected program would total $50,000,000 a year. This would include not only the revenues from reclaimed land but from irrigation and soil conservation.

Soil conservation and the control of water resources, engineers say, go hand in hand. Rains are not absorbed by barren, denuded lands. The water flows unchecked into the nearest streams and lakes, carrying with it any valuable topsoil that might remain.

Silting lakes and rivers, in turn, add to the flood dangers.

William A. Faught, agricultural economist for the Federal Reserve Bank of Dallas, makes this observation:

"It is apparent that the improvement and conservation of the soil are closely related to the conservation and management of water supplies. It would be difficult to formulate a satisfactory program to provide a solution for either of these problems if the other were disregarded. Effective methods of conserving soil and water have been developed, and the public, including both farmers and business leaders, is aware of the importance of establishing these methods on the land."

Faught called attention to the steady deterioration of the soil because of unsound farming practices.

"Over large areas of the region," he continued, "the protective cover has been stripped away, exposing the land to the beating action of rain and increasing the rate of erosion. The run-off water into streams and rivers has been speeded up and flood damage has been intensified. Silting, which results from this erosive process, has partially filled many storage reservoirs, and reduced the productivity of lowland fields on which it was deposited."

But reclamation, erosion control, and water conservation are only part of the watershed association's broad improvement program.

Its most popular phase, perhaps, will be recreation. A series of reservoirs and lakes along the 578-mile stretch are of the Sabine would provide facilities for boating, swimming and fishing. It would enable east Texas to make a strong bid for tourist trade, now one of the Nation's largest sources of revenue.

For recreation cannot be written off as nonessential. It has moved into the ranks of big business. The tourist dollar is bolstering the sagging economy of many a drought-ridden State that has reached its limit in industrial expansion. East Texas leaders see no reason why this area, once an ample supply of water is assured, should not train its sights on the tourist trade and an expanding industrial program.

Lake Texoma, near Denison, is a typical close-to-home example of what recreational facilities can do for a community. It has become one of the most popular playgrounds of the Nation. All northeast Texas has reaped the benefits.

Lake Texoma was built by Army engineers for power, flood control, irrigation, and navigation. The recreational center was developed by the Department of the Interior and the National Park Service. The original cost was $54,000,000.

In asking for an appropriation recently for the expansion of its recreational facilities, Senator ROBERT S. KERR, of Oklahoma, said a million people visited Lake Texoma in 1948. Of all Federal projects, he added, only Yellowstone Park exceeded this record.

The indirect benefits from a recreational area often exceed the direct. Factory owners have long since learned that a contented worker is more apt to be an efficient worker. Consequently, in crowded industrial areas with inadequate provision for recreation, production is likely to suffer.

East Texas leaders believe the development of recreational areas not only would attract tourists but would be a definite inducement in bids for new industries.

There are two other important phases of the projected watershed development program. They are irrigation and navigation.

Near the mouth of the Sabine in Orange, Jefferson, and parts of Chambers and Liberty Counties, a network of canals and ditches feeds the principal agricultural crop—rice. Orange County alone has a 10,000-acre harvest that brings in $500,000 a year. There are at least 150 miles of canals in the area's irrigation systems.

Further inland, irrigation becomes somewhat of a rarity. A few farmers in Smith and Rusk Counties are using portable systems. Their success may start a trend.

The prospects for navigation in the upper reaches of the stream admittedly are remote, though Carl Estes, Longview publisher, insists that it is coming.

"Many of us," he told a Gladewater audience recently, "will live to see commercial steamers plying the Sabine in the east Texas oil-field area."

Currently, however, river shipping is confined to within a short distance of the mouth. But it has paid off. Water-compelled freight rates have effected great savings for shippers. The Interstate Commerce Commission requires railroads to meet the water rates on any rail shipments originating in the navigable area.

IV. ETEX CITY NEEDS

ORANGE, Tex., September 21.—This busy port's hue and cry about a threatened water shortage doesn't make sense to the average inlander.

Only a few miles from the Gulf of Mexico, the broad expanse of the Sabine River appears to offer ample assurance of a plentiful water supply. It is big enough to float a battleship—or a fleet.

Then why is Orange so vitally interested in the development of a water-conservation program along the entire length of the stream? How can a dam at Big Sandy, Longview, or Logansport possibly benefit the coastal area? Why did an Orange man, Edgar Brown, Jr., make the first pledge of $1,000 a year to the Sabine River Watershed Association to help find a solution to water problems hundreds of miles away?

The answer is found in two words that bob up frequently in engineering reports: regulated flow. The people of Orange know that unless the Sabine's flow is maintained at a reasonably consistent level their huge industrial plants will be in constant jeopardy, and that control measures, such as the construction of dams, must be taken on an area-wide, rather than local basis.

The Sabine dumps an average of nearly 6,000,000,000 gallons of water into the Gulf a day. But the actual run-off throughout the year may range from a mere trickle one day to a raging flood another day.

During the period of low flow, local industries face the constant threat that salt water from the Gulf will back up the stream, forcing a shut-down of factories representing an investment of millions of dollars. They must have fresh water to operate.

If they were unable to meet this threat thousands of employees would be idled and the impact would be felt throughout this section of the State.

The Orange Leader, commenting editorially on the projected watershed-improvement program, told how Orange County's irrigation systems had saved the rice crop during a dry spell last year, but added:

"At the same time, something a lot less subject to boastfulness was going on without publicity. Industrial concerns in the area were sweating blood because the supply of fresh water was inadequate. Tremendous quantities were required for irrigation, which seriously affected industrial usage.

"For a time it was nip and tuck with the industries whether they could stay in operation or be forced to close down until the rains came upstream and the river's flow increased.

"It is true that a lot of water flows down the Sabine River to the Gulf every year. But it also is distressingly true that most of this water comes down the stream during about 8 months of each year.

"So far as the fresh-water situation is concerned, the idea behind the present waterways movement is this: If a series of low-level dams can be constructed upstream on the Sabine, the water could be impounded during months when it is plentiful, then released as needed during periods of drought.

"Until this is done, there can be few more big industries requiring large quantities of fresh water built on the Sabine."

The unprecedented gains made by industry in the Beaumont-Port Arthur-Orange area during the last 10 years has attracted Nation-wide attention. Hundreds of millions of dollars have been invested in refineries, shipyards, chemical plants, and synthetic rubber factories.

Most of them take vast quantities of water. A nylon plant near Orange, for example, requires 30,000,000 gallons a day. There is not a major industrial installation in the entire Sabine Basin that does not impose a heavy drain on the current supply.

The threat to agriculture is equally menacing.

Orange County rice growers keep their fingers crossed when talking about their supply of fresh water. Their irrigation systems have served them well. During the dry spell last year irrigation canals and ditches remained free of salt water and not a grain of rice was lost.

But will their luck hold out? In some of the neighboring counties and in Louisiana parishes across the river, the loss was heavy. Rice is the principal cash crop in this area. A few failures would undermine the entire agricultural structure.

When the Sabine River Authority was created a few months ago, an Orange man, John W. Simmons, was chosen to direct its destinies. It was not only because of his qualifications but because he is in a position to realize the gravity of the water problems.

Other Orange leaders have thrown their strength behind the watershed-improvement program. They want dams built all up and down the Sabine to help maintain the flow at a consistent level and at the same time develop new industries that will strengthen the economy of all east Texas.

UNIVERSITY OF MICHIGAN LIBRARIES

The late Beauford H. Jester, as Governor, addressing a water conference in Tyler last year, said:

"Texas has been as profligate in its usage and wastage and lack of conservation of its water as it has been in years past with its forests, oil, and gas. We have no more frontiers that we can move to, or more unexplored areas, so to speak, that warrant us in being wasteful of our natural resources. Our job is to conserve and better utilize that most basic of natural resources—water."

The Governor added that the picture is not too desperate in east Texas as this area has perhaps more available water than any other section of the State. But he cautioned that failure to make intelligent use of the existing supply would place a limit on future industrial expansion.

V. A SUMMARY OF ADVANTAGES

LONGVIEW, TEX., September 22.—Did you know that—

Texans are using water more than twice as fast as nature can replace it?

A shortage of water threatens to hamper the industrial expansion program in east Texas?

A single industrial plant near the coast uses as much water as Houston or Dallas?

Two-thirds of the domestic supply comes from underground, and 90 percent of the surface water flows into the Gulf?

In an effort to arouse east Texans to the gravity of the water problem, the newly organized Sabine River Watershed Association has launched an all-out crusade to pave the way for a long-range conservation program.

Volunteer speakers have been recruited to appear before luncheon clubs, schools, and civic groups. Each has been armed with statistics showing the urgent need for harnessing the water of the Sabine River.

Solution is simple

The figures about the diminishing supply were not gathered out of thin air. They came from Judge Guy C. Jackson, Anahuac, president of the Texas Water Conservation Association.

No alarmist, Judge Jackson says the solution of the problem is simple if everyone will pull together. Waters of the Sabine alone, according to the judge, will support four times the present population of the watershed area if proper control measures are taken.

What control measures are necessary? A series of dams, strategically located along the stream, would impound water for municipal and industrial use. It also would check floods that inundate hundreds of thousands of acres annually. It would help maintain a consistent flow so necessary to industry in the lower Sabine Valley.

And how will the program be carried out? The State legislature early this year created the Sabine River Authority, a nine-man agency empowered to map an all-embracing improvement program. Only $25,000, however, was appropriated for its use. So the private watershed group was organized to do much of the spade work and, if necessary, raise funds to take up the slack.

United States engineers are expected to start a routine survey of the project soon. But with a limited allotment of funds progress will be slow unless additional money can be raised to speed up operations.

Recreation centers

Once the project is given the official sanction of the Government, the next move would be actual construction of the dams. There probably would be three or four major reservoirs and from 15 to 20 smaller lakes that could serve not only as a water supply but recreation centers.

John Ben Shepperd, president of the watershed association, says, "under favorable conditions it should be possible to complete the entire project within 10 years."

Judge Jackson, who has studied the water situation throughout the Southwest, casts an apprehensive eye over California, Arizona, New Mexico, and other States that appear to be fighting a losing battle for more water.

"California," he says, "always brags about its sunshine. Los Angeles, so its boosters tell us, has only nine rainy days a year. But while they brag about the sunshine their water supply has cost the city and the Federal Government nearly a billion dollars.

"Newcomers are pouring into California at a rate of about 2,000 families a week. If that rate continues, California will have to close its gates to outsiders within 20 years because there won't be enough water for all.

Water means life

"In the Arizona country, water definitely means life. One of Arizona's driest counties is using water 18 times faster than nature is replacing it. And another, 11 times. How long can that last? Well, when the cistern goes dry the citizenry must move to a new source of supply.

"The water table (the depth at which underground water is found) has dropped in Arizona more than 55 feet in the last 6 years. In the area around Delano, Calif., it has dropped 220 feet in 20 years. What sort of promise does that hold for the future?"

Judge Jackson keeps records, taken from Government reports, that underscore the essential nature of water in industry.

"During the war," he says, "the Government picked tentative sites for more than 300 war plants, then had to pass them up because water supplies were inadequate.

"That, of course, was during the war. Nevertheless, it should serve as a yardstick. Industry wants to move to the Southwest where raw materials are more abundant and where the climate and labor conditions are better. But the thing that is stopping that movement is the lack of a stable supply of water."

To prove his point, the judge quoted a few figures:

The per capita consumption of water in the United States is 100 gallons a day. That is, a town of 5,000 needs 500,000 gallons daily. This is about four times the consumption in Europe.

It takes 65,000 gallons of water to produce a ton of steel.

To produce a gallon of gasoline, 10 gallons of water are required.

More than 3,000 gallons are required to process 100 cases of green beans.

A gallon of beer calls for 15 gallons of water.

One process of synthetic rubber production requires 85,000 gallons per ton of rubber.

It takes 100,000 barrels of water to raise an acre of oranges.

An iron smelter in east Texas uses about 17,000,000 gallons, and if a proposed steel mill is erected to operate in conjunction with the smelter the requirements will be raised to 70,000,000 gallons.

If the goals of the Sabine River Authority are attained, the huge water-conservation project likely will be operated under State supervision.

Warns of United States control

Ralph McAlister, of Nacogdoches, an active water conservationist whose interests lie in the lower Neches Valley, has warned that if we wait too long the Federal Government will take over our water project and a three-man board, unfamiliar with Texas problems, will control our destinies.

The Sabine River Authority is clothed with broad powers. Under the law it may issue bonds not to exceed $25,000,000. It may sell water for industrial, agricultural, or municipal uses and it may collect revenues from its recreation centers.

Whether the project will be self-supporting is questionable. There is little doubt that the over-all benefits will far exceed the cost.

"We hope," said President Shepperd of the watershed association, "to keep the management within the framework of our Texas government. That sort of policy is more in keeping with our ideas of free enterprise."

CORPS OF ENGINEERS,
OFFICE OF THE DIVISION ENGINEER,
SOUTHWESTERN DIVISION
Dallas, Tex., August 3, 1949.

HON. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: Receipt is acknowledged of your letter dated July 29, 1949, wherein you have expressed your interest in the completion of the survey of the Sabine-Neches River area, and your desire for information as to whether any request has been made for additional funds for those rivers.

In answer to your inquiry, you are informed that a request was made for additional funds to carry on the pertinent field investigations and office studies for the Sabine River report, in which you are interested. However, because of the limited funds appropriated by Congress for work of this character, and also because of the large number of other reports of major scope assigned to this division, it was found necessary to prorate the allotted funds to assure a reasonable rate of progress on as many reports as practicable.

For your further information, it is presently estimated that the Sabine River report will cost about $141,000, and of that total approximately $35,000 has been allocated to the continued prosecution of the necessary investigations and studies.

Sincerely yours,

LOUIS W. PRENTISS,
Colonel, Corps of Engineers, Division Engineer.

CORPS OF ENGINEERS,
OFFICE OF THE DIVISION ENGINEER,
SOUTHWESTERN DIVISION,
Dallas, Tex., August 11, 1949.

HON. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: Receipt is acknowledged of your note of August 7, 1949, which was written on the bottom of my letter to you, dated August 3, 1949.

In reply to your inquiry as to the amount of funds required for the Sabine-Neches you are informed that the status of funds for the two separate survey (review) reports currently being prepared on the Sabine and Neches Rivers and their tributaries is as follows:

River	Estimated total cost of report	Available funds
Sabine	$141,000	$25,000
Neches	118,000	24,000
Total	259,000	50,000

In further compliance with your request I am returning herewith for your files my original letter to you with your note thereon.

Sincerely yours,

LOUIS W. PRENTISS,
Colonel, Corps of Engineers,
Division Engineer.

DEPARTMENT OF THE ARMY,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, August 26, 1949.

HON. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: Reference is made to your note of August 15, 1949, which was

appended to a reply by Col. Louis W. Prentiss, division engineer of our southwestern division, relative to the allocation of funds for the review reports on the Sabine and Neches Rivers and their tributaries, Texas. Your note requests information as to whether all or part of the funds needed for these investigations was requested by the Corps of Engineers for the fiscal year 1950.

The Corps of Engineers in its budget request for funds to prosecute its survey program throughout the country during the fiscal year 1950 included the amount of $48,600 for the investigation of the Neches River and its tributaries and $58,700 for the investigation of the Sabine River and its tributaries. As you have been informed by Colonel Prentiss, the amounts currently available for those investigations total $59,000. Funds included for our survey program in the Civil Functions Appropriation Act for 1950 (H. R. 3734) were allocated to the Corps' field offices during July under the provisions of Public Law 154, Eighty-first Congress, which permitted the allotment of those funds contained in appropriation acts now before the Congress which are not in dispute between the House and Senate.

Your letters are being returned herewith as requested.

Sincerely yours,

LEWIS A. PICK,
Major General, Chief of Engineers.

EXECUTIVE OFFICE OF THE PRESIDENT,
BUREAU OF THE BUDGET,
Washington, D. C., September 2, 1949.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

MY DEAR MR. BECKWORTH: This will acknowledge receipt of your letter dated July 29, 1949, requesting information on the status of funds for a survey of the Sabine-Neches River area by the Corps of Engineers, and your letter dated August 12, 1949, requesting information on a source from which the recently established Sabine River Authority could receive or borrow funds to plan or complete a study of the area.

With respect to the survey of the Sabine-Neches River area, I might point out that river and harbor and flood control survey funds are contained in lump-sum appropriations from which allocations are made to projects at the discretion of the Secretary of the Army and the Chief of Engineers. It is understood that allocations are made to as many of the highest priority surveys as may be carried forward within available funds consistent with reasonable and economic rates of progress. I am informed that the Corps has allocated $24,000 to the Sabine-Neches survey through fiscal year 1949, and has tentatively allocated an additional $11,000 for fiscal year 1950. No special budget request has been made for funds to complete this survey.

As to sources of financial assistance for the Sabine River Authority it may be possible that the Authority might qualify for a loan from the Reconstruction Finance Corporation. I would suggest that inquiry be made at the Public Agency Loan Division of RFC to determine specifically the eligibility of the Sabine River Authority for financial aid through that agency. I am not aware of any other possible source of Federal funds for such purposes.

I hope that the above information meets your present needs.

Sincerely yours,

ELMER B. STAATS,
Acting Director.

GENERAL SERVICES ADMINISTRATION,
Washington, September 13, 1949.

Hon. LINDLEY BECKWORTH,
House of Representatives

MY DEAR MR. BECKWORTH: Reference is made to your letter of August 12, 1949, concerning the Sabine River Authority which was created by the Legislature of the State of Texas at its 1949 regular session (ch. 110, Laws of 1949). You inquired whether there was any source from which such authority could receive or borrow funds with which to plan or to complete a study.

The only funds available to this Administration at the present time for planning purposes consist of $200,000 appropriated by the Congress under Public Law 266, approved August 24, 1949, to carry out the provisions of section 8 (c) of the Water Pollution Control Act. Copies of the acts referred to herein are inclosed. You will note that section 8 (c) of the Water Pollution Control Act authorized an appropriation to the Federal Works Agency to enable the Federal Works Administrator to make grants to States, municipalities, or interstate agencies to aid in financing the cost of engineering, architectural and economic investigations and studies, surveys, designs, plans, working drawings, specifications, procedures, and other action preliminary to the construction of projects approved by the appropriate State water-pollution agency or agencies and by the Surgeon General.

Under section 5 of the Water Pollution Control Act, the Federal Works Administrator was authorized to make loans to States, municipalities, or interstate agencies for the construction of necessary treatment works to prevent the discharge by such State or municipality of untreated or inadequately treated sewage or other waste into interstate waters or into a tributary of such waters, and for the preparation of engineering reports, plans, and specifications in connection therewith. However, no funds have been appropriated by the Congress for the purpose of making loans under such section.

By virtue of the Federal Property and Administrative Services Act of 1949, Public Law 152—Eighty-first Congress, approved June 30, 1949, all the functions of the Federal Works Agency and of the Federal Works Administrator were transferred to the Administrator of General Services, and the Federal Works Agency and the Office of the Federal Works Administrator were abolished.

If the plan for which the Sabine River Authority is seeking funds pertains to water-pollution control, and if the Authority believes it can qualify for a grant under the Water Pollution Control Act, I suggest that you advise the Authority to correspond with Mr. W. H. Sindt, Division Engineer, Bureau of Community Facilities, General Services Administration, whose address is 1003 Texas and Pacific Building, Fort Worth 2, Tex.

Assistance that was made available, in recent years, in connection with the provision of public works was rendered through our advance-planning program whereby funds were advanced to States and political subdivisions thereof to assist in the preparation of drawings and specifications for public works proposed for construction with funds to be furnished by the applicant. However, our authorization to advance funds for plan preparation for such purposes expired on June 30, 1947.

In his midyear economic report, the President recommended to the Congress that it enact legislation at this session to assist States and localities to intensify their advance planning of public works. This is one of the recommendations considered by the President as of vital importance in the current economic situation. Such legislation would result in an adequate reserve of public works to be implemented as material and manpower become available, or accelerated if necessary to help stabilize the construction industry. Senate bill 2116 and House bill 5739, which have been approved by the respective Committees on Public Works, contemplate the extension of the advance-planning program, and it is hoped that the Congress will take favorable action on these measures.

Since the Sabine River Authority is a conservation and reclamation district, it may be that the authority will wish to communicate with the Bureau of Reclamation, Department of the Interior, to inquire whether that Bureau has any funds available for the purpose desired by the authority.

Sincerely yours,

JESS LARSON,
Administrator,
General Services Administration.

DEPARTMENT OF AGRICULTURE,
SOIL CONSERVATION SERVICE,
Washington, D. C., October 6, 1949.

Hon. LINDLEY BECKWORTH,
House of Representatives.

DEAR MR. BECKWORTH: A survey of the Sabine River watershed, concerning which Mr. John W. Simmons wrote to you recently, is scheduled to begin in fiscal year 1951 and is so indicated in our budget estimates recently discussed with the Bureau of the Budget. Previous commitments on other watersheds and carry-over of surveys started before the war have fully taken up the facilities available to us in the current fiscal year. The Sabine survey would be undertaken along with the Neches, the Calcasieu, and Mermentau. The survey of these watersheds is estimated to cost $162,000 and would require 2 years to complete, that is, fiscal years 1951 and 1952.

We have made a preliminary examination of the flood-damage problems in the Sabine watershed which indicated the seriousness of the flood damages in that area and the need for a comprehensive study, as suggested by Mr. Simmons, of the sources and what should be done in the way of watershed treatment to alleviate these damages.

When the survey is started, we shall keep in close touch with Mr. Simmons so that there may be the maximum possible coordination with the objectives of the Sabine River Authority.

Sincerely,

M. Y. NICHOLS,
Acting Chief.

DEPARTMENT OF THE ARMY,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, October 10, 1949.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: Reference is made to your letter dated October 1, 1949, concerning additional funds for the survey of the Sabine-Neches River by the Corps of Engineers. With your letter you enclosed a communciation from the Acting Director of the Bureau of the Budget on this subject in which he states that no budget request has been made for funds to complete this investigation, and you inquire whether I could make a request to the Bureau of the Budget for additional funds for this purpose.

For a number of years, the funds provided by Congress for the prosecution of the authorized program of investigations has been insufficient to carry on that program at a desired rate. In the absence of specific information showing the necessity in the national interest of completing the investigation of the Sabine-Neches River at an accelerated rate over that provided for other investigations throughout the country, this office would have no basis for submitting a special budget request for funds to complete this investigation nor would the Bureau of the Budget have any basis for favorable consideration of such a request. However, in the event that a larger appropriation is made in 1951 for carrying on the investigation program every consideration would be given to advancing the completion date of the Sabine-Neches survey consistent with the funds appropriated.

UNIVERSITY OF MICHIGAN LIBRARIES

I trust that the information contained in the paragraphs above is sufficient for your present purposes.

The enclosure with your letter is returned as requested.

Sincerely yours,

LEWIS A. PICK,
Major General, Chief of Engineers.

EXECUTIVE OFFICE OF THE
PRESIDENT,
BUREAU OF THE BUDGET,
Washington, D. C., December 23, 1949.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

MY DEAR MR. BECKWORTH: Receipt is acknowledged of your letter dated November 20, 1949, with respect to the survey by the Corps of Engineers of the Sabine-Neches River, Tex.

As Acting Director Staats pointed out to you in his letter dated September 2, 1949, in connection with this same survey, river and harbor and flood control survey funds are contained in lump-sum appropriations from which allocations are made for project studies at the discretion of the Secretary of the Army and the Chief of Engineers. If the Secretary of the Army and the Chief of Engineers determine that the Sabine-Neches River survey should be completed at an accelerated rate, increased allocations could be provided through their administrative action. It would appear that the schedule for completing this survey is a matter of negotiation between representatives of local interests and the Corps of Engineers.

Sincerely yours,

FRANK PACE, JR.,
Director.

DEPARTMENT OF ARMY,
January 4, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: Reference is made to your note of December 18, 1949, appended to General Crawford's letter to you of November 23, 1949, relative to funds for the Sabine River survey. You ask if the Corps of Engineers would request funds for completion of this or any survey.

Based upon information presently available as to the urgency of the flood problem on the Sabine River this office is unable to justify a request for sufficient funds for completion of the survey in the immediate future. Accordingly, we cannot make a request for funds for early completion of the Sabine River survey. The Corps of Engineers does not make specific requests for funds for completion of any particular survey; however, numerous surveys are completed each year with funds provided in a lump sum for our authorized examination and survey program.

In the event your questions pertain to the use of General Services Administration funds, please refer to my letter of December 9, 1949, in reply to your note on a letter received by you from Mr. Pere F. Seward, Commissioner, Bureau of Communiy Facilities, General Services Administration, in which it is stated that it appears that General Services Administration funds cannot be used by the Corps of Engineers for prosecution of the Sabine River survey. This conclusion was based on the Commissioner's statement that planning funds appropriated to the General Services Administration under authority of Public Law 532, Eighty-first Congress, are to be advanced to local authorities for the planning of non-Federal public works. Accordingly, it is not proposed to request such funds for completion of the Sabine River survey.

Sincerely yours,

LEWIS A. PICK,
Major General, Chief of Engineers.

The Indeterminate Length the American Taxpayer Must Go To Make Good the Interest on British Bonds

---

EXTENSION OF REMARKS
OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Friday, January 6, 1950

Mr. WHITE of Idaho. Mr. Speaker, with the help of the Bureau of Engraving and its billions of printing-press money made good as to purchasing power by the ingenuity and enterprise of American industry, and the brawn and productiveness of American labor, coupled with the utilization of oceans of petroleum energy applied in most every line of human endeavor, we have been able to service our huge national debt and at the same time contribute billions of dollars—American purchasing power—to help service the British national debt.

After all, the most important thing to our international financiers is to maintain the integrity of the bonds they hold of the European governments, the so-called Marshall-plan countries.

There seems to be no limit to the financial burden these financiers would induce our Government to place on the back of the American taxpayer in furthering their scheme to put money in the national treasuries of Great Britain and the Marshall-plan countries, so that when the interest coupons on the government bonds of these countries are presented, this money will be on hand to pay them.

Not satisfied with the huge cash contributions the American taxpayers have already made and are now making to the governments of these countries, these financiers want more

A condensation of an illuminating article by the able economist, Herbert Bratter, on the new plan for further financial contributions to Great Britain, taken from the Sunday Star of January 29, is presented here, together with extracts from an editorial appearing in the January 26 issue of the Washington Times-Herald:

[From the Washington Star]

The rumor markets of Washington, and perhaps of other world capitals, have encouraged speculation in the past week or two that the British Government will shortly submit a formal request for the equivalent of a United States loan of $8,000,000,000 for the liquidation of the so-called blocked sterling balances. These are the bank balances which have piled up in London as a result of goods and services which were supplied to the British during and after the war by India, Egypt, and many other countries.

To pay off those war debts, even though slowly, is today a great burden for the British. Whether or not Uncle Sam is now to be propositioned to take over this burden, the possibility does throw a spotlight on an important element in the whole problem of Britain's economic troubles—as well as those of her creditors.

CLOUD OVER ECONOMY

Ever since the war Britain in its financial relations with the rest of the world has been bankrupt in the sense that its obligations have exceeded its capacity to pay. Despite the assistance Britain has received through the Bretton Woods program, interim aid, the Anglo-American financial agreement of 1945, and the ERP, the country's reserves of foreign exchange are dangerously low. In part these reserves are low because of the rate at which London has permitted India and some of the other owners of the wartime-accumulated sterling funds to use them in the purchase of British goods, which otherwise might have been exported there or elsewhere against payment in foreign currencies. During the war the Indians and others gave up goods for London bank balances and got no goods in exchange; now the British in releasing those same balances, are giving goods and getting no other goods back in exchange. This the British call "unrequited exports." There has been strong pressure on the British Government from within the country to slow down the rate of honoring of the piled-up foreign bank balances, and a few weeks ago the Chancellor of the Exchequer announced that payments would be slowed down.

For years now the huge total of the blocked-sterling balances has hung like a cloud over the British economy, yet no solution has been found. When after World War I the British, like others, owed large war debts to the United States Treasury and found the annual payments burdensome, they simply stopped paying and, presumably, we have stopped dunning. But the more than $8,000,000,000 which Britain today reportedly owes to owners of the London bank balances and cannot pay off are not so readily to be canceled for political considerations. The Indians and others want to buy things with their money; in fact, want to buy things here, if possible. They would like to get dollars for their blocked sterling balances, so that they may buy American goods. But Britain has no dollars to give them.

Who owns those $8,000,000,000 or so of blocked balances? India and Pakistan, although they have been allowed to spend substantial portions of those sterling holdings since the war, still have to their credit more than $2,240,000,000 in London. Other members of the Commonwealth hold important amounts, notably Australia, whose balances in London have been growing rapidly in recent years, to a total last June of about $1,000,000,000. Eire, a non-Commonwealth country, owns a bit less than that in London banks. Egypt accounts for more than $800,000,000, it is believed.

PART OF DOLLAR TALKS

These balances have been the subject of Anglo-American official discussion ever since the war. Prior to Bretton Woods the United States Treasury Department recognized them as a potential troublemaker. During the Anglo-American loan negotiations in 1945 the sterling balances were exhaustively examined and in the loan agreement itself the British Government undertook to make settlements with the countries which owned those accumulations; yet settlements have not been made, due to the unwillingness of the owners of the balances to cancel any part of them. * * *

Because the greater part of the blocked-sterling problem is an Asian problem and because the United States of late has become very Asia-conscious, the British understandably are hoping for a way out of these bank-balance difficulties through American aid. Britain doubtless hopes that somehow in the extension of American aid to Asia Washington will persuade the eastern creditors of London to cancel part of the sterling in consideration of dollars supplied by the United States. In Colombo recently Foreign Secretary Ernest Bevin stated that the United Kingdom will ask the United States to share the problem of non-Communist Asia. "The United States," he added, "is a very generous country." * * *

The Indians and other creditors would welcome Washington's replacement of the sterling with dollars only if no strings are at-

tached. Indian Finance (Calcutta weekly) sees as the most simple solution for this vexing problem—the taking over by the United States of the entire sterling obligations of Britain. * * *

We are now being told that this country is now helping India through the ERP aid to Britain; that with the diminution and final ending of ERP India will suffer and that, therefore, the Indian and British problems are really one. Americans are thinking more about India than ever before, but what is uppermost in their minds is Britain's inability to get on its feet and the fact that all the financial transfusions of the postwar years have failed to get the European deficits out of our budget. * * *

If history is a guide, therefore, some way will be found, eventually, to help Britain handle the sterling debts.

[From the Washington Times-Herald]

NEW SCHEME REVEALED

A move to give more billions to the British is gathering momentum. Representative WOLCOTT, of Michigan, one of the best-informed Members of Congress on financial matters and a delegate to the Bretton Woods Conference in 1944 by appointment of President Roosevelt, said in a statement last week that an attempt soon would be made to have the United States assume the debt of Britain to India, Egypt, and other foreign countries.

WOLCOTT was the first to describe the details of the new scheme. He said that the United States would pay these British debts by accepting sterling now frozen in London in payment, first, for agricultural products accumulated by the Commodity Credit Corporation, and then for machinery and other items.

All this ties up with the proposal made in December by a study group of United States Council of the International Chamber of Commerce. The scheme released by that group was the first suggestion of using money obtained from the American taxpayers to pay old and stale debts of the British Government.

The study group limited the donation to 15 percent of the British debts. The idea now, according to Representative WOLCOTT, is to have the United States assume the entire debt.

The composition of the group in the International Chamber of Commerce which made the original proposal shows the motivating influence. The interests back of the new $8,000,000,000 donation to Britain are the same ones which put over the Marshall plan and then made huge profits out of it. They are also the same ones which backed every other donation of American funds to Britain.

MARSHALL-PLAN BUSINESS

One of the twenty-one named as authors of the scheme is Lamar Fleming, Jr. Mr. Fleming is president of Anderson, Clayton & Co., the principal business of William L. Clayton, former Under Secretary of State.

Mr. Clayton was the principal architect of the Marshall plan, directed negotiations with foreign countries in working out the plan, and directed the drive for the passage of the first ECA Act. Mr. Clayton's firm has supplied at least $100,000,000 worth of cotton paid for with ECA funds. ECA transactions with Anderson, Clayton & Co., tabulated by the Tribune, total $79,000,000, with no figures available since September nor between February 1, 1949, and April 30, 1949.

Another member of the International Chamber of Commerce group which suggested unloading British debts on the American taxpayer is S. Sloan Colt, president of the Bankers' Trust Co. of New York.

His bank has, from the first of ECA, had a large percentage of the letter of credit business. Through the end of the year, Mr. Colt's bank has had $281,000,000 worth of business from the Marshall plan. Two directors of the Bankers' Trust Co., Philip Reed and Ward Melville, were members of the Committee for the Marshall Plan—the propaganda group which agitated for passage of the act originally. Reed is also president of the International Chamber of Commerce.

The National City Bank of New York, which has had $310,000,000 worth of ECA business, was represented on the committee to put over the Marshall plan by two of its directors, Sosthenes Behn and Gerard Swope. Now we find two officers of the bank, W. Randolph Burgess, chairman of its executive committee, and Leo N. Shaw, a vice president, on the roster of the study group which brought out the new British aid plan.

BANKS GET THEIR SHARE

Two Irving Trust Co. directors, Henry P. Bristol and David L. Luke, worked hard to get the Marshall plan through Congress. The bank has cashed in on their efforts thus far with $220,000,000 worth of letter of credit business. A vice president of the bank, August Maffry, took a leading part in preparing the International Chamber of Commerce report.

J. P. Morgan & Co. has had $238,000,000 worth of business out of the ECA. I. C. Raymond Atkin, a Morgan vice president, was one of the study group which brought out the suggestion for a new lot of British aid. The Bank of America also can see the point that foreign aid is good for the country or at least the financiers' end of it, as its share of the ECA banking business so far has been $197,000,000. Russell G. Smith, an executive vice president, is on the international chamber's committee.

Those who had the misfortune to invest in foreign bonds which are not being paid or serviced would like to see their debtors helped; so the membership on the chamber's committee of James Grafton Rogers, president of the Foreign Bondholders Protective Council, is understandable. For like reasons, so is that of William S. Robertson, president of the American & Foreign Power Co.

The new plea for British aid at the expense of the American taxpayer is not being promoted by patriotic people who have only the welfare of all the people of the country in mind. It has been launched by persons who have their own private interests in mind. The influence of these people, when combined with that of the eastern Anglophiles, proved sufficient to put over the $3,750,000,000 loan to Britain in 1946 and the Marshall plan.

Unloading upon the United States old and stale debts of the British Government does seem a little more outrageous than the other schemes, but it will all look sweet and reasonable when the internationalists' propaganda has had a chance to dress it up.

Debacle in China

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, the Chicago Tribune correctly puts its finger on the situation in China. I include it as part of my remarks:

ENOUGH ROPE

Secretary of State Acheson has announced that Russia has absorbed or is in process of absorbing Manchuria, Outer Mongolia, Inner Mongolia, and Sinkiang from Communist China. He did not say whether this was being done with or without agreement of the leaders of the Chinese Communists. He implied, however, that the seizure will turn the Chinese people against Russia and against China's own Communists, and stated that it should be the policy of the United States to give the Soviet Union and Chinese Reds enough rope so that they may hang themselves.

We do not know how accurate Mr. Acheson's report is or whether it is a new development. There is some reason for approaching the matter with caution, for the Secretary has certain axes to grind. His cautionary word against foolish adventures by America is, of course, an oblique defense of the refusal of the administration to give further support to the Nationalist Chinese Government in Formosa or elsewhere. It is also a defense of the administration's orginal botched policy of intervention in China and of its present do-nothing policy.

Mr. Acheson also, it should never be forgotten, is a faithful stooge of British foreign policy. His parents were both born as British subjects. The British Government, in the hope of protecting its China investment, China trade, and its colony of Hong Kong, has hastened to recognize the new Communist government. Although we have refused to date to follow suit, there is good reason to believe that Mr. Acheson would like to do so in order to uphold the hand of His Majesty's Government.

He can now argue that, in view of the Soviet seizures, American recognition of the Red regime in Peiping might be accepted by the Chinese masses as moral support of Chinese integrity, and that to take this step would make the Chinese friendlier to us. Recognition, he might contend, would line us up with them against Russia, so that at a more opportune time they might side with us against Russia.

There is only one trouble with this position. Unfortunately, it is serious. The Chinese must have short memories, indeed, if they forget that it was Mr. Roosevelt, an American President, who first let Stalin in to rob and then possess himself of the Chinese orchard. At Yalta, in a snap decision, consummated, according to the late Secretary of State Stettinius, in a mere 13 minutes, Mr. Roosevelt gave Stalin the opening he is now exploiting.

As the price for Russia's entry into the last few days of the war with Japan—an action which Stalin had voluntarily pledged 15 months before with no price tag attached—Mr. Roosevelt, without consulting our ally, China, agreed that Russia should receive all the territory she had lost in the Russo-Japanese War of 1904, including special rights in Manchuria.

Thus Stalin was told he might Russianize the port of Dairen, lease the naval base of Port Arthur, take over joint operation of the Chinese eastern and south Manchurian railroads, and count upon Mr. Roosevelt to exact concurrence from Chiang Kai-shek, the leader of Nationalist China. When Japan surrendered, Russia was installed in Manchuria and disarmed the Japanese Kwangtung Army, turning over all of its arms to Chinese Communist forces, who employed them in the conquest of all China against Chiang's Nationalist forces.

Thus the Roosevelt-Truman administration stands as accessory in Russia's reported theft of vast areas of China, and if Mr. Acheson expects the Chinese people to direct their entire wrath against Russia, we fear that he will be disabused.

Something can be said for his doctrine of "enough rope." It is a doctrine which would have made great sense in 1941 when the United States had to appraise the world situation. Mr. Roosevelt refused to let events take their course with Germany and Japan, and, incidentally, with Russia. He had to plunge into war. As the British military

UNIVERSITY OF MICHIGAN LIBRARIES

historian, Maj. Gen. Fuller, has noted, there was every chance that Germany and Russia, the two dictatorial powers, would have bled each other white if left to fight matters out between themselves. By intervening, Mr. Roosevelt built Russia into a menace compared to which Germany was of slight importance.

The doctrine of "enough rope," now advocated by Mr. Acheson in China, is not the doctrine which the administration he represents has followed. We have spent billions on economic and arms aid and have pushed ourselves to the front everywhere as a check upon Russia instead of adopting the patient and long view that, left to themselves, events supply their own counteractive. If enough rope will insure Stalin's downfall in China, it will insure his downfall everywhere. Yet Mr. Acheson regards it as a local remedy instead of a general therapy and continues the frantic program of rushing into every trouble spot everywhere, with the sole exception of China.

The Republican Record

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1950

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the folowing editorial from the New York Herald Tribune:

THE REPUBLICAN RECORD

Speaking at a Democratic conference on Saturday, where the illusion of unity was created by the ingenious device of keeping entirely silent on civil rights, Vice President BARKLEY departed from his prepared text to prophesy the approaching end of the Republican Party. It is a suggestion he has ventured before, and one that scarcely does credit to the Vice President's natural good sense or optimistic attitude toward life in general. On the same day, in New York, Representative FRANKLIN ROOSEVELT, JR., was belaboring Republican skulduggery and talking as if the Democratic party was purely and undividedly in favor of civil rights reforms. That was a position, it seems to us, which did not do credit to his intelligence.

Not only logic and the record of history cried out against these Democratic orators. On the same day, by a fortunate coincidence, two outstanding Republicans spoke for their party. At a luncheon of the Women's National Republican Club Governor Driscoll and Representative JOHN DAVIS LODGE, of Connecticut, had opportunity to prove that the Republican Party is very much alive and intends to remain so, and that on the crucial issue of civil rights it has acted effectively, rather than engaging in mere talk.

Representative LODGE, who is less well known in these parts than he should be, exhibited in his speech the combination of forward-looking zeal and realistic prudence which is characteristic of the Republican Party at its best. He insisted that the needs of men must find an effective response, and that neither timidity nor a fear of "me tooism" can justify the Republicans in ignoring them. But these needs, he insisted, also, can be met in other ways than by barren centralization and the withering of incentive. To maintain that the price of social improvement is the granting of illimitable powers to the state in the worst kind of defeatism. It is a defeatism in which Representative LODGE refused to indulge.

On civil rights he properly took the offensive, asserting that in this whole matter the Democrats have been "hesitant, apologetic, and ineffective." What he said was borne out in the speech of Governor Driscoll, whose record in New Jersey, like the record of Governor Dewey in New York, has shown that the Republicans really do believe in reform and do not hesitate to act. Even partisan oratory does not justify the interpretation that during recent weeks in Congress the Democrats have been sincerely anxious to pass civil rights legislation and that they have been thwarted by the opposition. The record needs to be kept straight before the voters, and Driscoll and LODGE have made a timely contribution to keeping it straight.

Cut Everything

EXTENSION OF REMARKS
OF
HON. WALTER E. BREHM
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1950

Mr. BREHM. Mr. Speaker, a familiar trick employed by advocates of deficit spending is to ask those of us who are attempting to economize just where we would make the cuts. Of course the objective back of this question is to try to embarrass those of us who are attempting to save our Nation from economic bankruptcy. They hope that our answer will serve to get us in bad with various groups or organizations who might have their appropriations reduced if our suggestions were followed.

I know that the Members of this House are loyal, patriotic servants of the people. I fear, however, that we may sometimes be influenced by some particular group. There are Members in this body who do not have a smokestack in their district and because of this they vote for each and every proposal which is advocated for the farmer. Other Members do not have a farm in their district but thousands of industrial workers so they vote for each and every proposal which is advocated for labor. Other individuals carry the torch for foreign countries, others for various pension groups, others for educational groups, others for veterans' organizations, and so it goes endlessly.

In my opinion there isn't one pressure group in a hundred who knows or cares what will be the over-all results to our Nation if their particular pet scheme is adopted.

Mr. Speaker, I started this speech in order to answer the question of where I would cut and my answer would be the following:

Cut everything. Cut the farm subsidies. Reduce all subsidies. Cut the rivers and harbors and highway and housing appropriations. Curb the lending powers of Government corporations. Reduce the amounts the Army and Navy and Air Force can spend. Pare down European aid. Cut the pay rolls, yes even our salary if necessary.

Put an economy and efficiency team to work in the Veterans' Administration to cut out the obvious wastes and abuses in administering the GI bill of rights. There are dozens of other activities where money could be saved without diminishing any really essential Government service, and without weakening the national defense.

There is excess fat in the Federal budget, from the Agriculture Department and Atomic Energy Commission all the way through the alphabet. The Government habitually hires at least three people to do what could be done better and at less cost by two. There are more Federal employees in Ohio than there are State employees.

We cannot do all this by saying, "We are for economy but—." What we must say is, "We are for economy, period." And that must mean cutting all the way down the line. We must stop spending money we have not got for things we cannot afford, regardless of their merit.

Now Mr. Speaker, these remarks may rise up to haunt me in the next election. Well so be it. My own personal fortunes in some future election are of small concern when contrasted with the solvency of America.

I refuse to support any peacetime budget unless it is a balanced budget brought about by economy in Government.

The Coal Crisis—What Is an Emergency?

REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1950

Mr. O'HARA of Minnesota. Mr. Speaker, the coal crisis which has been existing for weeks and weeks is reaching a climax. Coal-burning train service is being suspended, and I have received wires from my congressional district and from the fuel conservator of the State of Minnesota that some kinds of coal already are unavailable. Certain schools will also be closed in the matter of 3 or 4 days.

The Congress has provided a law for an emergency of this type and that law should be carried out.

Mr. Speaker, in our section of the country temperatures range from slightly above zero to as cold as 36° below zero.

The question which I ask is. How many people have to be frozen to death before it is determined that there is an emergency?

Our people are appealing for immediate relief. Action is necessary and coal must be delivered in these emergency conditions. Further delay invites nothing but catastrophe.

Mr. Speaker, I urge you to convene an extraordinary session of the House of Representatives for the purpose of taking emergency action in the present coal shortage crisis.

I include the following telegrams, letters, and newspaper accounts to show the serious conditions existing:

GLENCOE, MINN., *January 27, 1950.*

Congressman JOSEPH P. O'HARA,
Second Congressional District, Minnesota, Washington, D. C.:

Ordered carload stocker coal from Old Ben Coal Corp., 230 South Clark Street, Chicago, Ill., to be delivered December 27, 1949, or soon as possible. If not delivered in 7 days will have to close St. Peter and Paul School. Please try to expedite.

GLENCOE LUMBER & COAL CO.,
GORDON F. DAHL.

Congressman JOSEPH O'HARA,
House Office Building,
Washington, D. C.:

Investigation among coal dealers here reveals serious situation in coal for domestic use. Stoker coal for home-heating plants very low. Under present severe weather conditions supply gone in week to 10 days, domestic lump sizes soon after. Please do all possible to secure immediate relief in this area.

R. B. WILLARD,
Executive Secretary, South St. Paul Civic and Commerce Association.

ST. PAUL, MINN., *January 20, 1950.*

Hon. JOSEPH P. O'HARA,
United States Representative for Minnesota, Washington, D. C.:

Governor Youngdahl has just wired President Truman as follows, quote: A coal shortage in Minnesota now becoming critical. Industries threatened with closure. Lake-dock supplies running low. Some kinds coal already unavailable. Worst of winter season still ahead. Minnesota now dependent upon rail shipments difficult to secure because of reduced production. Imperative that action be taken to assure an increased supply in immediate future. Unquote. Your assistance in securing intervention of national Government in relieving situation is earnestly solicited.

J. W. CLARK,
Fuel Conservator, State Capitol.

COMFREY TRAIN TAKEN OFF AGAIN

On again, off again. That's the way Northwestern passenger train service to Comfrey and Darfur has been going in the last few months.

Since last Sunday the train is off again. The Northwestern withdrew it for the second time since late last October because of a shortage of coal. The suspension is for an indefinite period.

The suspended train was passenger 16, which leaves Sanborn at 3 p. m., travels through Comfrey and Darfur, and arrives at Belle Plaine, Iowa, at 11:10 p. m. daily except Sunday. The last trip was made last Saturday.

So Gil Iverson, star route carrier from the Springfield post office to Comfrey and Darfur, is back to carrying all classes of mail to these communities. The last time the train was suspended he made 19 round trips between October 29 and November 21. Carrier Iverson makes the circuit every day except Sunday and holidays.

WE'RE GETTING USED TO BELOW ZERO TEMPERATURES NOW

Frigid weather continues to prevail here, but it's the kind of weather Minnesotans expect at this time of year.

High winds kicked up a near blizzard Sunday. Fortunately only 1½ inches of snow were recorded, or this area would have had blocked roads and high drifts. The strong winds hit this area in the early morning hours Monday, but blew out of steam before noon.

Subzero readings have been regular this week; however, daytime temperatures have not been unusually low.

The following week's readings are furnished through the courtesy of Springfield's weather observer, Alex Peterson, United States volunteer official weatherman.

	High	*Low*
Thursday, Jan. 5	10	−15
Friday, Jan. 6	20	−5
Saturday, Jan. 7	14	−13
Sunday, Jan. 8	35	−1
Monday, Jan. 9	27	1
Tuesday, Jan. 10	17	0
Wednesday, Jan. 11	30	0

JANUARY 30, 1950.

Hon. JOSEPH P. O'HARA,
House Office Building,
Washington, D. C.:

All available supply of stoker coal in Gaylord will be exhausted within a few days. None available from any source. Situation will be serious in a short time. Local school has 1 week's supply on hand. Urge immediate action.

H. A. KNOBEL,
Clerk, Independent School District No. 19.

MINNEAPOLIS, MINN., *January 23, 1950.*

On Friday, January 20, a check-up of dock coal figured against unfilled orders already placed indicated that our available stocks for dealers or industrial spot orders were exhausted and that we had already drawn heavily against reserves for contracts. Consequently, it was necessary to issue an order that we could not accept further orders for dock coal. This was a hard decision to make but limited working time at the mines last summer cut our lake shipments in half, causing this shortage. We expect to take care of contract commitments.

This fuel shortage can be relieved greatly by all-rail shipments if the mines are put back to work immediately on a 5-day work week basis. We earnestly suggest that all dealers and industries wire or write their representatives, Senators, or Governors, advising of coal needs and asking the necessary governmental orders to issure this much-needed coal production.

NORTH WESTERN-HANNA FUEL CO.

Foreign and Defense Policies of the United States

EXTENSION OF REMARKS
OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1950

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by George Sokolsky, from the Washington Times-Herald of January 30, 1950:

THESE DAYS

(By George Sokolsky)

In the face of a potential enemy of the dimensions of the Russian universal state, a national carefully guards its own potentialities. The most serious problem in wartime that faces the United States is the supply of a few essentials, such as raw rubber, tin, and other metals, which are obtainable on the American continents and some of which must be imported.

Uranium, which is more important in war than in peace, is available in Canada; Bauxite in ample quantities is available in Surinam, British Guiana, Curacao, and Jamaica; tin from Bolivia and copper from Chile; antimony comes from Chile, Bolivia, Peru, Honduras, and Mexico; chrome comes from Cuba; cobalt from Canada.

In a word, war requires integration in a defensible area.

From that standpoint, after our frightful blunders in China for which the State Department is responsible, the 10,000-mile supply line from our west coast to southeastern Asia is too long and too difficult to maintain against a fleet of snorkel submarines operating out of the bays and harbors of Soviet China.

Because of our errors it will be difficult to protect either Japan or the Philippines or even Guam and Hawaii. Our first line of defense, in actual war, has been pushed back by Soviet Russia, to the west coast, to Los Angeles, San Francisco, and Seattle.

Taking for granted our favorable relations with Canada, the problem then is, what is our position in Latin America? To maintain more of a union than was achieved at Chapultepec in 1945, it is essential to cultivate not only the self interest but the respect of the Latin-American countries.

With the exception of Brazil, these countries are culturally related to Spain.

They are all Roman Catholic, and that term needs to be understood, for while to most Americans, the Roman Catholic Church is a religious sect, to Roman Catholics it is a culture, a way of life. For instance, a Mexican may be anticlerical, but he is not a Marxist, he remains a Catholic and his wife and children will be trained in the Catholic faith.

To refuse to recognize Spain and to be offensive to Spain, while recognizing Tito, can only strike a Latin as monstrously illogical, and seeking for logic, he reaches the conclusion that Spain has been rejected by the United States because in that country catholicism defeated Marxism.

As a matter of fact, Spain is the only country in Europe where Christianity and communism fought it out and Christianity was wholly victorious.

If the foreign and defense policies of the United States are to be integrated, Latin America is more important than Europe, and Spain is more important than any country in Europe because of its cultural influence upon Latin America.

A sound policy is an integrated one and this country is on dangerous grounds when its foreign and defense policies are operated in conflict.

During the Roosevelt administration, when the State department functioned with adoration for Soviet Russia, communism made tremendous inroads in Latin America, particularly in Cuba and Mexico.

Lombardo Toledano, the leader of Mexican communism, was a great factor in the development of a Marxist enclave. While such influences have become weakened in the Latin countries, they are by no means dead.

Peron represents our greatest error in Latin America. The United States opposed his rise to power which he has never quite forgotten.

Our opposition was based on the utterly false assumption that we could pick between good and bad dictators; that Stalin was a good dictator and Peron a bad one. But Peron turned out to be a very successful one, who not only established himself over the Argentine, but has also pursued an independent attitude, almost a competitive attitude, vis-à-vis American policy.

UNIVERSITY OF MICHIGAN LIBRARIES

This country, in its defensive program, must make sure of the Argentine. It could prove to be an Achilles heel, the weak spot that imperils.

In fact, in a knockout war, it might prove necessary to bring wheat and meat from the Argentine to the United States, should our means of transportation be dislocated.

The so-called good-neighbor policy was so inadequately and amateurishly handled, that in spite of huge expenditures its lasting results are not visible. To win the next war, we need to be sure of both American continents.

Fair Employment Legislation

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, the fair employment practices bill appears to be a reasonable piece of legislation. Members of Congress who have studied it quite carefully believe that if it is finally adopted that it will do more harm than good.

It calls for the establishment of another Federal agency which would have jurisdiction over all employers who employ 50 persons or more doing business in interstate commerce. This agency would be charged with the duty of preventing any discrimination in employment based on race, creed, or color. Further, the sole judge of such a charge would be the Federal agency set up under this measure. Any decree entered against an employer or a union would be enforceable in the courts. Obviously this tremendous power might be exercised for good or evil. One need not speculate very much to understand the strife and contention that might arise, especially in the South. It could easily start a class or race war and its sponsors know it.

A majority in the Congress, if provided with a secret ballot, would vote against it. Party leaders in both Houses know that is true. But both parties are committed to the legislation, solely for political purposes and not for the good of the country.

One week ago the Democratic leaders in the House shed crocodile tears in beating a move to restore previous power to the Rules Committee. The breast beaters cried that the effort to restore this power was designed to prevent the FEPC bill from getting to the floor for action. The effort was defeated decisively by a coalition of New Dealers and Republicans. There was no charge that this was a coalition of reactionaries, as the leftists have shouted before.

Now, 1 week later, and FEPC is still bottled up in committee with the help of President Truman and the Democratic leaders in the House. These Democrats do not want the bill to pass in its present form and they will have their way. Vote-hunting politicians have been paying lip service to the measure and a lot of unsuspecting people are being hoodwinked. Many fine colored people and a large group of labor leaders are being taken for a ride and they must be aware of it.

Emergency Situation on Montana Indian Reservations

EXTENSION OF REMARKS
OF
HON. WESLEY A. D'EWART
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1950

Mr. D'EWART. Mr. Speaker, the emergency situation on Montana Indian reservations, which I mentioned to this House on last Thursday, continues to cause great concern.

It is certain that many hundreds of Indians will have to be supported with food and fuel throughout the remaining months of this harsh winter, particularly on the Blackfeet, Rocky Boy's Fort Belknap, and Tongue River Reservations.

The President has now sent to the House a deficiency request for $800,000 for Indian welfare, and I hope that we will lose no time in making this money available so that further suffering from cold and hunger will be unnecessary.

Meanwhile I can report some improvements in the situation. The Indian Bureau reports that an additional $10,000 has been made available to the Blackfeet Reservation, and another $10,000 for the other reservations in Montana. Also, we have been able to secure release of part of the Blackfeet tribal oil royalty funds which have been tied up by another Government agency.

The various reservations have received or are receiving their shares of the 500 elk taken by Government hunters from the northern Yellowstone Park herd, and this meat will be very welcome.

Reports coming to me also indicate that an effort is now being made to use to the fullest extent the surplus commodities which are available from our agricultural supplies. I cannot understand why this source of food was not fully exploited long ago, and I hope that the potatoes, apples, dried eggs, and other supplies available will be distributed rapidly to the needy Indians.

The yearly repetition of emergency hunger and cold on our Indian reservations is something that is unnecessary and can be avoided.

Dead Animals on Our Highways Dangerous to Public Health

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1950

Mr. RANKIN. Mr. Speaker, I am taking advantage of this oportunity of calling to the attention of the Congress, and the country, a condition that vitally affects the health of every person in every State in the Union, as well as in the District of Columbia.

On my return to Washington, I recently drove approximately 1,000 miles, through four States and the District of Columbia. On that trip I saw hundreds of dead animals, and parts of dead animals, on the highway. I saw dead dogs, dead cats, dead skunks, dead rats, dead squirrels, dead rabbits, dead possums, dead crows, dead buzzards, dead birds, and other dead animals, that had been run over by automobiles, and their bodies left to rot on the road.

In the summertime we see a large number of dead snakes on the road that have been run over by automobiles. Many of them are poisonous and extremely dangerous.

If any of these dead bodies are affected with contagious or infectious diseases, the germs are picked up by every car that rolls over them.

I am not a doctor, but I know that polio has been spread throughout the country in some mysterious manner that even the medical profession cannot explain.

I know that a great many wild animals are affected with rabies or hydrophobia, one of the most dangerous diseases known to man.

I know that in some States rabbits have become affected with some kind of disease that is not only destroying them but making it dangerous for anybody to eat their flesh.

I know that the body of any dead animal that is in a decaying condition is likely to be affected with disease germs that are dangerous for one to come in contact with.

I want to make two suggestions.

First, that any motorist who kills an animal of any kind on the highway should be required to stop his car and remove its body from the road.

Second, that the highway officials, as well as the public-health officials in every county in every State, and also in the District of Columbia, be required to have the bodies of dead animals removed from the highway as soon as they are discovered, and that every motorist who sees a dead animal on the highway be required to report it to the nearest authority.

In my opinion, this would prevent the spread of some very dangerous diseases and would probably save the lives of large numbers of men, women, and children throughout the country.

House Vote Should Decide

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1950

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial

from the Mt. Vernon (Ohio) News of January 28, 1950:

HOUSE VOTE SHOULD DECIDE

Whether you're for or against the Truman program, you should welcome the administration's victory over the House group that tried to scuttle the new system for bringing bills to the floor.

For many years the House Rules Committee had life-and-death control over legislation. It was like a traffic cop, steering some proposals to a floor vote, blocking others. It could smother any measure it disapproved.

Countless bills that would have passed the House never reached the floor. Some were bad, but some were good. The relatively unknown committee members struck down both kinds—without regard to popular sentiment or the views of the whole House.

Last year administration forces succeeded in breaking the committee's stranglehold on legislation. It rammed through the committee itself, and then the House, a new plan under which a measure could be brought to the floor 3 weeks after the committee turned thumbs down on it. In other words, the committee could be bypassed.

The change was generally hailed as a triumph for more broadly democratic methods over the autocratic impulses of the tiny group of men on the Rules Committee. The new 21-day rule meant that the full House could be assured of making the final decisions on controversial issues.

But as the 1949 session opened, a coalition of Republicans and southern Democrats on the Rules Committee took command and reversed the 1948 action. It decided to cast out the 21-day rule and restore to the committee its power to throttle any bill.

Republicans flatly said they hoped thus to block most of President Truman's social-welfare program. Southern Democrats made plain they wanted to stop civil-rights bills.

The administration was seriously concerned that it lose the advantage gained last year. Headed by Speaker RAYBURN, Texas Democrat, Mr. Truman's House chieftains marshaled all the strength they could to keep the 21-day rule. The fight looked close, but in the end the administration won by a surprising 236 to 183 when 64 Republicans came over to its side.

So, once more the old undemocratic system is out the window. That's where it ought to stay. Its supporters argue that legislative traffic runs wild without that check. But it's hard to believe that sensible lawmakers can't devise a way to steer bills wisely without giving the Rules Committee veto power over them.

The House floor is the place to decide the fate of major issues. All the Nation's representatives, not just a chosen few, should pass upon them. If they make a bad choice, the voters can reject them and put in other men who can correct the error. That's the sound democratic approach.

Truman's Spending Spree Based on Theory That Government Has the Right To Take Money From Peter and Give It to Paul

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, a President who can outspend 32 other Presidents to date has established some kind of a record. Mr. Truman has outdistanced the others by more than eleven billions.

Mr. Henry Hazlitt, in Newsweek for January 23, points out the fallacies in the President's argument for a perpetual spending spree. I commend it to the attention of all Members:

THE FORGOTTEN TAXPAYER

(By Henry Hazlitt)

"This financial program," insisted President Truman in presenting his annual budget, "provide a sound basis on which to proceed." He thought his spending policy one of prudence and restraint. "It provides for esesntial activities," he said, "on a minimum basis and no more." He spoke of it as if it were an abstemious, almost a niggardly budget. He had denied request after request for additional funds. In fact, he declared at one point: "The major question in my mind is not whether we are doing too much spending but * * * too little."

This budget that Mr. Truman considers to be so sound, prudent, restrained, a minimum and perhaps too little, happens to be in simple fact a continuation of the largest peacetime expenditure ever proposed by the head of this or any other government in the history of the world.

The requested 1951 expenditures of $42,440,000,000, would be greater than our total estimated national income in 1932. They would be more than 5 times the annual rate of spending in the peacetime years of the Roosevelt administrations. They would be more than 10 times the annual rate of spending in the Hoover administration.

This colossal rate of spending, Mr. Truman argues, is necessary to meet the demands which the foreign and domestic situations put upon the people. It contributes to the welfare of our people. It encourages prosperity. It maintains high employment. It promotes an expanding economy.

The real truth is the exact opposite. Mr. Truman's bouquet of fallacies stems from looking solely at what the expenditures do or appear to do for those to whom they are given. He forgets that a government cannot give anything to Paul without taking it from Peter. In brief, he completely forgets the American taxpayer.

Mr. Truman really does assume that we can eat our cake and have it too. He forgets that the Government cannot fill a single need without making it impossible for the individual taxpayers to satisfy other needs. He declares that many Federal expenditures constitute direct supports for important sectors of our economy. But he forgets that the taxes taken to make these expenditures must constitute at least equal depressants on other important sectors of our economy. He sincerely believes that he can pass economic miracles by seizing more and more from the American taxpayer and handing it over to someone else.

Yet you do not help the people to meet their needs by taking away from them the earnings on which they depend to meet those needs. You do not maintain high employment by putting further tax burdens on the industries that provide employment. You do not encourage production by burdening the productive to subsidize the unproductive. You do not create an expanding economy by killing incentives and draining industry of the very capital by which productivity is increased and an economy expanded.

Even with the present unparalleled burden of peacetime taxes the Government stands to raise only $37,300,000,000 in revenues. This means that it plans a deficit in the 1951 fiscal year of more than $5,000,000,000. This deficit alone would be greater than the entire expenditures of the Federal Government in any year in the Hoover administration. It would come on top of an estimated deficit of $5,500,000,000 in the current fiscal year, on top of 18 deficits in the 20 preceding fiscal years, and on top of a national debt of about $259,000,000,000.

What is most ominous is that the President no longer seems to consider deficits anything to worry about. He expects the country to be satisfied with the vague assurance that we are moving toward budgetary balance in the next few years. Mr. Truman and his advisers seem to believe that they can keep a perpetual boom going by perpetual deficit financing and perpetual inflation. And that belief, as experience shows, has always ended in disillusion and disaster.

Liberal Magazine Pioneers in Western United States Venture

EXTENSION OF REMARKS

OF

HON. JOHN A. CARROLL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1950

Mr. CARROLL. Mr. Speaker, recently the Christian Science Monitor carried an article titled "Liberal Magazine Pioneers in Western United States Venture." This article, written by Kimmis Hendrick, concerned the establishment of the new semimonthly magazine, Frontier, published by Gifford Phillips and edited by Phil Kerby.

I was very interested in Mr. Hendrick's account, as I have been a reader of Frontier since its first issue. As a magazine of opinion devoted particularly to the West, Frontier can play an important role in the future development of this great part of the Nation. The magazine is published in Beverly Hills, Calif., but it is printed in Colorado, and its interests include the entire West, from the Pacific seaboard through the Rocky Mountain area. In its first few issues, already it has published outstanding articles by such western writers as Carey McWilliams, Roscoe Fleming, Benton J. Stong, and Robert Stapp.

Every Member of Congress who is interested in trends of thought and action in the West will find Frontier well worth reading. Under leave to extend my remarks, I include the article "Liberal Magazine Pioneers in Western United States Venture," from the Christian Science Monitor for December 30, 1949, in the Appendix of the RECORD for the further information of Members:

LIBERAL MAGAZINE PIONEERS IN WESTERN UNITED STATES VENTURE

(By Kimmis Hendrick)

BEVERLY HILLS, CALIF.—Western liberals now have something they have been wanting for a long time—a review devoted to western affairs and similar in outlook to Nation and New Republic.

The appearance here of a modest-looking semimonthly called Frontier is noteworthy for two reasons:

1. It puts the liberal viewpoint on record for a region of tremendous, vital growth—a service that can be useful not only to liberals but to careful, conservative critics of the liberal position.

2. It helps, therefore, to draw the line between the genuine liberal viewpoint and that

UNIVERSITY OF MICHIGAN LIBRARIES

wholly fallacious liberalism espoused by Communists—of which, it appears, the far West has too many and too much.

These two points become all the more emphatic in view of Frontier's definition of liberalism. Liberalism, says editor Phil Kerby, means that which a free people are evolving as their concept of society—provided, that is, they are adequately informed.

This proviso is Frontier's great opportunity. The West has liberal journalism, true. But in several western cities, notably Los Angeles, there has been virtually none at all, and it is Mr. Kerby's ambition to see Frontier help westerners get adequate appraisals—not necessarily political appraisals—of developments vital to their future.

This is an ambitious hope. When it is considered, however, that these States represent the newness of America, and that populationwise they represent the biggest migration to a new frontier of this time or of any time, it can be seen as an ambition irresistibly attractive to the liberal editor.

It is even more attractive to the editor who considers, as Mr. Kerby does, that the still-new West presents two fascinating extremes: the already entrenched conservatism of its founders and the unformed, liberal-tending hopes of the new generation of settlers that has poured in by the millions since Pearl Harbor.

Take Los Angeles. Today it can aptly be called the world in microcosm. A community shaped by hardy, enterprising pioneers whose successes have given it metropolitan status, Los Angeles is even more the camping ground of newcomers who have just two things in common—they are Americans and they like California.

Again, take Hollywood. Here is a place that is not a community so much as an influence. People think of it as the origination point for the neighborhood movie and the gossip column. But it has a bearing on the mores and manners of millions of moviegoers and an undoubted impact on the economic and political affairs of California.

Mr. Kerby believes that a magazine devoted to a review of what is happening in Los Angeles, in Hollywood, and throughout the West can help crystallize and support whatever genuineness there is—and, obviously, there must be much—in this evolving picture.

Such a review must rest on convictions. Frontier's convictions, as has been said, are the convictions of liberalism, belief in the individual's instinctive or deliberate quest for self-realization and a truer relationship to the rest of mankind. Such liberalism, of course, has nothing in common with communism, fascism, or clericalism, and Frontier regards these as having no part at all in its ideal.

It takes money to establish a magazine. Frontier has the money. A young Denver millionaire, Gifford Phillips, as publisher, is underwriting the cost for 2 years, anyway. But Mr. Phillips has indicated that the magazine must budget itself carefully and build enough circulation to become self-sustaining. He estimates that 10,000 subscribers will enable it, not to make money, but to pay its bills.

He is printing Frontier at the Golden Press, in Golden, Colo., a suburb of Denver, where he publishes a weekly newspaper. He owns a radio station in Pueblo, Colo. He has television interests in Hollywood. In Mr. Kerby he has an editor of broad experience as a western newspaperman—and he has given him what any editor would gladly call a free hand.

It is Mr. Phillips' good fortune, as a young publisher whose maturity is yet to be tested, to have the opportunity to give the far West something it can profit by, provided the job is carefully done.

The Ohio River Is the World's Most Beautiful River

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1950

Mr. JENKINS. Mr. Speaker, the word "Ohio" means the beautiful river. Thus the Ohio River was named before the State of Ohio was named.

Besides being the world's most beautiful river, it is one of the world's greatest carriers of freight. The tonnage carried on the Ohio is gradually increasing and the increased usefulness of the Ohio justifies the great improvements which the Government has made on this river in the past 50 years. Greater improvements are yet to come, and with them will come usefulness.

The following newspaper clipping describes the beautiful Ohio in beautiful language:

OHIO: THE BEAUTIFUL RIVER

The Iroquois called the river "Ohio," and the name was later translated by the French as "the Beautiful"—La Belle Rivière. Not a beautiful river, mind you, but the beautiful, with no fear that it might be confused with any other.

The last moments of a sunset on a westering reach of the upper Ohio, smooth-flowing water the color of burnished copper between almost perpendicular stone banks already pitch black in shadow; or the jade green of low winter water on the middle river accented by a cold sun or bordering snowbanks; or a summer morning above its mouth where the broad stream makes a sweeping curve through rich black bottom lands, bound by yellow willows and gnarled white-limbed sycamores—those sights should convince even scholars of linguistics that "Ohio" must mean "the beautiful," no matter what the apparent connotation of the Iroquois noun.

But appreciation of the river's beauty was not limited to French and Iroquois. Charles Fenno Hoffman, urbane editor of the Knickerbocker Magazine, got his first view of the Ohio at Wheeling in 1833:

"The Ohio is beneath your feet. The clear majestic tide, the fertile islands on its bosom, the bold and towering heights opposite, with the green esplanade of alluvion in front, and the forest-crowned headlands above and below, 'round which the river sweeps away, to bless and gladden the fruitful regions that drink its limpid water—these, with the recollection of deeds done upon its banks—contrasted with all the luxuries of civilization that now float securely upon that peaceful current—these make a moral picture whose colors are laid in the heart, never to be effaced: no man will ever forget his first view of the Ohio."

One prosaic Englishman, Abner D. Jones, was prepared to find the Ohio wanting. But after he had viewed its length even Abner added his mite of commendation: "I had often heard the praise of this majestic river sung, and had curbed my expectations lest I should be disappointed. The Ohio is a beautiful river. There are points on the Hudson and Connecticut, and other rivers of the East, which equal anything I saw on the Ohio; but its peculiarity is that it is all beautiful. There are no points bare of beauty; but every mile is as rich in scenery as it was in verdure at the time of my passage down its winding way.

The Cost of Limited Wars

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks an interesting item that appeared in The Reporter on the subject of the cost of limited wars:

THE COST OF LIMITED WARS

"Limited" has become a word to watch; world government with "limited" powers, "limited" assistance to Chiang Kai-shek, and so on.

For 4 years, a "limited" war was waged in Greece, in which Greek Government soldiers were armed with American weapons and paid with American money. It has also been called a budgeted war: The Greek Government's expenses had to stay within the budget that the United States Government had approved. Fighting against the Greek Army, which was advised, but not exactly led, by American officers—advice is of course "limited" leadership—were Greek guerrillas. Nobody knows their exact number, but it is generally assumed that at the height of the fighting there must have been around 20,000. The total cost of the Greek "limited" war for the American taxpayer was around $1,000,000,000, or $50,000 per Greek guerrilla (more than twice as much as The Reporter estimated while the war was still going on). A fairly well-fed Greek may weigh around 130 pounds. His weight in gold at the present legal rate of $35 an ounce would be worth $72,800. If the Greek guerrillas had been made of gold, we would have been getting them at a 33⅓-percent discount.

Intervention in Greece, no matter how necessary, was much more expensive to the American Government than to the Communists. A bridge built at the cost of $1,000,000 could easily be blown up, as many were, with a $25 Communist bomb. One wonders why the Communists have put a stop to this drain on American wealth.

Perhaps the reason is that they now see the prospect of another American experiment in "limited" assistance or "budgeted" war. If Chiang Kai-shek, thanks to United States help, were to hold Formosa and spring back to the mainland, he would face a Communist army of from 2,000,000 to 4,000,000 soldiers and guerrillas. At the Greek rate of expense—$50,000 per enemy—Chiang Kai-shek's victory would cost us between $100,000,000,000 and $200,000,000,000. The total national budget of this country, as even the Chiang advocates are supposed to know, is approximately $43,000,000,000.

All this, of course, is true only for a "limited" war, fought by a friendly army with the "limited" or "budgeted" assistance of the American Government.

Tom Shiras

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1950

Mr. TRIMBLE. Mr. Speaker, Tom Shiras was one of the prime movers in the initiation of a program of progress

for the northwest section of Arkansas. I knew him well. He was my friend. He was a constant booster for the development of the water resources of the White River watershed. He was interested also in the development of the latent mineral resources in our section. He literally gave his life in the service of development of that great section. His name is indelibly imprinted upon the progress that has been made and the development which we hopefully expect in the years that lie ahead.

The following editorial from the Baxter Bulletin, published at Mountain Home, Baxter County, Ark., on January 26, 1950, discloses the effort which he lent to his community, his section, and his State. I desire to insert this editorial as a part of my remarks:

TOM SHIRAS, 1879–1947

Three years ago this month Tom Shiras, whose name was synonymous with progress in north Arkansas, left the Ozark hills and hill people who had accepted him as their spokesman for more than 40 years. The hundreds of feature articles he wrote about the Ozarks were published regularly in the magazine section of the Arkansas Gazette and many other newspapers and magazines, and he was at the forefront of every significant move for expansion of industry and agriculture and the utilization of the resources of nature. He collected, in the years he spent as co-publisher of the Bulletin, an unusual wealth of information about the people and the potentialities of north Arkansas, and transmitted this knowledge in glowing terms to thousands of readers.

It was not his capabilities or exceptional knowledge, however, which endeared Tom Shiras to his thousands of friends in the Ozarks; it was his incomparable personality and friendliness. In every hundred thousand men, perhaps, there is one who can talk at any man's level and who makes friends with every man he meets—that was Tom Shiras. In every country store in the 40 hill counties of north Arkansas he told his story, and men of every trade crowded to listen. It was a story of a day when the Ozarks would rival the sections of the North and East in industry and wealth, when the forces of nature would be coupled with the vast resources and local initiative to turn the wheels of industry. That this would eventually happen, he had not a doubt, and he transmitted his energy, enthusiasm, and optimism to all who heard him.

Before Tom Shiras died 3 years ago, he saw this new era begin to unfold. Now the series of dams which he urged so strongly are being built, and surfaced highways are being constructed into the former remote sections where he traveled. He was a man who rose to a high place of esteem in the hearts of the people of Arkansas because of his individual initiative and comradeship. His theory was that every man is entitled to independence and identity. At his passing, the Arkansas Gazette wrote: "Tom Shiras himself was a monolith of a man in character, personality, and accomplishment."

Automatic Control of Cotton

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1950

Mr. GATHINGS. Mr. Speaker, I have just read with interest an article that appeared recently in the Memphis Commercial Appeal commenting on a plan of cotton production control. This plan has been proposed by one of my constituents, Mr. E. L. Dean, of Jonesboro, Ark. Although I have not studied Mr. Dean's plan, I would like to place this article in the RECORD for the information and consideration of the Membership.

The text of the article follows:

AUTOMATIC CONTROL OF COTTON PROPOSED BY ARKANSAS PLANTER

(By W. Clarence Adams)

JONESBORO, ARK., January 22.—A Jonesboro planter and livestock grower believes he has a plan of cotton production control that would finally eliminate Federal Government participation in the industry.

He is E. L. Dean, who says he has been working for 20 years on a plan for adequate controls. Mr. Dean, a graduate of the agricultural economics department of the University of Chicago and a former county agent, believes it is high time a concrete plan be worked out to assure the cotton farmer a good living without so much uncertainty.

Because of the competition of rayon and other developed synthetics, it is doubly important now that leaders of the South unite in a demand that Congress draw up an act that is sound economics and which would provide an equitable profit to cotton growers and stabilize the industry, he declared.

PLAN OUTLINED

Mr. Dean's plan calls for Congress to—

1. Authorize a nonprofit corporation for the purpose of marketing all cotton grown in the United States and operate it in the interest of producer and consumer.

2. Provide for the purchase of sufficient stock of the corporation by the Federal Government to furnish necessary margins to handle all cotton grown in the United States. (Provision may or may not be made to retire this stock by the producer at a small rate per bale.)

3. Provide for a United States Cotton Board, appointed by the President of the United States from a list provided by farm organizations.

4. The instruction to the United States Cotton Board should be very definite and specific in the act, leaving nothing to the discretion of the members.

The full operation of the program would be as follows, says Mr. Dean:

"By using the margin provided, the United States Cotton Board should begin at once to buy cotton, starting at parity price. As soon as sufficient cotton has been accumulated, the Board would make known to consumers of raw cotton the kind and amounts of cotton on hand and offer to sell to them at a price 1 cent above parity, the 1 cent to be used to defray necessary expense of handling.

TEN-MILLION-BALE RESERVE

"When and if the Board shall accumulate more than 10,000,000 bales of cotton which shall be considered a normal reserve, the Board must lower the purchase price 1 cent per pound the following year. The selling price must be lowered the same amount and at all times stay 1 cent per pound above the purchase price.

"All price changes must be announced on January 1, of each year but no change shall take place except on July 1, following the announcement. The price shall remain unchanged thereafter for at least a year," Mr. Dean continued.

Mr. Dean asserted:

"If the reserve, or cotton pool, continued to get larger in spite of the reduced price and the increase is due to increased acreage, the same procedure should be followed each year until the increase is stopped. The gradual reduction of price, however, should decrease production and increase consumption to lower the cotton in the reserve.

"If it failed to do so, however, and the amount of cotton in the reserve reached 15,000,000 bales, then the Cotton Board should announce to the farmers that they would have the option of either voting acreage control or accepting a price in the future progressively reduced by an added cent each year until production was checked. Such an election should be sponsored and held by farm organizations," Mr. Dean said. "Farm organizations could influence farm voters to select the proper stopping point for price to pay the needed profit, yet get the desired consumption."

NO MORE GUESSWORK

Mr. Dean asserted that if the reserve should be below the normal mark, a price advance of 1 cent per pound should be announced each year to build up the reserve.

He said he believes the only time guesswork would have to be resorted to would be the first year in fixing the starting price. After the first year, the condition of the reserve would determine the price and the price in turn would determine the amount produced and the amount consumed, he said.

Thus, he contended, the program would become automatic with no further Federal attention needed.

If the Federal Government should choose to subsidize foreign shipped cotton to offset the penalties paid by farmers because of protective tariff, that would be another question but would in no way interfere with this stabilizing plan, Mr. Dean said.

Cecilia Wenz Welcomes American Legion Auxiliary Members to Indiana

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, the American Legion Auxiliary is one of the great patriotic organizations in this country. Last week the national executive committee assembled at its national headquarters in Indianapolis to consider matters affecting the general welfare of the United States.

Mr. Speaker, Cecilia Wenz is the national treasurer of that organization, and she was called upon to extend greetings to the women who were present from every State and our Territories. Her remarks were typically "Hoosier" and they should be preserved. I am pleased to extend them at this point in the RECORD:

Madam President, national officers, past national presidents, and members of this executive committee, unaccustomed as I am to public speaking, I've just realized that a great injustice has been done to you, as a result. In all the times that we've been meeting in Indianapolis, seldom has a bona fide native of the State welcomed you to Indiana. Now that's a great shame, because Hoosiers are very friendly people. In fact, it's been said we're so friendly that all you have to do is set your foot inside the State line and the Indianapolis newspapers will refer to you ever after as a native Hoosier. This is a kind of State pride that outrivals that of Texas or Brooklyn. We don't claim we can beat the rest of the country—we're

UNIVERSITY OF MICHIGAN LIBRARIES

just trying to absorb it. And so, in addition to welcoming you to national headquarters this morning, I take great pride and personal pleasure in greeting all you former "Hoosiers" back home again in Indiana.

Water Pollution

EXTENSION OF REMARKS
OF
HON. CHESTER C. GORSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1950

Mr. GORSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Resolution on water pollution

Whereas the Buffalo Sewer Authority has developed a plan for reducing the effect of industrial wastes in the Buffalo River tributary to the Niagara River; and

Whereas the Niagara River has been described as one of the most seriously polluted streams in the United States; and

Whereas the construction of works essential to such pollution abatement would impose a tremendous burden upon this community; and

Whereas it is a public obligation on the part of municipalities in this area to take such action as may serve to reduce pollution reaching the Niagara River: Therefore be it

Resolved, That the Common Council of the City of Buffalo hereby petitions the Congress of the United States to amend Public Law 845, known as Water Pollution Control Act, so as to provide for and allow loans of at least $5,000,000 at an interest rate of 1 percent to municipalities and public authorities for the purpose of constructing works essential to pollution abatement, and to further amend the act so as to include under the term "treatment works," all works directly contributing to the abatement of existing pollution in interstate or boundary waters, and that the Reconstruction Finance Corporation be instructed to loan money at the rate of 1 percent for that purpose; and be it further

Resolved, That the Representatives in Congress from western New York and the United States Senators from the State of New York be presented with copies of this resolution.

Do It Now

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. REED of New York. Mr. Speaker, if each one of the 141,000,000 people in this country would speak to Congress with one voice, it would be "Repeal the burdensome excise taxes and do it now." The large executives have the facilities with which to express themselves on this question.

There is an upsurge from all classes of people demanding relief from excise taxation. The larger the family, the more the chief breadwinner has to pay in hidden taxes. There is another group who are suffering from the delay in repealing excise taxes, and that is the manufacturers who find that they are suffering from a buyers' strike as the result of President Truman's message to Congress. Labor is threatened with unemployment because of the delay in repealing excise taxes.

Under leave to extend my remarks, I am inserting in the RECORD a petition to the Congress of the United States from 51 executives in American industry for the repeal of the wartime excise taxes:

A PETITION TO THE CONGRESS OF THE UNITED STATES FROM 51 EXECUTIVES IN AMERICAN INDUSTRY

The wartime excise taxes were passed as wartime controls in 1941, 1942, 1943. They served their purpose well.

But the war is over. It has been over for more than 4 years.

Everyone agrees today that wartime excise taxes are unfair in peacetime.

They are discriminatory. They penalize selected industries, the men and women who work in them, the public which needs and buys their products.

They have created serious unemployment in certain industries and communities. They prevent fair and free competition.

Everyone agrees with this statement of the President in his tax message:

"There is need to reduce taxes which burden consumption and handicap particular business. * * * Some (excise taxes) are depressing certain lines of business. Some burden consumption and fall with particular weight on low-income groups. Still others add to the cost of living by increasing business costs."

And—this statement is just and statesmanlike.

We believe that the same sound reasoning applies not only to the 7 industries for which the President recommended some relief—but applies with equal force and equal justice to all of the wartime excise-tax levies of 1941, 1942, 1943[1] on all of the 27 industries affected.

These excise taxes were justified during wartime. They are unjust and discriminatory during peacetime. To repeal some of them now and allow others to remain is only to alter the shape of the discrimination.

We support the President in his concern for a balanced budget and debt reduction at high employment, and we are convinced, after careful study, that wartime excise taxes are today a dangerous obstacle to the achievement of these goals.

This is a matter of simple arithmetic.

1. How much revenue would the Federal Government lose if the wartime excise taxes of 1941, 1942, 1943[1] were entirely repealed? The net loss will not exceed $1,500,000,000; it may well be less.

2. Can the Federal Government safely accept such a reduction of revenue? The budget now includes $1,920,000,000 to make loans and purchase certain assets, many of which are already guaranteed by Government agencies. Guaranteed mortgages and loans are a major part of this item. This $1,920,000,000 is not an expense; it is a recoverable asset. (See p. 1117 of the Federal Budget just published.)

3. This sum alone is greater than the maximum net loss of all wartime excise taxes of 1941, 1942, 1943.[1]

American consumers have already registered their protest against these wartime levies.

They have done so by drastically cutting their spending in most of the 27 industries affected.

They are waiting for their Congress to act. Every passing week adds to the cut-back in buying, in production, in unemployment.

Every passing week adds to the crisis.

This committee has been organized for the sole purpose of presenting a just petition for the redress of a serious grievance.

We ask justice for the public which pays these unfair taxes. Justice for those of our employees who have been taxed onto the relief rolls through no fault of their own. Justice for communities disrupted by unemployment. And justice for the men and women who have invested in our companies.

In this spirit, we—active heads and executives of our businesses, Democrats and Republicans alike—solemnly exercise the American right of petition. We appeal to the conscience and the reason of the Congress:

Repeal the wartime excise taxes of 1941, 1942, 1943.[1]

Repeal these taxes completely.

Repeal these taxes now.

Senate Judiciary Changes in Celler DP Bill Unacceptable

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1950

Mr. CELLER. Mr. Speaker, under the guise of liberalizing the Displaced Persons Act of 1948, the Senate Judiciary Committee has taken the Celler displaced-persons bill and unfortunately perverted it to the use of German expellees. Cleverly written to leave the impression that it accepts the principle of an increase in the admission of displaced persons in this country, it has completely departed from the principles of the Celler bill.

The Celler bill is designed to deal specifically with the problem of the displaced-persons camps—to look toward their quick dissolution, and to relieve the taxpayer of their burden of support for these camps. All facts point to the conclusion that the passage of the Celler bill will achieve that result. The changes to the Celler bill proposed by the Senate committee, despite their appearance to the contrary, would do no such thing. They leave untouched the central problem which is the elimination of the displaced-persons camps. The Senate committee bill does that primarily by including in its definition of the displaced person "persons of German ethnic origin who are expressly excluded under the Constitution of the International Refugee Organization."

That provision coupled with its other restrictive provision that 30 percent of the authorized visas shall be issued to persons who have been for at least 2 years at some previous time or times engaged principally in agricultural pursuits practically bars entry to those in the DP camps. The Displaced Persons Commission has testified that the agricultural restriction in and of itself has made the present act unworkable because of the difficulty in finding so high a percentage of eligible agricultural workers. There will be no difficulty in finding agricultural workers among the persons of German ethnic origin, but where does that leave the displaced person?

In addition thereto the proposed changes strengthen the provision that 50 percent of the German and Austrian quota shall be available exclusively to persons of German ethnic origin who were born in Czechoslovakia, Estonia, Hungary, Latvia, Lithuania, Poland, Rumania, Russia, or Yugoslavia, or areas under the control of any such countries.

Thus we see in effect a bill not for the persons in the displaced-persons camp, but for persons of German ethnic origin. In other words, the persons in the DP camps will have to compete with a heavy and overwhelming advantage in the law on the side of Germans for admission to the United States. This spells out a studied attempt to close our doors to the persons in the DP camp. It means that the American taxpayer will have to continue maintaining these camps for an indefinite period; it means that the DP problem will remain with us to be rehashed and rehashed over and over again; and it means that the hopes of dissolving the IRO on March 31, 1951, to which the United States is so heavy a contributor, will be dashed.

In addition to the expenses borne by the United States in maintaining these camps and in contributions to the IRO, the United States will be called upon to pay for all transportation costs of those persons of German ethnic origin since these persons do not come within the jurisdiction of the IRO. The constitution of the IRO forbids the organization from paying transportation costs for persons so excluded. Let me point out that the IRO bears the costs of transportation of displaced persons within their own definition. It will be noted, of course, that the Senate Judiciary Committee has changed the definition of a displaced person which heretofore has been the definition used by the International Organization. Acceptance of these provisions will mean a denial of our international obligations as well and a rift in the direction of international harmony.

I note, too, that the Senate Judiciary Committee proposes to include the word "Marxist" in addition to the word "Communist" already included in the Celler bill in its definition of excludible persons. It is hardly a legislative word since its definition is many things to many men. What is a Marxist and who is a Marxist is far from being settled and to use so vague a term legislatively is a grave error. Does a Marxist mean George Bernard Shaw, Clement Attlee, or Tito, or Molotov or any or all of them?

The Celler bill at best was a compromise bill, but it does have the merit of dealing directly and centrally with the problem of the displaced person. It has not departed radically from the core of the problem as has the Senate Judiciary version, which includes in its definition of displaced persons such people like the Greeks who reside within their country. That is the most curious of definitions. The purpose of a displaced-persons bill, I emphasize, is not to treat with all unhappy people everywhere.

It is most fervently to be hoped that the debate on the Senate floor will reveal the unhealthy structure of the proposed amendments to the Celler bill and that good statesmanship and good sense will prevail upon the Members of the Senate to reject the Senate Judiciary proposals and accept the House bill.

The Common Cold

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1950

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Dr. A. M. Washburn, from the Arkansas Health Bulletin of January 1950:

THE COMMON COLD

(By A. M. Washburn, M. D., director, division communicable disease control)

Winter is upon us with the cold in its period of greatest prevalence. The common cold is seldom a serious ailment but has a nuisance value of extensive proportions. Colds and their resulting complications—sinusitis, bronchitis, laryngitis, swollen glands, infection of the ears, and often pneumonia—are said to result in the loss of 60,000,000 work days and $400,000,000 in wages annually. More than half of all absences from school and work are caused by colds. Most persons have one or more colds a year. The incidence does not vary greatly according to age, sex, race, or occupation, but it appears to be highest in children under 5 years of age.

A cold is an acute catarrhal affection of the upper respiratory tract caused by one or more filterable viruses, usually accompanied by a slight rise in temperature on the first day and chilly sensations with coryza (cold in the head), and general lassitude lasting up to 7 days. Colds are highly communicable while the virus remains in the discharges from the nose and throat of the infected person, the source of all new colds. Transmission is brought about by coughing, sneezing, and explosive manner of speech by which droplets of infection are passed from the infected individual to susceptible persons within short range; and indirectly by handkerchiefs, eating utensils, etc. Susceptibility is universal, the cold developing within 72 hours after exposure, usually within 12 to 48 hours. A period of about a month or so of relative immunity follows an attack.

The common cold is largely preventable—preventive measures being of two groups—avoiding exposure and forming daily health habits to strengthen body resistance. The following rules may well be followed:

1. Stay away from crowds and ill persons during the cold season. An individual with a cold should remain at home in bed during the acute stage to protect others and to lessen the chance of complication.

2. Practice sanitary disposal of nasal and mouth discharges.

3. Avoid overheated rooms, too much clothing, and sudden changes in temperature.

4. Form proper habits of eating, sleeping, exercise, and recreation. Eat a varied diet, in moderation, consisting of meat, green vegetables, fruit, and milk, rather than rich pastries and sweets. Get plenty of rest.

5. Keep your hands scrupulously clean and away from nose, mouth, and eyes. Cover coughs and sneezes with handkerchief, or preferably, disposable tissues which should be burned or flushed out through the toilet.

UNIVERSITY OF MICHIGAN LIBRARIES

6. If there is any doubt about the seriousness of the infection, see your doctor.

Various types of vaccine have been tried in the past but have not been proved as effective preventives of colds; however, they may prevent secondary infections, and thus complications. Recently the use of antihistaminic drugs under the direction of the private physician has been tried because the early signs of the cold are allergic in nature. Such drugs are not effective unless used in the very first stages of the cold.

California's Great Debt to Ed Hyatt

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1950

Mr. ENGLE of California. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include an editorial from the January 25, 1950, issue of the San Francisco News praising the services of Ed Hyatt, State engineer in California for 35 years, who is retiring this month. The imprint of Ed Hyatt's planning and effort in California will become even more distinct as time goes on, and I join in the sentiments of the editorial praising his work on the now nationally famous Central Valley project. The editorial is as follows:

CALIFORNIA'S GREAT DEBT TO ED HYATT

On February 1 the man who, more than any other living California citizen, has been responsible for long-range water conservation planning in this State will retire from public office. He is Ed Hyatt, State engineer for 35 years.

Ed Hyatt, together with Col. Robert B. Marshall, drew with daring strokes the picture of California's water needs back in the 1920's. Their long-range vision was shared by few other citizens. They saw that the State's very existence depended upon conserving the waters of the great Central Valley and using them economically for agriculture and industry. They drew up the original State water plan, which was the basis of the Central Valley project, now evolving. As State engineer, Hyatt started the work of putting the plan into execution and carried on until it became so big the Federal Government was asked to take it over.

The News is proud to have supported the plan from the beginning to date and proud also to have been associated with a far-seeing, devoted public official like Ed Hyatt in its development. He deserves public commendation and thanks for the contribution he has made to the fundamental welfare of the Commonwealth.

Our Civil and Human Rights

EXTENSION OF REMARKS
OF
HON. EDWARD J. HART
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1950

Mr. HART. Mr. Speaker, under leave to extend my remarks, I include herewith the address delivered at the annual dinner of the Hudson County (N. J.) Bar Association at the Hotel Statler, New York, in December, by Hon. J. Howard McGrath, Attorney General of the United States.

A distinguished audience of nearly 1,000 lawyers, including many eminent judges, listened with rapt attention to the Attorney General's address. The speech made a marked impression upon those present and commendations of the address were heard on every side.

The speech follows:

OUR CIVIL AND HUMAN RIGHTS

With the discovery of the New World, there came to this continent droves of colonists, seeking release from physical and spiritual oppression. Europe was just awakening from the slumber and nightmare of the Dark Ages; and from it went forth the oppressed, searching for freedom from tyranny and freedom to make the best of themselves in a fresh world. On this continent, in 1776, "our forefathers brought forth * * * a new nation, conceived in liberty, and dedicated to the proposition that all men are created equal." We have fought two world wars to defend our freedom so that we may live by that faith.

Now, on the continent where a light shone through the darkness to our colonists, America has herself become a light shining to all the world.

To millions of people everywhere, America is the source of new strength and new hope. We are giving our material aid through the European recovery program and in many other channels. We have given our promise of military support. We hold out to all the knowledge that America seeks no aggrandizement but rather the extension of human freedom everywhere.

Unfortunately, there are certain governments which hate the freedom we defend. They are dedicated to the proposition that a small ruling class knows what is best for all. They profess democracy, but in the lands they rule there is no freedom of speech, no freedom of thought, no freedom of religion, no security of the person, no freedom to meet with one's neighbors, no freedom to leave the country and exchange ideas with others of different belief. These governments seek to extend their rule by a world-wide conspiracy against the good order and the institutions of the other countries of the world. They proffer false promises of human freedom. With well-practiced lines, they are competing with us for the minds of men.

As lawyers, all of us here are sworn to defend our Constitution and the guaranties of liberty which it contains. It is, therefore, fitting that in this time of grave division in the world we should consider anew what our freedom means to us, how it has been preserved and some of the things we must do to preserve it for the future.

You will recall that when our Constitution emerged from the Constitutional Convention of 1787 it contained no bill of rights. It made no reference, for example, to freedom of religion, freedom of assembly, freedom of speech, or of the press.

The brilliant Hamilton, who was as much responsible for the adoption and ultimate ratification of the Constitution as any man, pointed out that the proposed Constitution guaranteed habeas corpus and trial by jury in criminal cases, and prohibited ex post facto laws, bills of attainder, and the grant of titles of nobility. A bill of rights, he went on to contend, was unnecessary, even dangerous. Said he, "Why, for instance, should it be said that the liberty of the press shall not be restrained, when no power is given by which restrictions may be imposed?" Such a provision on liberty of the press, he argued, could afford a pretext for implying power to regulate the press. Moreover, he wrote, "What signifies a declaration that the liberty of the press shall be inviolably preserved? What is liberty of the press? Who can give it any definition which would not leave the utmost latitude for evasion? I hold it to be impracticable; and from this I infer that its security, whatever fine declarations may be inserted in any constitution respecting it, must altogether depend on public opinion, and on the general spirit of the people and of the Government. And here, after all, as is intimated upon another occasion, must we seek for the only solid basis of all our rights."

Nevertheless the people were alarmed. Many feared that liberties won from the King by the Revolution would be lost to the new Government. Thomas Jefferson wrote from Paris to his friend Madison:

"A bill of rights is what the people are entitled to against every government on earth, general or particular; and what no just government should refuse or rest on inferences."

And again, on a later occasion:

"The declaration of rights is, like all other human blessings, alloyed with some inconveniences, and not accomplishing fully its objects. But the good in this instance vastly outweighs the evil."

This clash of views on an express bill of rights was to become a typical phenomenon in the struggle for liberty and equality. We should do well to remember this bit of history in viewing our present-day problems.

To achieve ratification of the Constitution its supporters promised the American people that the Congress at its first session would propose amendments for protecting the rights of the people against violation by the Government. This promise was carried out. The First Congress proposed what became the first 10 amendments to the Constitution, known ever since as our Bill of Rights. These amendments were promptly adopted by the people and became part of the Constitution on December 15, 1791—a day we have just commemorated, and which we mark each December 15 as Bill of Rights Day.

Thus we have guaranties that Congress shall make no law respecting the establishment of religion, or prohibiting the free exercise thereof; or abridging freedom of speech or freedom of the press; or the right of the people peaceably to assemble and to petition the Government for a redress of grievances. So also we have detailed guaranties that criminal trials conducted by the Federal Government shall be carried on in accordance with basic standards—publicly, speedily, and fairly. There is affirmed the right of the people to be secure from unreasonable searches and seizures in their persons, houses, papers, and effects. These and other rights are guaranteed to all of us by the Bill of Rights against infringement by our Government. The Bill of Rights embodies not by indirection but in the explicit language of law our belief in freedom, our belief that there are some things that the Government may not do under any circumstances, our belief that an individual is an end in himself.

In the years that intervened after the establishment of the American Bill of Rights great changes took place. The original fears of tyranny from abroad and from monarchical tendencies within gradually disappeared. America settled down to an era of material growth, aided by the unprecedented advancement of science and invention, but complicated by such phenomena as slavery and emancipation, tremendous waves of free immigration and later restriction, unheard-of prosperity for many, economic misery for others in the shadow of plenty. The longing and striving for liberty did not change. Only the sources of potential oppression were different. Fear of private exploitation, backed by sometimes corrupt forces of law, replaced the early fear of our National Government. In fact, the National Government assumed the role of protector and mediator in the

struggle to arrive at a balance between property and human rights.

This was particularly evident in post-Civil War days when the thirteenth, fourteenth, and fifteenth amendments to the Constitution were adopted. The thirteenth amendment abolished slavery and involuntary servitude. The fourteenth amendment, conferring citizenship on the former slaves, prohibited the several States from making or enforcing laws "which shall abridge the privileges or immunities of citizens of the United States," from depriving "any person of life, liberty, or property, without due process of law," and from denying to any person "the equal protection of the law." The fifteenth amendment forbade abridging the right of citizens to vote on account of race, color, or previous condition of servitude. All three amendments empowered Congress to provide for enforcement by appropriate legislation. And Congress did. In a series of statutes known as the Civil Rights Acts, Congress in the years after 1865 sought to eliminate the practices and indicia of slavery which, if maintained, would defeat the purposes of the constitutional amendments. The statutes dealt with such things as peonage, and enticement into slavery; equality between blacks and whites in the right to own and transfer property, to make and enforce contracts, to sue, and to serve on juries; nondiscrimination in public accommodations, and, in general, equality in the rights and privileges which all citizens should enjoy. The bitterness of the Reconstruction, and the action of subsequent Congresses and courts, particularly prior to the First World War, reduced or nullified much of this legislation, leaving a residue of a few sections of the original laws. These provided dull and difficult weapons to wield when, in 1939, former Attorney General Frank Murphy, the late Mr. Justice Murphy of the Supreme Court, embarked a group of lawyers in the Department of Justice upon a regular program for enforcing civil rights, which incidentally has been continued by the succeeding Attorneys General in a unit of the Criminal Division known as the Civil Rights Section.

It remained for President Truman, in December 1946, to constitute the President's Committee on Civil Rights, a group of 15 distinguished citizens. The committee was asked to "determine whether and in what respect current law-enforcement measures and the authority and means possessed by Federal, State, and local governments may be strengthened and improved to safeguard the civil rights of the people." The committee engaged in extensive study and research. In October 1947 it handed up its report, containing findings and recommendations, now widely known under the title "To Secure These Rights." Out of further study of this report came the President's message to Congress of February 2, 1948, and his program for action.

I think it important to reiterate, as did the President and his committee, that although our basic human freedoms are better cared for and more vigilantly defended than ever before, there is a serious gap between our ideals and some of our practices. No thoughtful observer will deny that we have in practice achieved a great measure of the Bill of Rights. By the combined conduct of our legislative, executive, and judicial branches of government—local, State, and Federal—and by the vigilance of private citizens, watchful of their own rights and the rights of others, we have built up and defended constitutional liberty to a place where it is, in this country, the rule and not the exception.

Yet we would not, we need not, pretend we are perfect. The Civil Rights Committee report and the President's message afforded us a looking glass. It reflects the imperfections ranging from deficiencies in education and social attitudes to the needs of formalizing certain public policies in legislative and other acts. Perhaps our principal weaknesses and difficulties are in unevenness of application of civil liberties. We are in constant danger of dividing our people, of weakening our unity, if we fail to insure equality of treatment.

When I was a Member of the United States Senate, I had the privilege of studying the President's civil-rights program as a basis for proposed legislation. As a result, I introduced four bills, still pending, designed to carry out the major parts of his legislative program in this field. The factor common to each of these bills is the purpose to eliminate, with regard to the subject matter, discrimination based on race, color, religion, or national origin.

The first of these measures—the proposed "Civil Rights Act of 1949"—has a number of objectives. It would set up a permanent Civil Rights Commission in the executive branch of the Government continuously to survey the status of civil rights in this country and to advise the President of measures which might be taken to enhance the security of human rights. The bill would also set up a standing Joint Committee of Congress on Civil Rights, and a Civil Rights Division headed by an Assistant Attorney General in the Department of Justice. The bill would amend some of the few existing statutes in the civil-rights field in an effort to strengthen protection of the individual's rights to liberty and to the privileges of citizenship. Thus, in the case of the existing criminal statute protecting citizens in their rights under the Constitution and Federal laws, it would extend protection to all inhabitants of the United States, whether or not they are citizens, and this protection would be afforded against infringement by persons acting alone as well as in conspiracy. Another amendment makes an enumeration of the principal rights protected against the misconduct of public officers, in order to make more definite and certain the protection which the existing law seeks to afford.

The right to be free from intimidation and coercion in voting in an election for national offices would be extended to primary and special elections as well as to the general elections. The existing statutory protection of the right of citizens to vote at an election without distinction as to race, color, or previous condition of servitude, would be more carefully drawn to ensure against discrimination by public officers in the cases of qualified citizens. A greater use of civil remedies, as distinguished from criminal penalties, would be encouraged by the bill. The bill would also provide equal treatment in the enjoyment of accommodations of any public conveyance or facility operated by a common carrier in interstate or foreign commerce, without discrimination or segregation based on race, color, religion, or national origin.

The second of these bills is the proposed Federal Anti-lynching Act. It is designed to protect against and punish the lawless violence of mob action, which supplants the orderly processes of Government.

The third bill is the proposed Federal Anti-Poll-Tax Act. This bill would make unlawful the requirement of payment of a poll tax as a condition to voting in a primary, general, or other election for national offices. The right to vote—to take part in the selection of those who make and administer the laws—is basic in a democracy. The poll tax, where it is still used as a prerequisite to voting, stands between the citizen and that right. Experience has shown that when voting is conditioned upon paying a poll tax, the number of votes cast is cut drastically; but that when the poll tax is abolished, the number of voters increases very greatly. The poll tax is a way of saying: "The poor shall not vote. The rest of us will decide what is good for them." And so great numbers of citizens, both white and Negro, are barred from the polls where this condition prevails. The counterpart of the bill, which as I said would remedy the situation in elections for national offices, has already been passed by the House of Representatives.

The fourth of these measures is the proposed Federal Fair Employment Practice Act. It is designed to prevent discrimination in employment on grounds of race, color, religion, or national origin. It would apply to employers of 50 or more employees, or labor unions of 50 or more members, engaged in interstate commerce, as well as to the Federal Government and certain contractors with the Federal Government. It is important to note that the bill does not permit anyone to demand employment by a given employer. Except for the causes specifically condemned, the employer may hire or refuse to hire or discharge for any cause that seems proper to him.

In respect of the common purpose running through these bills, it is useful to observe the kind of right which is sought to be stated and preserved. In a sense, it is almost a negative right, expressive of the desire of all freemen to live unmolested—the right not to be treated differently from other men; the right not to be singled out for the special treatment which implies that there is more than one class of citizenship. The bills propose to reiterate and reinforce the guaranties of equality upon which our Government is based.

Some persons, with the earnestness and sincerity of Hamilton, others with less pure motives, will ask: What do we accomplish by declaring equality by law? Can we eliminate prejudice against minorities by legislation?

Statutes on nondiscrimination may not in themselves remove racial, national, or religious prejudices. Admitted. But they can create conditions favorable to the gradual disappearance of such prejudices. Already there are a number of years' experience in your State, New Jersey, with fair employment practice legislation. So, too, there is experience with similar laws in New York, Massachusetts, Washington, Oregon, New Mexico, Connecticut, and Rhode Island—all indicating that this kind of law can create a climate of opinion in which discrimination tends to disappear. And conversely, we know that statutes or public policies which support or condone Jim Crowism, and other forms of caste, simply solidify discrimination, giving it the gloss of respectability. The way to eradicate racial tension, wisely said the Supreme Court of California in a recent case, is not "through the perpetuation by law of prejudices that give rise to the tension."

What I have been speaking of principally, refers to the responsibility of government—the formal organization of our society—in the protection of individual liberties. But the responsibility cannot rest there alone. The individual, no less than his government, must share in serving the ideals of the democratic faith. Obviously, he has a duty to stand up for his own rights when they are invaded. An authority which threatens the rights of one citizen becomes all the stronger if it succeeds, and all the more dangerous to the rights of others. A citizen who asserts his own rights is therefore protecting not only himself but his fellow citizens as well.

But he has a further duty. This is to respect the rights of other persons. He must recognize each of his fellow men as a human being like himself, with wants, and the need for dignity, like his own. He must remember the words of the Declaration of Independence—"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty and the pursuit of happiness." It was essentially for the protection

UNIVERSITY OF MICHIGAN LIBRARIES

of these rights that the signers of the Declaration of Independence declared that—"We mutually pledge to each other our lives, our fortunes and our sacred honor."

In the world today, this duty of each American citizen is more than a duty to the particular individual whose rights would otherwise be violated. It is a duty which each of us owes to every other citizen of the country. In one sense, it is a matter of national security.

Racial, religious, or national discrimination is a fearful thing for our country, both at home and in our international relations. At home, it divides us when we should be united. It leads to bitterness in its victims, and the rejection by some of the American creed.

In a brief filed recently in the United States Supreme Court, in a case involving alleged discrimination in interstate transportation (*Henderson* v. *United States*), the Department of Justice took occasion to call the Supreme Court's attention to testimony of a well-known Negro baseball player, who appeared before a congressional committee to answer statements which questioned the loyalty of large numbers of American Negroes. The witness said:

"Just because Communists kick up a big fuss over racial discrimination when it suits their purposes, a lot of people try to pretend that the whole issue is a creation of Communist imagination.

"But they are not fooling anyone with this kind of pretense, and talk about "Communists stirring up Negroes to protest,' only makes present misunderstanding worse than ever. Negroes were stirred up long before there was a Communist Party, and they'll stay stirred up long after the party has disappeared—unless Jim Crow has disappeared by then as well."

Abroad, discrimination embarrasses us in our international relations. It furnishes hostile propaganda to foreign critics. It raises doubt as to our sincerity among friendly peoples. Today, the United States enjoys a position of world leadership. Yet, the very existence of this country, and of the free nations associated with us, depends in considerable measure upon how well we live up to our own ideals at home. We must therefore do more than let the world know that we have the highest standard of living. We must prove to the world that our democracy works. Every one of us, by what he does or fails to do, in the daily business of living—in his contacts with neighbors, fellow workers and even strangers—inevitably affects the composite of our efforts to build a peaceful world.

Our concern, and the concern of all freedom-loving peoples, today, goes far beyond the domestic pattern. In many ways we have begun to make it clear that the protection of human rights is a matter of international concern.

Something akin to a constitutional convention of almost the whole world was held in San Francisco in 1945. I am referring, of course, to the San Francisco Conference which framed the Charter of the United Nations. In that Charter, universal interest in human rights is expressed more prominently and authoritatively than ever before. "To achieve international cooperation * * * in promoting and encouraging respect for human rights and fundamental freedoms for all without distinction as to race, sex, language or religion," is stated to be one of the purposes of the United Nations. The General Assembly, the Economic and Social Council, and the Trusteeship Council, are given responsibility for promoting human rights within their fields of competence. The Economic and Social Council is specifically directed to set up a human rights commission—which it has done. And all members of the United Nations pledge themselves to take joint and separate action, in cooperation with the United Nations, to promote universal respect for, and observance of, human rights.

There were some at the San Francisco conference who thought that the Charter did not go far enough in the protection of human rights. But there was no time at San Francisco to draft an international bill of human rights. Instead, it was decided that the question of framing one could be taken up by the United Nations organization itself after it got started. President Truman voiced his hope for such an international bill of rights in his speech at the closing session of the San Francisco conference. Under the Charter, he said, "We have good reason to expect the framing of an international bill of rights, acceptable to all the nations involved. That bill of rights will be as much a part of international life as our own bill of rights is a part of our Constitution." And so, just as our Bill of Rights was added to our Constitution after the Constitution was adopted, the United Nations has been taking steps to frame an international bill of rights which, in effect, would be added to the Charter of the United Nations.

A great preparatory step was taken just 1 year ago. On December 10, 1948, the General Assembly of the United Nations proclaimed the universal declaration of human rights. This declaration is not a treaty, as is the Charter of the United Nations. But it is, in its own words, "a common standard of achievement for all peoples and all nations." It declares many of the basic rights set forth in our Constitution and bill of rights, and some which are neither fully realized here nor elsewhere in the world, but which some day may be accorded to everyone.

Coordinately with the drafting of the universal declaration of human rights, the drafting of a proposed treaty was begun, to provide the basis from which to give legal effect to certain of the fundamental human rights. This proposed treaty is called the Covenant of Human Rights. It has been in preparation by the United Nations Commission on Human Rights since 1947 and is not yet finished. It is receiving most careful attention from our Government and the many governments participating in the drafting, as well as from hundreds of organizations in and out of the United States—bar associations prominently among them.

In this way, among others, the United States and other free countries are moving forward together, through the United Nations, in the noble enterprise of weaving their ideals into the fabric of international law.

But always there is the ordinary man and woman, and his and her duties and responsibilities as citizens in a democracy. Individually, at times, the contribution of each, the importance of each, may seem minute. Nevertheless, local governments, State governments, national government, international law, and international procedures cannot do the job without them. We know from experience that a great share of our liberties depends upon the vigilance, the wisdom, the tolerance, and the courage of our citizenry. Each of you, therefore, as a private citizen, has an unavoidable responsibility for the preservation of the American freedoms. As guardians of these freedoms, you are also guardians of the fair name of the United States and of its powers of moral leadership in the world. To this generation of Americans has come the greatest responsibility ever visited upon the citizenry of any nation. You are keepers of the light. Yours is the duty to make sure that it shines for all the world.

Government Favoritism With RFC Loans

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1950

Mr. MASON. Mr. Speaker, Henry Kaiser owes Uncle Sam $194,000,000. The Kaiser-Frazer Corp. recently secured from the RFC a new loan of $34,400,000 to pay the cost of retooling their plant in order to produce the new 1950 Kaiser-Frazer auto models; and another loan of $10,000,000 to establish a credit set-up for Kaiser-Frazer dealers in order to help them handle the output of the Kaiser-Frazer Corp.

Since the new Kaiser-Frazer car will be sold in competition with other lightweight cars—Ford, Chevrolet, and Plymouth—American tax-payers should wonder why Uncle Sam lends taxpayers' money to some big manufacturers on favorable, liberal, easy terms, while their competitors have to take their chances of borrowing from the banks on regular banking terms, covering interest charges and adequate collateral.

The Lustron Corp. of Columbus, Ohio, is another example of a favored RFC borrower. This corporation is supposed to manufacture prefabricated steel houses, but so far has turned out very few. The promoters of this company put up only $10,000 of their own money, but have already secured loans amounting to $37,500,000 from the RFC and have applied for $14,500,000 more.

When the Lustron Corp. applied to the RFC for their first loan in 1947, it is understood that the application was turned down by the RFC directors, but President Truman personally intervened in the case and forced the directors to reverse their position and grant the loan.

Has Uncle Sam decided to favor certain business friends but handicap, hinder, and punish certain other business concerns because they are not friendly toward the so-called Fair Deal? If the administration takes taxpayers' money and uses it to reward certain business friends and to punish certain business enemies, then we are headed down the road to national socialism.

THE A. & P. SUIT

It is axiomatic that bigness of any kind means power, and power unchecked means power abused. The Federal Government has brought suit against the A. & P. in an effort to break up that organization because the Government charges its very bigness makes it a monopoly, per se. What is a monopoly?

Webster says a monopoly is "(1) a conspiracy to limit production and maintain high prices; (2) an illegal combination in restraint of trade; (3) a combination having exclusive control of." Does the A. & P. limit production and maintain high prices? Of course not;

in fact, it does the exact opposite. Does the A. & P. restrain or restrict trade in any way? Of course not; it facilitates trade rather than restricts trade. Is the A. & P. a combination having exclusive control of? Of course not; it handles less than 6 percent of the Nation's groceries. Then, why the suit?

The Federal Government itself is the greatest economic monopoly on earth outside the iron curtain. The Federal Government not only restrains agricultural production by acreage control in order to maintain high prices, but it also corners the market by buying up millions of pound of butter and billions of eggs in order to control prices. One wonders, therefore, if the A. & P. suit is not a case of the pot calling the kettle black—our bureaucratic Government is a very dirty pot and the A. & P. is a clean, shiny pot. Which is more dangerous, a corporation regulated by Federal, State, and local governments, with its great power diffused by ownership distribution; or a bureaucratic monopoly exercising economic power that is not regulated but is in the hands of politicians of the Pendergast-machine type? This is a question that the voters must ponder over and try to answer in 1950.

Secretary Acheson's Policy For China

EXTENSION OF REMARKS

OF

HON. ARTHUR V. WATKINS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, January 30 (legislative day of Wednesday, January 4), 1950

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Policy Advanced by Acheson for China Declared 'So Extremely Comfortable'," written by Dorothy Thompson and published in a recent issue of the Washington Evening Star.

There being no objection, the article was ordered to be printed in the RECORD as follows:

ON THE RECORD—POLICY ADVANCED BY ACHESON FOR CHINA DECLARED "SO EXTREMELY COMFORTABLE"

(By Dorothy Thompson)

The Secretary of State, Dean Acheson, speaking at the National Press Club last Thursday, advanced a policy for China (and we presume, for the rest of the world) which has all the charm of extreme novelty.

"The single, most important fact shaping American policy in the Far East," Mr. Acheson said, "was the attaching by the Soviet Union of the four northern areas of China." "The United States must not now do anything which might divert Chinese attention from Russia," he continued, for the division of China "must bring upon the Russians the hatred and righteous anger of the Chinese people."

PLANNED IT THAT WAY?

So we planned it that way? The reason for the secret treaty at Yalta, giving Russia special privileges in Manchuria, was just to encourage Russia to overreach herself? The reason for forcing the truce upon Chiang Kai-shek in November 1945, and allowing tens of thousands of Communist troops to escape; and for insisting in 1946 that the Kalgan Pass be opened to permit a million Communists to move into Manchuria and be armed by the Russians with the entire equipment of the Japanese Kwantung army, was to be sure that by Russian encroachment in China, the Chinese people would recognize their real enemy?

Do we, perhaps, have a secret agent in the Russian Politburo who directed the Soviet Union to annex the four northern provinces of China, since this is going to make the Chinese people awfully sore?

We don't like the Nationalist Government (runs the argument), so it is well for the Communists to defeat it. But communism being synonymous with Russian imperialism is hostile to the real interest of the people of China, and they will revolt. Ergo, the more successful Russian communism is, the less successful it will be.

No wonder George Kennan, author of the containment policy, resigned from the State Department. To contain communism is "putting the cart before the horse," said Secretary Acheson. "It is the United States' aim to develop within the people a resistance to communism based on the dignity and right of every people to develop their own way * * * any one who violates the integrity of China is the enemy of China and is acting contrary to our own interest."

But apparently, you can't develop a resistance to communism until you first have it, nor rise in righteous anger against the violation of territorial integrity until it is violated.

This is certainly a subtlety outsubtling the Kremlin.

ANOTHER TITO, OBVIOUSLY?

What we want to know, however, is just how the indignation of the Chinese (and other) peoples is going to express itself once the Russian noose is around their necks and all anti-Communist leaders assassinated or exiled?

There are at present some million Nationalist guerrillas on the Chinese mainland. There are 300,000 Chinese Nationalist troops (trained by the United States) in Formosa. There is a leadership, now very reduced, but still a leadership, and all these express the hatred and righteous anger of the Chinese people.

But we mustn't support them. No; we must wait for something more inspiring—obviously another Tito.

Maybe Secretary Acheson has one in mind. We suggest, however, that the Russians have thought of that possibility, and aren't going to let it happen twice.

At any rate, we have a new foreign policy, surely the most remarkable in our history—and so extremely comfortable. Under it we don't have to do a thing except "keep our own purposes perfectly straight, perfectly pure, perfectly aboveboard," and our enemies will do all the rest for us.

Stalin doesn't know it, but he's our ally. The more peoples he subjects, the more he will be hated and, conversely, the more we, sitting still in our perfect purity, will be loved.

Obviously, too, we were wrong about Hitler. If we had just let him take the world, people would have been plenty sore, and would have revolted—the Jews, for instance.

It is incredible. But it's true; it's the policy.

Communism

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1950

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Walter Simmons, from the Washington Times-Herald of today:

COMMUNISM

(By Walter Simmons)

In refusing to help the Chinese Nationalists hold Formosa, the United States has lost its last chance to fight world communism on an equal basis, according to Premier Yen Hsi-sham.

With Formosa gone, the aging marshal said, "communism will sweep like an avalanche through southeast Asia soon controlling half the earth and two-thirds of its population."

When that has happened. Yen said, "it will be too late for Americans and their allies.

"You cannot understand the difficulties of fighting communism militarily until you have tried it yourself," said the war lord, whose epic defense of his Shansi province home was the most prolonged battle of the civil war.

His soldiers built thousands of brick and concrete pillboxes, manufactured their own guns and ammunition, and withstood siege for 9 months until starved out last April.

"Americans do not yet understand that communism has developed an unprecedented and unmatched system of political military strategy," Marshal Yen warned. "The people are so controlled that they are made into a solid enemy body.

"When we entered Communist territory, it was like entering a sea of mud. The stronger our forces and the deeper they penetrated, the more they were hurt.

"No man, whatever his sympathies, dared be friendly or give us information. We were dead and blind. Yet the Communists, 100 or 200 miles away, knew every detail about us.

"You are already facing the same situation in regard to Russia and her satellites—but how many Americans realize it? How much chance do you have of getting reliable information out of the iron curtain countries?

"Yet it is common knowledge that some Americans steal top Government secrets, even those of the atom bomb, and pass them to Russia.

"This is exactly the same problem that confronted us in China. You will discover it for yourself someday. I hope it is not too late when you do."

Marshal Yen admitted incompetence and maladministration were partially responsible for the Chinese Government's failure. He has been among the Government's foremost critics for years, while waging his fight in Shansi Province.

"But it was easy for the Communists to raise troops, because families knew it meant death for all if their sons did not go with the Red army.

"The Government, defending the people, had difficulties in getting them to contribute 5 percent of their crops, because they were hungry. Yet the Communists collected two-thirds of the crops in their areas because the people dared not refuse."

UNIVERSITY OF MICHIGAN LIBRARIES

Marshal Yen said American urgings of democracy on the Chinese in 1946 and 1947 crippled their fight against communism.

"At a time when everyone should have been sacrificing the most, democracy meant less burdens and more aid from the Government," he said.

Discontinuance of Passenger Service

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1950

Mr. BROOKS. Mr. Speaker, under leave to extend and revise my remarks, I enclose herewith two letters, which I think cover a subject matter of great importance to the people of America.

In recent months, the railroads have begun to abandon passenger service, especially discontinuing the operation of passenger trains. In north Louisiana, which is the area which I represent in Congress, two major systems, namely, the Illinois Central and the Texas and Pacific, have abandoned passenger trains. The local people as a result of this abandonment are seriously inconvenienced in their transportation needs.

I have called upon the Post Office Department to make an over-all study of this abandonment, with a view of revamping the postal-delivery system in the localities affected. This may mean a considerable change on the part of the Post Office Department. It may mean the use of trucks, highway post offices, and other means of mail delivery. It may also mean that old routes will have to be abandoned and new routes put into use to meet a situation which has changed considerably because of the contraction of the passenger service by the railroads.

As these letters indicate, I have taken this matter up with the Interstate Commerce Commission, and I feel that a thorough investigation should be made to find out the reasons why the railroads, now operating at nice profits, should abandon needed service. If the railroads are not meeting their responsibility to the public, I think the Interstate Commerce Commission should say plainly that this is the case. Then, too, if the railroad companies are in effect abandoning their franchise, the Interstate Commerce Commission should proclaim this fact, and efforts should be made immediately to assist people in communities without proper transportation to regain the position which they had lost by the recent program of the railroads in discontinuing passenger service.

This is a most important matter, and, Mr. Speaker, I hope that the Interstate Commerce Commission will move vigorously and aggressively to find out what the situation may be in those communities and to advise us in Congress if legislation is needed to protect our people from any unwarranted and arbitrary action by common carriers.

The letters to which I refer are set forth, as follows:

HOUSE OF REPRESENTATIVES,
Washington, D. C., January 25, 1950.
Hon. J. MONROE JOHNSON,
Chairman, Interstate Commerce Commission, Washington, D. C.

DEAR MR. JOHNSON: A number of passenger trains have been discontinued on the railroads in Louisiana, especially in north Louisiana, within the last few months. Two of the big systems, namely, the Illinois Central and the Texas & Pacific, have discontinued passenger trains, to the great inconvenience of the people of a large part of north Louisiana.

The action of these two roalroads in discontinuing passenger service has disrupted the mail service, and the Post Office Department has had to enter the field, put trucks in service and rearrange in general the system of the transportation of the mail. Certain communities are left without any railroad passenger service whatsoever, and since some of these communities do not have bus service, they are in a critical situation regarding transportation.

From the financial records I have been able to obtain, I find these two railroads to be in good shape financially. It may be that they have been losing money on the lines discontinued, but it seems to me some of the railroads are now reaching the point where the question is whether or not, by discontinuing service, they have abandoned their franchise. I understand from others that a similar situation prevails in other sections of the country.

I do not know what power the Interstate Commerce Commission may have. It should have power for investigation purposes. If this is the case, it seems to me very proper that some action ought to be taken by the ICC to investigate the situation developing throughout the country, caused by the great railroad systems: abandonment of service—especially passenger service—and whether or not the abandonment has reached the point that the ICC should act to protect the people of the country affected; or whether a new policy should be instituted for the purpose of guaranteeing communities proper transportation.

From day to day, I am in receipt of letters from communities which are now deprived of passenger service, and which are in great difficulty regarding transportation. I do not know what to tell these people, but I think as long as a railroad is making money, where necessary, it should be reqiured to give service in localities where, even though by doing so, it may lose money in it's operation in certain limited localities.

I will be glad to have an expression from you as to your views on a matter which has become critical in certain sections of the United States.

If you feel legislation may assist you in the performance of your necessary functions, I will be glad to have this expression from you as to what is needed.

Sincerely yours,
OVERTON BROOKS,
Member of Congress.

HOUSE OF REPRESENTATIVES,
Washington, D. C., January 25, 1950.
Hon. JESSE M. DONALDSON,
Postmaster General,
Washington, D. C.

DEAR GENERAL DONALDSON: Several railroads have discontinued passenger service throughout Louisiana, especially in north Louisiana. This has brought about disruption, in certain instances, of mail service and has created hardship on local people. The Illinois Central Railroad and the Texas & Pacific, for instance, have both abandoned certain passenger service in north and central Louisiana within the last few months. I am receiving complaints from local people about the inadequacy of the mail service as a result of the action by these railroads and others.

It seems to me, therefore, that because of the failure of the Railway Mail Service a full investigation of the situation existing in Louisiana should be begun at once by the Post Office Department. In this investigation, it is my belief that an effort should be made to revamp the entire postal delivery system where inadequacies are found, and in all cases the Post Office Department should move, it occurs to me, to replace promptly the rail service which has been abandoned by speedy postal service.

I previously called this situation to your attention in the case of the Illinois Central Railroad, and you indicated that you would cause an investigation to be made of the matter. I am asking that this investigation go further and include other railroads which have recently abandoned passenger service, especially the Texas & Pacific, which has, I am told, abandoned all passenger service from Shreveport, south to Natchitoches, on what is commonly referred to as the Mansfield branch.

Please advise me what action I may expect to have out of your office at an early date.

Sincerely yours,
OVERTON BROOKS,
Member of Congress.

Lt. Jack Traub

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1950

Mr. VELDE. Mr. Speaker, it is with a mingled feeling of sorrow and pride that I announce to this distinguished body the funeral and interment of Lt. (jg) Jack Traub, of Pekin, Ill., which will take place on February 2, at 2 p. m., in the Arlington National Cemetery. Lieutenant Traub was killed in action on Guadalcanal on June 2, 1945. As far as I have been able to ascertain, he is the only distinguished hero of World War II to be buried in the Arlington National Cemetery, who comes from Pekin, Ill., in the district I am honored to represent.

Lieutenant Traub was born in Pekin on January 18, 1921. He attended the Pekin Community High School and graduated with the class of 1939. After studying at the University of Illinois for 2 years his career was interrupted by the war in which he gave his life so heroically.

His parents, Mr. and Mrs. Orville Traub, of Pekin, Ill., as well as all the members of his family, are I know, proud of the lieutenant's distinguished service record. His parents, while deeply grieved, are, I am sure, proud of the brave and fighting spirit shown by their son. His friends and acquaintances will revere his memory more and more as time goes by.

May I, by this means, extend my deepest sympathy to his parents, relatives, and friends, as a token of my respect for the heroism displayed by this young man.

May we, as grateful Representatives, assure them we will work hand in hand in the interests of lasting world peace.

Federal-State Relations to Education

EXTENSION OF REMARKS
OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1950

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Dr. James K. Pollock, late of the Hoover Commission and head of the department of political science of the University of Michigan:

FEDERAL-STATE RELATIONS TO EDUCATION

INTRODUCTORY STATEMENT

Before answering specific questions concerning the recommendations of the Hoover Commission, it is important to clarify the mandate under which the Commission operated.

It was not the task of the Commission to determine policy. Thus, in the field of education the Commission was not asked to determine the size of the budget or the extent to which the Federal Government should participate in this activity. This was deemed to be the task of Congress.

The only task of the Commission was to decide: assuming the present extent of educational activities on the part of the Federal Government, where and how can this activity be best administered within the organizational framework of that Government.

To this end the Hoover Commission applied to education the same standards of judgment which it applied to all other functions of the Federal Government which it investigated. These standards were applied with the following objectives in mind:

1. To consolidate departments, offices, and agencies so as to encourage in Government order, clear lines of responsibility and authority and effective organization.

2. To reduce to the minimum the number of agencies reporting to the President.

3. To set up consistent policies governing the administration, as far as possible, of all aspects of government.

4. To give status to Government functions in relation to the size of the budget it commands and the number of employees on the pay roll.

5. to give general discretion for determining the organizational and operating needs of departments to general administrators irrespective of the functions of their agency as they are best able to determine such decisions in line with the over-all needs of the agency as well as the Government.

Question. Why doesn't the Hoover report agree with the task force report?

Answer. In making its recommendations concerning education the Hoover Commission used the reports of the task force in the same manner that it used them to make recommendations regarding all other functions. In making its choices as to which recommendation of the task force to accept, to modify, or to reject, the commission took into consideration not only the needs and place of the specific Government agency under consideration but the needs and place of that agency in relation to all other Government agencies.

Upon study of the task force report on education, the Hoover Commission concluded that one of its major recommendations, that of the creation of a Federal Board of Education was not sound in relation to the organization of Government as a whole. The commission came to this conclusion on three counts:

1. Education is not a primary function of the Federal Government. It is a function of the States.

2. In comparison with other functions that the Federal Government performs, education is a very small part of the governmental picture both as to amount of money expended as well as number of employees.

3. The function of the Federal Government in education is one of service, advice, and professional leadership.

Th se conditions being true, the commission would have found itself unjustified in recommending the establishment of a separate agency for education, particularly as one of the chief aims of the commission was to reduce and consolidate the number of agencies and departments in Government.

Question. What are the dangers in a large agency administering a complex of many different services?

Answer. There are few dangers in a large agency administering different services so long as these services are related and well-integrated into the departmental structure.

Since the Commission was not in favor of creating a new and separate agency, education had to remain either in the Federal Security Agency (a "large" agency) or had to be transferred to another "large" agency. Education being closely related to the other functions handled by the Federal Security Agency, the recommendation to leave education there was in line with the general objective of the Commission to group-like functions, whenever possible, in one department or agency.

Moreover, it was felt that such an agency should be headed by a single, appointed, general administrator. Such a general administrator is in a better position than the "functional specialist" (as the educator) to pass upon the importance of each activity which the whole agency must perform in relation to the rest of all Government functions.

Page 44 of the Hoover Commission states: "It is the well-being of the individual, not control by the doctors, educators, or social worker, with which the Government's health, educational, and social-security functions are primarily concerned."

Question. What is the argument favoring including the United States Office of Education in a Department of Welfare (S. 2060), if it would give the Secretary of Welfare the right to determine completely by Executive order educational functions in the Federal agency for education?

Answer. The Commission established in its report concerning education, as well as all other functions, certain basic requirements for effective departmental organization:

1. The reduction of the number of departments reporting to the President.

2. The tightening up of organization, control, and integration of bureaus and agencies below the departmental level in order to do away with the freewheeling autonomous status these agencies have enjoyed to date. The autonomy of these bureaus has too often made them irresponsible and unresponsive to the over-all needs of the whole department under which they operate and even the whole of government.

As concerns the placement of education in a Department of Welfare of Cabinet rank, the justification for such a recommendation is the same as for placing it in the Federal Security Agency which such a Department of Welfare would absorb.

In such a Department of Welfare education would be accorded the importance which it deserves in relation to the sum total of all other Government functions.

If and when Congress decides to expand the budget and personnel of the Office of Education, then is the time to reappraise the need for placing this agency in a more prominent organizational position. But the expansion of the educational activities of the Federal Government is a political decision falling within the scope of Congress and not the scope of the Hoover Commission.

Question. Should the Government appropriate large sums of money for general education?

Answer. This is a question of policy which Congress must decide. As I indicated in my introductory remarks, the mandate under which the Commission operated defined its scope as limited to those questions related to the organization and management of Government.

Question. What about an independent Department of Education with Cabinet rank?

Answer. The proposition of an independent Department of Education with Cabinet rank was not laid before the Commission. Had such a proposal been submitted to it, it would, in my opinion, have opposed such a plan. Again, one of the basic aims of the Commission was to reduce the number of departments, not to multiply them. Moreover, as indicated before, the limited educational activities of the Federal Government do not warrant the creation of a separate department for their performance.

Question. What about S. 656: A Federal Board of Education as proposed by the American Council of School Administrators and supported by the NEA?

Answer. This is substantially the recommendation of the task force. Thus, the Commission would reject this proposal on the same grounds as it rejected the task-force recommendation. In addition, the Commission was particularly opposed to the type of board that this proposal contemplates. It is unsound to permit such a board to operate as an independent agency and to allow it to pick its own administrative officer. This would make the agency head almost completely independent of the President and, therefore, violates every sound principle of executive control and responsibility. It is the President, irrespective of whether he does or does not appoint the agency head, who ultimately must bear the responsibility for the performance of this activity. Moreover, independence of operation without reference to the other needs of government is unthinkable. In consideration of all of these factors, the Commission had no other alternative than to recommend that the Office of Education continue as a subordinate unit in one of the major agencies—the Federal Security Agency.

Question. In an agency with Cabinet rank, the political head obviously would be in authority over the whole hierarchy and determine the functions of even the Education Bureau. Would there not be the same danger in a Federal Board of Education?

Answer. As indicated, the Hoover Commission did not support the task-force recommendation for the creation of such a board. Neither would it have supported an agency with Cabinet rank.

In the case of a Federal Board of Education, I am all for keeping our educational system in consonance with the desires of the people. As one interested in improving the control of the people over their Government, whether education, health, welfare, or any other function, I cannot see any justification for making the process of control more difficult. The interjection of a board, such as the proposed board, between the people and the function to be administered is merely to place another obstacle in the way of effective control by the people.

UNIVERSITY OF MICHIGAN LIBRARIES

In addition, in any solution as much care should be taken to avoid too much professional dominance of education as of too much political dominance of education.

Question. What are the possible weaknesses in a Federal board set up at the national level?

Answer. It would seem to me that I have indicated what these weaknesses are when I discussed the philosophy which governed the recommendations of the Commission.

Question. Is a National Board of Education analogous to a State board?

Answer. There is a serious fault in such an analogy. Education is a State function and not a national one. Therefore, if any comparison were to be made between the two, it must be based on two differing sets of assumptions which underlie the respective purpose of each in this activity.

Soil Conservation in Louisiana

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1950

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks, I present a most interesting and informative report, compiled by the Soil Conservation Service, in reference to its work in the State of Louisiana. This report shows the extent of soil-conservation work over the period of years and shows the results from this work. The increase in production of agricultural products as a result of soil conservation work is one of the interesting features of this report and highlights the importance of soil conservation work throughout the country. I think this report gives valuable information on the reason for the present remarkable production record which has been set by the farmers of not only the State of Louisiana, but of the entire United States.

Mr. Speaker, the report is as follows:

In the six soil-conservation districts which serve most of the area within the bounds of the Fourth Congressional District of Louisiana there are 17,125 farms with a combined area of 1,396,848 acres.

The oldest of the six districts, the Dorcheat soil-conservation district, was organized late in 1938 and started receiving assistance from the Soil Conservation Service April 25, 1939—just 4 days ahead of the D'Arbonne district. The youngest district, Dugdemona, started operation only 2 months later than did the first. All of the districts have been in operation over 10 years.

There are 3,933 farmers in the six districts carrying out active soil-conservation plans on 639,237 acres of land. The number of conservation farmers, however, may not suggest accurately the interest in soil conservation in this congressional district. In addition to those who are actively engaged in a soil-conservation program, there are almost 2,000 others waiting for assistance from Soil Conservation Service technical personnel.

Any educational work or publicity pertaining to soil conservation immediately brings still other applicants to the soil-conservation district for assistance. Of the 3,933 farmers carrying out conservation plans, 687 have their plans on maintenance, which means that this number of farmers have already completed their initial conservation programs on their land and are now maintaining those programs.

A survey taken in 1943, in which detailed information was supplied by 610 Louisiana farmers who had conservation plans on 118,068 acres, revealed that conservation farming increased Louisiana crop and pasture production an average of 45 percent and also saved labor and equipment use on one farm in two.

These 610 farmers from all sections of the State said that both acre yields and total production had risen sharply after the application of planned practices. With 18 percent fewer acres in cotton, they grew 17 percent more pounds of lint. With 9 percent fewer acres in corn, they produced 42 percent more bushels of corn. And 284 of them said that the conservation program had brought about a total annual cash saving of $37,590 in labor and use of farm machinery.

The farmers reported that their average per-acre yields had increased from 13 to 20 bushels of corn since applying conservation practices, from 199 to 285 pounds of lint cotton, from 19 to 25 bushels of oats, from 13 to 17 bushels of peanuts, from 108 to 157 bushels of sweetpotatoes.

Similar increases were reported in yields of legume, hay, other hay, silage, cow peas, peaches, soybeans, and other crops. Land-use changes made as a necessary part of protecting farms from erosion added many new crops in a trend toward diversification. By putting 4,400 idle acres to work, the 610 farmers have increased grazing land 52 percent, with only a 5-percent decrease in cropland and a 16-percent decrease in farm woodland.

With the use of idle acres, the increased feed and hay yields, and the larger and better pastures, the conservation farmers have been able to start or expand livestock enterprises. The number of cattle has been increased 81.4 percent. The farmers have 42 percent more brood sows, 44 percent more pigs, 29 percent more ewes, 31 percent more chickens.

In spite of fewer acres in farm woodlands, harvest of pulpwood, sawlogs, rail ties, and piling poles has increased from 2 to more than 10 times.

Theo DeSoto, of Mansfield, in the upper West Red River soil-conservation district, was one of the 610 farmers interviewed. In 1937, DeSoto and technicians of the Soil Conservation Service at the CCC camp in Mansfield worked out a conservation plan for his 160-acre farm. At that time yields were low, and erosion was taking more soil every year. Seven acres were idle.

DeSoto had established every practice planned, and most of them had been in effect 5 years when the survey was made. He said that erosion had been controlled, rainfall conserved and soil fertility increased. No land was left idle. Lint-cotton production was 58 percent greater from 20 percent fewer acres. Acre yields of corn were increased 33 percent. Corn acreage declined 23 percent but total production was increased almost 4 percent.

DeSoto increased hay production by adding a new crop, lespedeza. With 7 acres of lespedeza and 6 acres of soybeans, he has 19.5 tons of hay a year as compared with 9 tons before. Livestock carrying capacity of pastures was increased 25 percent an acre, and DeSoto increased the size of his pasture from 11 to 69 acres.

With the greater amount of food and hay produced and the larger and better pastures, DeSoto added beef production as a major enterprise. At the time of the survey in 1943, he had 30 beef cows where he formerly had 2.

Two ponds were constructed on his farm to supply water for the cattle.

The experiences of Theo DeSoto are typical of conservation farmers in this district.

Timber and the other products of the forests are important to the economy of northwest Louisiana as well as to the State as a whole, and the need for intelligent conservation of these lands through reforestation, woodland management, and fire protection is readily apparent.

More than half of Louisiana's 30,000,000 acres of timberland is owned by individual farmers, and more and more of these farmers are learning, with the help of their soil-conservation districts and through aid of Soil Conservation Service field men, the importance of woodland management to their own economy.

Woodland management is a program for sane and efficient use of woodlands—of making it possible for woodland to produce trees at a maximum rate on an unending basis. The trees and other products are harvested much as any other crop, and the farmer is finding that his woodland can be one of the most profitable crops on his farm.

At the end of the last fiscal year there were 312,968 acres under woodland management in the State's 25 soil-conservation districts, which represents an increase of 186,184 acres in a 3-year period. Though progress is being made in woodland management in Louisiana, there are still thousands of acres of woodland in practically every district in the State which are not being properly managed. This includes the northwestern districts.

The biggest problem in timber management right now is getting farmers to select and cut only the trees that should be cut. A large portion of the farm woodland in Louisiana is now producing 50 to 100 board feet of lumber to the acre per year. Under intensive management production can be increased 5 to 10 times in 20 to 25 years, which isn't a very long time in the life of a tree.

Soil-conservation forestry technicians advise farmers to take certain land, put it to timber, and treat it as a farm crop. It takes no fertilizer and no cultivation. Foresters do not advise a farmer to plant pines on land best suited to row crops or grass.

Recent surveys made by technicians of the Soil Conservation Service reveal that about half of the approximately 3,000,000 acres in three soil-conservation districts in the northwest section of Louisiana should never have been considered for cultivation at all, due to soil, slope, erosion, poor drainage, or other factors. These acres should have been kept in permanent vegetation, such as pastures or trees, to insure their stability and producing power in the future.

Progress is being made in northwest Louisiana. The six districts in the Fourth Congressional District had 159,254 acres in improved pastures at the end of this fiscal year, the D'Arbonne district had 32,058 acres under proper woodland management—a substantial increase from the 8,534-acre figure in 1947—and the Saline district had 46,436 acres under woodland management, which is a like increase over what it was last year. Other districts have increased acres under woodland management accordingly.

With the advent of new-type mechanical tree planters, the job of tree planting is expected to increase rapidly in the soil conservation districts where this work presents a problem. The new Illinois Central Railroad tree planter has been ordered by the D'Arbonne, Dugdemona, and Saline districts with the intention of speeding up tree planting. The D'Arbonne district expects to plant 3,000,000 pine seedlings this year with the aid of the new tree planter.

The strides in farm drainage that Louisiana farmers have made in the last 2 years has been remarkable—more than 300,000 acres. The reported 54,675 acres of farm drainage accomplished in the six soil-conservation districts included in the Fourth Congressional District show that this area is doing a great deal to solve the problem of farm drainage. Drainage is a basic practice, one on which the other practices that make up a coordinated soil- and water-conservation program must wait. It is a practice that almost invariably has paid hand-

some dividends in increased production. For instance, T. P. Moore, Jr., farmer and supervisor of the Upper West Red River Soil Conservation District, says that drainage has increased his production at least 35 percent.

A part of this benefit, of course, comes from the use of soil improving and soil-building crops which is made possible to a large extent by drainage. Example: A portion of the 161,532 acres of cover crops planted by farmers in the six districts last fall.

Drainage and woodland management, however, are mentioned only as examples of how soil and water conservation measures assist in solving land problems for the farmer. In the case of every farm, it is the combination of the needed measures that must be relied on to bring the farm to a state of stability and continuing productivity.

The program of soil and water conservation in Louisiana is putting the State's agriculture on a sounder basis. Erosion is being controlled, idle acres have been put to productive use. The result has been a more secure and prosperous farm family, a more dependable source of raw materials for industry and a more stable foundation for a tax structure.

The program in Louisiana, as in other States, is well under way. Results and the rate of current progress are encouraging. An appropriation by the State of Louisiana has aided greatly in speeding up application of the program in recent years. The most recent appropriation was $80C,000 for the 1948-49 biennium, to be allotted to the soil-conservation districts at $390,000 a year. These funds made possible the employment of personnel and the purchase of needed equipment for the advancement of the soil-conservation program.

The rate of planning and application of soil conservation, however, is limited in a large measure to the number of trained technicians which can be placed, with available resources, at the disposal of the districts.

The following figures show the total achievements of the six soil-conservation districts in the Fourth Congressional District up to July 1, 1949:

	Planned	Applied
Contour farming.....acres..	173, 731	108, 026
Cover cropping.....do....	236, 720	161, 532
Crop residue management..do....	226, 410	184, 348
Strip cropping.....do....	148	112
Pasture improvement.....do....	199, 869	159, 254
Seeding of pasture.....do....	124, 978	77, 849
Wildlife area improvement..do....	1, 783	1, 507
Woodland management.....do....	162, 662	79, 423
Tree planting.....do....	13, 215	7, 220
Farm and ranch ponds..number..	821	691
Terraces.....miles..	12, 692	5, 901
Field diversions.....do....	87	38
Farm drainage.....acres..	89, 548	54, 675
Open drains.....miles..	1, 003	660
Irrigation land preparation.acres..	30	3
Improved water application.do ...	93	1
Water facilities.....number..	68	29
Woodland cutting.....acres..	128, 806	44, 581

Conservation needs for Louisiana are:

Contour planting, acres	2, 344, 862
Cover crops, acres	4, 909, 133
Crop residue management, acres	5, 654, 240
Strip cropping, acres	200, 886
Range properly stocked, acres	4, 449, 766
Seeding range and pastures, acres	4, 296, 693
Farm and ranch ponds, number	14, 377
Field and gully planting, acres	192, 207
Woodland management, acres	6, 274, 818
Terracing, miles	199, 176
Diversions, miles	4, 649
Individual farm drains, acres	2, 950, 880
Farm irrigation land preparation, acres	150, 944
Irrigation systems, installed or improved, number	1, 892
Improved methods of irrigation, water application, acres	301, 192
Shelter belts, windbreaks, acres	1, 379

National Old-Age Pensions

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, January 31 (legislative day of Wednesday, January 4), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by William H. McMasters, of 448 Broadway, Cambridge, Mass., before the Senate Finance Committee on January 28, 1950. Mr. McMasters is president of National Old Age Pensions, Inc., and vice chairman of National Pension Committee. He advocates a straight national pension for qualified citizens.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. Chairman and gentlemen of the committee, my name is William H. McMasters, of 448 Broadway, Cambridge, Mass. I am president of National Old Age Pensions, Inc., and vice chairman of National Pension Committee.

I have long been an advocate of a straight national pension for qualified citizens reaching the age of 60 years. Despite the many legislative efforts that have been made to circumvent this basic idea, nationally and in the States, the ultimate trend toward that goal has never shifted. Little by little the old-age assistance title of the Social Security Act has been broadened until today the Federal contributions overmatch that of practically every State in the case loads. This is not so in Colorado, Washington, or in much-publicized California. Here we see the States outmatching the Federal Government.

I feel that it rests with this committee to suggest a simplification of the whole problem of old-age pensions by having it handled entirely by the Federal Government. If this step is taken, the present labor-management troubles with respect to pensions will be solved for all time. The democratic doctrine of equality will supplant the present inequality among the States which exists in the old-age assistance title of the Social Security Act and in no other pension statutes. I feel that it is now time for the elderly citizens of the Nation to be treated the same in Mississippi as in Massachusetts, just as soldiers, postal employees, civil-service employees and all others who benefit either from contributory or noncontributory systems designed to protect them against want in their old age.

The Aircraft Disaster at Washington National Airport on November 1, 1949

EXTENSION OF REMARKS
OF
HON. EDWIN C. JOHNSON
OF COLORADO
IN THE SENATE OF THE UNITED STATES

Tuesday, January 31 (legislative day of Wednesday, January 4), 1950

Mr. JOHNSON of Colorado. Mr. President, under date of November 10, 1949, 16 Bolivian pilots and aviation instructors addressed a joint letter in Spanish to Eastern Airlines, Inc., at Washington National Airport. The letter of these Bolivian pilots makes serious charges of incompetency against Rios Bridoux. The letter alleges that he has been involved in numerous accidents and has an unsatisfactory flying record. These allegations, if true, cast serious doubts on his ability to fly an American aircraft safely, although he was authorized by the CAA to make noncommercial, that is, not for pay, flights in this country.

The Bureau of Safety Investigation of the Civil Aeronautics Board has received the letter but states that it has not been made a part of the November 1, 1949, accident-investigation record. The reason for not incorporating it in the record, according to a Board official, is that the letter is not in the form of a sworn statement, and the CAB thus far had been unable to obtain verification. The Board is stated to have endeavored to secure confirmation of the charges contained in this letter but so far has been unsuccessful, even though the subject matter of the letter is admittedly relevant to the inquiry. The present Bolivian Government authorities reportedly have been slow in replying to CAB requests for verification of these charges, and have not as yet even sent up the official flying record of Rios Bridoux.

Mr. President, I ask unanimous consent to have the letter printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

BUENOS AIRES, *November 10, 1949.*
EASTERN AIRLINES,
National Airport,
Washington, D. C.

DEAR SIR: The terrific accident with the DC-4 that occurred the 1st of November at the airport has greatly disturbed the entire world as the major air tragedy in the history of the United States.

It has affected us doubly, for a Bolivian aviator was involved in that horrible tragedy, and so the reputation and the professional standing of Bolivian aviation is also concerned.

It has greatly surprised us that the press and the international news agencies have issued information that is so inaccurate and given to them by people that are interested in hiding the truth—presenting to the world wrong and misleading statements of the facts.

The mention in the news of the name of the Brazilian diplomat, Senor Guillermo Gutierrez Vea Murguia allows one to believe that he might have been the one who confused the press, for he was an associate of the pilot and so for that reason, his testimony might have been partial to him.

The two of them, Gutierrez and Rios Bridoux, staged a riot in Bolivia June 13, 1946, and received money for that riot, according to the general version. The financier was the industrialist, Carlos V. Armayo according to the information given at that time by the Secretary of State to the Bolivian Ambassador, Mr. Victor Andrade.

It is for this reason that the information of Mr. Murguia regarding Mr. Bridoux cannot be impartial because of their economic and political relations. Furthermore, he does not possess the technical and necessary knowledge to give an opinion on the matter.

The professional background of Rios Bridoux differs from that mentioned by the North American press. The laudatory qualifications and particularly the title, "Lindbergh of Latin America" are inconsistent

UNIVERSITY OF MICHIGAN LIBRARIES

with the facts. And this affects the rating and the dignity of Bolivian aviation to which we belong.

Because of this, we are compelled to make the following statements—that we are ready to verify personally at any time to safeguard the prestige of Bolivian aviation, and of which Rios Bridoux is one of the least deserving of those qualified.

We do, therefore, make these statements as professional pilots with meritorious citations which are recognized throughout the world. We have done our utmost to do our duty with dignity and with a high sense of responsibility.

Mr. Bridoux has the following background:

A. Declared unsuitable as a pilot by Dr. Smith, colonel of the Aeronautical Service of Bolivia in 1946.

B. Accident in May 1946 in Bolivian town of Reyes—violated the ruling on minimum of time and disobeyed orders on flight control. The accident occurred when he attempted to land with an excess of speed, thus landing in the woods which surround the airport. The accident destroyed the Douglas C-47 of the FFAA of Bolivia.

C. Accident in June 1946 while trying to land in an AT-6 N186.

D. 1948: When attempting to land during a night flight mistook a public thoroughfare in the city of Santa Cruz for the airport and so placed in danger the lives of hundreds and caused panic in the town. He arrived at the airport of Santa Cruz without permission for a night landing since he had flown arbitrarily from the town of Yacuiba.

E. He was released from the Army in 1946 for offenses committed against the military regulations. One offense was the contraband of rubber in Army planes—ignoring the agreement between the American and Bolivian Governments, as is evident in the Rubber Reserve and its offices in the city of Reyes, the region of the rubber production. The contraband was taken from Reyes to La Paz and Rios Bridoux could do this as a military pilot because the Rubber Reserve had no guard over them.

F. The record of 5,000 hours flying time presented by him is false and there is proof that it has been raised more than 2,000 hours. The version given to the American press is entirely wrong in this matter.

None of these circumstances confirm the qualifying title of "Lindbergh of Latin America" that Senor G. V. M. has given him and that the news services have printed after the horrible accident in which by an unfortunate cause, Bolivian aviation is stained with blood due to the irresponsibility of Rios Bridoux.

He obtained his present position as Director of Civil Aeronautics as a result of his political work in Bolivia from June to September where he had to shoot at miners and bombard the cities of Cochabomba and Santa Cruz which caused much suffering. Rios Bridoux lacks moral authority as well as culture and sufficient knowledge to accomplish the task that the Bolivian Government has given to him, and so he has caused such disgrace as that which prompts this letter.

The officers who sign this letter have been military professors and aviation instructors in Bolivia and are ready to verify these statements if necessary.

Sincerely yours,

Armando Cortez, Walter Arce, Juan Moreira, majors; Walter Lehm, head of Lloyd Bolivian Pilots; Javier Cerruto, Raul Zumaran, captains; Reve Pinedo, Jaime Ayala, Walter Coronel, Louis Uriona, all stationed in the United States of America with Lloyd Bolivian Airways; Herbert Estremadoiro, Jorge Belmonte, Fernando Castrillo, Francisco Larres, lieutenants; Demetrio S nsetenea, with LLA. B.; Leon Kolle Cuelo, lieutenant stationed in Argentina.

Basing-Point Legislation

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Tuesday, January 31 (legislative day of Wednesday, January 4), 1950

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter received by me, as well as other Senators, from 76 economists of the American Economics Association, urging the defeat of S. 1008, the basing-point bill. These men have given a great deal of study to this issue, and they have no personal ax to grind. For this reason I believe we should pay the greatest respect to their conclusions about S. 1008.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JANUARY 13, 1950.

Hon. PAUL H. DOUGLAS,
United States Senate.

DEAR SENATOR DOUGLAS: We undersigned economists, fully sharing the conviction of the Congress that the traditional American policy of maintaining a free and competitive economy should be preserved, urge that legislation facilitating the use of basing-point or freight-equalization systems of pricing, in particular the bill S. 1008 now pending before the Senate, be rejected.

We are convinced that such systems have been employed as a means of effecting the sort of collusive price fixing that is condemned by the Sherman Act. We believe that they have promoted the suppression of competition and resulted in serious economic waste.

It has been said that the proposed bill would clarify the law. We do not believe this to be the case. Some of its supporters contend that it would legalize basing-point pricing; others insist that it would not. These interpretations of the bill's provisions are so inconsistent as to make it certain that its enactment would occasion far more confusion than may now exist. Another decade of litigation would be required to remove the uncertainties that these provisions would create. In the meantime, collusive pricing practices now outlawed by the court would be reinstituted, and others would go unchecked.

The bill would seriously weaken the antitrust laws and hinder their enforcement. It would impose upon the Government, in the case of industries long habituated to monopolistic systems of delivered pricing, a wellnigh impossible burden of proof. It would permit the issuance of an order terminating an agreement to employ a basing-point system, but it would prevent the issuance of an order enjoining the continued use of the system itself.

The bill would go far toward emasculating the Robinson-Patman Act by restoring the good-faith defense of the old Clayton Act, thus enabling a seller to justify any price discrimination, no matter how destructive of competition, by showing that his discriminatory price was adopted to meet the price of a competitor. This defense would serve to bolster the systematic matching of delivered prices under basing-point systems. But it would not be confined to such cases; it could be offered in justification of every form of price discrimination that is now prohibited by law.

Believing in the superiority of a system of free enterprise and fearing that freedom will be endangered as competition is restrained, we appeal to all members of the Senate to vote against the bill S. 1008 or any other bill which could be so interpreted as to legalize the basing-point system of pricing.

Respectfully yours,

Highway Construction

EXTENSION OF REMARKS

OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Tuesday, January 31 (legislative day of Wednesday, January 4), 1950

Mr. O'MAHONEY. Mr. President, the Joint Committee on the Economic Report has issued a study of highway needs throughout the Nation. The publication of this report has attracted great interest, and in the Washington Evening Star of last night there was an editorial based on the document. The title of the editorial is "No Time for Bickering." That is an admonition which can apply in many different fields, in addition to the field of highway planning. Irrespective of that, however, Mr. President, I feel that the Star editorial should appear in the CONGRESSIONAL RECORD, and I therefore ask unanimous consent that it may be printed in the Appendix.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NO TIME FOR BICKERING

Against the background of the O'MAHONEY committee's long-view report on Washington's highway needs, current bickering among District and Federal highway and bridge planners becomes inexcusable. At a time when these officials should be working shoulder to shoulder toward realization of a $200,000,000 traffic-relief program of the nature described in the report, they are at an impasse over bridge sites. And the National Capital Park and Planning Commission, created by Congress to bring far-sighted leadership in building a better city, is even proposing a halt to further bridge construction until existing traffic bottlenecks are eliminated.

But the best relief for present bottlenecks is to be found in new channels for traffic—new bridges, freeways of the Whitehurst type, and similar bold, though costly, projects. Instead of abandoning plans for immediate construction of a fourth bridge across the Anacostia River, we should be going ahead with plans for more than one new bridge over that stream and for additional crossings along the Potomac from Alexandria to Great Falls. Meanwhile work should go ahead on interim relief measures, such as underpasses, street widening and relocation, corner cutting and the like, although it is absurd to consider these piecemeal undertakings as an adequate substitute for major relief projects.

No one proposes the launching at once of all phases of the far-reaching highway program envisioned in the report of the Joint Economic Committee. That is at least a 20-year program—longer than 20 years if the present rate of highway-fund allotment is adhered to. Today the District is spending only about 10 millions a year on highways and bridges, about equally divided between repairs and new construction.

Included in the long-range program are some projects which cannot fairly be considered as primarily District responsibilities. The proposed bridge between Alexandria and the Blue Plains area is a good example. That would be essentially a by-pass for the benefit of United States route 1 traffic. In a similar category is the proposed new bridge over the upper Anacostia to serve the uncompleted Washington-Baltimore Parkway. The Federal Government is financing and building this parkway as far as Fort Meade, because of its military value. It would be logical to assess the cost of the parkway bridge against the Federal Government, in view of the national aspect of the whole enterprise.

In fact, so many governmental interests are involved in the orderly development of a comprehensive highway system in the metropolitan area that, as the O'MAHONEY report suggests, an over-all coordinating agency may become necessary to effect joint action. This is a subject for exploration by a commission of inquiry of the type proposed in the pending Sasscer bill.

Neglect of Christian Refugees of Palestine

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 31 (legislative day of Wednesday, January 4), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Whole of Christendom Neglecting Christian Refugees of Palestine," written by Dorothy Thompson.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ON THE RECORD—WHOLE OF CHRISTENDOM NEGLECTING CHRISTIAN REFUGEES OF PALESTINE

(By Dorothy Thompson)

An investigating mission under the auspices of the American Christian Palestine Committee—composed of Protestant pastors and laymen—has returned from Palestine and reported against UN internationalization of Jerusalem as dangerous and unnecessary.

The group also opposes even the latest, much less inclusive scheme advanced by Roger Garreau, president of the United Nations' Trusteeship Council, to limit internationalization to a small area containing the chief holy places.

In short, it would appear that the mission wishes, as does Israel, to keep the United Nations out of Palestine altogether.

This column agrees with the mission that it would be dangerous to oppose or criticize the state of Israel in any way. It even is dangerous for an American publicist. Israel and its American supporters are claiming an absolutely unique immunity from criticism—as recently pointed out by pro-Israel Walter White.

STATE CREATED BY FORCE

Although Israel owes the legitimizing of its existence to United Nations partition, which was accepted by its agents, the state does not conform to that plan, but has been created by force—as what is left of the Arab world in Palestine is held by force. The ports of Jaffa and Haifa were not awarded to Israel, but Israel holds them. The internationalization of Jerusalem was included in the original plan, but is now refused. To protect a UN trusteeship would require force, for without it, force would certainly be used against it. Therefore, it is dangerous.

Whether a UN trusteeship anywhere in Palestine is unnecessary depends on one's viewpoint of necessity. The mission declares it is unnecessary as a means of protecting shrines, and that there is complete religious freedom in Palestine. Maybe there is freedom to worship, but how about the worshipers? Christian shrines remain undisturbed; how about the Christian community? Is it free, even to survive?

The United Nations never took one step to guarantee the lives or property of the indigenous Arab population in Jewish Palestine. Hundreds of thousands of them have been turned into refugees, living in the bitterest want, with all their possessions expropriated by Israel. And those refugees include most of the Palestinian Christians who constitute one of the oldest, most faithful Christian communities on earth.

Their story was told in part by Yusif El-Bandak, son of the mayor of Bethlehem (all Bethlehem is Christian), and in the November 30 issue of "The Christian Century." It apparently surprised Americans to learn that there were any Christians in Palestine. Yet they constitute a tenth of the Arab-speaking population. None of them are converts from Islam. All are either descendants from Christians, of the time of Christ (mostly Philistines or Canaanites), or of the Crusaders.

TIES TO WESTERN WORLD

Throughout history they have had ties to the western world. Their sons have been educated in Christian schools and colleges in the Middle East, and in the west. They have been among the most progressive and prosperous of the native population, and were concentrated chiefly in Jaffa, Haifa, and "new" Jerusalem, where they owned fully two-thirds of all the property, both in private and institutional holdings.

The members of this community are today refugees in the country wherein they have constituted a secure and highly respected community for centuries. Their properties have been confiscated without compensation. In the birthplace of Christ—which would have fallen except for a well-organized defense—40,000 of them have taken refuge, bursting the capacities of a town of 15,000. Although their fellow Christians have taken them into their homes with sacrificial generosity, thousands, like Mary, could "find no room in an inn," and, like Mary, their children are born in stalls, or in caves, or under trees, while over them "the silent stars go by."

All that reaches them is a trickle of totally inadequate relief. Great Christendom neglects them. The Moslems watch their plight with wonderment, asking, "if the United States, overwhelmingly a Christian country, lets these Christians perish in the birthplace of their Lord, whom will the United States protect anywhere?"

Russian agents jeer, "You call us atheists, but where is that Christian world?"

And a "Christian" mission reports about shrines, but not about Christians.

Who will protect this community? Israel, which created their plight? The Moslem world? Who, if not the UN?

UNIVERSITY OF MICHIGAN LIBRARIES

Address by Russell W. Davenport in Presenting Award to Displaced Persons Commission

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, January 31 (legislative day of Wednesday, January 4), 1950

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Let Us Keep the Faith," delivered by Russell W. Davenport at New York City on January 28, 1950, in presenting to the Displaced Persons Commission the annual award of the Association of Immigration Lawyers.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

LET US KEEP THE FAITH

Mr. Chairman, Commissioners, and distinguished guests, it is a great pleasure for me to be here to help perform the little ceremony that is the object of this gathering.

The issues with which our guests of honor have had to deal, and with which most persons in this audience are almost daily concerned, are issues that involve not only the welfare of this country but of the entire world.

As you know, I am a Republican—a member of a party that has had some difficulty in recent years in winning its side of the argument. The Displaced Persons Commission is of course nonpartisan, and in that sense it makes no difference which party your speaker belongs to. Nevertheless, I welcome this opportunity to express my profound conviction that on matters such as we are discussing here, and indeed on all major decisions in foreign affairs, the two major parties must consistently join together to make common, bipartisan policies.

It is often said that the United States has emerged from the two world wars as the most powerful nation on earth. This fact cannot be questioned. But it will be well for us if we have a clear idea of what we mean by it.

Do we mean only that the United States has the most powerful Military Establishment? Potentially, at any rate, that statement might be true. Beyond our shores it is a statement that would be given much credit and much weight. But I do not believe that when Americans speak of the United States as the most powerful nation they have the thought of military power in mind. They mean something else.

One thing they mean, is that the United States is the most powerful nation in terms of industrial and economic productivity. Through our productivity and our industrial know-how we can show other people how to raise their standards of living and how to open for themselves new opportunities. That, for example, is the inner meaning of the European recovery program.

Yet how do we show other people these things? Not, certainly, by military force. Nor yet by economic force. It would not be consonant with any aspect of our doctrine of freedom to force our principles or our way of doing things upon anyone else.

Basically, American power is a moral power. It is that power which arises when an individual or a people is dedicated, for example, to the principle of justice. It is that power which arises when we assert that men are equal, irrespective of race, color, creed, or nationality. It is that power which arises when we insist upon government by law, rather than government for military, economic, or propagandistic advantage.

The power of America is that power that springs from the proposition that all men, not just Americans, of a right ought to be free.

We do not say that it is our task to make all men free. We do say that they ought to be free. We let the moral law speak for us. And insofar as we harness our military and economic resources to the service of that law, we shall be great and we shall grow greater as the future unrolls.

America the military power is just one more nation in the troubled history of man. But America the moral power is something new in human evolution, something of which we have yet seen only the beginning, something that awakens in all men that hope, that faith in the future, without which they cannot be free.

Now, among the moral propositions upon which our power was originally founded there was one that particularly concerns us tonight, the proposition that anyone on earth could become an American.

During more recent times it has become necessary for us to qualify this great proposition. It has become physically and economically impossible for us to accept everyone who wants to come here. Some of these limitations have economic causes and some political.

Let us be crystal clear, however, that the limitations we have placed upon free immigration do not cancel the principle. Americans may still be born anywhere on earth.

But now, just as the economic problems of our time caused us to limit the principle some decades ago, so the terrible problems created by the Second World War have required us to expand those limitations in order to save the principle.

Had we, after the Second World War, insisted upon the rigid application of our prewar immigration quotas, no one in the world would have believed that the United States was still dedicated to the proposition that all men ought to be free. They would have accused us of hypocrisy. It was absolutely essential for the survival of our principle that we set up machinery for the admission into this country of persons who had been uprooted by war and revolution and who literally had no home.

And it was from that necessity that there grew the Displaced Persons Commission, which we are gathered here to honor.

Now, my friends, as you see, I have come to this point in a very unsentimental way. I have not talked to you about the suffering of these displaced persons. I have not sought to make an appeal to what are commonly called the humanitarian instincts of the American people, though these instincts of mercy, of kindness, of generosity are very strong in our people.

I have rather sought to show, that when we properly understand the meaning of those words "American power," we find that the mere preservation of that power, which is a moral power, requires that we stand forth before the world as the defender and upholder of the principles of freedom—not just for Americans, but for everyone. And this means, in the present state of the world, that the admission of displaced persons is not merely a humanitarian act, but, literally, an act of self-preservation. It is an act to preserve the moral power upon which the destiny of the United States is founded.

In the light of this truth our course is clear. What we need is a Displaced Persons Act which will apply this principle in simple and unambiguous terms.

Every qualification that we add to the act raises an ambiguity of some kind. For example, to take the simplest qualification, it is generally recognized that the United States ought to take, as a minimum, 400,000 of these displaced persons. Why, then, do we keep qualifying this figure by writing it down to 330,000 or some other fraction of the minimum? Let us take 400,000 without haggling about it; the extra 70,000 is not going to ruin the United States.

But other and far more serious qualifications keep creeping into this vital legislation. The House bill that was passed last spring wisely and courageously eliminated many of them. But now we find that in the Senate they have crept back again.

We are again confronted with the old restriction that 40 percent of all who are admitted must come from countries annexed since the war by a foreign power—which weights the quota very heavily in favor of the Baltic states.

We are confronted with the restriction, that 30 percent of the quota must have practiced agriculture for 2 years.

Now everyone recognizes the desirability of allocating these new citizens to the farms, where they are much needed. But a rigid percentage requirement like that means that if enough agricultural workers cannot be found others cannot be admitted. The Commission's courageous policy during the past year, of deferring the allocations for these various categories to the last possible moment, is well known. Nevertheless, well over 100,000 able-bodied and desirable persons were excluded because of the impossibility of filling specific quotas.

Even more serious is the effect of such restrictions on the rest of the world, and particularly on the displaced persons themselves. Must they not be puzzled, that in a land which boasts that its citizens can choose their own occupations, a particular occupation is designated as the key that opens the magic door? And must they not be puzzled that a people who believe that all men are equal give an overwhelming priority to persons of Baltic stock?

I say that such restrictions do us more harm than good. Let us abandon them. Let us instruct the Commission to give preference to agricultural workers, and the like, but let us give it power to exercise its discretion.

And then there is the matter of caution. We have heard the charge repeated over and over again, that these displaced and homeless persons are infested with communism and other subversive doctrines. But anyone who will spend time in their camps with an open mind is bound to come out with practically the opposite impression. Owing to their terrible experiences with authoritarian regimes, an overwhelming proportion of these people are dedicated to the ideals of democracy—dedicated with an intensity that is capable of shaming many who already enjoy democracy and take it for granted.

Of course, it is true that there are communists and subversives among them. But the Displaced Persons Commission goes to almost fantastic lengths to screen such persons out. The security protections involved in the administration of the displaced persons law far exceed in severity and carefulness any rules that have ever been applied in the normal immigration law. There are at least seven special protections, as follows:

1. The Commission itself maintains the closest watch on security problems and has issued iron-bound instructions that no one who was ever a member of the Communist, Nazi, or Fascist Parties, or of related parties, for whatever reason, is admissible into the United States under the program.

2. An extensive field investigation is conducted overseas by the Counter-Intelligence Corps of the United States Army.

3. There is a special additional investigation for any displaced person whose country or origin has been overrun by the Communist terror.

4. Special laboratories have been set up for the examination of documents relating to eligibility.

5. The Immigration Service examines all displaced persons overseas, and then again examines them upon arrival in the United States.

6. There is an individual check on every displaced person by the Federal Bureau of Investigation.

7. And finally, there is a constant rechecking by the International Refugee Organization, so meticulous that Communist Russia has refused to be a member of the IRO.

Now, ladies and gentlemen, it is a very good thing to be cautious. But as everyone of us knows from experience in his personal life, caution can be carried too far. It can become a disease. The man who is afraid of all the things that might happen to him from the time he gets up in the morning until he goes to bed is a psychopathic case and usually ends up in a sanitarium. He can be healthy only if he counters his daily risks with reasonable care.

In the framing of this new Displaced Persons Act, let us abide by that good American principle. Let us take reasonable care. No less than that, certainly, but no more. And let the qualifications that we make also be reasonable qualifications. I urge that policy upon the Senate of the United States. And I especially urge those Senators who have hitherto obstructed this legislation to remember, that too much caution, and too many qualifications, can so undermine this legislation as to jeopardize the moral power, the good faith, of the United States.

Before I close I want to give you one specific example of how an excess of caution—a pathological excess of caution—is causing a shocking injustice beyond our shores, and is working to our own disadvantage.

Since the Second World War thousands of little children in Europe have been adopted by American citizens. They were orphans. Not only had they no homes, they had no parents. The circumstances of adoption were innumerably varied. Some have been adopted by Americans serving overseas; others by Americans in this country, because they wanted a child in their home or for some other reason.

One of the good provisions of the present Senate bill is that it provides for the admission of 5,000 of these adopted children. However, and here is this old business of qualification again—it imposes the restriction that they must be adopted by servicemen in Europe or by Government employees.

Now in the first place, 5,000 is not enough. The figure should be 25,000, as suggested by Senator TYDINGS.

But, secondly, since when have we so admired Government employees, or so exalted the armed services, that we should appoint them the sole guardians of our orphans? Why is it not possible for an ordinary American citizen, in responsible circumstances, to adopt one of these orphans in like manner and bring him into this country?

Most of these adopted orphans, let us note well, will come to this country some day, somehow—if in no other way, then on the immigration quota. It is manifestly to our interest that we bring them now rather than later; that we begin now to educate them in the American way of life; that we provide them with parents now, rather than permit them to develop all those faults and weaknesses which, psychologists tell us, are created by the lack of parental care.

I happened on this particular issue through some close personal friends, Mr. and Mrs. Rene Augay, of Scarsdale, N. Y. This couple was unhappy because they had no children. Through a friend they heard about a little boy named Peter who was born in Austria in 1946; whose father disappeared, and whose mother soon thereafter died of heartbreak and poverty. Peter had been taken by his maternal grandparents; but they were also poverty stricken and were too old to work. The Augays saw his photograph and were charmed. They journeyed to Europe, met him, fell in love with him, and with the greatest joy adopted him. That was going on 2 years ago.

But then the Augays had to return to America, because they are not rich and Mr. Augay has to work—all the harder now, since he has a third person in the family. Naturally they assumed that they would be able to take their child to this country. But every effort failed. There was nothing in the law to entitle Peter to a visa. He belonged nowhere. The Augays even tried to take him in through Canada; but the Canadian authorities refused him on a simple and logical ground. They said he was an American citizen.

So the Augays had to leave Peter behind. They put him in a children's home in Geneva, Switzerland, and said good-by. And there he is to this day. Peter worships Mrs. Augay, his new mother: whenever a visitor comes to the children's home, he runs out to the door crying, "Maman?" in the expectation that she has come to take him away. But he is always disappointed. When he is naughty, the lady who runs the home turns his mother's picture to the wall—and his father's picture, too. That is the worst punishment in the world for him: he at once behaves, and then begins asking where his mother and father are and why they can't come for him again. I ask that question, too. Why can't they?

Peter Augay is now 4 years old—in fact, I have told you this story because tomorrow, Sunday, January 29, is his birthday. And I would like to give him a birthday present and to have you give it with me. I would like to draw his case to the attention of the American public, in order that the Senate of the United States will at last recognize his right to be an American citizen.

I make no special plea for Peter—nor would he want me to. I appeal in his name, on his birthday, on behalf of the thousands of orphans whom responsible American citizens have adopted. I raise him as a symbol. Not the atom bomb, but this child of 4 is the true symbol of American power; the true symbol of the moral power that has made this country so great.

Let us, then, validate that symbol. Let us change that clause to permit any responsible American citizen—not just a special group—to bring into this country his or her adopted son or daughter. Let us recognize that when great and simple principles become cluttered with timid qualifications justice cannot be done.

Ladies and gentlemen, the business of the evening is to do honor to these distinguished guests, Ugo Carusi, Edward M. O'Connor, and Harry N. Rosenfield, who constitute the Displaced Persons Commission.

I need not tell you, who have struggled with the involutions of the present law, what heroic work these gentlemen have done, against what odds. They have been accused of just about everything in the book. But they have never lost their nerve. And they have never lost their faith in the great principles that it is their task to implement.

There has just been issued, as you know, the report of a special subcommittee of the Committee on the Judiciary of the House of Representatives. This subcommittee inquired into the work of these men in an exhaustive way. And here is what it says and I quote: "The studies and investigations undertaken in Europe have convinced this subcommittee that, on the whole, the administration of the 1948 act is being conducted in a diligent and satisfactory manner."

Well, that is a very fine vindication of your work, Mr. Commissioners. But I think that we here can do better than that. Of course, we do not carry the weight of a subcommittee of Congress. But there is in our hearts a great warmth and a great thankfulness, which, perhaps, official reports cannot properly supply.

There is warmth, because the going has been tough—and we, like all Americans, admire and love men who can do their jobs well under tough circumstances.

There is thankfulness, because you have been good public servants, loyal to principles upon which the power of America is founded.

And I know that there is a great, unseen audience, Mr. Commissioners, who join us tonight, in sprit, in expressing this warmth and thankfulness: the more than 120,000 displaced persons, who—case by careful case—have been admitted by you into this free land of ours; and not merely admitted, but settled into our American life.

And there is still another unseen audience woebegone and hungry, but clinging still to their hopes; those hundreds of thousands who wait in the DP camps of Europe for a chance to enter here.

The Association of Immigration and Nationality Lawyers, whose purposes center around the just and proper care of those who come to our shores, believes that you Mr. Commissioners, have set such a high standard of public service in the field of immigration, that it herewith presents you with its annual award for the year 1949.

It is my great privilege, gentlemen, to hand you this award. May the good work go on. Let us keep the faith.

Nondiscrimination in Immigration and Employment Practices

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 31 (legislative day of Wednesday, January 4), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial on the subject of civil rights and nondiscrimination in immigration and employment practices, published in the January 1950 issue of the magazine known as Goodwill, a soundboard for democratic public opinion.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Among the presently hotly debated questions in the United States and in the United Nations is the question of civil rights and nondiscrimination in immigration and employment practices. Many of the problems arising in the UN, as well as in this country, basically stems from the afore-mentioned questions. Problems abroad between two nations arise from misunderstandings of their respective positions, and mutual distrusts toward each other. A protest is lodged in the UN because of the protesting

UNIVERSITY OF MICHIGAN LIBRARIES

nation feels that another nation has transgressed or infringed upon her rights.

In a democratic nation all the inhabitants of that nation is supposed to enjoy equal rights and privileges under the laws of the country. The Declaration of Independence and the Bill of Rights have meant to give those democratic rights to all the peoples of America, without regard to race, creed, or color. There should be no discrimination in civil rights, employment, and immigration and naturalization policies.

Yet, today the United States Government is still practicing discriminatory laws and restrictive measures in immigration problems against orientals. The peoples who are being discriminated against are the Japanese, Indonesians, Malayans, Siamese, Burmese, and a few other smaller nations. They are mostly inhabitants of southeast Asia with an aggregate population of 250,000,000 people. All these peoples are now independent nations or, at least, autonomous, and have already become democratic-conscious and sensitive to social relationships outside their own countries. Most of these peoples look toward the United States for inspiration and leadership. Many of them have made more intensive studies of American history and such personalities as George Washington, Thomas Jefferson, and Abraham Lincoln, than the average American.

The Oriental Exclusion Act which was enacted by Congress in 1924, to prevent Asiatics from enjoying the same privileges in America in immigration matters is a slap in the face to all Asiatics. No respectable Asian will tolerate such an injustice and inequality to exist in an alleged democratic nation. There are reports in the papers to the effect that the United States intends to win over the rest of Asia, meaning southeast Asia, to the democratic cause. To a certain extent the United States Government has shown an increasing interest in the welfare of those countries, while President Truman has reiterated his point 4 program of economic and cultural aid to undeveloped countries. Those reiterations, although well-meaning, may sound attractive to radio listeners, but they will not suffice to calm the hearts of formerly suppressed Asiatic nations. To these peoples practical action in the application of democracy in this country and in United States foreign policy speak louder than words.

It stands to reason that the Oriental Exclusion Act is an overly outmoded law. Under that law no Asiatic could immigrate to the United States or receive equal treatment in naturalization matters. They didn't have any immigration quotas. Recently, this act had been modified in regards to nationals of China, the Philippines, and India. But, otherwise, its continued existence against the other half of Asiatics, is a paradox of American democracy. The speedy repeal of this Exclusion Act is much overdue. We hope that responsible Americans will urge their Senators and Congressmen to proceed with the liquidation of the last remnants of the colonial system. The close of World War II has already put an end to that colonial era abroad.

If America wants to retain its moral leadership in the world, it has to necessarily make certain adaptations to new conditions and attitudes of the people of the world. Laws in all countries have been modified just as fashions change from day to day. In an article in the New York Times magazine, April 3, 1949, Mr. Raymond B. Fosdick, former president of the Rockefeller Foundation, stated:

"Nothing is static in this world, least of all our ideas. Values change from age to age and the interpretation of one generation is seldom the interpretation of the next. Social conceptions must constantly be retranslated and reexpressed in contemporary conditions. Even our conceptions of freedom and democracy are not static principles. The Declaration of Independence was a broader definition of freedom than that which came out of the Revolution of 1688, just as 1688 widened the freedom of the Magna Carta."

Further up he said, "Democracy is another conception which must also be reinterpreted from generation to generation. It is government by the people and for the people, but its limits were not finally determined by the political concepts of the eighteenth century. Rather it is a growing, dynamic faith, a perpetually evolving adjustment between freedom and justice, between individual rights and the demands of society." This adjustment, however, is never perfectly and finally attained; it remains a problem which mankind must solve again and again. "It is provided in the very essence of things," said Walt Whitman, "that from any fruition of success, no matter what, shall come forth something to make a greater struggle necessary."

In conclusion Mr. Fosdick stated, "If democracy means anything at all, it means the promise of growth. Democracy is not a finished project; we are engaged in building it. There is no blueprint which covers all the contingencies that may arise, or the new ideas and patterns that may be developed in the future. There is no final and absolute form of democracy which has been handed down from some political Sinai. We have no Karl Marx in our past. Democracy is a method of evolution, a maturing way of living, a conception of human relations rooted in the worth and dignity of the individual and inspired by the developing idea of freedom."

We feel that America has matured in such a way so as to grant equal opportunities to all its inhabitants and residents regardless of race, creed, or color.

Displaced Persons

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 31 (legislative day of Wednesday, January 4), 1950

Mr. JENNER. Mr. President, an article published by Hon. Virgil M. McClintic, publisher, White County (Ind.) Democrat, outlines the experiences of two displaced persons who have been given refuge in White County, Ind.

I submit the article herewith and ask that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Two displaced persons from Europe are happily situated in two Big Creek township farm homesteads located across the road from each other at the homes of Mr. and Mrs. B. C. Shell and O. C. Parks and family. The families sponsoring them in their new homes are just as happy as the two young women.

First to arrive in the county was Miss Troosh Agafia, native of the Ukraine, who is with the Parks family. She reached here on June 4. Mrs. Alexandra Kiritschenko from Yugoslavia arrived at the home of Mr. and Mrs. Shell on August 15.

After Congress passed the law June 15, 1949, permitting displaced persons from Europe to come to the United States, announcement was made that 205,000 DP's could come here. The Shells made application June 24 with the Church World Service, through which Protestant churches worked. They requested that they would like a girl 25 to 50, capable of assisting with the housework as Mrs. Shell was crippled with arthritis, and a Protestant. On March 3, this year, they received notice that the girl had been selected and would be ready to come soon. However, Mrs. Kiritschenko became ill with the flu and her voyage was slowed up for 3 months.

LAND AT BOSTON

Applicants who sponsor the DP, must furnish inland transportation from the ports of arrival, Boston, New York, or New Orleans. In June the Shells mailed the transportation. Mrs. Kiritschenko went to Bremen in June and sailed on July 19, on the *General Sturgis*, in which there were 885 DP's. It took them 9 days. The travel bureaus were responsible for taking care of them en route to their destinations over the country. Mrs. Kiritschenko was routed to Detroit, and from there took the Wabash to Lafayette, where the Shells met her.

Miss Agafia landed at Boston, and then came by train to Lafayette.

Mr. Parks put in their application in July 1948, a couple weeks later than the Shells. Their letter was sent to the Ukranian American Relief, and their application was acted upon quicker than through the other agency.

Born in 1913, near Moscow, Mrs. Kiritschenko was the daughter of a railroad engineer. When a little girl she went to live with her uncle and aunt, and they traveled quite extensively as the aunt was a Russian consular, comparable to an American Ambassador. They lived in Turkey, Greece, Yugoslavia, and Italy. When a little girl, she learned some English from an American lady. Mrs. Kiritschenko speaks fluent German and Russian and some French. She is a member of a family of six children, three boys and three girls. The family is well educated and hold responsible positions.

TRAINED NURSE

Mrs. Kiritschenko was married to an officer in the Russian Army, but had not heard from him since the war. She had 2 years' nurse's training and worked as a nurse in an X-ray laboratory for 4½ years in Belgrade, Yugoslavia. Since liberation, she had been a nurse in a kindergarten for the last 4 years in Munich, Germany. She stated that first she was in charge of three infants, and then was responsible for seven children ages 2½ to 3, all war orphans.

In the hospital she became acquainted with modern appliances found today in the kitchens of American housewives. She did not hesitate to use the appliances found in the Shell home. She had no trouble in learning. Pat Doremire, a Chalmers High School pupil, assisted her in showing where the things were in the house. She can manage the household very well, and has prepared some fine meals.

Mrs. Kiritschenko is a member of the Greek Orthodox Church, but has attended the Chalmers community church regularly since she came here.

She is an attractive blonde and has natural curly hair. The clothing brought with her is like American women wear. She brought several trunks full, which she described as "my house." She has worn her hair bobbed for a number of years, but when a girl it was long.

Shortly after her arrival at the Shell home, Mrs. Kiritschenko received a letter of welcome to the State of Indiana from Gov. Henry F. Schricker, which she prizes greatly.

Mrs. Kiritschenko enjoys reading the newspapers, but remarked that she has learned more about what is happening in Europe since she came to the States than during the time she was a resident.

Being able to speak some English, it was possible to secure considerable information from Mrs. Kiritschenko. However in the case of Miss Agafia, it was difficult. Both young women were at the Shell home the afternoon of the interview and when these pictures were

taken. While they both speak Russian, they are different. Miss Agafia is Ukraine Russian or Polish. Mrs. Kiritschenko assisted with the interview.

NATIVE OF UKRAINE

It was learned that Miss Agafia was a native of Ukraine, but she has no living relatives to her knowledge. She went to Poland, then Czechoslovakia and then to Germany, where she did field labor.

The clothing that she brought had been sent through missions to Germany. Before coming to the States, she worked in the Baptist mission in Munich.

Asked if she was happy in the United States, he replied, "Like it here," with a big broad smile.

She is an expert gardener and flower lover. No weeds grow in her garden. She likes to knit, and has some beautiful sweaters that she made which she brought with her.

The Parks family has a dairy and the cows are milked by machine. Miss Agafia took a delight in seeing the machine work. Afterwards she stripped some of the cows, and a member of the family is quoted as saying that "she stripped the cows so dry they had to prime them the next time to milk 'em." She also enjoys hunting eggs, in fact any kind of out-of-door work. Practically all of her 42 years has been spent on a farm.

Nine Members of the House of Representatives Add Names to List of Sponsors of House Concurrent Resolution 64, To Strengthen United Nations

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1950

Mr. HAYS of Arkansas. Mr. Speaker, under leave to extend my remarks in the Appendix, I include the following statement which my colleague, the gentleman from Minnesota [Mr. JUDD], and I have issued:

Nine Congressmen added their names today to the 102 original sponsors of House Concurrent Resolution 64, a resolution to strengthen the United Nations, thereby constituting the largest number of congressional sponsors of any foreign policy resolution in the history of the United States.

The new sponsors include Representatives CARL ALBERT, Democrat, of Oklahoma; WILLIAM P. BOLTON, Democrat, of Maryland; WILLIAM M. COLMER, Democrat, of Mississippi; WINFIELD K. DENTON, Democrat, of Indiana; EDWARD H. KRUSE, JR., Democrat, of Indiana; JOHN E. MILES, Democrat, of New Mexico; A. S. MIKE MONRONEY, Democrat, of Oklahoma; DONALD W. NICHOLSON, Republican, of Massachusetts; and MELVIN PRICE, Democrat, of Illinois.

The resolution, designed to put Congress on record in favor of strengthening and developing the United Nations, is as follows:

"Resolved by the House of Representatives (the Senate concurring), That it is the sense of the Congress that it should be a fundamental objective of the foreign policy of the United States to support and strengthen the United Nations and to seek its development into a world federation open to all nations with defined and limited powers adequate to preserve peace and prevent aggression through the enactment, interpretation, and enforcement of world law."

Congressman BROOKS HAYS, Democrat, of Arkansas, an original sponsor of House Concurrent Resolution 64, commented: "This increased bypartisan support of House Concurrent Resolution 64 is indicative of the growing belief in the House of Representatives that peace must be obtained through the establishment of world law.

"If we are to stand behind our pledge to support the United Nations, we must use all our moral and political strength to mold that organization into a body truly capable of preserving peace. House Concurrent Resolution 64 aims at establishing through the UN the minimum law necessary to maintain peace.

"In a world divided, we must seek to unite not to aggravate the schism. The sponsors of this resolution want the United States to make it clear that we are willing to sit down with all nations to establish a system of justice and enforceable law in the realm of world security.

"Although we must stay strong, our best resources for peace, as always, are not the arms of war but the strength of our dedication to the values of justice, order, and human dignity."

Congressman WALTER JUDD, Republican, of Minnesota, one of the initial sponsors said:

"In a world engulfed in a shadow of fear generated by the armaments race, we must achieve a positive moral base for our policy decisions. House Concurrent Resolution 64 shows the United States an important way to seize the moral initiative through the advocacy of a strengthened United Nations.

"This policy is not only consistent with the highest American tradition but is an urgent necessity in the present atmosphere of international tension. The establishment of law in the realm of world security is not an easily attainable goal, but should we fail the future is indeed foreboding.

"We must not shrink from what we believe is morally right because of the fear of possible frustration. We must stand firm in the strength of our convictions. We seek now to define our goal and indicate a method by which we shall strive to achieve this end. Failure to act along these positive lines would play into the hands of those who profit by deepening division and despair."

Senate Concurrent Resolution 56 which is identical to House Concurrent Resolution 64, has the support of 22 Members of the Senate. A subcommittee of the Senate Foreign Relations Committee is expected to begin hearings on this and similar resolutions on Thursday, February 2.

Letter to Dr. Montgomery

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1950

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

JANUARY 30, 1950.

DEAR DR. MONTGOMERY: We shall sorely miss you in the House each noon. There was always great comfort and solace to hear your daily invocation. I shall always remember tenderly our friendship that has abided with us for many years. Wherever you may go, and whatever you may do, may health and happiness ever be with you and your dear wife.

You have left with all us Members many unforgettable lessons in religion and morality. They are as enduring as sermons on stones.

The name James Shera Montgomery will ever be a cherished name in our Halls. You recall what the psalmist said, "Better is the fragrance of a good name than the perfume of precious oils."

Not so long ago, I visited Israel and there the word spoken on meeting and on departure is Sholom (Hebrew for peace).

Till we meet again, Sholom.

EMANUEL CELLER

The Columbia Basin

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1950

Mr. HORAN. Mr. Speaker, no section of this country has been more in the national spotlight recently than the Pacific Northwest, the drainage area of the mighty Columbia River.

In order to give all Members a brief general background of the Columbia region, its natural resources, its history, and its promise of the future, I wish to include in the RECORD a series of articles written by Mr. Leon Starmont, of Spokane, Wash., who for nearly 40 years has been reporting on that region. While Mr. Starmont's articles contain some statements not entirely in agreement with other versions of many of the happenings with which he treats, I think they deserve the attention of those who have been subjected more consistently to other points of view.

The Columbia is so tremendous in its importance to the people who live near it and the Nation as a whole that I believe those charged with planning its future should explore every idea advanced by those, such as Mr. Starmont, who will live with it.

The first article follows:

[From the Spokesman-Review, Spokane, Wash., January 22, 1950]

LET'S EXPLORE THE BASIN

(Article 1)

(By Leon Starmont)

During the covered-wagon days of 1850, according to a story related at an off-the-record session of the Columbia Basin Commission the other day, a party of pioneers halted beside the old Oregon Trail, to take counsel, reorganize their ranks, and explore the immediate surroundings.

"We know where we're going," one leader insisted.

"But which is the right road?" asked another.

"We don't know just where we are," remarked a third.

"We're not sure just how we got here," added a fourth.

The point was supposed to be that the whole Columbia Basin comprehensive program is now at the stage reached by that more or less hypothetical wagon train 100 years ago.

Residents of the Pacific Northwest are fairly well agreed on the ultimate goal, which is to bring about in this corner of the continent the finest flowering of western civilization. In simple words, the plan is to make this the best spot on earth in which to live and raise a bunch of kids.

UNIVERSITY OF MICHIGAN LIBRARIES

ALL WANT THE SAME THING

There is no important disagreement in the Columbia Basin as to what the people want. There are differences of opinion as to the best way of getting it.

There are even contradictory accounts of how the region reached this present stage of development. One task of this reporter will be to separate the facts from the fables, for the benefit of future historians.

The roads ahead wind into the future, somewhat as the Oregon Trail—a route of many detours, short cuts, and alternate choices—led into the Columbia Basin in covered-wagon days.

These are the main ideas as to how the goal may best be reached:

1. Continuation under the present set-up through the voluntary Columbia Basin Interagency Committee (CBIAC), formed in 1946 after the Spokesman-Review had published a series of articles disclosing the confusion that before then existed.

2. Continuation through CBIAC under the Hoover reorganization plan, in which the Federal agencies concerned with river projects are to be consolidated into one department instead of five.

3. Control by the Western States and financing through taxes or bond issues, in order to avoid the necessity of repeated calls on Congress for authorization of projects and appropriation of money.

4. An interstate compact, under Federal auspices, with a commission of one man each from Washington, Oregon, Idaho, and Montana, nominated by the governors, and a chairman selected by the President.

5. A Columbia Valley Authority or Administration, modeled to some extent after the Tennessee Valley Authority; several proposals along this line are grouped under the common name CVA.

6. An independent agency directly responsible to the President, operating with its own funds and controlling its own finances, like some of the Federal banking units.

HOW DOES IT WORK?

Before attempting analysis of the five plans offered as substitutes, it may be well to examine the present set-up. Does it click as hoped? Do its wheels mesh?

That is where these explorations start.

The opening articles will merely establish, in terms of that 1850 wagon train, where we are now, and in some cases how we got this far.

Many approaches are possible—chronological, historical, geographic political, industrial, governmental, administrative, engineering. This reporter will try the human angle, the story of who does what and why.

Commissions may be set up, new boundaries established, powers delegated to this group or that, but it takes human beings to keep the machinery running. Often the success of the project depends not on the technical skill or legal acumen of the operators but their ability to get along with their fellow men.

There has to be an order of procedure, a scheme of things, a realization that the whole basin cannot be developed at once, and that pay rolls cannot be equalized among all the counties all the time.

RIVALRIES MAY DELAY

The Columbia drains about 260,000 square miles. Its 1950 population is probably 3,000,000 people.

From the Gros Ventre's headwaters in Wyoming to Astoria, at the river's mouth, is 730 miles. From Valemount, British Columbia, where Canoe River turns southward, to Tuscarora, Nev., is 820 miles. All these areas have to be considered.

In past years, local fights over priorities have held back development. That difficulty continues into 1950.

A river does not have a single source. It has as many sources as there are springs and snow-fed rivulets.

It is usually said that the Columbia rises in Canada. So do the Kootenay, the Pend Oreille (Flathead), the Kettle, and the Okanogan.

Wyoming contributes the main stream of the Snake. Into it flow the Raft from Utah, the Bruneau and the Owyhee from Nevada, the many-forked Salmon and the Clearwater and Palouse from Idaho, the Grande Ronde from Oregon.

Other direct tributaries of the Columbia include the Spokane from Idaho, the Chelan, Wenatchee, and Yakima, from the eastern slopes of the Washington Cascades, the Walla Walla, Umatilla, John Day, and Deschutes from Oregon, and the Willamette and Cowlitz, whose problems are quite different from those of the upper reaches.

MANY CONFLICTS

The number of possible conflicts becomes immense when you start multiplying the number of states and nations involved by the number of counties, cities, and towns, and then again by the distinct industries, the possible uses, and the numerous local districts.

There are port districts, irrigation, drainage, soil conservation, and utility districts. There are national forests, parks, monuments, and wilderness areas.

There are Indian reservations.

And just outside the limits of the Columbia Basin, within the same political divisions, are other cities, such as Vancouver, Seattle, and Tacoma on the coast; Helena and Great Falls, Mont.; Klamath Falls, Oreg.; and Salt Lake City.

How to divide the water and arrange the priorities among all these political subdivisions, cities, towns, districts, and industries is one phase of the problem that now confronts the Pacific Northwest.

Add the clash of human ambitions and personalities.

Toss in deep-seated rivalries among 20 Federal agencies.

Stir the desires of a few hundred political leaders or would-be leaders.

Embellish with the free opinions of numerous regional, State, and local trade associations, development leagues, reclamation institutes, and chambers of commerce.

Is it any wonder that the number of possible conflicts, if stated in figures, would reach from Jasper Park to Crater Lake on a large-scale map?

Statehood for Hawaii

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1950

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial which appeared in the Milwaukee Journal on January 29, 1950, entitled "Quit Stalling on Hawaii."

Mr. Speaker, the question of admitting Hawaii to the Union as a State is not a new one. It has been considered by successive administrations for many years now, with good reasons offered in support of such action.

The ties that link our Nation with Hawaii are more than a century old. Voyagers, traders, and missionaries from the United States were among the first occidental people who established lasting relations with the people of Hawaii, long before those islands began to play a role of importance in international affairs.

The history of Hawaii offers strong justification for the proposed admittance of that Territory to statehood. By 1854 Hawaii was already a civilized and Christianized country with constitutional government, highly creditable legislative, executive, and judicial branches, modern industries, personal and property rights secure, and the respect of other nations and independence assured.

Annexed to the United States on the eve of this century, the Hawaiian Islands became a Territory, and an integral part of our Nation on June 14, 1900. Ever since that time the people of Hawaii have been keenly interested in securing statehood. Through their elected representatives they have repeatedly petitioned Congress for statehood, and in a plebiscite in 1940 they voted in favor of statehood by majority of more than 2 to 1.

The people of Hawaii are capable of assuming the responsibility of statehood, and they have proven worthy of it. And our Nation has more than little to gain in admitting Hawaii to the Union as the forty-ninth State. The following editorial enumerates few of those advantages, and it reflects my sentiment that H. R. 49 should be passed by Congress this year.

The editorial referred to follows:

QUIT STALLING ON HAWAII

What has the United States to gain by admitting Hawaii to the Union as the forty-ninth State?

A permanent military bastion in the Pacific, of course. A vacation paradise. An area greater than the States of Delaware, Connecticut, and Rhode Island. A sturdy economic unit that last year paid $90,000,000 in Federal taxes, more than each of 11 States. And a loyal, intelligent, democratic population of 527,000.

What else would Hawaiian statehood do for us? Read what a special committee of the House of Representatives, after visiting the islands, has reported to the Committee on Public Lands:

"Admission of Hawaii will be notice to the people of the Pacific and to the world that this country intends in no sense to retreat from its position of leadership in the Pacific. * * *

"It will be reassuring to the friends of democracy. The United States will give them a practical demonstration of its belief in the democratic system of government by admitting Hawaii to the Union as a State and its people, thereby, to the full privileges of American citizenship. This example will be of far-reaching influence. * * *

"It will provide an effective answer to Communist propaganda that is undertaking to persuade the people of the Pacific, and particularly of the Far East, that there are racial barriers in the American system of Government that militate against people of oriental origin.

"It will serve to bring the people of Hawaii into closer relationship to the people of the rest of the country and the latter to a fuller appreciation of our responsibilities in the Pacific."

This country has dallied too long with the affections of the Hawaiian people. Since 1920 they have been asking for the statehood that they have earned and the representation to which they are entitled. Thirty-six statehood bills have been introduced in the Congress. There have been

at least six congressional investigations in Hawaii. There has never been any serious opposition to statehood, yet the final step is never taken.

Another statehood bill is now before the House. It should be passed there and it should be passed in the Senate. This is not only a matter of party pledges or of keeping the promise long held out to the people of Hawaii. It is, as the House committee said tersely, "in the national interest."

Comparative Welfare Costs

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1950

Mr. GAMBLE. Mr. Speaker, I ask unanimous consent of the House to include in the CONGRESSIONAL RECORD the following article from the Daily Times, published at Mamaroneck, N. Y., Friday, January 13, 1950, entitled "Comparative Welfare Costs":

COMPARATIVE WELFARE COSTS

Westchester County, which initiated nearly twoscore years ago much of the social reform which later was adopted at Albany for the State and tremendously amplified at Washington for the Nation, has rarely been accused of stinginess in relief for the unfortunate. And yet it is gratifying, in view of the knowledge that relief funds can easily be wasted, to learn that Westchester's welfare costs are low in comparison to those of the State and Nation.

Let's consider, for example, the three outstanding divisions of old-age assistance, dependent children, and general assistance:

Out of each 1,000 persons 65 years of age or more in Westchester, 70 receive old-age assistance. But the State average is 105.3 per 1,000 population, and the Federal average is 231.

In the matter of dependent children, out of each 1,000 children under 18 in Westchester, 14.7 receive aid. But the State average is 32.6 and the national average is 29.

Similarly, in general assistance, including that extended to veterans and home relief, the Westchester average is 5.5 per 1,000 population, the State average is 12.7, and the national average is 7.6.

In each of these three divisions, it will be noted, the Westchester costs are lower per 1,000 of population, in some cases markedly so. And since these three divisions represent the large bulk of welfare and relief recipients, it may be fairly surmised that Westchester's over-all welfare costs are lower per 1,000 than for either the State or Nation.

This gratifying factor, we are sure, is not due to niggardliness on the part of those responsible for the distribution of public welfare funds in the county. Rather, we like to believe, it is due to efficiency, elimination of waste, and a due regard for the interests of the taxpayer as well as of the applicants.

To some degree, we hasten to add, this fortunate condition may arise also from the fact that Westchester is an above-the-average county in its prosperity and per capita financial ability. But that alone would not be sufficient to bring about the pleasing comparisons enumerated above.

And, whatever the cause, we hope the results remain.

Korean Aid Bill Defeated

EXTENSION OF REMARKS

OF

HON. JOHN C. KUNKEL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1950

Mr. KUNKEL. Mr. Speaker, under permission to extend my remarks, I include the following radio broadcast I made recently on the subject of aid to Korea:

A week ago the House defeated the Korean aid bill by a vote of 193 to 191. Previously a motion to recommit the bill to the Foreign Affairs Committee for further study was defeated by a vote of 194 to 190. It is most unusual for a bill to be defeated after a motion to recommit that same bill has been defeated. I cannot remember offhand any instance of this during my service in the House. I voted against providing this money for Korea. I was surprised to learn, during the debate, that our executive officials have so far made no commitment whatever to Korea. The usual policy is for the administration to make some kind of a commitment and then urge Congress to supply the funds, whether the commitment was wise or foolish, on the ground that it was a pledge made by our executives of the United States.

In the white paper on China, issued last year, Secretary Acheson and the State Department definitely declared themselves out of China and, impliedly, out of surrounding sections of Asia. South Korea is a pin-point—half a peninsula—on the Asiatic Continent. Since the State Department has declared itself out of China, I do not see how they can expect us to hold onto a pin-point on the Asiatic Continent while releasing all the neighboring territory. I have a great deal of criticism to offer on the score of our Asiatic policy, and our China policy in particular, although I hold no brief for the Nationalist Government of Chiang Kai-shek. But our own vacillating, shifting methods were at least as much responsible for the loss of Asia as were the obvious shortcomings and corruption of the Nationalist Government. President Truman and Secretary Acheson have refused to take any steps to protect Formosa. I read Mr. Acheson's speech on this subject carefully. There is a good deal to be said in support of his contention about Formosa, in view of the policy adopted in the white paper. Some fog and doubt still surround the facts on this question, but I am perfectly willing to wait for that fog to clear before making any criticism of a decision which may be a sound and wise one.

Taking into account the Chinese white paper and the decision on Formosa, plus the fact that there is no commitment at all in connection with aid to Korea, it seemed to me that this would be money and goods thrown away, or placed where the Soviet Union could absorb it if the Soviet Union decided to do so. Furthermore, the program was a continuing one, lasting over a period of years and amounting to much more than the amount involved in this bill. South Korea is 7,000 miles from San Francisco. Freight charges would absorb 25 percent of the total appropriation—$1 out of every $4 would be used to carry the goods over there. This gives some idea of the impracticability of the whole proposition.

I was going to quote at length from the speech on the floor by Representative JACKSON of California. He is a member of the Foreign Affairs Committee who opposed the bill. But after thinking it over, I decided to quote instead from Representative WALTER JUDD's speech, because he voted in favor of the bill, and hence his analysis of the objections would obviously be more impartial. Many of my friends in this area know and admire Mr. JUDD. He is also a member of the Foreign Affairs Committee. While he finally voted for the bill he stated about as clearly as anyone the objection to it:

"In the first place, Korea is not essential to our security. No military man says that it is, every military man before our committee said that it is not. Also the Secretary of State last week, in a speech he made before the Press Club, is reported to have said that Formosa is not essential to our security because it is beyond a line he drew from the Aleutians through Japan and Okinawa to the Philippines. Korea is also beyond that line. If Acheson's argument regarding Formosa's dispensability is sound, then he himself ought to be opposing aid for Korea too.

"In the second place, South Korea is not tenable whenever there is any effort by Russia or her satellites to take it. I would like to quote the expert opinion of General Marshall on this point from the hearings 2 years ago when he appeared before our committee:

" 'Representative JUDD. If north China and Manchuria should be taken over and organized by the Communists, do you think our position in Korea would long be tenable?'

" 'Secretary MARSHALL. I think it would not be tenable.'

"So you can properly argue, if you wish that it is a waste of money to pour millions into an area which cannot be defended because of the situation we have helped produce in Manchuria and China, and an area which we have no intention of making the slightest effort to help defend. Furthermore, it may well be against the interests of Korean security to build it up industrially, making it so much more desirable a prize for Russia's agents to seize and use for Russia's interests and against our own.

"There is no question but that there are people in the State Department who think South Korea is doomed as a result in no small degree of our own Government's blunders in this whole area which they want to cover up. They ask us to put up this money now so that if and when the day comes that Korea goes, they will have their alibi already prepared. They can then issue a white paper on Korea and say: 'Well we did everything we could and Congress appropriated plenty of money. But the Government of Korea was just so incompetent and inefficient and undemocratic and corrupt that it failed to hold the support of the people and so collapsed before the Communists.'

"To those people this bill never was a bona fide effort to save Korea. It is a phony—an attempt to shift blame from themselves for the Communist conquest of Korea which they expect. If we make the money available, they can blame the Koreans; if we were not to pass the bill they could blame the Congress. In any case the primary aim to them is to get themselves off the hook in Asia, to get an excuse for their failure to save Korea all fixed up in advance.

"There is a fourth argument against the bill. I myself feel our greatest need is for a positive, over-all consistent and defensible far-eastern policy. China was important to such a policy, in fact essential to it; Formosa is vital to it. The Philippines, Japan, southeast Asia are all vital to it. South Korea is not."

In the past, our Chinese policy changed every time the wind shifted, now no policy at all.

Representative JACKSON closed his speech dramatically:

"South Korea is a Bataan without a Corregidor, a Dunkerque without a flotilla, a

UNIVERSITY OF MICHIGAN LIBRARIES

dead-end street without an escape. If the Congress wills it we shall invest in a gambit of pawns against an opponent whose major pieces are skillfully jockeyed against both South Korea and the United States on terrain chosen by our opponent and on terms which he alone will dictate. Let us be humanitarian, but let us not close our eyes to reality in a day when the fate of a world depends upon clear judgment and straight thinking."

American Program in Germany

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1950

Mr. DOLLINGER. Mr. Speaker, we know now that our Nation has failed miserably in its German program. We promised the denazification, demilitarization, and decartelization of Germany, but the record shows that none of these has been accomplished. The truth is that we are further than ever from our goal of a democratic Germany. Our muddling, poor management, lack of foresight, and woeful mistakes have cost us our prestige in the eyes of the world.

The collapse of the denazification program was bad enough, and the return of Nazis to great power in Germany, lamentable, but now we come to the worst of all. Shocking and incredible is the news that John J. McCloy, the American high commissioner for Germany, still hesitates to order the hangman to execute the sentences which were passed some 26 months ago on the 16 most dangerous Nazis yet alive. We hear reports that he is considering an amnesty for some of them, and they may all escape the death penalty.

The following article by John Hohenberg which appeared in the New York Post on January 30, 1950, presents the facts very clearly. I agree with the author that more than American prestige is at stake, and that American justice is on trial before the world.

Remember, the condemned had a fair trial at Nuremberg. A few short years ago, stories of their unbelievable cruelties made our blood run cold. They were the masters of the Nazi furnaces, the gas chambers—inhuman planners of mass annihilation of millions of innocent victims. We dare not forget their terrible crimes against humanity. Certainly, the time has come when we must demand that the sentences imposed at Nuremberg be carried out—and at once.

SIXTEEN WORST NAZIS, PLEAS LOST, MAY STILL BEAT NOOSE

(By John Hohenberg)

This is the incredible and shameful story of Operation Nazi.

At Nuremberg, when the world's conscience revolted against the pitiless extermination of 6,000,000 Jews, it was designed as an act of supreme retribution.

Today it is in danger of being perverted into a bid for the political favor of the Germans who did nothing to halt the slaughter.

John J. McCloy, the American high commissioner for Germany, still hesitates to order the hangman to execute sentences which were passed up to 26 months ago on the 16 most dangerous Nazis yet alive.

There are well-founded reports that he is considering an amnesty for some of them—perhaps all.

McCloy has not forgotten that these 16 were the masters of the Nazi furnaces, the gas chambers, and the execution squads in which German, Polish, and Ukranian Jewry perished. He is reminded of it daily.

Yet, he waits. And in Washington not an official voice is raised in protest.

The State Department, preserving the diplomatic niceties, has adopted a hands-off attitude. It won't do anything for or against the most conscienceless killers of modern times. It helps to translate their appeals for clemency as a matter of convenience.

The Department of the Army, considering itself lucky to be out of Operation Nazi for the time being, acts as a transmittal agency for the writs which they shower on United States courts. Just messenger service, Army officials explain with a shrug.

Only Telford Taylor, the Army prosecutor who fought the case before the international military tribunal at Nuremberg, so far has demanded action from Commissioner McCloy.

"We have shown these Nazis far greater mercy than any convicted American murderer ever enjoyed," says Taylor. "It is time they were hanged."

But they are not.

Why?

First, the legal rights of condemned men had to be complied with. As a democratic demonstration, everybody agreed this was both just and necessary.

LONG DAY IN COURT

They were given every opportunity before the Nuremberg court to demonstrate their innocence and they failed.

Next, they waited while other Nuremberg defendants carried appeals direct to the United States Supreme Court, which refused to review the verdict of the international tribunal.

After that, still another Nuremberg defendant tried the other course of American judicial process—up the ladder through the Federal Court of the District of Columbia, the court of appeals and the Supreme Court. All three said "No."

Then a congressional investigation had to be made on whether there where irregularities in the trials. Now that is completed.

What now remains to deter McCloy?

HE REVIEWS THE REVIEWS

First of all, he has decided on his own responsibility that he must reaffirm the affimation of sentence passed by his predecessor, General Clay.

After that he believes he must wait for still a third appeal, just filed with the assistance of American authorities, with the District Court in Washington. He need not, as Taylor points out, since that avenue already has been closed.

Finally he says he has been deluged with appeals for clemency from a host of persons for the 16 Nazis.

There is some doubt about the size of that appeal, however. Inquiries in Washington showed that from 2 to 20 letters were received for each of the 16 defendants.

Extreme right wing German Nationalists, riding back into power, could increase that a hundredfold if they chose and the pleas still would be synthetic.

APPEALS MAGNIFIED

However, the disposition is to magnify the importance of the appeals for clemency. That is done for the very good reasons known to the American authorities concerned with Operation Nazi, the men who fix policy for the State Department in Germany.

McCloy's staff takes the trouble to point out that United States lawyers are concerned with the condemned men's fate—but the names aren't available except in Berlin or Frankfurt am Main. The American lawyers are keeping carefully under cover.

A final consideration in McCloy's mind is the length of time the 16 Nazis have been under sentence of death. "Cruel and inhuman punishment," so the legal phrase goes.

TESTIMONY RECALLED

"Cruel and inhuman" for such as Paul Blobel, the architect turned mass assassin who testified before the Nuremberg tribunal:

"When the men were ready for the execution one of my leaders gave the order to shoot. Since they were kneeling at the brink of the mass grave, the victims fell, as a rule, at once into the mass grave.

"I have always used rather large execution squads, since I declined to use men who were specialists for shots in the neck. Each squad shot for about 1 hour and was then replaced."

Such are the 16 who so far have cheated the noose and who now are being considered for amnesty. Such are the factors which are threatening to transform Operation Nazi from an act of retribution into a travesty of justice.

More than American prestige in Germany is at stake.

American justice itself is on trial before the world.

Resolutions of Monroe County (Iowa) Farm Bureau

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1950

Mr. LECOMPTE. Mr. Speaker, on October 25, 1949, the members of the Farm Bureau of Monroe County, Iowa, met in annual meeting at Albia and adopted a set of comprehensive resolutions expressing the position of this great organization with respect to issues and problems that are before this country.

I desire to give to the Members of Congress the opportunity of knowing the position of the Farm Bureau of Monroe County, Iowa, at this time, and I include these resolutions in my extension of remarks:

MONROE COUNTY FARM BUREAU RESOLUTIONS, 1949

The members of the resolutions committee recommend the following resolutions to the general membership as policies of the organization. These resolutions are based on questionnaires completed by members at township meetings and from other current problems facing the farm people of our county.

AGRICULTURAL POLICY

1. We believe some type of farm price-support program is necessary.

2. We favor a program of flexible supports tied to the amount the commodity is in surplus with minimum guaranties or floors and a minimum of controls. We believe this program should be developed through a bipartisan approach.

3. We believe satisfactory compliance with soil-conservation practices should be a requisite to eligibility for price supports.

NATIONAL AND STATE HEALTH PROGRAM

1. We favor Federal aid to enlarge the capacity of medical schools and for construction of more hospitals and for medical research.

2. We oppose compulsory health insurance.

LABOR-MANAGEMENT RELATIONSH P

1. We believe that the question of wages and working conditions, etc., are social, ethical, and economical in nature and can be settled through mediation supported by legal methods.

2. We believe in the principle of organization for self-betterment but feel that welfare of the public should be placed above the individual or group.

3. We approve some sort of extension service for the betterment of family living conditions for the urban workers.

GENERAL

1. We favor changing rural mail routes so that the principle of free mail delivery becomes an actuality to all rural families as road conditions will permit.

2. We favor the establishment of a Federal agency for the purpose of setting up telephone cooperatives modeled after REA cooperative.

3. We request the American Farm Bureau Federation to institute a national advertising program to acquaint the general public with the final distribution of the consumers food dollar.

4. We believe Federal aid for farm-to-market roads should be increased.

President Truman's Budget Message

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1950

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

THE CONNECTICUT
CHAMBER OF COMMERCE, INC.,
Hartford, Conn., January 24, 1950.

Hon. JAMES T. PATTERSON,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN PATTERSON: President Truman's budget message reflects a commendable determination to carry out numerous recommendations made by the bipartisan Hoover Commission to improve administration efficiency.

The Connecticut Chamber of Commerce on the whole approves the recommendations of the Hoover Commission report. We understand that approximately 20 percent of the recommendations were enacted in the last session of Congress and that this will mean ultimate savings in Government operating costs of at least $1,250,000,000. The sweeping improvements in Federal purchasing, storage, records management, and other "housekeeping" functions, which are well under way in the General Services Administration, we understand, indicate a potential saving from this source of $250,000,000.

May I take the liberty at this time of calling your attention to important Hoover Commission proposals which apparently have been ignored? The Hoover Commission recommendations on business functions conducted by the Government sought to establish a clearer demarcation between the fields of taxpaying private enterprise and Government enterprise. This was particularly true with respect to commercial banking and lending activities, electric power utilities, and certain other forms of business enterprise. Many of the Hoover recommendations were aimed at restricting Federal expansion in these fields. Of direct Government lending, for instance, the Commission said: "It opens up dangerous possibilities of waste and favoritism. * * * It invites political and private pressure or even corruption. * * * Direct lending should be absolutely avoided except for emergencies."

The President's budget message, however, advocates large Federal expansion in these various fields. It seeks additional lending powers for the RFC, an agency whose operations the Hoover Commission roundly criticized. It calls for further expansion of Federal electric power activities, including the creation of a Columbia Valley Administration in the Northwest, and it suggests similar authorities in other parts of the country. Such a program adds up to nothing less than the eventual nationalization of the electric-power industry, an objective certainly not entertained by the Hoover Commission.

The message also backs legislation to enlarge the Government's part in the Nation's home-building industry by launching a program to provide housing for middle-income groups. Other proposals for new ventures into business fields are indicated in competition with taxpaying private enterprises—all adding up to more bureaucracies, more waste, and more tax demands upon the people's pocketbooks.

The Hoover task-force committee on Federal-State relations expressed concern about the trend toward National Government encroachment on the fields traditionally reserved for State and local governments. It called for Federal withdrawal from tax fields properly belonging to State and local governments and for an overhauling of the Federal grants-in-aid structure.

The budget message virtually ignores these proposals. Instead it asks Congress to approve grants-in-aid for 1951 totaling $2,999,000,000, an increase of $738,000,000 over 1950 outlays and an all-time high figure. This increase would include $290,000,000 to initiate the controversial Federal aid to education measure now before Congress, which is opposed by many Governors and State legislatures and by many leading educators as an unwarranted attempt by the Federal Government to intrude upon a public service which is constitutionally and traditionally a State responsibility.

It is the belief of the Connecticut chamber of commerce that one of the chief reasons why the proposed 1951 budget has swelled to the size it has is the increasing tendency of both Congress and the executive branch to resort to foot-in-the-door financing devices to speed approval of new spending legislation which would otherwise encounter rough sledding on Capitol Hill.

For instance, passage of new spending programs of a continuing nature is often made easy because the legislators are told that a very modest appropriation will suffice to get them under way the first year. The extent to which the annual cost will rise in succeeding years is a matter which is seldom explored or divulged. The 1951 budget is full of large expenditures for items which once began modestly enough but have grown steadily through the years. This should provide a warning to Congress, then, to look carefully at the price tags on the many new spending measures advocated by the President or initiated by congressional committees.

Three examples of projected programs bearing a low down-payment tag but destined ultimately to require huge annual appropriations include: (1) The bill creating a National Science Foundation which would spend only $400,000 the first year but would eventually entail annual outlays of $100,000,000 and up; (2) the St. Lawrence seaway which would involve the expenditure of only $4,000,000 the first year but would eventually shoot up to a maximum of $82,000,000 annually for the next 7 years; and (3) Federal aid to education, which contemplates a $290,000,000 expenditure at the start but would reach $2,000,000,000 or more annually as soon as possible, according to the commitments of its sponsors. So on down a long list.

Another foot-in-the-door device, we feel, to get new projects started is the contract authorization, which, as you know, is a grant of authority to a Federal agency to contract for construction or other services in a given amount. This is a sound and even necessary procedure when properly used, but in recent years it has been much abused. For instance, Congress has frequently replaced part or all of a requested appropriation with a grant of contract authority in order to show a budget cut. The taxpaying public, we believe, would rather see Congress make bona fide reductions in appropriations and put an end to such subterfuges as this.

The President's 1951 budget message asks Congress to approve $3,363,000,000 in contract authorizations, of which $1,280,000,000 is for programs requiring new legislation. These sums for the most part are not included in the $42,400,000,000 spending total proposed for 1951. They are in addition to this total, and their cost would be reflected in increased expenditures for 1952 and thereafter.

I know that your desk is piled high with many current proposals now before Congress and I apologize for this long dissertion, but deemed it necessary in order to acquaint you with our opinion. We trust that at the opportune time you will give the above your serious consideration.

Respectfully yours,
WAYNE R. DICKERSON,
Executive Vice President.

Deficit Financing Is Fraudulent

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1950

Mr. VELDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Peoria Star of January 28, 1950:

DEFICIT FINANCING IS FRAUDULENT

Extravagant spending by the Federal Government was made possible by the adoption of the sixteenth amendment to the Constitution in 1913. This amendment gave the Government the authority to seize any part or all of the income of its citizens. Government spending was limited only by the amount which the Government dared take from voters.

Unlimited spending by the Government was made possible by the abandonment of the gold standard early in the Franklin D. Roosevelt regime. When the Government had promised to repay loans in gold, the amount of such loans was limited by the amount of gold held by the Government. But now the Government promises to repay in currency which is unlimited. Thus, we have deficit financing, based on unlimited spending, based on unlimited borrowing.

President Truman's proposal to spend $5,000,000,000 more next year than will be collected in taxation is based upon the Government's privilege of printing unlimited bonds and money. Behind deficit-financing plans is the implied hope that next year or

UNIVERSITY OF MICHIGAN LIBRARIES

5 years from now, by some means not now known, tax revenue will be greater than Government expenses, so that the current deficits may be repaid. In time of business depression, such a hope might not be unreasonable, but when employment figures are high and business is active it is absurd to look to the future for a time when the Government may be better able to pay its debts.

Dr. Edwin G. Nourse, the one conservative member of the President's Council of Economic Advisers, was forced to resign last fall because he sharply criticized deficit financing. Dr. Nourse said in New York this week that the 2-year deficit of $10,000,000,000 (and possibly $15,000,000,000) has stirred fears of inflation and possibly a rising uncertainty as to the stability of the dollar itself. He added:

"The first order of business in this country in 1950 is to turn from the easy acceptance of deficits as a way of life to the making of a specific and hard-headed plan of getting back to the black ink and a long-run program of sound debt management."

The alternative is certainly inflation. The Government cannot continue to spend money it does not have without inflating currency. Prices will go up as the value of money goes down. And for every cent the value of a dollar drops the Government will be defrauding its people of millions of dollars in savings. Inflation cuts down the value of life-insurance policies. It makes bonds worth less when they mature. Savings deposits shrink in value. Not even the money hoarded in a strong box can resist the destruction of inflation.

President Truman's deficit-financing proposal is a fraud upon all of the people, not only this generation but the next and the next.

President Truman's Tax Message

EXTENSION OF REMARKS

OF

HON. CHARLES H. ELSTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1950

Mr. ELSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr. Morris D. Ervin from the Cincinnati Times-Star of January 25, 1950:

MESSAGE FOLLOWS FAMILIAR LINES—THE PRESIDENT ON A FISHING TRIP FOR VOTES

(By Morris D. Ervin)

WASHINGTON, January 25.—As a revenue measure President Truman's tax message to Congress Monday is not likely to prove of much value. As a political document it is of considerable interest.

The message may result in more votes for the Truman administration. It is not likely to result in any more dollars for the United States Treasury.

The message follows the lines of an old political device. It is designed to convince the taxpayers that the incumbent administration is intent on taking from the rich to take care of the poor.

In order to accomplish this purpose Mr. Truman's message proposes that certain excise taxes, such as those on transportation, communication, and such consumer goods as electric-light bulbs be abolished or reduced. The total of the reductions which he proposes along this line would amount to about $750,000,000 a year.

But at the same time he proposes that this loss of revenue be made up by increasing the taxes, principally the income taxes on corporations, to bring in additional revenue in the amount of $1,000,000,000.

Now this message makes it appear that if Congress follows the President's recommendations, the little taxpayer will have fewer taxes to pay and the big fellow will have more taxes to pay.

BUT WILL IT?

But will it actually work that way?

Mr. Truman himself, in the first paragraph of his message sort of lets the cat out of the bag. He says that "taxes are the means by which our people pay for the activities of the Government."

Now a truer statement was never made by a President of the United States, though Franklin Roosevelt put it in a little more literary way when he said that: "Taxes are paid in the sweat of every man's brow." (That was before he was President.)

Boiled down to its essentials, what the President proposed to Congress Monday was to repeal or reduce many of the direct taxes on such commodities as electric-light bulbs, cosmetics, luggage, telephone calls, and railroad tickets. He would reduce these taxes to the point where the Government would receive something like $750,000,000 less in revenue from these sources than it now does.

But at the same time he would increase the taxes on the corporations which produce electric-light bulbs, cosmetics, luggage, and furnish telephone service and transportation, to the point where they would pay to the Government $1,000,000,000 more every year than they now do.

THEY ALSO PAY

Well, who do you suppose is going to pay for this? The answer to that one is simple. The people who buy these products and use these services. The same people who are now paying $750,000,000 a year. Under the President's proposal they would pay $1,000,000,000 a year.

There is but one source from which the Government can get revenue and that is from the people. That's what Mr. Truman himself says. It may not collect taxes directly from the little taxpayer. But it collects it from him indirectly just the same. If the ultimate consumer didn't pay these taxes then they just wouldn't be paid. He is, as a matter of fact, the only guy who can pay them.

The Government may decide to repeal direct excise taxes on such things as electric-light bulbs, for instance. And then it may decide to collect an equal amount from the manufacturer who makes electric-light bulbs.

Well, who pays the bill? The fellow who buys the electric-light bulb. If the electric-bulb manufacturer tried to pay the additional bill himself he would go broke. So he passes the bill on to the purchaser in the form of higher prices and in the end the purchaser pays the bill. Only in this case instead of paying $750,000,000 he would pay $1,000,000,000.

HE KNOWS

Now, of course, Mr. Truman knows that Congress knows all about this. It knows who pays the bill. So it isn't likely that Congress will go along with the President on the scheme which the President has proposed, that is, to reduce direct taxes on the consumer and then hand him a still bigger bill in the form of high prices.

But Mr. Truman has set up a scheme to defend himself against that. He warned Congress in plain language that if it tried to reduce direct taxes on the consumer but failed to increase consumer prices by an even larger amount he would veto the bill. Then he would be in a position to say that he had tried to reduce taxes for the "little fellow" but Congress wouldn't pass the bill on to the "big fellow."

And in that case, unless, of course, Congress overrode his veto, the tax structure would remain exactly what it is now and Mr. Truman would get credit for a good try.

As stated before, the President's message is not likely to rank with Alexander Hamilton's famous reports on the fiscal affairs of the United States. But it is more than a little likely to rank as a political document of considerable interest.

Relations With Spain

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1950

Mr. ZABLOCKI. Mr. Speaker, during the months of November and December 1949 my colleagues, the Honorable JOSEPH L. PFEIFER, the Honorable THOMAS S. GORDON, the Honorable JACOB K. JAVITS, and I traveled in Europe as a study group designated by the chairman of the Committee on Foreign Affairs. All of us except Mr. JAVITS visited in Spain on December 9, 10, and 11.

At the request of certain Spanish newspapermen we prepared a statement to be issued to the Spanish press. Our statement, issued on behalf of the group by Mr. PFEIFER, was based upon questions raised by the newspapermen. In answering them, we sought to shed light on certain misimpressions which our conversations had indicated as prevalent in Spain. We had found a disposition to believe that any Congressman's view necessarily reflected the view of our Government, a misunderstanding of executive and legislative interrelationships in our constitutional process, an apparently overoptimistic assurance about the future of relations between our country and Spain, and a feeling that the resolution of issues between the two countries depended solely upon actions to be taken by the United States.

Our statement was an honest effort to bring these matters into proportion. This statement was the only one made by the Pfeifer subcommittee in Spain, notwithstanding any other attributions or quotations which may have appeared in the press here or abroad.

The Spanish press reacted in a manner that we had not anticipated. I see no point in reviewing here the editorial remarks made about us in the Madrid press. Apparently, however, the Spanish reaction has caused the belief among our colleagues that we issued a hostile statement in Spain. To clear up that misunderstanding, it is well to publish the text of the statement:

STATEMENT BY THE HONORABLE JOSEPH L. PFEIFER, DEMOCRAT, NEW YORK, MEMBER OF THE HOUSE OF REPRESENTATIVES OF THE CONGRESS OF THE UNITED STATES, AT MADRID, SPAIN, DECEMBER 10, 1949

This statement has been prepared in consultation with my colleagues, the Honorable THOMAS S. GORDON, Democrat, of Illinois, and the Honorable CLEMENT L. ZABLOCKI, Democrat, of Wisconsin. It has their full concurrence.

We are three members of the Committee on Foreign Affairs of the United States House

of Representatives. That committee exercises primary jurisdiction for the House in regard to legislative problems bearing on the conduct of American foreign policy. The committee includes 25 members. We do not speak for all of them. We speak only for ourselves.

It is always well for people of other countries to keep in mind the proportions and principles of American politics and constitutional traditions when they evaluate statements by visiting Congressmen. Any Member of the Congress speaks only for himself. He controls only his own vote. Our Congress has 531 Members—435 of them in the House and 96 in the Senate. Thus any Member can speak for only about one-fifth of 1 percent of the total membership. It is well that you avoid exaggeration of the importance of passing statements by American Congressmen.

Keep in mind this, also. We have an explicit and long-established constitutional system in the United States. Under that system the primary authority in foreign affairs is an executive function. It is not a congressional function. I do not mean to imply that our foreign affairs are carried on without responsibility. Far from it—our President, as well as our legislators, is responsible to our electorate. He derives his powers only through mandates developed in free elections which must be held periodically. So do not misinterpret what I say when I emphasize that foreign affairs are primarily an executive concern in our country.

Now that I have set the proportions of this statement, I shall go on to a few questions that I have been asked.

I have been asked about the attitude of the Americans toward Spain.

I trust there is no doubt in the minds of Spaniards that the attitude of Americans toward them is friendly. In America we have many jokes about the characteristics of the peoples of other nations. It is in point, however, that we have no stock jests about Spaniards. Spaniards as a people are always spoken of in terms of esteem. Furthermore, a large part of the United States was first influenced by European institutions through the agency of Spain. The institutions of Christianity and the culture of Europe first came to our West as a result of the endeavors of Spaniards.

Spain is a land of romance and heroism in the American mind. Spaniards are thought of in terms of friendship and respect. I think that will endure far beyond the passing difficulties of the moment. I am reassured in this thought by the fine hospitality—the genuine courtesy—that my colleagues and I have enjoyed during every moment of our stay in Madrid.

I have been asked what is the United States going to do about Spain? I think the order of the question is wrong. I do not mean to be harsh when I say that Spain is a secondary problem to the United States. The United States, however, is a primary problem to Spain. The real question is this: What is Spain going to do about the United States? Only the Spaniards themselves can answer that question.

I have been asked to comment on the question of a loan to Spain. Such loans in our country come under the authority of the Export-Import Bank. It is a public institution chartered by Congress and administered by our Executive. The decision ultimately would have to be an executive decision. It would be a presumption for me to attempt to give an answer to so complex a question after so brief a stay in Spain.

I trust, however, that an answer satisfactory to the aspirations of the Spanish people can be worked out. But let me say, again, that it is a matter not simply for the United States to settle. It is, in the last analysis, a question for Spain and the Spanish people to settle. So, I repeat: What is Spain going to do about the United States?

Mr. Speaker, further I would like to include and call attention to the following letter written by Dr. Joseph F. Thorning, which appeared in the New York Times of January 13, 1950, and which reflects my personal sentiments for a revised policy for Spain:

A REVISED POLICY FOR SPAIN—CASE FOR ESTABLISHMENT OF RELATIONS WITH PRESENT REGIME PRESENTED

To the EDITOR OF THE NEW YORK TIMES.

In the current discussion about friendship with Spain an important admission was made in the Times' editorial (Recognizing Franco, December 22, 1949). This reads as follows:

"It was wrong and short-sighted to withdraw the chiefs of diplomatic mission in the first place."

One could go further and acknowledge that the policy of attempted ostracism, adopted under an impression that the Soviets would be suitably appeased, has proved not only bad in principle but also a failure in practice.

It had exactly the opposite effect to that intended: it consolidated overwhelming popular sentiment behind the head of the Spanish state as the symbol of resistance against outside interference. Indeed, according to the Madrid correspondent of the New York Times, the present administration in Spain is stronger than ever. For that result, the constant drumfire of foreign dictation is largely responsible.

The Times is correct, and so was Senator ARTHUR H. VANDENBERG, in pointing out that the Spanish question should be considered in its "proper framework" and in the light of all pertinent resolutions of the United Nations General Assembly. But readers of the Times have a right to expect the whole record to be rehearsed and studied.

Although the so-called Franco Fascist regime, without any opportunity for self-defense, was denounced and a resolution was passed in 1946 recommending the withdrawal of chiefs of diplomatic mission from Madrid, it is untrue to assert that such a policy has been reaffirmed by the Assembly.

FAILED OF TWO-THIRDS VOTE

When the identical 1946 resolution was brought up again in 1947, according to the rules, by the Soviet-dominated Polish delegation, it failed to receive the necessary two-thirds vote and in the official minutes of the General Assembly reporter was recorded as rejected.

This is one reason why many experts on international law, including Dr. Edwin Borchard, of Yale University, and Dr. George Finch, former editor of the American Journal of International Law, judge the 1946 resolution to be invalid. Consequently, a number of nations, including some in the Western Hemisphere, considered themselves free to maintain, or to restore, a full complement of diplomatic officials in Spain.

More recently, in May 1949, a decisive majority (26 to 15, with 16 abstentions) supported the motion, proposed by Brazil, Bolivia, Colombia, and Peru, to leave all nations free to send, or not to send, ambassadors and ministers plenipotentiary to Madrid.

At the same time, and this is a point of genuine importance, the proposal of Sovietized Poland to repeat the 1945–46 denunciation of the present Spanish Government as Fascist and as having been imposed by the Axis was soundly beaten by a vote of 32 to 11. A similar fate, by more resounding majorities, was inflicted upon all other resolutions urged upon the UN by the iron curtain bloc in the General Assembly. With the defeat of these Soviet-inspired motions, the whole case against Spain fell to the ground.

REVIEW OF POLICY

In view of this historical sequence, it would appear to be reasonable to expect our country, democratically, to review its Spanish policy without delay. Since a mistake, admittedly, was made in 1946, the sooner we admit our error and try to repair the damage done, the more secure will be the people of the United States and the more advantageously we can provide for our national interests.

If we do what is right there is no solid ground for belief that the shock to public opinion in western Europe, and especially in France and Great Britain, would be enormous. Has not Winston Churchill called, repeatedly, for a revision of the bankrupt policy toward Spain? Did not the French Government, despite Leftist clamors, reopen its Pyrenees frontier and resume a lucrative trade with the Spanish people? Has it been forgotten that the Times of London, calling for an end to hypocrisy, in a powerful leading article (April 25, 1949), described the attempted ostracism of Spain a futile gesture?

The public, here and abroad, will recognize a policy of good will and fairness toward the people of Spain.

Dr. JOSEPH F. THORNING,
Associate Editor of World Affairs.
WASHINGTON, *January 10, 1950.*

Clear Channel in Radio Field

EXTENSION OF REMARKS
OF
HON. J. FRANK WILSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1950

Mr. WILSON of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

CLEAR CHANNEL IN RADIO FIELD

Come February 1, United States representatives will meet in Habana with Cuban spokesmen in an effort to reach an understanding on Cuba's demands for larger representation in the field of clear-channel broadcasting. If Cuba wins its point, necessarily will be involved impairment of improvement to present rural radio service in this country.

The recent Montreal conference on the same subject adjourned without agreement. Clearly some sort of treaty on the allocation of international radio frequency is a necessity to prevent interference. At the present time there is a high degree of voluntary cooperation. The persistent Cuban demand in the face of a lack of engineering standards and control in that republic is a good indication that the best solution will be treaty terms.

Our own clear-channel broadcasting is considerably perturbed by the situation. Affected principally are rural areas which can only be adequately served by clear-channel stations. Various farmer marketing groups have gone on record as to dependence on the service for price quotations. Consumers are interested in commodity prices and conditions. Weather reports are of extreme value.

Rural America is dead set against any agreement that will permit inroads on radio channels utilized by the United States. Broadcasting interests realize that the best basis for international dickering lies in complete utilization of clear-channel service now open to domestic service.

Few American observers believe that Cuba could possibly utilize now all of the stations which it asks. But Cuba may be using the familiar bargaining figure device as a means to an end.

UNIVERSITY OF MICHIGAN LIBRARIES

The question of international distribution of frequencies has never been given the attention that it deserves. This country, the home of radio-broadcasting development, early set up its own national domestic regulation. But the question of power and frequency beyond the jurisdiction of the Federal Communications Commission will require all of the official skill we have to arbitrate. Certainly everything possible should be done to strengthen our position when we come to the bargaining table.

They Do as They Are Told

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1950

Mr. GWINN. Mr. Speaker, you own a 112-acre farm in Texas. You want to raise 75 acres of cotton in 1950, to meet your expenses. You thought you could decide what you ought to plant, did you? But, your Government at Washington tells you, you may not plant any cotton this year.

If this sounds like an episode from police state Russia, let me quote the full text of the farmer's letter, as I find it in the CONGRESSIONAL RECORD for January 3, 1950, at page 19:

GRAND SALINE, TEX., *December 23, 1949.*
Mr. LINDLEY BECKWORTH,
Member of Congress.

DEAR SIR: I did not get any cotton acreage for the year 1950. I wonder just why. Seems to me like it was an unfair thing. They tell me it was because I did not have cotton in 1946–47–48.

I had truck crops, and seems they did not give me any credit for any war crops. Way things are going to be next year, we may not sell truck stuff, and we have a farm to pay for. I am expecting you to do all you can to help me get an allotment. I think each farm should have a few acres, don't you?

We have 112½ acres and 75 acres in cultivation, and are not allowed any cotton at all.

I appreciate whatever you can do to help me.

ARLIE E. HOLLOWELL.

A poor, helpless, frightened citizen feels the iron hand of remote bureaucracy. Maybe he has mortgage payments to meet. He wants to plant a money crop to meet his interest.

Here is what our Government—not Russia—wrote to a farmer in New York who wanted to raise his wheat allotment to 21 acres from the 13 acres assigned to him by the Government:

SEPTEMBER 1, 1949.

T. E. MILLIMAN,
Churchville, N. Y.

DEAR WHEAT GROWER: You have expressed a desire in writing for a reconsideration of your wheat allotment for 1950.

The county agricultural conservation committee have set aside Tuesday, September 6, from 1 to 5 p. m., to hear each farmer individually state his reasons for wanting his allotment increased.

You will be given 5 minutes to tell why your allotment is not satisfactory.

Stop at our office at 112 Federal Building for your number in line.

Failure to appear at this hearing may be considered a waiver of your right in connection with such appeal.

Sincerely yours,

ARTHUR G. ODELL,
Co-Assistant in Conservation.

Mr. Milliman wrote me saying that—

A farmer is helpless in his desire to escape Government controls and at the same time make his farm break even.

For the farm-support price makes the Government the only market possible for his crop. It is much higher than the open-market price which is greatly depressed by huge surpluses.

Yes, farmers may appeal.

But before their appeals are decided, in some far-away place, before some bureaucratic hearing to which they cannot even afford to travel, the time for planting will be gone.

If they do appeal, they have to go to the desk of a bureaucrat and get the number which tells their place in line. Then they are allowed the whole of 5 minutes to tell their story to the all-powerful judge who decides what they may do on their farms.

Will the Truman police state crush these poor farmers into insolvency in the boom of 1950?

If so, remember that this bankruptcy has been dictated from Washington, in the name of the Socialist state. It has claimed that it can build houses and manage crops and prices better from Washington than the people can manage for themselves.

These letters help us in America to see what every other country knows—that Central Government management must be measured in the end by what it does to individual citizens. To our far-away Federal Government they are the poor, helpless, faceless creatures of the States and the counties.

They have no choice but to do as they are told by our very own all-powerful, omnipotent, morally bankrupt Federal Socialist Government.

This is socialism—American variety, in action—here today.

Conciliation and Consultation, Not Coercion, Answer to FEPC Problem

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1950

Mr. HAYS of Arkansas. Mr. Speaker, a logical and convincing argument for a moderate approach to the problem of discrimination in industry has been voiced by the Christian Science Monitor, one of the Nation's foremost newspapers. In an editorial appearing on January 27, the newspaper discussed proposed FEPC legislation and concluded, "The real reliance is on education and consultation."

Mr. Speaker, I am unalterably opposed in the use of force in advancing a policy of nondiscrimination in industry. However, I do believe that the Federal Government should concern itself with this problem. For that reason, I have introduced H. R. 6668, which would employ education and consultation as proposed in the editorial.

Under leave to extend my remarks, I wish to include the editorial from the Christian Science Monitor:

WHEN RIGHTS CONFLICT

Are opponents of civil-rights legislation helping their cause by desperate maneuvers to stave off a debate and vote in Congress? We doubt it.

By obstructive tricks they not only risk damaging democratic legislative processes; they fail to put the emphasis clearly on sound reasons for their position—reasons which should be well weighed by the Nation.

Some of these reasons are based on rights which conflict with civil rights. One is the right of local self-government, usually expressed as States' rights. The Constitution expressly reserved to the people and the States powers not granted to the Federal Government. Such legal rights are supported by practical political wisdom and real questions of justice.

For instance, the civil-rights proposal now most hotly contested—the FEPC bill—would infringe the right of employers and union members to choose their asscciates. It may be argued that they should be willing to choose their associates without regard to race or religion. But there is a vital difference between should and must. When the State tells the individual how he must choose his associates it is interfering with a peculiarly intimate freedom. To correct one injustice it is committing another.

Quite possibly one injustice is greater than the other, and if the State's attempt at correction promised to be effective, it would be more nearly justified. But the State—happily—is not omnipotent. It cannot by law overnight change social customs and individual concepts of right. There is no question that a Federal FEPC act would be nullified, much as the Stamp Act was nullified before the American Revolution. Without defending nullification—although most Americans rejoice in the Boston Tea Party—we recall that Edmund Burke's statesmanship recognized the folly of indicting a whole people and of trying by coercion to achieve a result which demanded conciliation.

American constitutional practice recognizes that majority opinion is not always a safe basis for legislation. On some questions the intensity of minority opinion is so great as to make compulsion unwise. In the case of FEPC, the fact that divisions of opinion run along sectional lines makes it pertinent to ask if an attempt at coercion will not stir up dangerous bitterness and delay reform.

We can all agree that progress out of discrimination is urgently necessary. This newspaper feels so deeply on the subject that it has supported careful antilynching and anti-poll-tax legislation. Much southern opinion seeks actively to eradicate lynching and would open the polls to literate Negroes. Thus legislation on these subjects has the hope of local support. But FEPC is a different matter. Even in the Northern States which have adopted FEPC laws there have been only the most gingerly attempts at enforcement. The real reliance is on education and consultation.

This method should be extended and tested far more fully before any Federal coercion is attempted. Probably no one who has not experienced the injustices suffered by minorities can know how essential reforms have become. But a sound recipe would be 1 part coercion to 10 parts Christianity—a far greater effort to put ourselves in our brothers' place and love our neighbors as ourselves.

Central Arizona Project Will Cost Over $1,600 Per Acre

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1950

Mr. ENGLE of California. Mr. Speaker, the gentleman from Arizona, my good friend Mr. MURDOCK, has made reference to certain remarks made by Congressman RICH appearing on pages 1130 and 1131 of the RECORD for January 30. The gentleman from Arizona took exception to the figures used by the gentleman from Pennsylvania in describing the cost of the proposed fantastic and unsound central Arizona irrigation project. Mr. Chairman, as proposed by this project water would be pumped a height of 1,000 feet into an aqueduct over 300 miles in length to take irrigation water to lands in central Arizona.

The gentleman from Pennsylvania referred to the fact that the cost would be $1,250,000,000 to $1,500,000,000 and equal $1,600 per acre for land in cultivation having a value of about $200 per acre. The gentleman from Arizona stated that the gentleman from Pennsylvania had his decimal point in the wrong place, inferring I presume that the cost would be nearer $160 per acre. Mr. Speaker, I rise in defense of the gentleman from Pennsylvania—he was too conservative in those figures he gave.

Here are the facts taken from the record of the hearings on the proposed bill, H. R. 934, which would authorize the proposed project.

The Bureau of Reclamation in its report and in the testimony of its engineers stated that if the project was not constructed 150,000 acres of land now in cultivation would go out of production and some 73,000 acres which had been in production at some time in the past but was not cultivated now would have to remain out of production. No witness for either the Bureau or Arizona could identify the 73,000 acres or tell where it was located—it is our belief it is new land which would be developed. Incidentally, the Bureau's figures show that about one-half of the water made available for delivery to the land would be required by this 73,000 acres. However, let us accept these figures and say that if the central Arizona project is not constructed, 225,000 acres of land will be out of production; and remember, Mr. Chairman, that is the end result which this irrigation project is supposed to avoid.

Now as to cost—and I again quote from the record—let us consider only the construction costs chargeable to irrigation—exclude power, flood control, recreation, and all other construction costs from the picture and here is what we find.

Without the 80-mile tunnel—which is included in the bill—the total irrigation construction cost is estimated at $399,424,000. Apply this against the 225,000 acres and you find it equals a cost of slightly more than $1,775 per acre—the gentleman from Pennsylvania stated the figure as $1,600 per acre.

Including the 80-mile tunnel and related features, as provided for in the bill, the total irrigation construction cost would be increased by another $550,000,000 making it $949,424,000 for the 225,000 acres this would amount to a cost of about $4,219. Is it any wonder, Mr. Chairman, that we call this project fantastic and unsound?

Now, Mr. Speaker, I would like to make reference to the statement by the gentleman from Tennessee, who replied in part to the gentleman from Pennsylvania, which appears on page 1131 of the RECORD. My colleague from Tennessee stated that power to be produced by this project will in time repay the total cost of the project to the Government. He did not tell you that it is proposed to write off as nonreimbursable around $80,000,000 of the cost. He did not tell you that the Government would never receive a cent of interest on this $1,250,000,000 used to build the project. As a matter of fact, after the power has repaid its own cost to the Government, without interest, most of what is left would be required to pay the annual irrigation, operation, and maintenance expenses.

The records show that the total charges the irrigators are able to pay for the water they receive, will equal only about 60 percent of the cost of the power used to pump the water the 1,000 feet of lift into the aqueduct. In other words, sale of commercial power will have to pay the entire construction cost of the pumping plants, aqueduct, and distribution and drainage systems as well as the operation and maintenance costs of such.

End War Tax Day

EXTENSION OF REMARKS
OF
HON. R. WALTER RIEHLMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1950

Mr. RIEHLMAN. Mr. Speaker, I would like to inform my esteemed colleagues in the House that Thursday, February 2, is a significant day. Thursday has been designated End War Tax Day.

On that day, businessmen from all parts of our country will be sending telegrams of protest to the House Ways and Means Committee and ask for immediate action to report on a bill ending excise taxes.

The reason is simple. The American people were given to understand by high ranking Government officials that excise taxes would be reduced. As a result the people stopping buying dozens and dozens of commodities bearing heavy, unfair, unrealistic, and unwarranted wartime imposed excise taxes.

As a result business has suffered from an administration-inspired buyer's strike which is bankrupting some businesses, severely damaging many others. The buyer's strike is causing widespread unemployment, reduction of production and pay rolls, and threatens to continue until we act to end the war taxes—not just threaten to end them.

Businessmen everywhere are being urged to wire the Ways and Means Committee on End War Tax Day to ask for action, and to point out to our economically naive administration that the end of war taxes does not call for new taxes on business. Such a step would continue to penalize consumers who pay all the taxes anyway.

The end of war taxes will boost consumption, increase production, aid employment, and return to the Government in increased corporation and personal income taxes more money than is now realized by the war taxes.

The day businessmen will tell that to Congress is this Thursday—End War Tax Day.

A Reporter Looks at Whittaker Chambers

EXTENSION OF REMARKS
OF
HON. RICHARD M. NIXON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1950

Mr. NIXON. Mr. Speaker, one of the most able of the many reporters who covered the trial of Alger Hiss for perjury was Victor Lasky of the New York World-Telegram and the Sun.

Under leave to extend my remarks I include an article by him which appeared on January 26 and which sets forth his observations on the conduct of Mr. Chambers during the course of the trial. The article follows:

Ever since Whittaker Chambers told Congress of Communist penetrations in high places he has been the target of a slander campaign which employed every smear and lie technique known to the Communists.

For 18 months Mr. Chambers was called a madman, a pathological liar, an unstable character, a stool pigeon. All because he told the truth. A Federal court jury decided Saturday that he had. That was that he had headed a Red spy network in Washington in which Alger Hiss was a productive cohort.

The story has made the rounds that Mr. Chambers was consumed by hate and a desire for vengeance in naming Alger Hiss. Why he should have felt this way was never explained by Mr. Hiss. But the facts show otherwise.

They show that Mr. Chambers first told his story in 1939 to the President's security officer. Mr. Chambers gave Adolf A. Berle, Jr., the names of Hiss and numerous other underground Communists. He urged Mr. Berle to ease them out of sensitive Government posts quietly in order to protect the Nation.

Apparently nothing was done. Alger Hiss rose to new heights in the State Department—traveling with Mr. Roosevelt to Yalta and directing the formation of the United Nations later in San Francisco.

Mr. Chambers also rose in the community. He thought he had done his duty in warning Mr. Berle. It was while he was earning $30,000 a year as senior editor of Time that he was subpenaed by the House Committee on Un-American Activities.

UNIVERSITY OF MICHIGAN LIBRARIES

Hiss, caught in a web of lies before the House group, came up with the theory that his accuser was crazy. But he admitted having no knowledge. Nevetheless the smear, fed by the Communist propaganda machine, spread through the land.

As Hiss was soon forced to admit that he had known his accuser, the anti-Chambers campaign grew more vicious. Sex vilification was employed.

Whittaker Chambers and his courageous wife said nothing to strike back. They could only await the outcome of the Hiss trial. And a jury of eight women and four men finally vindicated him. They decided on the basis of a mountain of evidence that Mr. Chambers was telling the truth and that it was Hiss who had lived a fantastic lie.

And what did Mr. Chambers say of the verdict? "It would be inhuman to gloat over another man's misfortunes."

Here is a statement of dignity and kindliness which should move even the emotions of a defense psychiatrist.

The Patriotic Contribution of Our Jewish War Veterans

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1950

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I should like to include the address I recently delivered before a meeting of the members of Post No. 32, Jewish War Veterans of the United States. The assembly took place on January 22, 1950, at Worcester, Mass., and the proceedings were broadcast over Station WAAB, in Worcester. The address follows:

Comrade Commander, officers and members of Worcester Post, No. 32, Jewish War Veterans of the United States, I was very happy to receive the cordial invitation to attend the installation exercises of this post tonight, and was very glad that my congressional schedule was such as to permit me to come here on this occasion, to be with you, the members of this great organization; an organization that was founded 53 years ago.

I think very few people know that it is the oldest organized group of American war veterans existing today, with the possible exception of the Grand Army of the Republic.

The founders of this great organization desires to insure that their descendants would carry on the principles that have made our country the freest in the world.

Most of us are descendants from immigrants, the sons and daughters of men and women who were forced to leave the countries of Europe because of persecutions, because of their race, color, or religious beliefs. Yes; your fathers and mothers fled from lands ruled by Czars and Kaisers, to this country where they could wear a badge of service, but never one of servitude.

That they were ever grateful for this haven where opportunities were so numerous, can never be questioned, whether in peace or war.

In all the wars in which our country has been engaged, the number of Jewish men and women of our armed forces has been larger than the ratio of the American Jewish people to the total population of our country.

They fought to preserve our freedoms and became war casualties in order that no American, whatever his religion, whatever his race, would ever become a victim of tyrannical dictatorship.

They met the first responsibility of good citizenship by defending our country and her philosophy of life in time of war.

You, and I, and all veterans seek for our country, in peace, nothing more than we sought for her in war. We want her to endure as the freest nation in the world. We want her major export always to be the ideals of human liberty and equal opportunity, upon which she has risen to become the great hope of mankind in this hour of world confusion.

You have demonstrated heroic patriotism as members of the armed forces of the United States. I know, and the people of this country know, that the Jewish War Veterans, as citizens, will continue to accept their full share of our cooperative responsibility in preserving America as the land of the free and the light of the world.

FEPC Rally

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1950

Mr. MULTER. Mr. Speaker, the Emergency Civil Rights Mobilization, which was held recently in Washington, was conducted in good American spirit and in orderly fashion. Those who organized this rally in Washington should be commended for this accomplishment, no less than for rejecting the support of the Communists and fellow-travelers who made futile efforts to join in on the civil rights mobilization effort and to capitalize on it for their purposes.

The story about this rally in Washington written by Henry Lee Moon appeared in the New Republic, on January 30, 1950, as follows:

FEPC RALLY IN WASHINGTON

(By Henry Lee Moon)

Sponsored by 60 national organizations, the emergency civil-rights mobilization brought to Washington more than 4,000 delegates from 33 States for a 3-day conference and mass lobby, January 15–17. Their presence in Washington dramatized the mounting pressure among rank-and-file members of liberal organizations throughout America for early enactment of the civil-rights program to which both Republicans and Democrats pledged support in their party platforms of 1948.

Observers agreed that the gathering of so large and varied a group was significant in that it was composed of non-Communist, and in many instances strongly anti-Communist, supporters of civil rights. The mobilization, initiated by the National Association for the Advancement of Colored People, sought primarily the enactment of the fair-employment-practices bill in this session of Congress. Leaders of the movement believed that this objective would be impaired by the participation of Communist elements.

Shortly after the announcement of the mobilization, William L. Patterson, national executive secretary of the Civil Rights Congress, wrote a letter to Roy Wilkins, acting NAACP secretary and chairman of the mobilization, offering the support and cooperation of the CRC and suggesting that Ben Davis, Paul Robeson, Henry Wallace, and Vito Marcantonio be invited to address the Washington conference.

Citing past experience with Communist-dominated organizations and challenging the claim of Communists to be supporters of civil rights, Wilkins rejected Patterson's offer. "We want none of that unity today," he said. "We do not believe that it will contribute to the success of the campaign. On the contrary, we believe it will be a distinct handicap."

Nevertheless, units of the American Labor Party, the Progressive Party, the Young Progressives of America, the suspended CIO unions and other left-wing groups persisted in trying to crash the mobilization. To avert their infiltration, rigid accreditation requirements were set up and a credentials committee appointed under the chairmanship of Willard S. Townsend, veteran foe of the Communists, president of the United Transport Service Employees, CIO, and a vice president of the NAACP. Delegates who failed to present proper credentials on the stationery of an accredited organization and signed by a responsible officer thereof were denied registration. Known Communists were summarily turned back by the committee.

Among the delegates there was unanimity in giving priority to FEPC and other civil-rights measures. Labor delegates from AFL and CIO unions subordinated their demands for repeal of the Taft-Hartley Act. Delegates from the American Jewish Committee, the American Jewish Congress, and the Anti-Defamation League of B'nai B'rith sacrificed the opportunity to press for enactment of a nondiscriminatory DP bill.

More than half of the delegates were from local branches of the NAACP. While the majority were Negro, from a quarter to a third were white men, women, and youths from labor, church, Jewish, Catholic, fraternal, veteran, youth, and civic organizations. The presence at the conference of both Negro and white delegates from the Southern States belied the contention that the people of that region are solidly opposed to civil-rights legislation. Among the 291 delegates from the South was an all-white group of 35 from the University of North Carolina. There were also delegations from such institutions as the University of Chicago, Howard, Brooklyn College, and Sarah Lawrence.

For the most part, the delegates were courteously received by their Congressmen. However, there is the story of the 8-person delegation from Texas which visited the offices of 18 Texas Representatives and was received by only 2. The delegates, however, came armed. In each of the 18 offices they left a petition signed by more than 5,000 registered Negro voters in the Representative's district, expressing their desire for the enactment of civil-rights legislation and indicating that they would vote in the Democratic primaries only for candidates who supported the party's platform.

While making it clear that they intended to meet the congressional foes of civil rights at the polls, the delegates indulged in no threats, denunciations, or wrangling with Congressmen. They were serious, orderly, resolute. And on Capitol Hill they made a favorable impression.

The tone of the conference was set by Wilkins when he said in the keynote address at the Sunday night meeting:

"We come today as representatives of 60 national organizations who are interested in American legislation, for the rights of American citizens, in the interest of America and of no other state. We are not here for malicious heckling and embarrassment except as the citation of your shameless congressional record embarrasses. We are here to demand our rights. We are here to protest and to reason with our elected Representatives. We will be heard here and when we return to our homes."

The delegates sought commitments from Members of the House not only to vote for FEPC but also to vote against the dangerous backward step recently proposed by the

House Rules Committee. They buttonholed Senators in an effort to line up votes for cloture as well as for the bills. From President Truman they received assurance that the administration would seek a vote on civil-rights measures if it took all summer.

Psychiatry on Trial

EXTENSION OF REMARKS
OF
HON. RICHARD M. NIXON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1950

Mr. NIXON. Mr. Speaker, the appearance of two psychiatrists as defense witnesses at the recent trial of Alger Hiss for perjury has created a great deal of controversy in medical and legal circles.

Under leave to extend my remarks, I am including an article which appeared in the New Leader on January 14 by Ellen Johns and one which appeared in the New York World-Telegram and the Sun on January 24 by Victor Lasky.

[From the New Leader of January 14, 1950]

PSYCHIATRY SET BACK 50 YEARS BY TESTIMONY AT HISS TRIAL

(By Ellen Johns)

Psychiatric history was made in a Federal courtroom last week when Dr. Carl A. L. Binger, a practicing psychiatrist and editor of the American Journal of Psychosomatic Medicine, delivered his own profession a blow from which it may well take 50 years to recover.

Testifying in defense of Alger Hiss at his second perjury trial in an effort to discredit the testimony of Whittaker Chambers, the chief Government witness, Dr. Binger proposed to demonstrate a psychopathic motivation both for the appearance of Whittaker Chambers against Hiss and for the body of his evidence. In response to a droning 69-minute reading of a hypothetical question by stubby defense attorney Claude B. Cross, Dr. Binger delivered his considered opinion that Mr. Chambers is a psychopathic personality.

In a rich and rolling baritone which never hesitated and once or twice could not be stopped, he proceeded to demonstrate his enjoyment of the role of expert witness, as well as his shocking contempt for the responsibilities the position entails. He showed repeatedly a definite bias against the subject he was analyzing, in one instance drawing a severe reprimand from correct and courtly Judge Goddard, who reminded him, "Doctor, you are here as a witness and not as an advocate."

As Binger continued the earlier rigid tension of the courtroom was punctuated from time to time by whispered comments which soon deteriorated into laughter, quiet but unmistakable. By the absurdities he repeatedly accepted as a basis for his evidence, by his feeble documentation both of the judgment he delivered and the justification for delivering it at all, he handed skeptics and enemies of psychiatry—the doubters, the haters, and those who fear its implications—a better case against his fledgling science than they could ever assemble by themselves.

Assuming the truth of the defense "question"—a complex fabric of truth, hearsay, and downright falsity, to no part of which Binger offered any objection or qualification—the good doctor announced his diagnosis of "psychopathic personality." This "disease," he said, has been well known and accepted for all of 15 years. He failed to mention that among psyhciatrists in general, there is serious doubt of the existence of any such "disease," and that it is a catch-all term which is constantly being redefined and reclassified. Yet he listed among the symptoms "omission of significant truth." He stated categorically, in elaborating on the symptoms that "anything is consistent with the diagnosis," and admitted that there are no statistics on its incidence.

For each of 5 of the 12 symptoms he claimed to find, he could demonstrate only one example of "characteristic" behavior in the 23 typed pages of assumptions which had guided his diagnosis. For 4 other of the 12 symptoms, the "pathological behavior" was something Mr. Chambers had described himself as doing under Communist Party orders or in his efforts to protect himself from the party's wrath after his break. Other bases for Dr. Binger's serious consideration were Chamber's admission that he had lied to the dean at college; that he had written an anti-religious playlet only 2 years after having been caught reading the Bible; that he failed to recall one pen-name he had used (although he did recall a long series of party aliases); and that a character, Sebastian, in Class Reunion, a novel Chambers translated from the German of Franz Werfel, had "certain abnormalities" and "no conscience, like Chambers."

Dr. Binger found it a pathological symptom that on the witness stand Chambers had admitted to perjury about the famous documents, "without apparent contrition, remorse, or shame." He implied thereby that psychiatrists do not expect a mature adult to be in control of his emotions in public. He took no consideration of Mr. Chambers' explanation that he had committed the perjuries deliberately and consciously in order to protect Alger Hiss.

Dr. Binger found Mr. Chambers extraordinarily indifferent to the feelings of others, in spite of public statements such as his reply to reporters' questions after Hiss was indicted: "I would be inhuman if I could take any pleasure in Mr. Hiss' personal troubles."

Not long after citing as a pathological symptom one instance of Chambers' inability to remember what day in April 1931 he had been married, Dr. Binger admitted to a 5-year error in his own recollection of a date. He called it pathological behavior that Mr. Chambers had often looked at the ceiling during his 5 days on the witness stand in the first trial (Judge Goddard was looking at the ceiling at this point in Binger's testimony) and undertook to add mind-reading to his own accomplishments. "He looked at the ceiling as if trying to recall what he had previously said," Binger explained.

In offering his qualifications as expert, Dr. Binger had described his medical career: medicine, epidemiology, researcher in physiology, and finally psychiatry. But he labeled Chambers' different jobs in and out of the Communist Party as clinical evidence of instability. This despite the fact that Mr. Chambers is enjoying the nineteenth year of his marriage and that he was an editor for Time for 10 years. Such trifles obviously, were not material to the analysis.

Dr. Binger found it very strange that Mr. Chambers recalled so commonplace an occurrence as a policeman directing traffic with an Easter lily in his hand. He declared that Chambers joined the Communist underground as a symbolic burial because of a sense of guilt over his brother's suicide—a tragedy which had taken place some 8 years previously. He stated that Chambers' reported claim to know more communism than Stalin and his remark that lying takes many forms, there are liars all about us were proof of paranoid thinking. Malcolm Cowley's unsupported assertion that Chambers accused Francis B. Sayre of heading an underground cell was proof that Chambers was given to pathological accusation. He declared flatly that Chambers was self-centered, and all but stated that when Chambers wrote an article subtitled "The Devil," he was necessarily referring to himself.

Dr. Binger thought it utterly outside the realm of rational explanation that when Chambers withheld the documents from the underground as hostage against possible kidnaping of himself or his family, he should have given them to his lawyer-nephew Nathan Levine rather than place them in a safety box to which he would have held the key.

Not content to stay within his own province of psychiatry, Dr. Binger offered to qualify as a literary expert as well by his judgments on some of Chambers' writings. Giving a resume of a story called The Dam Fool, Dr. Binger was outraged that although he tells the story of a mollycoddle he acts as though he were a hero. Significantly holding back part of the truth. Dr. Binger did not mention that Chambers had discovered and then translated Bambi, a classic of children's literature. Instead, he declared that "all of Chambers' writings and translations emphasized the witness' abnormal characteristics."

One spectator remarked at the end of Dr. Binger's testimony, "That doctor should have his head examined." Since no reputable psychiatrist will attempt analysis without long and repeated personal interviews and the cooperation of the patient, nor attempt clinical assessment of evidence out of context, it is unlikely that we will have a psychiatric explanation of Dr. Binger's motives in appearing as a voluntary witness in the Hiss case.

But the grudging respect that the psychiatric profession has won through the high seriousness of purpose and careful qualification of a majority of its members is worth fighting for. Perhaps its guardians will not be too dismayed by Dr. Binger's body blow to launch a counterattack.

[From the New York World-Telegram and the Sun of January 24, 1950]

HISS VERDICT STIRS CONTROVERSY: JURY VS. PSYCHIATRISTS

(By Victor Lasky)

The appearance of two mental specialists as defense witnesses at the Alger Hiss perjury trial has set off a storm of debate in legal and psychiatric circles.

Both Drs. Carl A. L. Binger and Henry Alexander Murray testified that Whittaker Chambers was a "pathological liar." A jury, after examining the evidence, decided that the former $30,000-a-year magazine editor was nothing of the sort.

NO PRECEDENT

But even before the jury decided it was Hiss who was the liar, the implications of such testimony had aroused considerable discussion. This newspaper learned of the controversy during the course of the trial. However, publication was withheld lest it affect the trial's outcome.

Vigorous opposition to the introduction of psychiatric testimony was expressed by Assistant United States Attorney Thomas F. Murphy. The prosecutor said it was without precedent in Federal jurisprudence and that there was nothing in the record to indicate Mr. Chambers suffered from mental illness.

BINGER'S BASIS

But Judge Goddard, one of the Nation's most highly regarded jurists, allowed it as the outcome of the trial was largely dependent upon Mr. Chambers' credibility.

UNIVERSITY OF MICHIGAN LIBRARIES

Dr. Binger, who was certified a psychiatrist 3 years ago, testified that in his opinion Mr. Chambers was a "psychopathic personality."

Dr. Binger based his opinion on a hypothetical question detailing the worst aspects of Mr. Chambers' life, both true and mythical, a selected group of his writings and translations, and on observing Mr. Chambers on the witness stand.

ADVICE TO JURY

Dr. Murray, of Harvard, who never saw Mr. Chambers, agreed with Dr. Binger's evaluation.

In charging the jury, Judge Goddard declared that their opinions were purely advisory and could be rejected if the jurors found the hypothetical question to be incomplete or incorrect or if they believed their reasons to be unsound.

"You yourselves," Judge Goddard admonished, "have seen and heard Mr. Chambers while he was on the witness stand for several days and you have heard all the evidence. It is for you to say how much weight, if any, you will give to the (psychiatric) testimony."

CALLED DANGEROUS

It was learned that the jury did not even consider Dr. Binger's and Dr. Murray's testimony.

However, Judge Goddard's ruling was termed a "dangerous precedent" by at least two Philadelphia judges, both noted authorities on evidence. Judge Louis E. Levinthal, who was adviser on Jewish affairs in the American military government in Germany, declared:

"It could be a dangerous precedent that a litigant who is rich and can afford to employ a psychiatrist can always get some expert to attack the credibility of a prosecuting witness on the ground that he is a psychopathic personality."

JUDGE BOK'S OPINION

Judge Curtis Bok, presiding jurist in Philadelphia's Court of Common Pleas, declared:

"If the defense in every case could do the same thing, every prosecuting witness would be subject to such analyses. Psychiatry is still very young. For the present, I think, the credibility of witnesses can be left to the jury."

The appearance of Dr. Binger and Dr. Murray led several prominent psychiatrists to volunteer their services to Mr. Murphy. Mr. Murphy admits that much of the material he used during cross-examination came from them.

LIMITED VALUE

One psychiatrist, who said he had no direct interest in the Hiss-Chambers controversy, told this newspaper:

"Whether a man is a psychopathic personality can only be determined after weeks of intensive interviewing, and even then we can't be sure. It can't be done from carefully selected passages of freely admitted testimony, poetry, and translations."

Not since the Harry K. Thaw case in 1906 has psychiatry suffered such enormous damage in public opinion, a leading official of the American Psychiatric Association declared.

SUBSTITUTE FOR COURTS

At least one lawyer declared that if psychiatric opinions were accepted as absolutely accurate there would be no need for judges, juries, or lawyers.

"If we ever decide that a psychiatrist has some special knowledge or power enabling him unerringly to separate truth from falsehood," the lawyer said, "there will be no occasion for trials as we now know them.

"The process would be similar to that when an African medicine man performs his rites. The only difference would be that our process would be science, whereas the bushmen's rites are nothing more than superstition."

Uncle Sam's Untapped Millions

EXTENSION OF REMARKS

OF

HON. CHAUNCEY W. REED

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1950

Mr. REED of Illinois. Mr. Speaker, today the most vexatious, incessant, and pressing problem that confronts each and every Member of Congress is our present confiscatory, oppressive, and merciless taxation. In spite of the enormous revenues collected by our Government, it continues to spend more than it accumulates. This is due to extravagance, refusal of the present administration to economize, and an alarming tendency on the part of many huge business enterprises to resort to subterfuge in order to evade their share of the cost of government. This later phase of our fiscal problem is admirably discussed and expounded in an illuminating article entitled "Uncle Sam's Untapped Millions," written by our distinguished colleague the gentleman from Illinois [Mr. MASON], which appears in the February issue of the American magazine. Believing that this article will be of intense interest to all Members of Congress and especially to those of us in the House of Representatives where all legislation pertaining to revenue must originate, I include it herein, in its entirety, as an extension of my remarks:

UNCLE SAM'S UNTAPPED MILLIONS—WHILE OUR DEFICIT-RIDDEN GOVERNMENT SEARCHES FRANTICALLY FOR NEW SOURCES OF REVENUE, A BILLION-DOLLAR JACKPOT OF UNTAXED PROFITS LIES UNTOUCHED

(By NOAH M. MASON, United States Representative from Illinois)

Administration leaders today are frantically searching for new ways to raise revenue. I maintain we can raise at least $1,000,000,000 in new revenue simply by taxing the untaxed.

Today there is a great rush by United States businesses to hide behind tax-exempt fronts when tax time comes around—as it is coming right now. If we plug the loopholes in our present tax laws that permit such escapes, we can raise the $1,000,000,000 without adding a single cent to the bill of the regular taxpayers.

The fantastic, jet-propelled growth of these businesses now hiding behind tax-exempt fronts is a serious threat to America's economic health. By escaping the normal 38-percent tax on their business profits the tax avoiders not only legally outwit Uncle Sam, but they achieve an enormous advantage over competitors. They can, and are, forcing thousands of conscientious, tax-paying ousinessmen to the wall.

More serious, they are shrinking up the taxable pool of United States wealth. Last year alone, several thousand companies, with vast business profits, slipped beyond reach of the tax collector by joining the ranks of the tax exempt. Because of their escape you and I must shoulder an extra burden. And already, as ex-President Herbert Hoover has pointed out, the "average working citizen" works 61 days a year just to pay his taxes.

Our laws as now written exempt charitable, educational, religious organizations; cooperatives; labor unions; and many others. When these exemptions were granted, many years ago, our lawmakers never dreamed they would be used to shield vast corporate, profit-making enterprises. But that is precisely what has happened.

By various and often devious means business organizations are making deals with tax-exempt institutions so that both profit by having the institution take over title of the company. In other cases, the tax-exempt institution simply goes into business itself on a big scale, because our present tax laws are rigged so that the prospects of making a big profit are irresistible.

These arrangements are depriving the United States Treasury of badly needed revenue, since billions in business profits are now going untaxed. I am not criticizing the organizations that make these profits by taking advantage of the laws. Nobody wants to pay more taxes than the law requires. It is the law that needs changing.

A spectacular example of the way our tax laws permit business profits to go untaxed is illustrated by the California & Hawaii Sugar Refining Co. This gigantic company operates the biggest sugar refinery in the world, at Crockett, Calif. The plant stretches for a half-mile along the water front.

The C. & H. is dominated by businessmen who also operate plantations, department stores, etc., on Hawaii. Though C. & H. makes millions of dollars in profits, it hasn't paid a Federal income tax since 1927. In that year it stopped being a regular tax-paying corporation and, its tycoons announced, had become a farmer's cooperative, simply by changing somewhat its corporate structure. (It remained, however, a corporation, with many of the same stockholders.)

Two years ago a House investigating committee pried into this change-of-face. The committee asked William B. Tyler, general counsel of C. & H., why his corporation became a cooperative. Mr. Tyler made this frank reply: "To save taxes."

In my Illinois district there is a little macaroni factory. Its taxpaying owner complained bitterly to me that his business was being hurt by unfair competition from an enormous nontaxpaying macaroni manufacturer in New Jersey. I looked into this matter.

The nontaxpaying Goliath in New Jersey is the C. F. Mueller Co., one of America's largest producers of macaroni, noodles, and spaghetti. The Mueller company used to pay the United States Treasury about $300,000 in taxes each year, until it sold out to a nonprofit foundation acting in behalf of New York University. By taking itself under the protective wing of this NYU-affiliated foundation, Mueller declared it would pay no more taxes, even though it was operating as before. And by not paying taxes it has a tremendous advantage over its taxpaying competitors in the macaroni field.

New York University, I discovered, has blossomed out as quite a protector of tax-escaping factories. Its affiliated foundations now own and operate, in addition to the macaroni factory, a $3,000,000 piston ring factory in Missouri, a $3,300,000 pottery factory, and a vast $35,000,000 leather goods company.

These four companies, protected by NYU, earn many millions of dollars in profits each year. A spokesman for the university has admitted the companies would have to pay $1,500,000 in United States taxes each year if they had not come under the university's protective wing.

The great mushrooming growth of companies doing business behind tax-exempt fronts has occurred almost entirely in the past decade. You don't have to look far to find the explanation. It lies in the great increase in the Federal tax on business profits. In 1916, when the Federal tax was first

levied, the tax was only 1 percent. Today the Federal Government takes up to 38 percent of an ordinary company's business profits in taxes.

Taxes have become a major cost of doing business in America. If you can avoid the 38-percent levy you have an enormous advantage over your competitor.

Hundreds of lawyers and corporate manipulators today are busy trying to figure out ways to convert their companies into tax-exempt operations. Recently a Broadway columnist revealed that "Hollywood moguls are working out a plan to set up film companies as cooperatives to escape many taxes." How this will work is not yet clear.

A few months ago the Wall Street Journal carried an advertisement for a 2,000-acre citrus grove in Florida for $1,700,000. The ad pointed out, suggestively, that the huge orange grove would make a mighty fine investment for some tax-free institution.

I have just received a folder issued by a firm of so-called industrial financiers in Chicago. It is a legal but brazen document pointing out techniques by which private companies and "nonprofit" charitable foundations can get together to their mutual advantage. The beauty of the set-up, it points out, is "the tax-exempt status of the foundation."

The strategy these promoters outline is the same "sale-and-lease-back" method now sweeping America. Dozens of foundations and universities are using this legal strategy. The tax-free institution buys the land and buildings of a company. Being tax-free, the institution can afford to pay a very generous price. It then leases the property right back to the old owner on a long-term basis. He's happy because he now has an abundance of loose cash available for expanding his business. The foundation is happy because it has a good, tax-free, real-estate investment. Everybody wins but the Treasury—and the taxpayer.

Changing your company into a cooperative is another popular strategy to beat the 38-percent tax. Since the beginning of World War II, when regular business profits were taxed up to 90 percent, co-ops have had a heyday. They plowed their tax-free profits right back into the business and grew and grew and grew. Today they are still growing, and this year are doing an estimated $17,000,000,000 business. They manufacture cheese and cosmetics, dig oil wells, run supermarkets and funeral parlors, etc.

How enormous the tax-free advantage can be is painfully known to independent oil jobbers in the Midwest. They have had a desperate time surviving in the face of a great upsurge of tax-free co-ops, which are buying up hundreds of millions of dollars' worth of oil wells, pipe lines, and refineries. (One single co-op owns 805 wells.) They are also selling oil around the world.

For several years the independent jobbers in Iowa begged Congress to pass a law eliminating this tax inequality. Finally, last summer, their powers of resistance were near the collapsing point. Eight hundred of these independents sadly decided to form a tax-free co-op of their own as their only salvation. They began taking the necessary steps.

Since I have a bill before Congress to bring tax equality I went out to speak to these oil men. In essence I said: "I put it up to you—do you want to join the tax exempts, and thus join the opposition to my bill, which you have been pleading for, or do you want to try to hold off a few more months to see if the coming Congress will correct this inequality?"

After long debate they agreed to hold off a few more months. I shall never dare to face those hard-pressed men again if this Congress fails to plug the loopholes in our tax laws which permit such a situation to exist.

There are many ways under our present laws that a business can operate legally for profit while paying little or no Federal tax on their profits. Here I would like to describe the five devices most widely used:

The charity trust device. There are many conscientious trusts and foundations dedicated to public service. But thousands have sprung up in recent years that are little more than pawns in the game of outsmarting the tax collector. Recently a tax-free foundation bought up a skyscraper office building in Houston, Tex., for about $2,000,000. It then leased the building out to a large cotton firm. Since never again, under our present laws, will an income tax be paid on that building's rental profits, the cotton firm obviously gets the advantage of unusually low rental rates.

The Russell Sage Foundation, a conscientious organization, has made a study of some of the newscomers to the nonprofit trust and foundation field. Its report stated: "A disturbing number of such foundations * * * appear to have no headquarters other than the office of a law firm, to be modest to the point of complete silence about any program for social or public welfare, and indeed to be making no present contributions of any sort from their accumulated and accumulating wealth."

The fabulous 95,000-acre Montana wheat ranch of Tom Campbell, America's largest wheat farmer, has been sold to a charitable trust in Omaha for $2,000,000. Its earnings, which have been subject to a 38-percent tax, will now go tax-free. Mr. Campbell will continue to manage his farms at a very handsome income.

The purchase was engineered by an enterprising young Omaha lawyer named Gordon Diesing. He bought the ranch on behalf of the United States Wheat Corp., which Diesing set up last April exclusively for charitable purposes and thus tax-free. This corporation's profits, after paying Diesing's salary, expenses, etc., are to go to another charitable corporation, the Sacred Heart Foundation fund, which is capitalized at $10.

Who do you think runs this second outfit? Mr. Diesing is listed as president, secretary, treasurer, chairman of the trustees, general counsel, and resident agent. In effect, his second corporation, capitalized at $10, bought control of a $2,000,000 ranch. Evidently not much money changed hands.

The Campbell ranch, I found, is not the only purchase Mr. Diesing has made. He also has bought for $4,800,000 the 55,000 acres of cotton land in San Joaquin Valley run by California's cotton king, Russell Giffen. For this he set up another charitable, nonprofit corporation, which he heads. Giffen remains as manager.

One of the most significant aspects of these two deals is that the two ranches in the past year have drawn almost $5,000,000 in United States Government farm loans. Presumably they will continue to draw loans. Thus, in effect, the United States Government will be guaranteeing that they make a profit, while not being able to tax those profits.

Then there is Royal Little, president of Textron Corp., the $60,000,000 textile firm. Mr. Little and his aides set up six tax-exempt charitable trusts which were given title to much of the Textron empire. A Senate subcommittee, under Senator TOBEY of New Hampshire, which investigated this set-up has reported:

"The maze of negotiations, investments, loans, and leases between these trusts and Textron present a fantastic picture of fiscal manipulation. * * * Trustees (of the trusts) were at the beck and call of Textron in shuffling mill properties from one to the other. * * * Large manufacturing companies have been purchased (by the trusts). * * * Many millions of dollars have been received by the trusts and but an infinitesimal portion thereof has been paid to the beneficiaries of the trusts."

The committee report concluded: "It is clear that [Textron] has made wide use of so-called charitable trusts as a means of providing risk capital to itself. * * * These trusts have never paid a cent of income tax. Thus, by this system of using charitable trusts, Textron has gained an unfair competitive advantage over the orthodox textile manufacturers, and the burden of taxation has been thrown more heavily upon the shoulders of all other taxpayers."

Mr. Little, when questioned, acknowledged frankly that abuses had existed, and agreed that legislation is needed to remedy the situation.

The educational device: Our founding fathers decided, properly, that the facilities for education should not be burdened with taxes. But they had no notion that universities would go into business in direct competition with taxpaying companies. That is what several dozen schools have been doing in the past 5 years, largely because their tax-exempt status gives them such an advantage.

We find schools in some odd businesses. The University of Michigan now owns Willow Run Airport. * * * Morningside College, of Sioux City, Iowa, owns a streetcar and bus franchise. * * * Gonzaga College, of Spokane, Wash., owns a radio station in that town. * * * Wittenberg College, of Springfield, Ohio, has purchased a $200,000 supermarket. * * * Goucher College, in Baltimore, owns half interest in the shopping district of Towson, Md. * * * Oberlin College, in Oberlin, Ohio, owns some 5-and-10-cent stores. * * * Girard College, Philadelphia, Pa., through a trustee foundation, operates coal mines. * * * Washington University, in St. Louis, has money invested in 51 business buildings in St. Louis, a railroad freight station, and a switching yard.

In a sense, the University of Louisville is going into the horse-racing business. A tax-free foundation—which will have the university as one of its beneficiaries—has bought the famous Churchill Downs track. The profits of the track will no longer be taxable.

The biggest business deals now being put across by colleges (and their friends) are real-estate purchases employing the sale-and-lease-back gimmick.

Very recently tax-free Yale University (through a subsidiary called Connecticut Boola, Inc.) bought a brand-new department store building which the famed R. H. Macy & Co. had built for itself in San Francisco. The price was $4,500,000. Then Yale turned around and leased the now tax-free building back to Macy's for 31 years at an average annual rental of $240,000. Both sides win. The United States Treasury, of course, loses.

Likewise, the University of Pennsylvania has bought and leased back the huge Philadelphia department store, Lit Bros. The sale-and-lease-back technique was apparently first pioneered for schools by Union College, of Schenectady, N. Y., in 1945, when it paid $16,150,000 for the department-store chain of Allied Stores, Inc.

All of these operations, of course, are legal, but as a newspaper in my district, the Dekalb Chronicle, commented: "It seems somehow to be a blot on the educational system." This newspaper felt that our schools, along with our churches, have a responsibility for setting a high standard of ethics for our Nation.

The religious device. Like colleges, our churches have a tax-free status. Here, too, abuses of the privileged status are appearing, though not yet as flagrantly as with colleges.

Father Divine has purchased the third largest hotel in Newark, N. J., and given it a tax-exempt status. A company publishing a religious magazine in Kansas City is tax-exempt.

UNIVERSITY OF MICHIGAN LIBRARIES

Some cities are finding this problem of increasing church property quite serious. Churches are taking millions of dollars' worth of property off the tax rolls. In Milwaukee it is estimated the city is losing $2,500,000 a year in revenue because churches and fraternal organizations have become such large property owners.

More and more church leaders have become disturbed by this trend. A few weeks ago The Christian Century warned its readers that "Tax reckoning is coming." It feared that churches would soon be facing public resentment.

"If the churches refuse to budge when the social implications of their untaxed profits and property are pointed out," it asked, "what will be the effect on their moral and spiritual influence?"

Other church leaders likewise are worried. Methodist officials are known to be disturbed over the untaxed profits some of their churches are making on properties which include on the premises such nonreligious tenants as taverns and pool halls.

Samuel Cardinal Stritch, the eminent Catholic leader of Chicago, has denied permission to the Catholic order that sought to purchase real estate in Lake County near the city. It is known that one factor he took into consideration in his decision was that the county already was seriously burdened by tax-exempt properties.

The Christian Century's stand is that churches should pay their own way on all their property. That, I think, is a bit extreme, but certainly churches should be taxed on all profits from their nonreligious enterprises. The Mormon Church engages in a great variety of commercial businesses. However, it has always set an example which other churches might, but rarely do, follow. It insists on paying its full share of taxes on profits from such business operations.

The cooperative device: Co-ops were given their privileged tax-exempt status in 1916. Then, it seemed like a nice thing to do. Co-ops then were merely small groups of neighboring farmers who formed associations to try to get a better return on their crops. Everyone then was inclined to pity the poor farmer. Furthermore, the Federal tax in 1916 was only 1 percent. Thus, only a minor concession was involved.

Today, however, the situation has changed vastly. The tax concession is not 1 percent but 38 percent. And many of the co-ops today are monster-sized corporations performing multi-million-dollar transactions in fierce competition with taxpaying businessmen. Today 80 percent of the co-ops are corporations. They run vast machine assembly factories, chemical plants, phosphate mines They sell oil around the world. They handle 75 percent of the Nation's fluid milk. They operate vast feed mills. A single mill in Buffalo is valued at $5,780,000. They operate the biggest grain elevators in America. One of them, in Enid, Okla., is about a quarter of a mile long.

Yet some of these co-ops still try to convince the public they're just a couple of little farmers struggling to make a living.

One of these so-called little farmer co-ops is the California Fruit Growers Exchange, which did a $300,000,000 business last year. It markets the famous Sunkist orange and 85 percent of America's lemons. The United States Department of Justice has prosecuted it as a monopoly. Yet this gigantic corporation is exempt from Federal income taxes.

Its operations are so far-flung that it has subsidiaries and subsidiaries. One subsidiary, the Fruit Growers Supply Co., in 1944, casually bought up the entire lumbering town of Westwood, Calif., for $11,000,000. The town has lumber mills, sawmills, veneer mills, box factories. Also included in the purchase was an estimated $11,000,000 stand of timber. Before the purchase, the town's enterprises paid the United States Treasury hundreds of thousands of dollars in taxes each year. Now they pay practically nothing.

In the United States today there are at least a dozen co-ops that would have to pay the Treasury an average of $1,000,000 each if they were taxed each year on the same basis as their competitors.

Yet they escape most taxes. Why? Because they claim to be nonprofit. When co-ops split a melon at the end of a year they don't call it a profit they're splitting. They say they are handing out a rebate or a refund or a final payment due.

The Bureau of Internal Revenue accepts this flimsy distinction. One reason the Federal Government accepts it is that cooperatives are very potent politically. President Truman himself has curried the favor of co-ops. A few months ago he told Iowa farmers, with whom co-ops are particularly strong: "This Congress will not listen to those who want to tax cooperatives out of existence."

No one wants to tax them out of existence. But they should be put on an equal basis with their taxpaying competitors. Otherwise, they will soon be driving our taxpaying businessmen out of existence at a rate that will cripple our economy. You just can't compete with someone who has a 38-percent edge on you.

The labor-union device: Unions, just like schools and co-ops, have long been on the income-tax-exempt list. When that exemption was granted I'm sure the lawmakers did not realize the unions would branch out into commercial enterprises having no relation to their union needs.

In many cities, unions receive rentals on buildings they own, and pay no tax on the income. The United Mine Workers Union in Springfield, Ill., has a big building with stores and offices which it rents out. In LaSalle, Ill., a local union is in the saloon-renting business.

Nor is that all. Both the CIO and the AFL are mapping plans to operate giant tax-free co-op supermarkets in union towns throughout America. These, of course, will be in direct competition with taxpaying grocers. The AFL has issued a bulletin urging its 7,500,000 members to set up co-ops to produce and distribute necessities on a gigantic scale.

CIO's United Automobile Workers is now backing a multi-million-dollar co-op store operation. It hopes to open a co-op supermarket in every town in America where there is a UAW local, which means any town that has an auto factory or airplane plant. A dozen UAW co-op stores are already open in the Detroit area. They sell groceries, appliances, clothing etc. Their announced aim is to capture 50 percent of all retail trade in the area. These stores, of course, pay little tax on their earnings.

We have seen, in this article, a half dozen of the favorite techniques profit-making enterprises have developed to avoid the tax collector. They have become so widespread that conscientious taxpayers are becoming indignant. Even the United States Secretary of Commerce, Mr. Sawyer, has acknowledged this indignation. Recently he made an extensive tour of the country consulting business groups. He has reported that one of the main gripes he encountered was this unfairness of our tax laws.

Our business leaders not only demand relief from tax-free competition from privately owned firms. They also believe that when a Government agency goes into an ordinary business venture—as agencies are doing increasingly—it should be required to pay a tax on its profits. Today the Federal Government operates a barge line on the Mississippi, it makes rum in the Virgin Islands, it runs tourist camps, and it manufactures fertilizer in competition with private companies. Likewise, State governments now own ferries and railroads, and have monopolies on liquor stores.

It is only fair, I believe, that Government profit makers face the income-tax collector just as any other businessman must do. By paying a 38-percent tax, our bureaucrats may come to realize that publicly owned enterprises are not so much cheaper to run, after all.

Some small progress is being made in getting the tax exempts to pay their fair share in taxes. Congress has finally prodded the Army's PX stores to pay taxes, just like anybody else.

As for the private tax avoiders, a little progress also is being made. The Treasury Department has finally forced a show-down with the Mueller macaroni people. It demands that the company pay taxes, even though its profits go to NYU. The Government contends that there is nothing charitable, scientific, literary, or educational in noodle making. The issue is now in the courts.

A few States also are taking action. Indiana has a law taxing business income of all churches, colleges, foundations, co-ops, etc. This law has produced no noticeable hardship.

Partly because of the public outcry, some of the farm co-ops are now voluntarily paying taxes on some of their profits. One of America's largest co-ops, the Cooperative Grange-League-Federation Exchange, of Ithaca, N. Y., has announced that it is going to pay voluntarily $928,000 (or about a 27 percent tax) on its profits of its past fiscal year. True enough, it ought to pay the full 38 percent (or $366,000 more), but the fact it is paying anything is a sign of the growing recognition that all business enterprises, regardless of their form, have a responsibility to help pay the cost of Government.

Isolated State laws and voluntary acts, however, are not enough. What is needed is an overhauling of our crazy patchwork of national tax laws to eliminate tax inequities. I am convinced that action can be gotten at this session of Congress. I would impose the regular profits tax on all commercial enterprises doing business for profit, regardless of who owns them.

Such a change would not in the least hinder schools, churches, unions, and charitable institutions in their primary functions. It would, however, cut the props out from under most of the legal tax dodging by commercial profit makers now going on in America.

Some such law, I believe, is urgently needed. We should tax the untaxed to ease the tax load upon the overtaxed, and provide much needed Government revenue. And we should do it before it is too late.

Extension of Communism

EXTENSION OF REMARKS

OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1950

Mr. GWINN. Mr. Speaker, under leave to extend my remarks, I include in the RECORD a letter to Dean Acheson by Hamilton Fish, a former Member of Congress, who was among the first to point out the danger of Communist influence in our Federal Government and who now reminds us that this influence, if allowed to affect our present policy, will mean the loss of all Asia and a seri-

ous threat to Africa and to our own security.

The letter follows:

AUGUST 9, 1949.

Hon. DEAN ACHESON,
Secretary of State,
Washington, D. C.

DEAR MR. SECRETARY: I am writing, as one of the pioneers in Congress against the extension of world revolutionary communism, to protest the betrayal by the State Department of the anti-Communist cause in China and of the security and best interests of the United States.

The policy of the State Department since 1945 has aided and abetted the Chinese Communists by undermining Generalissimo Chiang Kai-shek and the Nationalists by a continuous and ruinous policy of appeasement.

The Chinese Nationalist Government was deliberately stabbed in the back by President Roosevelt at Yalta, threatened and coerced by General Marshall into a disastrous appeasement policy in 1946 with the Communists, and deceived, thwarted, and maligned by a clique of near-Communists and fellow-travelers in the State Department for a number of years with unprecedented success.

I charge that the white paper is a studied plea to exonerate and whiten a series of frightful blunders committed by our State Department, and to incriminate and blacken Chiang Kai-shek and the anti-Communist forces in China.

I charge that the white paper is a distorted account of recent Chinese history, with the object of making Chiang Kai-shek (the arch enemy of Communists) the scapegoat for the incompetency and appeasement policies of the State Department. According to Ambassador Patrick J. Hurley, "Nearly all the officials relieved by me in China because they were pro-Communists are now in the State Department presumably writing white papers."

I charge the white paper with being a contemptible character assassination of Generalissimo Chiang Kai-shek who was our valiant ally in World War II and a determined and fearless leader against the extension of world communism since 1927.

I charge the white paper with being an essentially negative and defeatist document consisting of a tissue of evasions, contradictions, sly insinuations, and half-truths to serve as a miserable alibi and whitewash for the consistently wrong-horse policy of the State Department.

I charge that the white paper is a monument of deceit and hypocrisy to cover up the tragic mistakes of F. D. R., General Marshall, and the pro-Communist group in the State Department in appeasing the Communists in China.

I accuse President Roosevelt of selling out the Chinese Nationalists by entering into secret and sordid agreements with Soviet Russia at Tehran and Yalta.

I accuse a determined group of Reds in the State Department with instigating the pro-Communist appeasement policy.

I accuse General Marshall of being the unwitting dupe of the pro-Communists in his Department in their plots and machinations to undermine Chiang Kai-shek by appeasing the Communists and stopping the shipment of arms to the Nationalists from 1946 to 1948.

I accuse the State Department of gross incompetency in our relations with Chiang Kai-shek, abandoning and deserting the Nationalists (who had all but driven the Communists out of Manchuria), of affording relief and arms on a basis of too little and too late, of being responsible for a cowardly and disastrous appeasement and do-nothing policy, and still adhering to the same do-nothing policy.

I accuse the State Department of willfully withholding the Wedemeyer report for 2 years until its effect was destroyed, because its recommendations were contrary to those of General Marshall.

I urge that the State Department stop whitewashing itself, cease its recriminations and attacks on Gen. Chiang Kai-shek, and throw all pro-Communists appeasers out of its offices.

I urge that we refuse to recognize the Communist government of China.

I urge that General MacArthur be recalled to testify before the proper committees of the Senate and the House regarding a definite plan to prevent the extension of world revolutionary communism in Asia.

I urge the establishment of a strong united pact of all anti-Communist nations and forces in Asia.

I urge that a truly bipartisan or nonpartisan plan be established to save the remaining nations of Asia from being engulfed by the military might of world communism.

I urge the immediate creation under Government auspices of an international organization to preserve freedom and to combat the propaganda, terrorism, and despotism of international communism.

It is public knowledge that as a result of Communist infiltration into the State Department that a number of its employees were arrested for conspiracy to violate the espionage law through theft of secret material in June 1945. Fifteen thousand confidential Government documents were recovered from the pro-Communist magazine Amerasia in New York by the FBI.

One Government employee, Emanuel Larsen, was fined $500 and assigned to a confidential mission in the Far East by the War Department. Philip Jaffe pleaded guilty and was fined $2,500. Alger Hiss is under indictment for perjury in connection with certain documents stolen from the State Department. Did he have a hand in formulating our pro-Communist appeasement policies in China?

Why has not Henry Julian Wadleigh (who declared in open court that he had stolen secret State Department documents for the Communists) been prosecuted?

How many more pro-Communist appeasers are there in the State Department? How many pro-Communists and traitors have been dismissed from the State Department since the disclosures in the Amerasia case in 1945?

Finally, I accuse the State Department of laxity and incompetency in failing to sustain, in every possible way, the anti-Communist forces in China during the last four critical years when their victory was almost assured. As a result of our State Department's bungling, China is entering an era of communistic terror and chaos.

If all the State Department has to offer is the white paper as a barrier to the conquest of Asia by world communism then I predict that, once China is fully communized, the Red hordes of Asia will sweep over the rest of the Far East, including Indochina, Burma, Korea, Japan, Malaya, Java, and India.

I further predict that within 10 years 4,000,000 well-trained and equipped Chinese soldiers will be on the march to Armageddon and the Suez Canal, fighting and killing American soldiers.

The American people have a right to know who is to blame among its officials for the catastrophic fiasco in China.

Already skilled Red agitators are fanning the flames of revolution throughout the Far East. Unrest, disorder, and civil war will follow as night the day.

We must have a definite and positive policy to stop world communism in Asia. We must not drift, by default, through the back door in the Far East into world war III.

Respectfully yours,

HAMILTON FISH.

What the ERP Has Done for Italy

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1950

Mr. RODINO. Mr. Speaker, Italy is today a better country all around, with more goods and more hope, as a result of the Marshall plan.

The Marshall plan has made three important contributions to Italy's recovery. First is the dollar program, namely, the allocation of dollars which buy very necessary imports such as coal, petroleum, and cotton which keep the Italian economy running, and machinery which remodernizes Italy's industry. Almost $1,000,000,000 have been allocated to Italy for this purpose under the Marshall plan thus far.

As a result of these dollars, Italy's production now surpasses that of before the war. Unemployment has decreased. The bread ration is gone, the black market has disappeared, the quality of bread has improved and the price has declined.

The second major contribution has come through the lira fund, or counterpart fund, which is made up of the lira receipts from the sale at fixed prices of the products that come into Italy free of charge under the dollar program. Approximately 200,000,000,000 lire, the equivalent of over $400,000, have already been deposited in this account.

This fund is being used to finance literally thousands of public works and other improvements all over Italy. These include bridges, roads, railroad improvements, railroad stations, better telegraph and telephone systems, dry docks, airports, thousands of workmen's houses, and the like. Some villages which have never had running water before are getting water as a result of aqueducts financed by the ERP lire funds. Some villages which never had electricity before are now finding magic current coming to them through ERP. Vast areas of land are being reclaimed through drainage and irrigation, farm roads are being run through them, buildings are being constructed, and machinery is being provided under the agricultural program of the lira program.

It is estimated that about 250,000 people will be given employment through this counterpart fund and that when the hundreds of projects in it are completed permanent employment will be given to many tens of thousands of men.

ERP is making its third major contribution to Italian recovery through the technical-assistance clause under the ERP Act. Under this clause ERP finances the sending of Italian experts to the United States or the bringing to Italy of American and other experts so that Italians will learn the latest methods of production, both agricultural and industrial.

Under this program Italian experts in as widely varying fields as electrical-power engineering and hybrid-corn development have gone to the United

UNIVERSITY OF MICHIGAN LIBRARIES

States, and American experts in such widely different fields as hotel development and well drilling have gone to Italy.

The Italian experts who have returned to Italy have been eager to spread among their colleagues the many lessons they learned in the United States and the American experts who have gone there have been well received and their words of instruction listened to with real enthusiasm.

It is estimated that long after the end of the Marshall plan the effects of the plan will be felt in Italy through the application of additional knowledge acquired by these many experts.

The technical-assistance program will receive even greater development during the present year.

Italy's economy has felt the beneficial effects of the Marshall plan in many ways:

First, the dangerous inflation that followed the end of the war was checked by the arrival of goods under the previous American Aid Acts and then under ERP. Now Italy enjoys one of the most stable economies in Europe, as was shown by the strong position maintained by the Italian lire at the time of the devaluation of the British pound last September.

Secondly, Italy's national income has risen to the point where, despite all the destruction of the war, it is virtually at the prewar level.

Third, the Government is rapidly cutting down the deficit between income and expenditures.

Fourth, exports have increased to a point where they are well above those of prewar and the dollar deficit between exports and imports is narrowing.

The Italians are being kept closely informed of the progress of the Marshall plan in Italy through every medium of public relations possible. The ERP mission in Rome, assisted by the Italian Government, makes liberal use of press and radio, but also employs large and small exhibits, sound and projection trucks, motion pictures, and other devices to inform Italians of what the Marshall plan is doing for them and what it expects of them in the way of increased productivity and greater economic integration in Europe.

Americans working for the Marshall plan in Italy have been greatly encouraged by two facts. One is the keen will of the Italians to reconstruct. Inheriting from the ancient Romans the desire and ability to build, the Italians have effected a miracle of recovery from the devastation of the war. Towns like Cassino which were razed to the ground are now almost or entirely reconstructed and in many cases are better off than they were before.

The second item of encouragement is the universal desire of the Italian people to work on an economic basis with the other peoples of western Europe.

The Italian Government has lent the ERP mission in Rome every support. While naturally some differences of opinion arise from time to time the cooperation existing between the government and the mission has been cordial and fruitful.

Perhaps the most outstanding development since the arrival of ERP in Italy has been the weakening, although not the elimination, of the Communist menace there. The Communist-dominated union organization known as CGIL has been greatly hampered by the fact that 40 percent of its membership left it and formed two anti-Communist organizations. It is reliably estimated that the card-bearing membership of the Communist Party has dropped about 20 percent in the last 21 months. Now when the CGIL calls a general strike for political purposes it does not have anything near the response it used to meet with 2 years ago. Then the economic life of cities virtually died. Now that economic life goes on, though with some diminution which in some cases is so small as not to be noticed.

Everywhere in Italy there is greater confidence, largely as a result of the Marshall plan. There is confidence in Italy's ability to be able to walk on her own feet when the Marshall plan ends without the necessity for extraordinary outside aid. There is confidence that Italy is coming back as a helpful and useful member of the family of nations.

"All Recognize We Cannot Go on Spending at War Year Rates—That No Nation Can Go on With Expenditures of the Size We Have Been Putting Out and Still Remain Solvent—What Can We Do About It?—The Prescription Is Simple—Cut Expenses by Getting Down to Basic Essentials"

EXTENSION OF REMARKS

OF

HON. CLARENCE G. BURTON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1950

Mr. BURTON. Mr. Speaker, it was my pleasure to be present at the Roanoke Chamber of Commerce annual dinner meeting on January 25, at which our Secretary of Defense, Louis Johnson, a native of Roanoke, Va., was the honored guest and made the principal address.

Roanoke has been the birthplace of a great many distinguished Americans but the memory of man runneth not to one who brought to public office greater drive, sincerity, and ability than Roanoke's first citizen of today, the Honorable Louis Johnson, Secretary of Defense.

His distinguished, beloved, and respected mother and father, brothers and sister must have thrilled when they heard the remarkable address given by their son and brother to his friends and to his neighbors.

Mr. Speaker, somewhere was written "a prophet is not without honor save in his own country," but in the personality of Louis Johnson, America has a public official equally well and favorably known in both the Orient and the Occident, respected by his neighbors and kinfolk equally as he is respected by freedom-loving peoples everywhere.

The address made by Louis Johnson in Roanoke on Wednesday night last will never be forgotten by those who heard him speak. It was a statesmanlike presentation which had to do not alone with the history of his home city and State but which constituted a comprehensive statement wherein was crystalized all the issues with which the world is faced.

No statement of Secretary of Defense Louis Johnson would be complete if he failed to express himself fully as to the vexatious problems which he seemingly encounters every hour of every day in the administration of the great governmental department and particularly with respect to the expenditure of the huge sums that have been entrusted to his care.

Mr. Speaker, his speech made at Roanoke is so replete with factual data having to do with the economic, social, industrial, fiscal, tax, and foreign problems that I am including it in my extension of remarks. I feel that every Member of this House, as well as those who sit on the other end of the Capitol, would find tremendous interest in his discussion of the multiplicity of subjects covered in this remarkable statement made by our great Secretary of Defense.

That statement reads as follows:

It is always an inspiration for me to return to Roanoke and rekindle so many pleasant memories of my life in the happy surroundings of my youth. Roanoke was my first home and—

"The home we first knew on this beautiful earth,
The friends of our childhood, the place of our birth,
In the heart's inner chamber sung always will be,
As the shell ever sings of its home in the sea."

My roots are deep in the heart of Roanoke. My parents were married here. They still live here. All of their children were born here. When they first came here, there was no city of Roanoke. It was a little village, Big Lick. In the span of their lifetime, my father and my mother have seen it grow from a village crossroads into the magic city of today. May God spare them many more years in which to behold the realization of the even greater promise that destiny holds for this community.

Roanoke always was, and still is, an ideal place to bring up an American family. I am grateful, indeed, that it was my happy destiny to grow up here. It was in the homes and the churches of Roanoke, in its public schools and on its athletic fields, that we learned the true spirit of America. Here we were brought up on the pioneer tradition of self-reliance, courage, and democracy, a tradition that we trace back to the old frontier of the French and Indian wars when our forefathers fought forest, beast, and hostile man to make life worth while in their promised land.

It was characteristic of the frontier to measure man by his individual worth and by his readiness and willingness to cooperate with the other members of his community in a common cause. It is that same spirit that has come down traditionally to us through the ages. It serves as the business

spirit of the Chamber of Commerce of Roanoke today. It serves as the community spirit of our every-day life. It is a spirit that the sons and daughters of our latest immigrants share with the descendants of our earliest pioneers.

As children in Roanoke, we were taught the fundamentals of American living, of love of God and country, of duty and chivalry, of true neighborliness and mutual helpfulness, of free discussion and wholehearted cooperation, of the ideal of live and let live. These are the same fundamentals to which President Truman has been dedicating himself, to maintain them at home and to extend them abroad. And it is toward the preservation of these fundamentals that I, as a member of his Cabinet, am devoting my energies today. For it is my particular job, as Secretary of Defense, to help maintain the United States in an environment of security and peace, so that all can go forward toward the greater realization of our American ideals.

Thanks to these policies, foreign and domestic, of President Truman, and to the wholehearted support of the American people behind them, the United States is currently enjoying unparalleled prosperity at home and wholesome respect abroad.

At home, according to a recent sample survey made by the Federal Reserve Board, every other American family owns at least one automobile. Three out of four families hold life-insurance policies with premiums of more than $100 a year. Seven out of 10 have bank accounts or own Government savings bonds. Forty-five percent own a house or a farm. But why go on with cold, impersonal statistics when practically every one of us can look at himself and measure the strength of his own position? Everyone of us knows that his life is better protected, his opportunity for useful and productive work greater, and his standard of living higher than ever before in our history. And when compared with what the men and women of any other country in the world have today, each of us can well apply to himself the colloquial judgment of our service veterans in occupied territories, "We never had it so good."

Unfortunately, there are some people who refuse to be happy. They seem to be so constituted that they literally enjoy gloom. They are the pessimists who seem to get a sadistic pleasure out of punishing themselves. They are convinced that only tragedy will overtake us if we persist in following what they regard as new ways.

These dire prophets, however, are no novelty in American life. There always have been some Americans whose affection for the past was such an obsession that they wanted to go through tomorrow's life in yesterday's environment. For them the old way is the best way—the true way—forever. "Oh, for the good old days," is their incessant cry. Any attempt to utilize the inherent flexibility of our Constitution, our laws, our customs, and our manners, to enable us to meet the needs of life in an atomic age, they regard as heretical—as radical and dangerous. They act as if our splendid American civilization is already nearing its meridian when, in fact, "We are yet only at the cock-crowing and the morning star."

We will not listen to prophets of doom. We know that the promise of today and tomorrow for ourselves and our children is still as unlimited as if ever was. Yes; we have problems—fiscal, economic, political, and military; problems of management and of labor; of government and of business; national and international—tougher problems than we have ever had before. But we, the heirs to the tradition of the frontier, are honest enough to face the facts, and intelligent enough and resourceful enough to solve our problems, no matter how difficult they may seem.

It is in that spirit that we have approached our present fiscal problem. In the world of today national defense has a priority lien on the Federal budget. It is not a priority of our own choice. It is a priority imposed upon us by world conditions—by the threat of imperialistic communism and its sinister forces that stand ready and alert to take advantage of physical or spiritual weakness wherever they may find them. The only way to avoid their dangers is to be—

"Strong in will
To strive, to seek, to find, and not to yield."

National defense, important as it is, however, is but one of the functions of our Government. Our Constitution was adopted not only to "provide for the common defense," but to "establish justice, insure domestic tranquillity, promote the general welfare, and secure the blessings of liberty to ourselves and to our posterity."

The priority on the Nation's pocketbook that national defense must have today is not one, therefore, that can wholly monopolize the Federal budget. No one recognizes that fact any more than we in the Department of Defense. We realize that successful government has many important functions to perform and they have a direct bearing on our ability to wage and win war. The President took all of these factors, of needs in their relative importance, into consideration when he made up his budget for the coming year. It is a well-balanced budget, balanced between the national economy and the necessary costs of government, and balanced within itself among the requirements to serve the relative needs of the American people at this time.

All of us recognize that we cannot go on spending at the rate of the war years. No nation can go on year after year, with governmental expenditures of the size we have been putting out in the last decade and still remain solvent.

What can we do about it? The prescription is simple—cut expenses. Get down to basic essentials. This medicine may be hard to take, but as intelligent, loyal Americans, we know we must take it. Gracefully, therefore, we shall swallow it and, instead of crying about it, we shall redouble our energies and strive to continue to give the American people what they have a right to expect of their Government—a sound and efficient administration.

That is the spirit that permeates the Department of Defense today. It is clearly manifested by our asking from our Government more than a billion less this year than Congress gave us last year; and we are doing so in full confidence that we retain our posture of defense, and our capability to wage war successfully, if necessary. We will get along on less because we are going to make every dollar do more.

Our military budget recognizes the dynamic nature of present-day security. It reflects development in the art and science of warfare. It takes into consideration the capabilities of possible aggressors. It promotes the development of the instruments best adapted to thwart his aggressive designs. It provides the men and the sinews calculated by the Joint Chiefs of Staff to meet the minimum requirements of a sudden emergency. It increases the number of men in combat units at the expense of desk jobs in administrative overhead. It buys more aircraft for our Air Force. It provides more money for research and procurement of new weapons for our Army. It meets the Navy demands for antisubmarine warfare. It keeps the strength of the Marine Corps in relation to its parent service, the United States Navy, in the ratio required by law. It calls for the procurement of more guns, guided missiles, tanks, and trucks than we ordered last year. It provides for a reduction from 865,000 man-years of civilian employment this year to 725,000 next year. It continues to wage war on duplication and waste and to promote efficiency and sound organization. In short, it is a budget that says security first, economy second—and provides a sufficiency of defense for the hour.

Even so, it is a budget of some compromises. No one service could possibly get all that it felt it needed. In its initial phases when the budget represented merely the total estimates of all the services, it ran to $20,000,000,000. By the time it was presented by the President to the Congress, and, in its present form, it is, not including strategic stock piling, approximately $13,000,000,000.

The difference between the original estimate and the final figure is not simply an arithmetic answer in subtraction. It is an achievement of unification made possible by military and civilian leaders who, thoroughly loyal to their own Army, Navy, and Air Force, thought, and worked, and planned in a spirit of team effort which placed the good of the defense program as a whole above the interests of their respective services. I am very proud to be a member of such a team.

We still have many problems in the Defense Department and we will continue to have them as long as we exist. Fundamentally they are human problems which human beings with good will toward each other can solve. We will solve these and any other defense problems that may arise, among ourselves in the American way—in the democratic way. We will gather facts. We will plan. We will consult. We will deliberate. We will listen. Finally, we will decide. We are determined not to suffer from the uncertainties that prevail of no decision when a definite decision is demanded. Always, we shall strive for decisions that are right, right on all the facts available, and after all sides have been given an opportunity to express their views. We shall make every effort to make our decisions right and to keep them right. Sometimes we will err, as all human beings must, but they will be honestly made, not errors resulting from undue haste or lack of study or deliberation. But in spite of these hazards, we shall not be deterred from making decisions when decisions are called for. I shall always remember the old maxims of the Field Service Regulations that were taught me in training camp at Fort Benjamin Harrison in 1917. They are still applicable:

"Vague or ambiguous orders indicate vacillation and the absence of any definite decision on the part of the officer responsible for them. Troops have a right to be told, in terms that are direct and unmistakable, exactly what it is their leader wants them to do."

We have made decisions in the unification of our armed forces—budgetary decisions, strategic decisions, personnel decisions—and never without giving all sides a hearing. They are honest decisions, the best possible decisions that such leaders as our Joint Chiefs of Staff and our Secretaries could help make. For these decisions we have assumed full responsibility to our Chief, the President of the United States, to the American people, and to their duly elected Members of the Congress.

On their own, the American people, too, have made certain far-reaching decisions in recent years in international matters. They have decided that our fate is linked with western Europe, that the chances of our survival and the survival of our American way of life depend on a climate favorable to democracy and unfavorable to communism; and we are proceeding accordingly. We are giving economic aid and military assistance to our friends to strengthen their financial structure and their ramparts, and to raise their confidence in their ability to resist communism.

These decisions were made in a series of positive actions taken in accordance with

UNIVERSITY OF MICHIGAN LIBRARIES

the established procedures of our Government. They were not sudden decisions. Each took time in the making. Each was aimed to meet a crisis in world affairs. Each was inspired by the President who is keenly alert to the shifting tides of the cold war.

Each decision was preceded by painstaking study and research. We in the Departments studied them. We drew up preliminary plans. We presented them to the President. He approved them and made them part of his program. Congress in committee and in regular session discussed them. Hearings were thorough and complete. The State Department, the Department of National Defense and others had an opportunity to express their views. Risks involved were considered and weighed. Finally, there was the act of Congress and the approval of the President. Thus each decision became a national decision, arrived at in typical American fashion.

Each far-reaching decision—the Truman doctrine, the European recovery program, the North Atlantic Pact, the mutual-assistance program—each ran the gauntlet of the presentation of facts, discussion, deliberation, and decision. Each decision was clear-cut. Each decision was one that not only we in America but peoples everywhere could understand. And the implications of each decision are now clear to all friends and to all possible foes. Peace, I venture, is more secure today than at any time since VJ-day, and it is secure because the American people were not afraid to make decisions and to stand by them.

In the coming months Congress will be called upon to provide the necessary funds to continue to give effect to these far-reaching decisions in international matters we already have made. My full faith in the good judgment of the Congress leaves me no doubt of the action that will finally be taken. To paraphrase the words of President Truman in his recent message on the State of the Union, I am confident that our Nation will not fail "to put a roof on the house after building the foundation and the walls" in our program of European recovery and mutual security.

While the blaze of publicity has focused public interest primarily on our decisions affecting Europe, we have also gone ahead nearer home with equal zest to formulate policies to strengthen our hemisphere solidarity against possible war. We in the Americas, dedicated to the same ideals, have long been engaged in working together and striving together to keep our continent out of war and to promote the blessings of peace among ourselves. Before we in the United States had our North Atlantic Pact and the mutual defense assistance program with our European friends we already had established their counterpart with our American neighbors, for the regional defense of our continent, in the Rio Treaty of 1947 and the Inter-American System formalized in Bogota in 1948. So when the time came to draw up the North Atlantic Pact and the provisions for a mutual-aid program for Europe, we followed the model, in words and spirit, of these two monumental agreements with our American neighbors already in effect for the better defense of the Western Hemisphere.

Together the North Atlantic Treaty and the Rio Treaty are twin security measures conceived in the interests of peace and the preservation of civilization. Our decisions and the decisions of our partners on both sides of the Atlantic are the stabilizing factors in today's world of unrest. They have given faith to the weary and the oppressed and courage to the strong and free. Each decision freely reached and resolutely executed breeds additional confidence in us to face new problems without fear. It has been our heartening experience that any issue, no matter how complex, once honestly faced will be intelligently and equitably disposed of when nations of good will, such as our partners and ourselves, sit down to find a solution.

We have entered upon our New Year 1950 with a record of marked achievements but with some issues, national and international, yet to be met. The President has outlined them to the Congress. In the course of the next few months these issues before the American people will be met faithfully and definite decisions will be reached. I am confident the decisions will be sound, that the American people will support them. Under the leadership of President Truman, we will continue to point the way toward a prosperous, secure, and peaceful world.

Are We Headed Toward Collectivism?

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1950

Mr. GWINN. Mr. Speaker, I want to call to the attention of all the Members of the House a very timely statement by Senator BYRD, of Virginia, warning us that "we are rushing headlong down the road to collectivism or socialism much in the manner of Great Britain."

The statement follows:

I would define collectivism as a system of government which subordinates individual freedom and initiative to an all-powerful state in which the government supports the people rather than the people the government. But for the sake of those who wish to be academic, the Library of Congress has supplied this definition of collectivism:

"A political or economic doctrine which maintains that the ownershp of property, especially land and capital, should reside in the community as a whole or in the state as the designated agent of the people. Collectivism is a broader term than communism in that revolutionary methods are not necessarily advocated. Moreover, the term is to be distinguished from socialism in its advocacy of broader controls over property rights."

It is my belief that we are rushing headlong down the road to collectivism or socialism much in the manner of Great Britain. The foundation stone of democracy, indeed of all our liberties, is the free-enterprise system; we cannot long enjoy political and religious liberty unless we likewise possess economic liberty. But the free-enterprise system is being dealt savage blows—and if the trend is too long continued will be destroyed—by (1) excessive Federal spending; (2) excessive taxation; (3) excessive government regulation; (4) excessive government competition with private business.

It is a very ominous sign that, in a period of peace and high prosperity, our Government has again embarked on deficit spending.

The American people never will knowingly and voluntarily give up their liberties, but the entire trend of government during the past 15 or more years has been gradually and definitely toward a highly regimented state with personal liberty subordinated to bureaucratic control. Those who have determined the course of government during these years have proceeded on the theory that the Government knows best, and that the Government should determine when its citizens should reap and when they should sow. Planned economy has been the fashion, and planned economy, in its ultimate form, is collectivism

An independent study recently transmitted to the Congressional Joint Committee on the Economic Report by President Truman's Council of Economic Advisers declared that the United States economy "is no longer a purely free and competitive economy." This study, carried through by Drs. Calvin B. Hoover and B. U. Ratchford of Duke University, examined the "impact of Federal policies on the economy of the South." While it was not endorsed by the Council, I am advised that it was sent by the Council of Economic Advisers to the Joint Congressional Committee "with great pleasure."

To my knowledge, this is the first federally sponsored study, originating in the executive branch and transmitted officially to Congress (or a congressional committee), in which it is stated that ours "is no longer a purely free and competitive economy." The authors, however, do go on to say that the economy of this Nation "is not consciously planned and directed by the National Government."

Presidential proposals this year included these:

Authority to control prices, wages, and employment practices; commodity control allocations; extended authority over consumer credit and bank reserve requirements; extended federalized power development through public works; expanded federalized insurance; socialization of agriculture (which turned out to be the Brannan plan); federalized urban redevelopment, housing and farm housing; federally aided education and socialized medicine, the latter being the most costly and far-reaching Federal program yet proposed. Adoption of a Fair Employment Practices Commission, recommended by the President, would empower the Federal Government to enter every private business and say who should be hired or promoted.

Such proposals, if adopted, would expand nearly 100 different programs already spreading out like tentacles from among the 60 principal Federal departments and agencies which extend Federal administration through financial aids, grants, subsidies, and benefits; pay rolls, pensions, payments, and virtually every other form of Government advance and contribution. It is my firm belief—and this is buttressed by history—that the people cannot surrender such vast power without eventually sacrificing basic individual freedoms.

Congress has so far defeated or resisted many of these new recommendations for extending Government control over individual citizens and embarking on new ventures of huge and unpredictable costs. But I say advisedly that if and when these proposals which the President is now urging upon Congress are enacted into law, then we shall have irrevocably committed ourselves to a socialistic state from which there can be no retreat.

Whether or not consciously planned and directed, the influence of these payments and programs of the National Government infiltrates the privacy of individuals, the policies of business, agriculture and labor, and the prerogatives of local, State, and foreign governments.

There are 17,000,000 people in the United States receiving monthly checks supplied by one or another program or payment pipe line from the Federal Treasury. That is the equivalent of 1 in each 9 of the total population, the equivalent of one-third of the total labor force. It should be noted, parenthetically, that when those receiving direct payments from State and local governments are added to the 17,000,000, the number of persons on public pay rolls becomes roughly 25,000,000. That is one-sixth of the population of the United States.

But it becomes impossible to arrive at the total number of persons affected by the programs and payments of the National Government when we include those receiving interest payments on war bonds and other Government securities; and when we add the mil-

lions more who benefit indirectly from approximately $25,000,000,000 flowing from the Federal Treasury into business through subsidies, purchases, construction contracts, and other expenditures, including those made in this country for the foreign-aid programs.

These vast spending programs lead directly to excessive taxation, which destroys the seed money necessary for industrial expansion, and on which increased employment depends. We are spending $15,250,000,000 for civilian domestic functions of the Federal Government, exclusive of $5,500,000,000 in interest on the national debt. To this add some $15,000,000,000 for national defense and about $7,000,000,000 for foreign aid—and you have the basis for an estimate that expenditures this fiscal year will come to between $42,000,000,000 and $45,000,000,000.

Against these three figures, the most authoritative estimate of revenue is approximately $37,200,000,000. Thus our deficit in the current year may be anticipated at between $5,000,000,000 and $8,000,000,000. Without retrenchment or new taxes it will be larger in the year beginning July 1, 1950. In the last fiscal year it was nearly $2,000,000,000.

And this chain of peacetime deficits is to be piled upon a postwar debt of a quarter of a trillion dollars. There are some self-styled Washington economists who say it is of no consequence so long as we owe it to ourselves. Stop and think of what that means: that debt means that each of us is responsible for nearly $2,000 of it. It is our debt to the extent that we own war bonds; to the extent that our bank savings are invested in it, and our life insurance for the protection of our families. It belongs to us to the extent that one dollar out of every seven we pay in Federal taxes goes to pay ourselves interest. And it will belong to us if the time ever arrives when the interest is not met or when it cannot be refinanced. It certainly will belong to us if it is not paid off.

There is documented evidence that business expansion is being discouraged. If the economy of this Nation is not consciously planned and directed by the Government, then our lack of consciousness can be traced to a total indifference to the warnings which have been flashing for some time along this economic primrose path.

I say there is literally nothing in the world today so important as to preserve the solvency of the American dollar and the American free-enterprise system.

This free-enterprise system supports the Government of this Nation in its present form and no other economic system can do that.

If the free-enterprise system falls, the Federal Government of the United States as it is known to the world also will fall.

If the American system and the American Government fall, so will the last hope for the preservation of freedom and democracy in the world.

To change our course, I would begin by eliminating the incompetence and extravagance that permeat virtually every branch of the Federal service. By this means, and notably by the dismissal of all unnecessary Government personnel, Federal spending could be drastically reduced. I would balance the budget for the fiscal year beginning July 1, 1950, on a basis of sound fiscal policies. I would abolish functions of government that are too costly and infringe upon the economic freedoms of our people. The exhaustive Hoover Commission report shows—and my own careful and exhaustive research over a period of 15 years confirms—that the Federal budget could be drastically slashed without any decrease in essential services.

I would change the present trend to collectivism by eliminating from high council those who distrust the people and feel that the people are not capable of handling their own affairs with an absolute minimum of Government interference.

I would reverse our present trend by appointing to administrative positions persons who recognize that the free-enterprise system is the foundation stone upon which this Nation was built, and that its maintenance is essential to the preservation of individual liberty and to the advancement of economic, political, scientific, and human progress.

I would reverse the trend also by demanding that governmental administrators heed an economic truism: that excessive Federal spending necessarily must lead to excessive taxation or national bankruptcy; and that free enterprise cannot expand under long-continued oppressive taxation. Insolvency is the only alternative, but if insolvency comes in, freedom must go out.

An essential ingredient in reversing the trend toward collectivism is not new restrictive laws and oppressive regulations, but rather a desire and a determination on the part of those in authority to preserve our free enterprise system and the principles of government that have made us great.

Many civilizations which have entered the domain of history seem to present two evolutionary periods. The first period is that in which the individual seeks to safeguard himself against the excesses of arbitrary power by exacting guaranties from those trusted to rule. The second is that in which these guarantees are gradually surrendered to the collective power of the mass.

Let us always remember that human freedom is not a gift to man. It is an achievement by man, and, as it was gained by vigilance and struggle, so it may be lost by indifference and supineness.

What Is the Difference Between Socialism and Social Welfare?

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1950

Mrs. DOUGLAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement I delivered on America's Town Meeting, Town Hall, New York, on January 24, 1950, on the subject What Is the Difference Between Socialism and Social Welfare?:

The policy of the administration of the Government of the United States falls squarely between those which are being advocated here by you, Mr. Thomas, and you, Mr. Steinkraus. I am in favor of the administration's policies and programs which, so far, have kept us moving forward on a sound democratic course—avoiding the rocks of reaction on the right and socialism on the left. The people of the United States obviously believe in, endorse, and support the policies of our constitutionally elected Government, since they have approved them in elections for 18 years, and will do so again next November.

Some have called what we have now a welfare state; some have called it a hand-out state—frequently by the same people. I do not know exactly what those terms mean as used by them and I do not propose wasting time by trying to define words and slogans. What we need to define are our objectives.

The best test of democratic government is the efficiency with which it serves the needs of all the people. The policy of our administration is to meet those needs under a system of free enterprise, and I submit that we are better free enterprisers than would be the kind of government which Mr. Steinkraus advocates.

What we seek is to meet the needs of our people in a complex society and at the same time maintain those essential freedoms of choice and action on which our Republic was founded to preserve.

We are striving to follow a policy of bolstering free enterprise in America by making it as really free as it can be in an industrial society.

No government which did not believe in free enterprise would have pushed private ownership of homes and farms as we have—would have made credit available to farmers and businessmen when they couldn't get it any place else, not only to save farms and businesses from failure, but to put families on land of their own and to help more people get a start in business, including many thousands of GIs.

We are really working for free enterprise when we seek to protect small businesses against the inroads of monopoly. We are really working for free enterprise when we seek to protect the bargaining rights of working men and women.

We are working for free enterprise when we help to build a healthy community, one in which people have decent homes, an opportunity for jobs, a right to get a good education. We are working for free enterprise when we preserve and develop our natural resources for the creation of new wealth, which in turn will create new industries and new jobs, for the benefit of all the people.

We are working for free enterprise when we work for economic stability on our farms, and for security during periods of unemployment and in old age.

These are some of the things we are doing. We do them because we do not believe that free enterprise is a privilege for just a few people at the top of the heap, but is the right of all the people.

Government is the means of coordinating our efforts so that we can work together to obtain goals which would be impossible to us as individuals. That may be socialism in the eyes of Mr. Steinkraus, but it is not socialism in the minds and hearts of the American people.

We all benefit when we work together and build a TVA or a Central Valley project.

We all benefit when we work together and devise a system of social security and unemployment insurance.

You can call that what you will. You can call it the New Deal, the Fair Deal, the square deal. You can call it the welfare state. Or you can call it hard times. But to me it is something which comes from the American genius. The ability to make things work. We are trying to make our economic system and our constitutionally elected and responsible Government work for us—for all of us. We intend to be neither the slaves of a system nor the slaves of a group of economically powerful masters. Call it whatever you want, but I call it the American way.

Mr. Lea Discusses the Electoral College

EXTENSION OF REMARKS
OF
HON. J. PERCY PRIEST
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1950

Mr. PRIEST. Mr. Speaker, under leave to extend my remarks, I desire to

UNIVERSITY OF MICHIGAN LIBRARIES

include a statement by a former distinguished Member of the House of Representatives, Mr. Clarence F. Lea, of California.

Mr. Lea has for a number of years engaged in an intensive study of our system of electing a President and Vice President. As a result of that study he has from time to time urged that the Congress adopt a resolution calling for an amendment to the Constitution that would revise our present system.

In the following statement Mr. Lea sets forth what I consider to be some very pertinent arguments in favor of revision of our present system:

The outstanding question before Congress as to modernizing our presidential election is whether or not Congress will give the people of each State a chance to have their ballots for President credited to the candidates for whom they are voted.

Under the present method of electing the President only one man, the plurality candidate in the State, is given credit for all the votes of that State. All other votes are credited in the electoral college as if cast for that one man. The minority party in the State may be the Democratic or Republican Party, or a third party, but the votes for their candidates are alike ignored.

In the last 11 elections, from 1908 to 1948, the American people indirectly cast 372,546,637 votes for President. Of this total vote, 163,379,535 votes, or over 43 percent, were credited in the electoral college as if cast for the candidates other than those for whom they were voted.

In the last presidential election over 23,660,000 votes, or 48 percent of all cast, were credited to candidates for whom they were not voted.

The last presidential election is simply typical of the present method of crediting votes. In the States he carried, President Truman received 14,600,000 votes in his favor. In the same States his opponents received 13,030,000 votes, all of which were credited to Mr. Truman in the electoral college. In the States he carried he received only about 1,500,000 less votes on account of his opponents' votes than he did for his own votes.

In States Mr. Truman did not carry he was denied credit for over 9,000,000 votes cast in his favor.

Mr. Dewey, in the States he carried, received 9,927,000 votes. He also received credit in the electoral college for 10,309,000 votes cast for his opponents in the States he carried. In other words, he received more credit in the electoral college for the votes of his opponents than he did for his own votes in the States he carried.

In the election of 1912 Wilson, Taft, and Theodore Roosevelt each received more credit in the electoral college for the votes cast in favor of their opponents than they did for votes cast for themselves. (See House hearings, p. 42.)

Either the Republican or Democratic Party may be the minority party in one State and the majority party in another. Whether or not its members belong to either the minority or the majority party should not make a particle of difference as to whether or not the voter's ballot should be credited in every State. The present method is poor sportsmanship. It is necessary and desirable for the prevalence of our party system and for the country's welfare, that each party should have its proper credit in every State.

Every lawful vote is entitled to be credited in the ultimate count of the election, just as a simple matter of political integrity.

Our electoral system provides no logical method of compensating the minority candidate for the votes cast in his favor but denied him in the electoral college. The votes of the minority party are denied it, regardless of whether the plurality be 1 or 1,000,000.

The House hearings show the credit given the two leading candidates in the last election for the first eight States, selected alphabetically, and carried by each candidate. For every 100 votes for Mr. Truman in the States he carried he received credit in the electoral college ranging from 162 to 210, and Mr. Dewey received credit in the electoral college from 176 to 203.

These erratic results of popular voting are due to the fact that the present method of counting votes has no logical relation to the population of the State or to the relative strength of the candidates within the State.

HOW THE VOTES ARE COUNTED

Under our present method of electing a President, there are three fundamental ways of disposing of the States' electoral votes:

First, the only candidate in the State who gets credit in the electoral college for his votes in that State is the one candidate who has a plurality of the popular votes.

Second, the plurality candidate also gets credit in the electoral college for all votes in favor of his opponents in such State. That is true, regardless of the size of the plurality vote or the minority vote.

Third, every candidate in every State is denied credit in the electoral college for all the votes cast for him in every State in which he fails to secure a plurality.

This method of counting votes wholly ignores the real character of our Presidential election. The election is a national election to elect a President for the whole country. It is separately conducted in each of the 48 States, but the issues run crosswise over every State in the Nation. It is a contest to approve or oppose candidates and policies. The political party engaged in the contest seeks to ally all persons throughout the Nation to rally in support of its candidate and its cause.

A HOMELY ILLUSTRATION

The object of an election is somewhat like a census. Suppose the Bureau of the Census was called upon to take a census of sheep and goats. It counts two large groups in one State and finds there are 200,000 goats and 200,001 sheep. Then in its return it would report a total af 400,001 sheep and say nothing about the goats. The enumerator would go to the next State, and he might find there were 60,000 sheep and 100,000 goats. He would report that there were 160,000 goats. Such a method of enumeration would be so devoid of common sense that all would brand it as stupid.

Is it much less stupid when the same method is pursued by a great government in holding an election to determine the will of the people of the Nation under constitutional authority as to who shall be their President?

The election is held in New York. It is found that the candidate with 45 percent of the votes has more than any other, so the report to Congress gives credit for New York as 100-percent Democratic or 100-percent Republican. The election is held in another State in which one party carried by a majority of 600,000. No more credit is given than if it were carried by a majority of 1. Such a method is not only senseless, but it is unjust and vicious.

Now Congress has the chance to give the people of the Nation the opportunity to determine whether they want to continue such a stupid method of voting.

As clearly set forth on page 21 and the following pages of the House hearings, the original unit vote was imposed upon the country 12 years after the Constitution was adopted. In every case the unit vote was engrafted on the electoral system by the dominating leaders of either one or the other of the two political parties then existing. The sole purpose was to prevent the opposite party from sharing in the State electoral vote. That effort is now a matter of history. The unit voting system has acquired no additional virtue in the many decades it has been in operation. It lacks fairness, it is unjust in its operation, and is a constant barrier to the accurate and just operation of our electoral system.

PROPOSED PLAN BASED ON EXPERIENCE OF THE NATION

The plan proposed in the amendment is one mainly based upon the experience of our American political life. Our general method of election, approved by experience as applied to Senators, governors, and Representatives, and other important officials, is to give the final election to the plurality candidate. All lawful votes, wherever cast, are counted and credited to the candidate for whom they are cast. When the totals are added, the election is decided in favor of the plurality candidate.

That is in substance what is proposed here. The Constitution allots the voting power to each State according to its population. Under the plan proposed, the people of the State, by their votes, determine how their electoral vote shall be credited. The electoral votes of all candidates in all States are added up, and the election is settled.

THE ALLOTMENT OF ELECTORAL VOTES

House Joint Resolution 2 and Senate Joint Resolution 2, which are identical, do not propose to change the voting power of the State. That voting power is clearly defined by the Constitution. Each State has votes in Congress according to the number of their Senators and Representatives. Each State has electoral votes in the same number that it has votes in Congress. The Constitution provides "Electors of each State shall have the qualifications requisite for election of the most numerous branch of the State legislature." In substance, the Constitution says to each State, "You shall decide who your voters shall be. All the Constitution requires is that in qualifying voters for Federal offices you shall apply the same standards you apply for the election of your own officials."

Electoral votes are allotted to the States primarily on the basis of population. In substance each State has the same number of electors as it has Representatives in Congress on the basis of population—two electors for each State regardless of population or the number of voters.

As the apportionment now stands, 82 percent of the electoral votes are granted in proportion to the population of the States; 18 percent or 96 electoral votes are granted by allotment of two votes to each State regardless of population.

Under the pending proposal, the presidential elector would be eliminated, and the people of each State would vote directly for President. The State electoral votes would be retained and disposed of in exact proportion to the popular vote in each State. No fairer method of division of electoral votes can be devised so far as the State disposal of its electoral votes is concerned. When votes are allotted to the States on the basis of population, we have a common unit as between the States based on population for the allotment of 82 percent of the electoral votes.

So far as the votes are allotted in proportion to population, they represent a common unit between the States as to the number of people represented, even though the States may differ as to the number of popular votes.

The two-vote allotment is not a common unit either from the standpoint of population or voters. Under the proposed plan, as contrasted with the present, the criticism on the basis of discrimination is very largely eliminated.

In my judgment the best possible common unit between the States is based on equality

of population. The best available source of a common unit as to the two-vote allotment is under the plan proposed, which would very greatly minimize any objection that could be made to this grant to the small States regardless of population.

The people of each State determine who their voters shall be. Those selected, regardless of their proportionate number of the State population, represent the State. Those who vote, whether 40 out of 100 or 30 out of 100, represent 100 people in every State. The standard of the Constitution is representation according to population and not according to the number of voters. That is a basic fact we must recognize in appraising our electoral system. Our Senators, our Representatives, or electoral votes primarily represent population and not voters.

Last election only one-third of the Nation voted. The Congressman represents the whole people of his district; not merely the one-third who voted.

CHANGES PROPOSED

As pointed out in the House report on House Joint Resolution 2, it is fortunate that the outstanding defects of our present method of electing the President are comparatively easy to remedy. Each change proposed in our electoral system by House Joint Resolution 2 simply removes an archaic provision, and in every instance substitutes a means more like we use to elect Senators, Representatives in Congress, and State officials generally.

The President must now be elected by Presidential electors. Under the proposed plan he would be elected directly by the vote of the people. Electoral votes would be allotted by popular votes.

Under the present plan, voters by the millions at each election are disfranchised. Votes are counted by the millions contrary to the way they were cast. No minority candidates are given credit in the electoral college. Under the proposed plan every lawful vote would be counted as cast. No candidate, as now, would receive credit for votes cast for his opponent.

Under the present plan the possibility of election in the House of Representatives, except as provided in the twentieth amendment, would be eliminated. Under the proposed plan the plurality candidate would be elected. Under the present method a majority of the electoral votes is necessary to elect. However, the presidential electors are elected by plurality votes.

Fourteen of our Presidents have been elected by a minority of the popular votes. If the Constitution required a majority of the popular vote to elect, 14 of the Presidents would have been defeated unless elected by the House.

THE AMENDMENT PROPOSES AN IMPORTANT CHANGE AS TO THE TWO-VOTE ALLOTMENT

The allotment of two votes to each State regardless of population is manifestly not on a uniform basis either as to the number of voters or the population of a State. If the two electoral votes of the State were divided by a vote of its own people, there is no injustice to the State.

However, the two-vote allotment is of important concern in the apportionment of electoral votes between the different States. Ninety-six votes to be disposed of regardless of population is an important factor in our electoral system.

It may be conceded that the two-vote allotment is not a grant of electoral power on a uniform basis, as measured by either population or the number of voters involved. This grant of gratuitous voting power to each State regardless of population has been defended as one of the checks and balances of our Government. It has a similarity to the Senate, whose Members are likewise not allotted on the basis of either voters or population. Nevertheless the Senate has served as a check and balance, and to the advantage of the country as a whole. It is highly improbable that the country would ever take away this two-vote allotment.

If we look upon it as an objectionable grant of power, the effect of the two-vote allotment is largely minimized by the geographic distribution of the small States which can use the two-vote allotment to their advantage. (See House hearings on House joint resolution, pp. 63–66.)

Those who object to the two-vote allotment regardless of population will find that the proposed constitutional amendment greatly reduces and minimizes any possible objection they may have.

At the present time all these 96 electoral votes are allotted to a plurality candidate. That means that no other party shares in the allotment of the two votes thus granted to each State.

For instance, in a State with four electoral votes, two votes are allotted to the plurality candidate and nothing to a minority candidate. Under the proposed plan, if one candidate, for instance, carried that State by a 10-percent plurality he would receive one and two-tenths electoral votes, while the minority candidate would receive eight-tenths of one electoral vote. So these two candidates would neutralize each other's vote to the extent of 90 percent and reduce the gratis vote from two to two-tenths of one vote.

This is better illustrated by the election of 1944. Mr. Roosevelt received 72 of the 2-vote allotment and Mr. Dewey 24. Had the proposed plan been in operation, the margin of Mr. Roosevelt on account of the 2-vote allotment would have been less than 14 instead of a margin of over 48 votes that he did receive. In other words, the present plan gives the two-vote allotment entirely to the plurality candidate. By the division of these votes between the candidates, the only gratis margin accruing to the benefit of the plurality candidate is confined to the percentage of his plurality.

In view of this change, the two-vote allotment when considered in connection with the geographical distribution of these votes (as explained on pp. 63–66 of the House hearings) would be of minor importance and would very largely remove any legitimate criticism that can be directed at the two-vote allotment.

A DANGEROUS IMPLICATION

Recently I was somewhat amazed to read a contention that the pending resolution to modify our electoral system carried a dangerous implication, because the proposed system would credit each person for whom votes were cast for President in each State with such proportion of the electoral votes thereof as he received of the total votes. After 160 years of popular government we find an American citizen arguing that it is a dangerous thing for a lawful voter of the country to have the right to have his vote counted as he cast it. In my judgment, popular government and civilization itself will get a good deal further by counting lawful votes the way they are cast than it will by refusing to count them.

Where is the integrity and the fairness of elections if we insist on refusing to count votes lawfully cast?

Why invite people to vote if we do not intend to count their votes after they are cast?

If the people of the State do not have a right to control the disposal of the votes allotted them by the Constitution, who has such right?

Is there any fairer way that can be devised for dividing the State vote other than in accordance with the will of the voters of that State as expressed at the polls?

It has been suggested that the proposed method of election is by proportional representation. Clearly proportional representation has nothing to do with this proposed plan. Proportional representation applies only where there are two or more offices to be filled.

In the proposed plan we have a division of votes in the same way we have a proportional division of votes in the election of a Governor, a Senator, or a Representative. The popular votes are converted into electoral units to form a common voting unit as between the States. All the votes in every voting area are counted, the totals are established, and the candidate having the greatest number of votes is elected.

Among other things, it has been contended that permitting minority candidates to be credited with electoral votes in proportion to their popular votes would unduly encourage the formation of numerous political parties. The fact is that in 15 different presidential elections the electoral votes have been divided between three or more candidates, and no party has long remained a party of consequence unless it has established itself as one of the leading parties of the Nation. The answer against needless multiplicity of parties is not by suppression of lawful votes.

Whenever a group is able to control the plurality of the State vote, however small that plurality may be, it gets credit for the total vote of the State. It then dominates the State.

Under the proposed method the minority candidates will get credit for their votes, but for the number of their votes only—no more or no less. They will get the credit they deserve, but no fictitious credit.

One of the distinct advantages of the proposed amendment would be that it will minimize the illicit influence that small groups can now exert through claiming a balance of power controlling the whole vote of such States.

What is more important in our electoral system than to have the votes counted as cast? No suppression of lawful votes and no credit for votes for candidates for which they were not cast.

Every lawful voter in this country should go to the ballot booth with the consciousness that his ballot will be counted as cast and have its proper part in deciding who shall be President. Under the present plan an average of 44 percent of our people who vote have no influence whatever in the final count.

Suppression and misappropriation of votes is an offense of a monumental character against our popular form of government. The only remedy in sight is the adoption of Senate and House Joint Resolution 2.

Statement Reds Could Knock Out United States in 90 Seconds Unadulterated "Baloney"

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1950

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith the following editorial which appeared in the St. Louis Post-Dispatch on January 30, 1950:

SENSE AND NONSENSE

Two well-known public officials have just made statements concerning the national defense of the United States. One sounds wholly sensible, the other wholly ridiculous.

UNIVERSITY OF MICHIGAN LIBRARIES

Governor Gruening of Alaska says the Territory which he is responsible for could be captured "tomorrow" by one or two parachute divisions coming across the Bering Strait. That sounds sensible. Settlements in Alaska are relatively small and spread far apart. We know that the vast area as yet has little means for defense.

The statement which is wholly ridiculous comes from Senator MUNDT. The South Dakotan says that Russia "could knock out the United States in 90 seconds." This assumes that the United States would know even less about such an attack in advance than it knew about Japanese movements prior to Pearl Harbor. It assumes that atom bombs can be carried around in vest pockets and left in factory lockers. It assumes that our Air Force, Army and Navy, with the greatest defense budgets in our history, have no plans for the protection of the Nation.

Governor Gruening should be listened to, Senator MUNDT.

F. D. R.

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to insert a very thoughtful statement made by Steve Walsh who writes under the column well known to newspaper readers in Massachusetts called the Bell Ringer, which appeared in the Lynn Telegram-News, Lynn, Mass., Monday, January 30, 1950:

They either held him in high respect or they hated the mention of his name. I'm referring, of course, to the thirty-second President of the United States because today is the sixty-eighth birthday of Franklin Delano Roosevelt. And in case it is of momentous interest to anyone, just count me as one who thought a lot of the man; the cripple in the White House, who gets bigger in name as time tolls the bell.

You got to have some form of infirmity to clearly understand what F. D. R. did for his race. Blind malice can always find a mark to shoot at, and in their madness of heart the venom of narrow souls poured out plenty of vituperation on Roosevelt. And to even think that there will be a discontinuance of this type of angry spite is like emulating Canute and telling onward waves to halt.

If you want to feel humble take a ride over through Poughkeepsie and then move along to Hyde Park, N. Y. Take a walk through the famed James R. Roosevelt estate, formerly the home of F. D. R.'s half-brother. Just beyond is the memorial building bequeathed by the late President to the people of the United States. Nearby is his grave marked by a simple marble slab; that and nothing more.

Around this plot is a 100-year old hemlock hedge, and though seemingly tens of people are always near you during your short visit, somehow you feel alone. That strange sensation will not live down as you meditate; the thought of what lies before you deep in the bowels of the earth. There are the remains of the man who at one time was the most powerful individual in the history of time.

But that has been changed, and the little mound and marker are all that remains. Unless you want to digress and point out what will be going on Tuesday, February 7, in many States of the Nation. Roosevelt's birthday has usually been the signal for an outpouring of the faithful to get ready for that date. Gayety is the watchword, not solemnity. A hundred-dollar ticket is the credential to a feast that is likened to ambrosia.

For this is the gathering of the boys and their better-halves; this is the long-awaited occasion to look each other over, to talk political shop, to make hay dipped in golddust, to laugh and cheer and applaud with high spirit, to try and emulate the bon vivants of yesteryear; in short, to keep up with the Joneses among whom Jesse Jones is one. But one voice will be missing: the mellifluent tone of the spellbinder, who always could say: "My frans."

Republicans will rave and rant about this sumptuous meal. They will call it undemocratic, and sulk like little children. But the delicious smells from the kitchen will be enjoyed, the tinkling of glasses will ring clear, the appetizing food will be consumed, and Democrats will still call this act "a division of the spoils."

The Challenge to Our Two-Party System

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1950

Mr. KEATING. Mr. Speaker, Under leave to extend my remarks, I include an address by my able colleague from Connecticut, the Honorable JOHN DAVIS LODGE, delivered before the Women's National Republican Club of New York last Saturday.

In the usual vigorous and forthright manner which characterizes our distinguished colleague's words, as well as his deeds, Representative LODGE has made an important contribution to the public discussion surrounding the future of the Republican Party. His sincerity, his clarity, and his vision commend his remarks to the thoughtful consideration not alone of his colleagues, but of all voters regardless of their political affiliation.

The speech follows:

Ladies and gentlemen, for some time now I have been looking forward to the pleasure of meeting with you to discuss Republican plans and policies.

A discussion of the future of the Republican Party is, in a sense, like discussing the future of our country. I say this because, if the Republican Party should falter, there does not appear to be another party ready to take its place. And if we had but one party, then, in sober truth, America as we have known it would cease to exist.

In other words, the two-party system is probably the most important single factor in the preservation of American freedom.

If we had more than two major parties our political system would probably degenerate into a myriad of splinter parties reminiscent of Europe. We would then be a prey to the same sort of coalition governments, the same kind of cynical barters and trades which for so many years have been the curse of some of the European parliamentary systems. We would in all likelihood have a minority government which would be far too weak to preserve political stability. We would probably also forfeit the concept that a main purpose of government is to safeguard minority rights while protecting the majority from minority control. Indeed, in those circumstances we would have control by a minority.

On the other hand, if we had less than two parties, we would have a one-party system, and this would completely nullify our Constitution, neutralize our Bill of Rights, and invalidate all our free institutions. Our checks and balances would be but a nostalgic memory and there would be no separation of powers, since all power would be concentrated in one partisan instrumentality.

The two-party system is then an essential ingredient of the free system to which we owe most of our many blessings.

And yet we have a growing body of independent voters in America. More serious still, there were in the last presidential election some 45,000,000 people who failed to vote.

The independent voter represents the balance of power in our elections. To some extent this can be a healthy condition. It can put the major parties on their mettle. It can engender a fine spirit of political competition out of which the country can benefit. It can result in electing the best candidates to public office. It can produce sound policies and progressive programs.

But if independence of party is carried too far it can undermine our two-party system.

The increased independence of the American voter is in large part the fault of the parties themselves. It is due to an inability to make the parties attractive to a larger number of people. The Republican Party contains people of varying views, and this is natural since our party is a national party and since our country includes many races, creeds, occupations, and climates. Politics is in large part the art of conciliating varying and differing groups of people, of bringing them in and keeping them in under one partisan roof. The Republican Party must convince a majority of the people who vote that it has a constructive plan of action which will respond more effectively to the needs and aspirations of all the people than the tired clichés, the reckless promises, and the special interest appeals with which the Democrats have in recent years preyed upon the fears and apprehensions of the voters.

But this electoral independence is also, it seems to me, due to the fact that many people do not associate themselves with the political life of the Nation. It is due to the tendency of the independent voters to think that if the Republican Party should fall by the wayside, if it should succumb for lack of adherents, or because of an excess of independents, then that is tough luck for the Republicans. That is hard on the officeholders and on the party-workers. It is none of their affair. Yet it is, I fear, desperately true that the disappearance of the Republican Party would affect them as much as it would affect the Republicans. It would affect the Democrats. It would deeply affect the lives of all Americans. The American people have a great stake in the survival of the Republican Party. The independent voter depends for his independence upon the survival of the two-party system.

Narrow partisanship is, of course, deplorable. Partisanship which places party above patriotism, patronage above principle, and personalities above policies is highly reprehensible. Yet the best way to discourage such sordid attitudes and such demogogic practices is not to retire to the sidelines in derisive independence but rather to plunge into the political melee and endeavor to influence the party of one's choice in the direction of the people's real welfare. The best, the only way to be effective politically is through the medium of one of our two major parties. We cannot give a vigorous demonstration that we believe enthusiastically in our kind of government unless an increas-

ing number of Americans become increasingly active in politics.

In creating a broader basis of political participation, the women of America play a predominant part. For they have a dual role in politics. In the first place it is to them that we all look to maintain the home which is the most important political unit of all. Indeed, one of the first measures passed by the new Communist government in Russia some 30 years ago was an attempt to destroy the family. Nothing that we can do in Washington will matter if the American home disintegrates. The laws that we pass and the treaties that we sign will avail us little if America is destroyed from behind through our children, the men and women of the future. Certainly the burden of domesticity falls primarily on the women.

The second aspect of this duality is best illustrated by the great gathering here today. It is truly heartwarming to see such a large delegation from Connecticut and particularly from Fairfield County. In my first campaign for public office in 1946 I came to appreciate what a vital part the women of my district play in politics. They are patient in handling details; they are willing to undertake all manner of political chores which are as essential to victory as they are lacking in glamour; but above all, they bring into politics a much needed idealism. They bring it not only in their own status as politicians, but also through their influence with the men. The very qualities of sympathy and tenderness which make for a happy home make also for a more rounded and better balanced national political life.

And then, my friends, let me remind you that in the United States (as of the 1948 estimate of the Census Bureau) there are 1,669,000 more women of voting age than there are men. Accordingly, you not only hold the balance of voting power; you are the power. You are in a position to protect the great heritage of America not only in the home but with the ballot. You have wisely chosen as your instrumentality the Republican Party.

The Republican Party is the only political organism standing between the American people and one-party government.

Let us revive that old phrase which cub reporters used to practice on their typewriters: Now is the time for all good people to come to the aid of the Republican Party. Certainly now is the time. Now is the time for us to be imaginative, coherent, truly progressive.

Let us confront the real issues in an effort to discover how we can be of service to our country.

It has been the fashion in some quarters to think that our party is on the horns of the dilemma of choosing between a philosophy which some have called me-tooism and a point of view which others have labeled as reactionary. But this is not our choice. Certainly we must not follow and imitate where others lead and create. But neither must we be obstructionists. We must not disagree for the sake of disagreement. As I believe our distinguished guest Governor Driscoll has put it, we must not come out against the Ten Commandments just because the Democrats favor them. It is not sufficient for us merely to carp, to criticize, and to condemn. We must above all conserve, construct, and create. In its policies and in its actions our party must reflect the fundamental divisions of thought among the American people.

Now that does not mean that we must be horse-and-buggy die-hards. Nor does it mean that we should advocate the doctrine of laissez fairé. It does not mean that we must follow in the recent tradition of a small segment of the Republican Party who classify themselves as isolationists rather than in the far older, more wide-spread Republican tradition that what goes on outside our borders is of great concern to us. It does mean that we must produce feasible alternatives to the schemes of the Democrats which, if they were adopted, would destroy the very welfare of which the Democrats are the self-styled champions.

And, as a matter of fact, if one could believe Democrat oratory the Democrat Party would be the me-too party. A curious example of this attempt to be all things to all men is found in the President's recent message on the state of the Union which, I may say, contained a minimum amount of comment on the state of the Union and a maximum quantity of cynical political bait. The speech is interesting because the President, anxious to appease a growing body of aroused Americans, resorted to the very me-too philosophy which he has often attacked on those occasions when certain Republicans have agreed with him. In an effort to attract the support of those who are alarmed by the increasing cost of government, by deficit spending at a time of high national income, and by the growing might of the Washington bureaucrats, the President stated that "businessmen must continue to have the incentives necessary for investment and for the development of new lines of enterprise."

Yet in the same breath he recommended a program which would go far toward eliminating these incentives, preclude the development of new enterprises, and concentrate more power in Washington.

The President also reiterated his desire for the repeal of the so-called Taft-Hartley law although the overwhelming majority of the Democrats in the House are opposed to repeal. Indeed, when repeal of the Taft-Hartley law came before the first session of the Democrat-controlled Eighty-first Congress only 30 Democrats out of 263 voted in favor of repeal. Furthermore, in spite of the President's request for repeal, the Democrat leadership has apparently decided to keep this issue for the 1950 campaign. I believe that this is a grave disservice to labor. I believe that labor is entitled to be influential in both parties. I believe that the welfare of the working men and women of America is entitled to the same bipartisan consideration as that which is accorded to the welfare of the Europeans. Labor and capital are component parts of what is essentially a cooperative effort. It should be the mission of the Republican Party to take labor legislation out of politics.

Furthermore, in order to provide more jobs and higher wages, in order to raise our standard of living, we must increase and improve our tools of production. This we cannot do if incentives are stifled, if risk investments are made so risky that people won't take a chance. This is the paramount interest of all of our citizens and in particular of labor. It has been estimated that the average job in America requires a $6,000 investment. It is a disservice to labor to discourage such investments.

The Republican Party should also point out to what degree the working men and women of our country are weighted down with taxes. Our Federal Government annually costs the average American between $275 and $300. It now owes the average American family of four somewhere between seven and eight thousand dollars. The average American citizen is plagued by dozens of invisible taxes. Yet the President talks of substantial tax increases.

A notable omission from the President's message is that it contains no reference to the Hoover Commission reports and recommendations which hitherto had been thought to have substantial bipartisan support. This is sad, indeed, particularly in view of the budgetary deficit because I believe that the overwhelming majority of the American people, including those who want the Government to do so much, want it done without waste and with efficiency.

And while the Hoover Commission reports and recommendations are not a partisan matter; while they are supported by many citizens in both parties and by independent voters, certainly there is a tendency in some administration bureaucrats to prevent a proper streamlining of our Government. The Republicans should assert themselves to the utmost in order that the President and the Democrat-controlled Eighty-first Congress should proceed with dispatch to the implementation of these recommendations.

With regard to what is often referred to as social legislation, there is no need to embrace the solutions offered by the Democrats. However, neither should we ignore these problems where they exist. It is up to us to demonstrate our imagination and our intellectual vigor by coming out with better solutions. Principally, however, the difference between our point of view and theirs is that for us it should be an effort to respond to a human need while for them it is usually part of a plot to concentrate additional power in Washington. Such centralization is, of course, pleasing to the Communists since it enables them more easily to undermine the morale of our people and to destroy the political fabric of our country.

Because the Government must be the servant of the people it must also be strong enough and wise enough to respond effectively to the problems of the day. While we provide incentives for the creation of new wealth, we must also intercede on behalf of those for whom life is particularly difficult in order that the people should retain their enthusiasm for the private-property system. While in order to raise our standard of living and buttress our economy we should reduce the national debt, effect large-scale economies in Government and return to sound fiscal policies, we must also assist those who have no more than a substandard on which to eke out a meager existence. But although the health of our Nation and the education of its citizens, old-age pensions and social security, minimum wages and unemployment compensation, large-scale production and full employment, rural electrification and flood control, adequate housing and soil conservation are all desirable objectives and all involve the people's welfare, we should burn into our brains the incontrovertible truth that the ultimate, the essential welfare of the American people depends upon the continuation and increase of the vital opportunities inherent in our free society. Aid to the needy, to the unfortunate in our society, is right and just and feasible. But if every family receives housing, food, clothing, medical care, and education from Washington, we shall have embarked upon a course which will cause a break-down not only in the American economy but also in the American character. And when a government attempts to redistribute to the citizens more than the citizens can produce, inflation and eventual dictatorship are the inevitable result.

I believe most strongly that on the issue of civil rights, acting in the clear and vigorous tradition of Abraham Lincoln, we should take a forthright stand. This is in keeping with our platform.

On this matter the Democrats are hesitant, apologetic, and ineffective. We can and must be united and strong. The Democrats have with consummate hypocrisy attempted to use this great problem in human relations for partisan advantage. In the last few days the Democrats have had the chance to bring up legislation involving the right of equal opportunity to work, and they have resorted to every parliamentary trick to avoid the issue. We should take no part in such activities. We should carry the banner on the civil-rights program. This is not only right and just and in the best Republican tradition, but it will also be of great help to us in the battle for men's minds which we are waging throughout the world with the godless forces of Communist aggression.

UNIVERSITY OF MICHIGAN LIBRARIES

And this brings me to the primary issue which faces our Nation—the issue of war and peace.

For it is relentlessly true that any social gains we make will melt like snow in the sun if we have war. And while this overriding issue should be met without regard to party advantage, it is more important to be right than to be bipartisan. And it must be increasingly clear to the people of America that it will be to their advantage to have in Washington a government which devotes its time not to a justification of its errors but to correcting them; not to covering up mistakes but to policies which will safeguard the peace. We have a right to demand of our officials that they place loyalty to America ahead of loyalty to their friends and cronies.

The most conspicuous and discouraging characteristic of Mr. Truman's message on the state of the Union is that it made no mention of the catastrophe in China and the Communist threat to Formosa and that it gave no indication as to how the state of the Union is affected by the dire events which in recent weeks have rung down the iron curtain on some 450,000,000 people in Asia. Communists all over the world cannot but applaud this dramatic absence.

While I do not feel that it is necessary or advisable for us to attempt to occupy the island of Formosa, I do believe that aid on the Greek pattern should be tried. It is undeniable that President Truman's statement on Formosa constitutes an abandonment of the Truman doctrine which is world-wide in scope. Formosa is the symbol of the failure of our entire Asiatic policy.

And so, in an effort to throw some light on this dangerous condition, I introduced a few days ago a resolution of inquiry in which I asked certain questions with regard to this entire lamentable affair. It seemed to me that the American people through their elected representatives were entitled to be informed.

It so happens that I have been a nonpartisan supporter of foreign-affairs legislation ever since I have been in Congress. But I do not feel that because I am a Republican, therefore I have no right to criticize or to disagree. I believe that the American people are entitled to a second voice on the great issue of life and death which is involved in our foreign affairs. And I believe that to attempt by cries of partisanship to deprive them of these criticisms in a matter of such grave importance is to subvert the great purpose of our political system at a time of increasing national peril.

If we Republicans abdicate our prerogatives, America may soon become an island of liberty in a sea of slavery.

In order to keep the light of freedom burning ever more brightly in a dangerous world, we in America must create a broader base of partisan political participation. More and more of our citizens must become politically active if we are to preserve the system which makes their political participation possible. Political duties are inevitable corollaries of political rights. Freedoms and responsibilities are inseparable. By discharging these precious responsibilities, we shall at the same time be exercising these cherished rights. We shall also in this way furnish the impetus which America needs in meeting the unprecedented opportunities for leadership which fate and fortune have visited upon us. We shall in this fashion provide America with the grass-roots spiritual and moral strength to safeguard our freedoms at home and to protect our freedoms aboard.

So will we breathe new life into our two-party system, and in so doing maintain the vigilance which we know is the price of liberty.

So will America go forward to new prosperities.

So will the contagion of our active faith in freedom spread to the dark recesses of this troubled planet where the forces of tyranny and oppression are still on the march.

So will we at long last lead the oppressed people of this harassed world out of the morass of suffering and slavery in which they are engulfed and onto the high, dry ground of liberty and peace.

The Republican Party is the best hope of America, and America is the last best hope of earth.

Boston Naval Shipyard

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to insert the following letter that I have received together with a very enlightening statement written by John J. Carey concerning the Boston naval shipyard:

JANUARY 30, 1950.

Hon. THOMAS J. LANE,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN LANE: Enclosed please find a feature article which was in the Boston Post, Sunday, January 22, 1950.

This article, we like to feel, is what an impartial survey would find of our Boston yard. It clearly brings out the many things that we have pointed out to top naval officials in the last year.

We feel proud of this article and felt that you would, too; so that is why we are taking the liberty of sending it to you.

With best wishes, I remain,

Very truly yours,

EDWARD F. HINES,
Secretary,
Charlestown Metal Trades Council.

BOSTON'S PART IN WORLD WAR III

(By John J. Carey)

Recently a group of Boston newspaper men and women were invited to visit the Boston Naval Shipyard, at Charlestown, where, under the direction of shipyard commander Capt. Richard M. Watt, Jr., we would be able to get a comprehensive idea of what was being done currently in this important naval base; and the preparations that were being made for defense and offense in the event of world war III breaking out.

Probably few persons, even among those who daily pass by the Navy yard, realize that this is the second largest General Electric plant at Lynn. It is true, many of the buildings are antiquated and ill-adapted to modern ideas of manufacturing efficiency. But, inside the buildings, the machinery and equipment and the methods employed are up to the last minute.

FIVE BIG UNITS

In addition to the naval shipyard itself, at Charlestown, the First Naval District includes the big submerged oil tanks in East Boston near the Orient Heights section which were built for World War II, and from which, through a pipe line running along the path of the old narrow gage railroad to a point near the old Cunard docks, the Navy ships can be serviced with their fuel requirements.

Another most important adjunct of the naval district is the Commonwealth docks at South Boston wherein was built, in 1914, the largest drydock in the United States; and which is, in fact, only exceeded in size by one other in the world. Still, a third major unit of the naval facilities here are the shipyards at Hingham, which were built by the Government and operated by the Navy for the construction during the last war of destroyers and landing craft. A fifth unit is the big gear works at Lynn.

Assuming that our chief opponent in the event of a third world war would be Russia, Boston is regarded as the first base on what is called in naval circles Route 1 to Russia. This is Boston's position because Boston, among our major naval bases, is hundreds of miles nearest to Russia. Operations against Russia would necessarily be from the Atlantic seaboard as the nearest base to the heart of Russia. Operations in the Pacific would be largely of a defensive nature because of the vast distance to Siberia by water and the further thousands of miles across the Asiatic Continent to reach Moscow.

NEAREST TO "POINT CHARLEY"

Boston's importance, in the event of such a war, lies in the fact that as stated above, it is much nearer to what is known in naval circles as Point Charley, but also because deep water extends much closer to Boston than to the other major yards, at New York, Philadelphia, Norfolk, and Charleston, S. C. Point Charley is the point off the Canadian coast at which ships turn north to take the great circle route to Europe which, because of the earth's curvature, is a shorter route than if a ship sailed directly east.

From Point Charley to within about 40 miles of the Boston naval base there is deep water, which makes it impracticable for the laying of mines; whereas, in the case of the other major naval bases, this deep water ends several hundred miles out from the coast. Because of this advantage of comparative mine safety accruing to the Boston base, practically all ships injured or in need of replenished supplies would make for the Boston base. The need to keep this base in first-class shape physically, and well supplied with skilled workers under the conditions the world is facing, would seem most obvious.

SUPPLIES FOR OUR ENTIRE NAVY

The Boston shipyard at Charlestown manufactures all the rope and chains for the entire United States Navy, and the marvels of modern machinery employed there in this work are not excelled in any industrial plant in the country. Anyone who thinks that rope was for use only in the old sailing ships would be astonished to see the way it is turned out by the mile at Charlestown for our modern battleships and cruisers, and from small sizes that might be used on a rowboat to great hawsers, 6 inches in diameter. Besides the rope and chains, the forge and chain shops at the yard make practically all the other hardware, pipe fittings, hooks, plates, bolts, shackles, jaw-fitting wrenches, and tools of almost every conceivable kind.

The most modern method of anchor-chain manufacture—Dielock—was developed at the Boston naval shipyard in 1926, and it was developed, not by an MIT scientist, but by one of the workers at the yard. Since 1923 it has been recognized and adopted by the United States Navy as official standard.

NEED FOR DEFENSE PROGRAM

The very fact that the Boston naval district has so many advantages over the other major bases on this coast makes it all the more necessary that a comprehensive defense program for the Boston area should be mapped out. The enemy knows of these advantages and, therefore, would be alert to the need of putting the facilities at this base out of commission. Besides the defense measures being taken by the military authorities, there might well be especial need of such a civilian program as has been suggested by Congressman KENNEDY and Gov-

ernor Dever to supplement what the military chiefs are doing.

I might say in closing that we newspaper representatives were very much impressed by what we saw and heard during our visit to the yard. The naval officers and the personnel were evidently as well equipped and trained to operate the big establishment as any group trained in private industry.

A Report to the People of Kansas City

EXTENSION OF REMARKS
OF

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1950

Mr. BOLLING. Mr. Speaker, this is a report to the people of Kansas City. If a Member of Congress is to do his job well, he must try to keep in personal touch with the thousands of people he serves as their representative in the National Legislature. As the representative of all of you, the people of the Fifth Missouri Congressional District, I have tried to keep you informed of my activities in many ways—through a weekly radio report on Monday nights at 10 over KCMO, by columns in weekly newspapers, through newsletters to those who have expressed a particular interest and, of course, through a large amount of personal correspondence. When the Congress is adjourned I join my staff at our Kansas City service office in the Federal Building at 811 Grand Avenue. This service office is open the year round.

This report is another way to keep in touch—and a chance to discuss with you some of the problems we face together.

DICTATORSHIP VERSUS DEMOCRACY

During 1949 the United States moved farther along the road to world peace. We continued our support of the United Nations. Our votes in favor of continuing the Marshall plan, providing adequate defense forces and giving military aid to our Atlantic Pact partners made clear that we meant to support and defend democracy in the world-wide struggle between dictatorship and democracy.

It seems to me that today, for the first time in history, our great country has a positive and well-rounded foreign policy. While we have not won every skirmish in the cold war, we have made a good beginning. Some of our victories have been spectacular—like breaking the Berlin blockade—other efforts have been less spectacular but just as important, such as plugging away, day after day, over the Voice of America, telling the world about our democracy and our efforts toward peace and world order. But the struggle between democracy and dictatorship will go on for a long time. The Communists will never, of their own accord, give up trying to destroy democracy as we know it. They and the other totalitarians will continue to try to develop fifth columns in democratic nations which is one of the reasons why my vote was cast for adequate appropriations for the House Committee on Un-American Activities. They will keep on exploiting misery, disease, poverty, and unrest wherever these conditions exist as a pretext for attacking the democratic way of life. What we have to do is to help plant the ideas and ideals of democracy firmly throughout the world and work to get rid of the conditions which give Communists their chance to spread their false doctrines among desperate and hungry people. The greatest ultimate security against communism will be found in the eventual elimination of the abject poverty and fearful insecurity in which so many of the world's people live. Peace will not come easily—we have to work at it constantly, with real determination and in cooperation with the other democracies.

ADVANCE OR RETREAT

Just as cooperation with other democracies is the key to the success of our foreign policy, so is cooperation by all the elements in our national community the answer to making our great domestic hopes come true. Our country enjoys the highest standard of living the world has ever known—yet, in 1948, a prosperity year, about one-third of all our families did not get the minimum goods and services they needed for their health and welfare. We cannot afford this.

There are many different ways in which this problem must be attacked if we are to solve it. First we all must recognize that ours can and must be an expanding economy. Despite our enormous production we have not approached our full possible development—there is no good reason why our gross national product 5 years from now should not be increased tens of billions of dollars to $300,000,000,000 a year. We have the means at hand, the resources, energy, and know-how. The achievement of this goal is in the interest of all groups in our national community. To achieve this goal we must all work together.

But if 5 years from now our over-all productivity is increased to $300,000,000,000 the problem of the lower economic third would not solve itself automatically. We must understand that we cannot afford to have millions of our citizens handicapped by low wages and poor working conditions, by the fear of insecurity in old age, by inadequate education and medical care or by opportunities restricted by senseless prejudices.

I believe we must have a program designed to help people to help themselves and develop into more productive workers in our communities and more confident citizens of our Nation. Some say we are trying to do too much—I say we cannot afford to do less. The challenge to us today is as great as those faced up to by the men who founded our great country, the pioneers who opened up our West and those Americans who on the battlefields have fought and died to preserve democracy.

WHAT HAS BEEN DONE

In the House, we voted last year to remove the unfair taxes on oleomargarine, and the Senate has recently followed suit. We passed a reasonably good rent-control law which protects the tenant from undue hardships and still assures the landlord a fair business return. A great program of housing and slum-clearance was enacted into law after a long fight in this and previous sessions of Congress. The House passed an expanded and improved social security bill, which the Senate is expected to act upon this year, extending coverage to 11,000,000 new people and increasing benefits on the average of 70 percent. Certain important benefits for disabled veterans and their dependents were also liberalized.

The minimum wage was raised to 75 cents an hour to help keep our laws in step with the times. I strongly supported this measure but was opposed to the amendment removing about 1,000,000 workers from coverage, which nevertheless was passed. An attempt was made to repeal the Taft-Hartley labor-management law and to write more constructive and effective labor-management legislation. I voted against the so-called Wood substitute bill, because it represented the substance of the present act under a different label. I did support the so-called Sims compromise, but when that failed, I joined with the majority in sending the Wood bill back to the committee. This important question remains before us.

Because of the vital need for cooperation among all our economic elements, it is very encouraging that a large number of Representatives from the cities showed an interest in the problems of the farmer. I was happy to have the chance to vote in favor of a bill to make telephones more readily available to rural areas. Part of the over-all housing program which we passed was devoted to the improvement of substandard rural housing. While I am in no way satisfied with the present farm price-support program—I voted for the final passage of the present bill because of the great importance to our economy of reasonably stable farm prices.

An amendment to the Antitrust Act was passed by the House in an important step to curb monopoly and unfair business practices. This bill, if passed by the Senate, would prohibit corporations from buying up the physical assets of their smaller competitors, which some groups had been doing because of a legal loophole in the old law. Individual initiative and healthy competition have helped to make us great, and we should make sure that our laws protect the small businessman from the encroachment of large corporations and great concentrations of economic power.

Despite the opposition of those of us who felt the legislation unfair to consumers, the House passed a bill which, should it become law, would result in greatly increased costs to the users of natural gas.

In my judgment it is not right in a democracy to make voting more difficult for one man than another so I voted in favor of the anti-poll-tax bill which passed the House.

A RIGHT WAY AND A WRONG WAY

A Congressman soon learns that there is more than one way for legislation to be defeated in either the House or the

UNIVERSITY OF MICHIGAN LIBRARIES

Senate. One way is the way we all understand—honest disagreement over the merits of the legislation. One side says "we are for it," the other side "we are against it." That is a direct and honest approach. The other approach is less well known. It consists of killing a bill by parliamentary maneuver. On the first day of the first session in 1949, we passed an amendment to the rules of the House which made it impossible for a handful of Members of the House sitting on the Rules Committee to bottle up legislation they did not like and prevent it from coming to the floor for democratic decision by the majority of the Members. An attempt a few days ago to reimpose this gag rule was soundly defeated.

Just as there is a right way and a wrong way for the House to carry on its business, there is a right way and a wrong way to carry into effect the decisions of the Congress. The decisions of the Congress when signed by the President become the laws of the land and are then administered and enforced by the executive departments. Much progress has been made in the field of reorganization of the executive departments. Many of the recommendations of the Hoover Commission on Reorganization have been carried into effect. I have strongly and consistently supported and worked for this program to streamline the functions of our Government and to assure the taxpayers the maximum benefit and service for every dollar spent.

THE ROAD AHEAD

We still face many problems. Our Nation's schools are in dire need of assistance from the Federal Government. Laws are needed to assure the unhampered use of the ballot, and the right for all our citizens to compete equally with others for employment for which they qualify. Some of our problems are financial. We are facing a deficit in a year of general prosperity. Our tax structure must be overhauled and modernized. Wartime excise taxes, for example, should be substantially reduced or, in some cases, eliminated, to assure a continued high level of business activity.

Some areas of the country have serious production and employment problems. We are fortunate that Kansas City is in an area which Secretary of Commerce Charles Sawyer described as "clearly the most prosperous of all the areas of the country."

As a Nation, we have learned our lessons the hard way. We have seen the totalitarian isms grow up and thrive in places where misery and poverty rule and people grasp for any false promise that seems to offer them a glimmer of hope. What we are doing—in the world and here at home—is taking out some insurance against the known hazards of bad economic and social conditions. In the heat of argument and debate your Representatives are trying to devise the ways that this can best be done.

In a democracy we can all share in building the future of our country and working for the communities that make up our Nation. No dictator can tell us what to do and when to do it. We use our democratic processes to tell ourselves what to do through the election of public officials who know us and respond to our needs. But the person who fails to use his democratic rights is not doing his share—he is letting somebody else do his thinking for him, and, more often than not, he is indirectly working against democracy and our way of life. I firmly believe that we cannot afford to let this happen because in these troubled times we face problems that everybody must help decide. We must all play our part. We must all work together. Only our enemies would divide us.

Once in a while, it is good to hear our goals restated. Here is what President Harry Truman said about our hopes in his recent State of the Union message to the Congress and the people:

We work for a better life for all, so that all men may put to good use the great gifts with which they have been endowed by their Creator. We seek to establish those material conditions of life, in which, without exception, men may live in dignity, perform useful work, serve their communities, and worship God as they see fit.

These may seem simple goals, but they are not little ones. They are worth a great deal more than all the empires and conquests of history. They are not to be achieved by military aggression or political fanaticism. They are to be achieved by humbler means—by hard work, by a spirit of self-restraint in our dealings with one another, and by a deep devotion to the principles of justice and equality.

It should make us truly thankful, as we look back to the beginnings of this country, that we have come so far along the road to a better life for all. It should make us humble to think, as we look ahead, how much farther we have to go to accomplish, at home and abroad, the objectives that were set out for us at the founding of this Nation.

As we approach the halfway mark in the twentieth century, we should ask for continued strength and guidance from that Almighty Power who has placed before us such great opportunities for the good of mankind in the years to come.

Textile Workers Union of America

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to enclose the following article from Textile Labor, official publication of the Textile Workers Union of America, CIO, January 21, 1950:

JOBLESS INSURANCE FLOPS BADLY IN TIME OF SLUMP; IN DEPRESSION?

(By Irving Kahan)

Statistics now show what many jobless workers have known all along—that unemployment compensation is grossly inadequate even in States boasting the highest jobless insurance benefits. One-third of the Nation's unemployed workers already have exhausted benefits. The President's Council of Economic Advisers reports that in some areas the number of workers collecting UCC payments actually is smaller than those who have run out of benefits.

Congress has been told in the President's economic report that in a number of major labor markets, 60 to 75 percent of the unemployed have exhausted payments.

In the third quarter of 1949 alone, 500,000 workers exhausted their insurance, compared to 225,000 for the same period in 1948.

FIRST TEST

These are some of the products of the unemployment compensation system's first test since the war. By prewar depression standards, the test was not a major one. Some sources even described it as merely a period of healthy readjustment. They were not textile workers; for the latter, the test was severe.

But however it is labeled, statistics show that unemployment insurance not only fell far short of meeting workers' needs during a slump, but as it now stands, will fall even shorter in the event of a real depression.

UCC payments did prevent a major collapse in consumer purchasing power but they did not help tide over periods of idleness some 35 percent of the Nation's unemployed. These 1,500,000 workers were left completely without income between jobs in 1949.

SOME SHORTCOMINGS

Regardless of the size of benefits and they varied from a top of $25 plus dependents' allowances for 26 weeks, in some States, to $15 for 12 weeks in others, the same general shortcomings were evident everywhere:

1. Benefits were too low, didn't last long enough, especially in one-industry towns, where other jobs were not available. Nationally, the average payment was only $21.01 a week and the duration was 12 weeks even though based on the highest workers' income credits in the Nation's history.

2. Not enough workers were covered; more than 30 percent still are barred.

3. Payments represented only about 35 percent of a worker's average earnings. When UCC was established in 1935, payments averaged 44 percent with the goal set at 50 percent. In the passing years jobless benefits have lost ground in relation to living costs instead of increasing.

4. Seasonal workers, like those in many branches of textiles, who need jobless insurance most, drew the smallest and shortest benefits.

5. Merit-rating refunds to employers with the lowest lay-offs, may be good in theory; in practice, however, the system is completely cockeyed for it imposes a low tax on employers in good times, when they can afford a high tax, and raises the tax in bad times, when they can afford it least.

REFUND BAIT

The bait of refunds has stiffened employers' resistance to new or improved benefits for workers. It has encouraged employers' groups to keep alive the phony charge that workers prefer to loaf at home and collect jobless insurance rather than work.

The barrage of propaganda has been so great that the public often forgets that jobless insurance is not a hand-out but a right earned and paid for by workers from their wages.

In practice, merit rating actually robs unemployment compensation funds. If eliminated and the full 2.7-percent tax on employers were collected, most States could raise benefits and spread them over a longer period without imposing new taxes.

BOWLES' STUDY

A study recently completed in Connecticut under the direction of Gov. Chester Bowles underlines this point, although it studiedly avoids recommending an end to refunds for employers.

Figures reported by Bowles contend that employers' payments in 1949 were the lowest in the Nation—half of those in Massachusetts and Rhode Island, neighboring States with similar economies. Average payment was 0.07 percent, compared to 2.7 percent allowed by law. In 1950, it was hiked to 1.4 percent.

Bowles reports that 40,000 workers are now receiving unemployment benefits but 52,900

others who drew an average of only $19.60 a week—in a State with one of the highest benefit rates—exhausted their benefits.

Bowles says these people need help—now. He proposes that their benefits be extended to March 31; to do so would cost between $4,000,000 and $10,000,000. He proposes that the money be taken from the State UCC fund which now stands at $158,000,000.

MERIT RATING

But his report shows that in 1948 alone merit-rating refunds amounted to more than $7,000,000. It is obvious that if merit rating were ended, Connecticut could extend present unemployment payments at least 3 months more, or a total of 9 months a year. That would bridge many a gap between jobs and would cut relief rolls.

The situation is more serious in Massachusetts and Rhode Island.

The Bay State paid out in 1949 about $115,000,000, according to Antonio England, former TWUA cotton-rayon assistant director who now is director of the State's division of employment security. The fund now stands at around $107,000,000, lowest since 1941.

RHODE ISLAND

Rhode Island last year paid out $30,000,000 and its fund is around $26,000,000 today. In Connecticut, payment was $43,000,000, as against a $158,000,000 fund.

Eliminating merit rating would increase available funds, England concedes, but in Massachusetts it would not solve the basic problem.

On a $3,000,000,000 annual economy, a full 2.7 percent tax would bring in about $81,000,000, still far short of the $115,000,000 spent in 1949.

As far as England is concerned, the basic answer is more jobs. That's the direct way of dealing with a situation in which 127,000 are currently jobless and 160,000 will have exhausted benefits by April 1.

WORK PROJECTS

Massachusetts is thinking in terms of work projects like road construction and veterans' housing.

Rhode Island, where at one time last year 20 percent of all workers covered by the act were collecting jobless insurance, is thinking in terms of Federal aid, although its spokesmen are aware that what it needs basically is a diversified economy.

Seasonal industries like textiles and jewelry create crises by dumping thousands of workers on the unemployment rolls.

The State fund is slightly better off today for an ominous reason. So many workers already have exhausted benefits that the fund is now paying out less than is coming in.

BILL UP

But Rhode Island needs help. Its Senator THEODORE FRANCIS GREEN has introduced a bill in Congress to reinsure State UCC funds and provide Federal grants to States where funds have dropped to the danger point.

Chester Bowles' way seems to be a more lasting answer. By increasing benefits and stretching the period of payment, the cushion under the economy which unemployment insurance has provided in the past can be made far firmer than it now is.

But isolated action by each State also is inadequate. A Federal program is needed. The Forand bill is the best prospect of the moment.

It would preserve the present Federal-State relationship, but fix minimum UCC standards for all States.

It would pay workers at least 50 percent of weekly wages and up to 10 percent more for dependents for at least 26 weeks. It would end waiting periods and some of the disqualifications that bar jobless workers from benefits.

The bill is not up to CIO standards. CIO wants coverage for all workers 52 weeks a year with all disqualifications, including those involving strikers, removed. It also wants the UCC system federalized. It knows that if States are left to act for themselves, nothing will be accomplished. But it is supporting the Forand bill.

Not so most industrialists and businessmen. Despite the lift jobless insurance gave consumers' buying power at the height of unemployment, they're for "toughening up" UCC administration. This means giving fewer people less benefits for a shorter time.

CHOOSE NOTHING

Given the choice of making unemployment insurance fit today's bill or resorting to depression-type WPA programs, the business and industrial community chooses—nothing.

As John W. Edelman, TWUA Washington representative, once told a chamber of commerce institute on this subject, it may require the "equivalent of an economic atomic bomb to awaken employing groups in the country to the fact that our free-enterprise system will not survive unless we speedily enact and honestly apply a comprehensive Federal security system which fulfills in fact the promise that the name implies."

Until that happens, it's up to the Eighty-first Congress to make the choice for business and industry—much in the manner of a doctor forcing medicine down the throat of a sick but unwilling patient.

Veterans' Housing to Veterans' Organizations

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. WEICHEL. Mr. Speaker, following the war Congress made available by legislation surplus buildings throughout the country for veterans' housing. This program was known as temporary veterans' housing and was sponsored by communities and veterans' organizations throughout the country. In legislation passed during the first session of the Eighty-first Congress it was provided that the Housing and Home Finance Agency could relinquish such veterans temporary housing to municipalities and other entities sponsoring such housing locally. However, such legislation did not provide that the housing and Home Finance Agency could turn over such temporary veterans' housing to nonprofit veterans' organizations chartered by Congress. In instances throughout the country nonprofit veterans' organizations have been carrying on, administering, and sponsoring such temporary veterans' housing. In order that war veterans might continue the use of such temporary veterans' housing I have introduced a joint resolution whereby the Administrator of Housing and Home Finance Agency may relinquish and transfer such temporary veterans' housing to nonprofit veterans' organizations chartered by the acts of Congress, as now being transferred to counties, cities, and other public bodies. This would permit the administration of such temporary housing to be carried on by the American Legion, the Veterans of Foreign Wars, the American Veterans, and other nonprofit veterans' organizations chartered by the acts of Congress.

Mr. Speaker, there is included herewith the following copy of the joint resolution:

Joint resolution to amend the act of October 14, 1940, as amended, giving nonprofit veterans' organizations administration of temporary veterans' housing

Whereas public law provided that the Administrator of the Housing and Home Finance Agency may relinquish and transfer title to temporary housing provided for certain veterans and their families under title V of the act of October 14, 1940, as amended, to State, county, city, or other public body; and

Whereas in numerous cases such temporary housing has been sponsored by the veterans' organizations; and

Whereas said act of October 14, 1940, did not provide for relinquishment and transfer to such veterans' organizations: Therefore be it

Resolved, etc., That the Administrator of the Housing and Home Finance Agency may relinquish and transfer, pursuant to the same general terms and conditions specified in subsections 505 (a) and (b) of the act of October 14, 1940, as added by the act of June 28, 1948, Public Law 796, title to temporary housing provided for certain veterans and their families under title V of said act of October 14, 1940, as amended, to any State, county, city, or other public body, including nonprofit veterans' organizations chartered by the acts of Congress: *Provided further*, That any application for such relinquishment and transfer shall be filed with the Administrator within 120 days after the approval of this act.

Removal of Racial Restrictions Now Prohibiting Admission to United States of Wives of World War II Veterans Asked To Meet Problem Arising in Japan and Other Pacific Countries

EXTENSION OF REMARKS
OF
HON. JOSEPH R. FARRINGTON
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1950

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to incorporate the text of a statement issued to the press setting forth the reasons for the introduction today of 24 private bills to remove racial restrictions now barring wives and fiancées of World War II veterans and parents of American citizens to this country.

The statement follows:

The removal of racial restrictions now prohibiting admission to this country of wives, present and prospective, of World War II veterans because they are nationals of Japan or of other countries whose people are ineligible to citizenship, is proposed in a series of private bills introduced in the House today by JOSEPH R. FARRINGTON, Delegate to Congress from Hawaii.

Delegate FARRINGTON proposes that the same policies that apply to brides of European races should apply to those of Oriental races who are ineligible to citizenship under present law.

He is requesting the House to act on 16 cases on an individual basis inasfar as the Senate has failed to act in a period of more than a year on H. R. 199 (the Judd bill)

UNIVERSITY OF MICHIGAN LIBRARIES

under which the racial restrictions in our immigration and naturalization laws would be removed.

The action taken by Delegate FARRINGTON today follows extensive correspondence and study of this subject. While in Tokyo in December, Delegate FARRINGTON discussed the problem presented by the marriage, present and prospective, of American soldiers to Japanese nationals with both officials of Gen. Douglas MacArthur's staff and with a large number of individual Americans now serving in the United States Army and in civilian capacities with the American forces in Japan.

Precedent for action on such cases on an individual basis has already been provided by the enactment of individual bills under which financées of American veterans who are Japanese nationals have been admitted to this country in order to consummate their marriages.

The bills introduced by Delegate FARRINGTON include:

1. Twelve that provide approval of marriages of American veterans now in Japan to Japanese nationals;

2. Two that would permit the marriage of American veterans to Japanese nationals;

3. That would admit two Japanese fiancées to this country for purposes of marriage to American veterans.

Delegate FARRINGTON at the same time introduced eight bills that would permit the return to Hawaii of alien Japanese parents of American citizens. He pointed out that these for the most part involve parents who lived for many years in Hawaii and failed to maintain their reentry permits so as to allow them to return to Hawaii to live with their children in their declining years.

"The introduction of these private bills to cover individual cases constitutes a very laborious method for dealing with this problem," Delegate FARRINGTON said, "and I have resorted to it only because it seems to offer the only prospect now for bringing relief to people who are suffering discrimination as the result of the continuation of certain restrictions in our immigration laws."

Military authorities who require permits for military personnel before a marriage takes place have no choice but to deny permits to those who intend to marry women of races ineligible to citizenship.

The policy of the Departments of the Army and the Air Force covering marriage in oversea commands is set forth in Special Regulations No. 600-240-5 and Air Force Regulation No. 34-12, issued in Washington under date of February 11, 1949.

The regulations point out that the alien wife of any United States citizen may be approved for entry to the United States on a permanent-residence basis without regard to quota only after having met the statutory restrictions covering the admissibility of aliens.

These regulations set forth the standards that must be met with regard to physical, mental, and moral condition of the individual involved and the restrictions applying to races ineligible for citizenship.

Requirements covering the financial responsibility of the prospective husband are also pointed out.

The policy of the services is that careful consideration should be given to all aspects of the marriage, including the admissibility of stepchildren as well as wives before permission to marry is granted.

Military personnel are required to obtain written approval prior to marrying. The policy of the Departments is to grant approval where personnel have complied with local regulations and the alien fiancées are found on examination to meet all requirements for admission to the United States. The inadmissibility of a fiancée constitutes a reason for denying permission to marry.

In the cases of women of races ineligible to citizenship, such as Japanese, Korean, and certain people of the Polynesian and Micronesian races this is absolute. The latter are ineligible to admission to this country or to citizenship.

The problem this presents is a very serious one with respect to Japanese. A large number of American troops have been and still are stationed in Japan. Among these are a very substantial number of Americans of Japanese ancestry.

The military authorities cannot grant permission for marriages which might otherwise be completely in order, from the standpoint of the character of the individuals involved and their financial responsibility, because the fiancées are ineligible to citizenship and to admission to this country.

The resulting situation has been most unfortunate. It has resulted in marriages which have taken place without the consent of the military authorities, and in a number of instances, the birth of children who did not have proper legal status in this country even though the marriages and births have been in accordance with Japanese law.

It has emphasized in a most unfortunate way the racial barrier against the Japanese race which still remains in our immigration and naturalization laws.

Under date of September 24, 1949, General Headquarters, Far East Command, issued circular 51 containing the regulations covering the marriage of civilian and military personnel in that command.

These regulations contain in paragraph 3, subsection c, this statement:

"Except under very unusual circumstances, personnel listed in paragraph 2 who are United States citizens will not be granted permission to marry persons who are ineligible to enter the United States for permanent residence or naturalization. Approval of requests may be given by the commander in chief, Far East, only."

Shortly after the war, Congress adopted the so-called GI Brides Act and the Fiancées Act in order to facilitate the admission to this country of alien wives and fiancées of American soldiers.

The GI Brides Act permitted the admission of these wives up to the end of December 1948. The law as originally presented did not include wives of races ineligible to citizenship. This denied to many veterans who served in the Pacific permission to bring to this country wives of races living in Pacific countries such as the Polynesians, Koreans, and Japanese, who are ineligible to citizenship.

This law was finally amended but only to permit the entrance of wives where marriages had occurred before August 22, 1947. There still remain a considerable number of men who were unable to marry before that date. These, and others who have married since that time, are confronted with a problem which certainly merits special legislation.

Ground Hog Day

REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1950

Mr. GAVIN. Mr. Chairman, Thursday next, February 2, is a great day—Ground Hog Day. And, again, I want to call to the attention of the House, to keep the record straight, that Punxsutawney, Jefferson County, Pa., Nineteenth District, is the home of the ground hog, that great prognosticator of the weather.

For more years than I care to remember—in fact ever since Punxsutawney was founded in 1849—this great meteorologist from his home at Gobbler's Knob, Punxsutawney, Pa., has been keeping the American people informed as to weather conditions for the 6 weeks following Ground Hog Day, February 2.

It is a matter of record that if the ground hog sees his shadow we are in for six additional weeks of cold wintry weather, and if his shadow fails to appear spring is around the corner.

Therefore, it is disconcerting to me and my many friends in Jefferson County, Pa., to see the bold attempts made by promoters of a lot of common alley cats, and so forth, trying to cut in on the ground hog's yearly prediction. This is a grave injustice to this great "seer" of the weather and it makes him very irritable. These brash attempts, which I deeply resent, by the run-of-the-mine fabricators and deceivers have given "his chuckship" in Punxsutawney a great deal of anguish. Last year, right here in Washington the local press tried to cut in on his annual irrefutable prediction with a common caged-up zoo cat posing as a ground hog. You all know the accuracy of weather prediction by this synthetic Washington ground hog. So, I want to impress upon the members that Punxsutawney, Pa., is the home of the ground hog—the originator of this unique and remarkable weather service, and that the Punxsutawney ground hog is the one and the only one that can make true, accurate, and unquestioned predictions on weather conditions for the next 6 weeks following February 2.

Mr. BROWN of Ohio. Mr. Chairman, will the gentleman yield?

Mr. GAVIN. I yield to the gentleman from Ohio.

Mr. BROWN of Ohio. I asked the gentleman to yield just to advise him that out in Ohio we honor Ground Hog Day each February 2 by the annual banquet of the Greenville Liars Club, for which I would be very happy to propose the gentleman for membership if he can spell that word "Punxsutawney" or whatever it was.

Mr. GAVIN. It is Punxsutawney.

Mr. BROWN of Ohio. If the gentleman can spell the word, I should be glad to propose him for membership in the Greenville Liars Club and pay his initiation fees.

Mr. GAVIN. Well, I will be glad to do that now: P-u-n-x-s-u-t-a-w-n-e-y.

Mr. BROWN of Ohio. The gentleman is very, very learned.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Cotton and Peanut Acreage Allotments and Marketing Quotas

EXTENSION OF REMARKS

OF

HON. GEORGE M. GRANT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1950

Mr. GRANT. Mr. Chairman, we are today confronted with a problem that is

not only of interest to the cotton growers of the Nation, but one that is paramount to the economy of the whole country. Days could be spent in arguing as to who is responsible for this condition, but, after all, where would that get us? Absolutely nowhere.

The important thing is that many cotton growers in this Nation are being unduly penalized through no fault of theirs. Please bear in mind that this bill is only 1-year legislation. It applies only for the year 1950. Just as soon as this legislation is disposed of, the Agriculture Committees of both the House and Senate are going to give careful study and consideration to the whole cotton program. You may ask why the present program is not working in an equitable manner. In the first place, no cotton quota program had been in effect since 1942. There was also the provision in prior laws that farmers who had diverted from cotton to the production of war crops should receive credit for such war crops in future cotton acreage allotments. This Congress should have, and did, keep faith with the farmer who voluntarily diverted his acreage from cotton to the production of some other crop that was in short supply. It now makes no difference what was the motive behind such a diversion. For my part, I believe that in the main, it was done to help the war effort. However, the law only provided that it be done, and since it was done in justice and in fair dealing, we must give credit where it was earned.

There was also a provision that there be an acreage reserve of 10 percent of the State allotment, and a reserve of 15 percent of the county allotment. There has been no uniform reservation of this reserve, either by the counties or by the States. Some counties have not reserved anything at all, while others made a very small reservation. I am not criticizing anyone, but only stating a fact. I am sure that both State and county committees have done the best that they could under the handicap that they have had to work under. This was something new to them and they were severely handicapped by the lack of accurate information. Remember, that there had been no quotas since 1942. There were no records, either on the individual farms or at the county or State level. Out of the nine counties in my congressional district, acreage reserves varied from minus 1 percent in one county to 2½ percent in another, and then all the way up to 15 percent. Out of the nine counties, five reserved over 7½ percent, and four under 7½ percent. However, one thing was done for which I do not believe there is any complaint, and that is the provision that the Secretary of Agriculture should allocate to each State its fair proporation or share of the national acreage. From there, it was the consensus of opinion in the Congress that the allotments to the respective counties and from the county level to the individual farm should be done locally—by those who were more familiar with local conditions than the Department of Agriculture here in Washington. This has not worked out satisfactorily because the law was new and there were many new committees who, on the whole, have done a good job under trying and difficult circumstances. However, in some instances, inequalities and injustices have developed. A condition that no one individual can be charged with, just an unfortunate situation that should and must be corrected.

The House Committee on Agriculture has been very diligent in an effort to correct this injustice, insofar as legislation is concerned. Early in December of last year when it developed that inequities were cropping up, the chairman of this committee requested those members of the committee who were interested to come to Washington for a special meeting. Many members of the committee immediately canceled engagements in their respective districts and came to Washington in an effort to attempt to do something to alleviate these hardship cases. Other Congressmen from the Cotton Belt met with the committee and after a thorough discussion and conference with the Secretary of Agriculture, and members of his staff, the chairman issued a statement to the effect that immediately upon the convening of Congress, that the committee would take prompt action to correct the injustices and inequalities as far as it could be done by legislation.

So, this is the reason we have this legislation before us today. The small increase that is requested will not unduly depress the market. Even with this modest increase, there will be a substantial reduction in cotton acreage this year, and it is estimated that after this increase is provided that we will have at least 5,000,000 fewer acres planted to cotton in 1950 than were planted in 1949. Some have estimated this as high as 6,000,000 fewer acres. We expect to have from year to year a constant and continuing decrease in the amount of cotton acreage until the carry-over is reduced to the point where the total supply of cotton will not exceed the normal supply as specified in the law. This legislation is fair and just.

There is a section in this bill which seeks to correct, for 1 year only, the mistake that was made in the 1949 peanut legislation. During the war, peanut acreage was 3,300,000 acres. In 1949, this was cut to 2,650,000 acres; and in 1950, this year, it has been cut to 2,100,000 acres. Without any hearings and in an effort to be helpful to one State, a provision was inserted in the cotton bill providing that no State shall receive less than 60 percent of the acreage of peanuts harvested for nuts in the calendar year 1948. It was thought and believed by the conference committee that any additional acreage given to this one State would be taken from each of the peanut-growing States. Certainly, those from this State who are interested in this legislation did not intend that one or two of the States should be made to unduly suffer. However, this was just what happened. Alabama and Texas were unjustly and unduly penalized because with a national allotment of 2,100,000 acres, the allotment to Alabama would be around 30 percent below the allotment to Alabama for 1949, whereas the national allotment would only be 19½ percent below the national allotment for 1949.

The farmers of my State know that there must be a cut in peanut acreage. In 1949, they took this cut without complaint and in 1950 were prepared to take another big cut in the national allotment. However, they were not prepared to take a cut in which all of the other peanut producing States did not participate. When farmers voted for marketing quotas on peanuts in 1949, they were assured that if a cut was made in the national allotment, it would apply prorata to all State allotments. After marketing quotas were established, it was unjust, unfair, and inequitable, and unconstitutional to change the law where it worked a decrease upon these farmers. We cannot change the rules in the middle of a game. I know that when the facts are known that no one will object to a clarification of this section.

Mathematical Truth

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1950

Mr. MURDOCK. Mr. Speaker, in a little midwestern town, I know of a church of a small denomination that does not own the church building, but instead the congregation rent a meeting place for all of their church services and Sunday school and all general assembly purposes and activities. They pay $1,200 a year rent. Among the various church activities, the women's organization meets in the church parlor for an hour one Thursday afternoon each month for their program. According to one computation from the above facts, a queer and distorted arithmetic might claim that $100 was the cost per hour for the use of the church building by this group of members. To do this, of course, they would have to ignore all other church uses of the building. Such a claim would be distorted, foolish, and untrue. And yet, this is the kind of arithmetic that we have been treated to on the floor of this House and by the propagandists in their recent figuring concerning the central Arizona water project.

To be more specific, this is the arithmetic which the gentleman from Pennsylvania [Mr. RICH] calls to our attention on page 1130 of the RECORD for January 30. He speaks of spending $1,600 per acre to put water on land in Arizona which would be worth only $200 per acre when reclaimed, and he asks, "Is not that asinine?" My reply is that that certainly would be asinine. I would never endorse such a proposal, and have never advocated such. I would not blame any public official for opposing the spending of $1,600 to reclaim an acre of land which would be worth

UNIVERSITY OF MICHIGAN LIBRARIES

only $200 an acre when reclaimed. I know of no public official who is advocating any such thing, but apparently Mr. RICH thinks that I myself am advocating such, judging from the remarks as recorded in the CONGRESSIONAL RECORD.

I wonder where the gentleman from Pennsylvania got his information? He is wrong regarding the $1,600 cost and equally wrong regarding the $200 an acre final value. He gives us only one factor of the problem by saying that the cost is $1,600 per acre, without being too specific as to the total cost of the thing under consideration and the total number of acres involved. What does he divide into what to get this $1,600? There are three parts to any problem in division. There is the divisor, the dividend, and the quotient. In this case, $1,600 is the quotient. As he computes it is it right or wrong? Correct or incorrect? I say it is fantastically incorrect. Of course, if you pick out a number which is outlandishly distorted as a dividend and divide into that number an insignificantly small divisor, you might get 1,600 as a quotient. But surely we ought to use a correct divisor and a correct dividend, if we want to arrive at a correct quotient.

Not knowing where Mr. RICH gets his figures, but knowing full well the phony figures that have been spewed all over the country by the Los Angeles propaganda machine, I can well guess the actual source of these figures. In this three-part arithmetical problem, the cost of the project—that part being considered—ought logically to be called the dividend. The number of acres to be benefited ought logically to be called the divisor; and if the latter number is divided into the former, we might logically assume that the quotient obtained represents the per-acre cost. First, let us look at the dividend.

What is the cost for the irrigation part only of this central Arizona project? It is not one and a half billion dollars, regardless of who says so. No competent engineer has ever made any such computation. The cost of this project is not $1,000,000,000. It is certainly not even $700,000,000, which is the Bureau of Reclamation estimate of the total cost under the terms of the bill, S. 75, amended and reported by the Senate committee. Mind you, we are talking now about the reclamation phase only of this central Arizona project—diverting the water into Arizona. It is reliably estimated that the cost of bringing water from the Colorado River to the lands to be benefited is $267,000,000. Rightfully and correctly, Mr. RICH and every other person figuring on this project should regard $267,000,000 as the estimated cost of the reclamation part of this comprehensive multiple-purpose project. I want to make it very clear that we are talking about $267,000,000, and not properly $700,000,000 nor one billion nor one and a half billion to which the windy opponents have attempted to blow up these figures.

Well, what is the correct divisor to be used in this problem? We cannot get a correct answer for a quotient—meaning cost per acre of the improved land—until we know how many acres we are dealing with.

HERE IS THE MATHEMATICAL TRUTH

Seven hundred and twenty-five thousand acres call for a supplemental supply of water, and that is the number that should be our divisor. Two hundred and sixty-seven million dollars is the estimated cost for those facilities which will be used solely to bring water into central Arizona for these 725,000 acres of land. Let us divide 725,000—representing the acres to be benefited—into the $267,000,000 estimated cost of facilities to bring the water, and our quotient or answer is a $370 burden upon each acre instead of the fantastic $1,600 which the gentleman from Pennsylvania evidently borrowed from somebody in California.

We must not overlook the fact that the total cost of this multiple-purpose project, now approximately $700,000,000, is more than half chargeable to commercial power production and is highly desired by California opponents of this particular bill. They have repeatedly declared that they want to build the Bridge Canyon Dam for power production only, which power they hope to get into southern California. Arizona needs the commercial power that would be produced at the Bridge Canyon Dam and has offered to buy all of it, so that Arizona power users could and would bear the chief burden of cost in this total project, and all of the money spent would be returned to the Public Treasury.

If certain California interests could kill this legislation for Arizona, in order to take for themselves that water which rightfully belongs to Arizona, thereby dwarfing the future of the youngest State in the Union, I am confident that they would then come before you asking for an appropriation as great, or greater, to duplicate or enlarge upon the power features in this particular bill. The only difference would be that the power would be solely for California's benefit—and they would also have water which belongs to Arizona.

Address by Oscar L. Chapman Before the Nebraska Reclamation Association

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Wednesday, February 1 (legislative day of Wednesday, January 4), 1950

Mr. SALTONSTALL. Mr. President, on behalf of the minority leader the Senator from Nebraska [Mr. WHERRY] who is absent on committee work, and at his request, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Hon. Oscar L. Chapman, Secretary of the Interior, before the Nebraska Reclamation Association, at Grand Island, Nebr., on January 26, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I appreciate this opportunity to visit Grand Island on my first western trip since assuming my duties as Secretary of the Interior.

As you know, I am not exactly a stranger to Nebraska, and I think I could never be a stranger to people who have joined together to promote the reclamation of the natural resources around them. I congratulate the Nebraska Reclamation Association for its past achievements, and I am glad to meet with you to talk about the future. In many ways we of the Department of the Interior feel more at home out here than at our desks back East.

You are the people who are among the leaders in the battle to conserve our great natural resources in water, power, and land. You have provided magnificent demonstrations of what a people can do to turn these resources to the enrichment of their own lives. You are the people to talk with about the job yet to be done, and you can give us advice on the way to do it.

The West has a big part to play in the building of the country's future.

At this midpoint of the twentieth century, we are entering a period in which we shall have to develop our resources far more aggressively, depending increasingly upon those resources which have not been immediately accessible. Our new task will require thinking about broader areas, and imagining a newer and better kind of life. It will be a life to which Americans are entitled, and one which will come to them through their own efforts.

The resources we have failed to use fully up to now can provide us with an abundance greater than we have ever had in the past. They will give us a new frontier, a western frontier to lift again the living level of our Nation's people.

Reclamation is a word we all understand. It gives us access to the water, land, electric power, and other resources of our river basins. It controls our floods, it provides recreational facilities for better health and enjoyment of life. It provides power and light to help us in our homes, on our farms, and in our business.

It reclaims the material gifts of nature, and directs them toward the betterment of human life.

We are about to close the first half of the twentieth century with the job of reclamation far from finished. The development of irrigation is about half done, when we measure it by present methods, concepts, and legislation. Some 21,000,000 acres have been brought under the ditch by private and Federal action. About 19,000,000 still remain, waiting for water to bring them into productivity.

We have installed 3,000,000 kilowatts of electric generating capacity out of a potential 37,000,000 kilowatts that might be developed from our western streams under reclamation and allied programs.

We have been reaping benefits with over $500,000,000 per year in added crop values and more than $30,000,000 annually in direct revenues from power. Yet our total investment in project facilities has been under $2,000,000,000.

I don't have to ask you whether this has been a sound investment for the people's welfare. I know, and you know, that the people of this Nation are entitled to no less than this.

But what about the job to be done?

One of the best friends of all of us who believe in reclamation is Harry S. Truman.

In his recent message to the Congress, the President promised an economy that can and must continue to grow, an economy that will distribute the benefits of progress to all the

people. He foresaw, within 5 years, an annual national output of $300,000,000,000. He predicted that by the end of this century, family income in America would be three times what it is today. But he added something—that this growth would come only if we made an attempt to attain it, with "conscious effort and hard work."

The part that the West will play in this growth is already clear. Under the spur of a driving, thriving economy that quickly absorbs every acre-foot of water, every new farm, and every kilowatt we can wring from the rivers, we must build and settle this great territory from Nebraska to the sea.

Projects now authorized by the Congress for the 17 reclamation States will provide irrigation water for over 7,500,000 acres of new land and will expand power capacity by nearly 3,000,000 kilowatts.

An outstanding example of the work that lies ahead in the vast national plan is your own Missouri River Basin project. It is of the highest importance.

For too long the mighty Missouri has flooded you out periodically, has washed away billions of dollars in your property and your soil, and then has stranded you dry.

The Missouri Basin program grew out of the tragic drought of the 1930's, when billions of dollars were lost through crop failures, wrecked homes, and dislocated peoples. Most of the States of the basin, including Nebraska, came out of that period with decreased populations. Your State is still feeling the effects of the drought, and the census of 1950 may show that, in population, you have barely held your own during the past decade.

The whole Nation was shocked by your tremendous losses in money and in human assets during and following the great drought. Sectional lines were forgotten as the Congress approved a gigantic undertaking to rehabilitate the entire Missouri Basin—the first basin-wide multipurpose development program. During the intervening years work on this program has progressed slowly. We are only now getting properly under way, and the work is beginning to accelerate at a fast pace.

We are not planning on a small scale. The Missouri is not a small river. The Missouri River Basin project, as now envisioned, will cost more than $4,000,000,000. This is a measure of your Federal Government's faith in this region. It is a measure of our faith in ourselves and our future.

The basin-wide concept of this project is the product of the coordinated work of the Department of the Interior and the Army Corps of Engineers. The execution of the program is going forward with the active cooperation of the basin States, the Department of Agriculture, and the other Federal agencies operating through the Federal Interagency Committee.

There are many reasons why we are doing these things. We estimate that 53,000 new farms comprising 5,000,000 irrigated acres—an area the size of New Jersey—can be established among the millions of acres of lands now relatively unproductive for lack of water.

Even at prewar prices additional crops from these farms would be worth $130,000,000 per year. At current prices they would be worth much more. Stabilized feed supplies, produced in tributary valleys, will permit far more productive use of millions of acres of range lands.

The program as now conceived calls for about 2,366,000 kilowatts installed hydroelectric capacity. This power will be produced without any drain upon our exhaustible fuel supplies.

Low-cost power will encourage new industries in scores of communities. It will permit the local processing of local produce. It will encourage the development of the still untapped mineral resources of the basin.

The control of floods will be of major importance to the people of the entire region. The newly created reservoirs will provide recreation for the people of the basin and for thousands of tourists. Fish and wildlife resources will be improved. Adequate water supply will bring better living and better business to many cities and towns. Control of the headwaters will help provide a navigable channel from St. Louis to Sioux City, providing an opportunity for cheap water freight that can benefit the entire region. The benefits of silt detention and the abatement of water pollution will be felt increasingly as the program is developed.

You who live in this region will have more convenience in your homes and more leisure in your lives, as a result of improved power and water facilities and because of enhanced economic progress.

As we move forward in this planning and building, various segments of the Department of the Interior are working on ways to multiply the benefits from this development in conservation.

In addition to the work of the Bureau of Reclamation, about which you know, the Bureau of Mines and the Geological Survey are probing the earth's surface, and subsurface, to learn what minerals can be developed and new and economical ways to produce and use them. The Geological Survey is looking after the measurement of the waters that are available.

The National Park Service is developing plans for making the fullest recreational use of the new reservoirs that will be available to the people.

The Fish and Wildlife Service is attending to the enhancement of our fish and game life.

Our Office of Indian Affairs already is exploring the favorable effects of this program in changing beneficially the lives of our original Americans.

The Bureau of Land Management is surveying the problems of improved protection and use of our range and other public land, problems naturally arising in the development of such a broad resource program.

I could go on enumerating the benefits of this program, but I don't believe that I have to persuade the Nebraska Reclamation Association as to its value to the Nation. You were in the front ranks of those who helped to convince the rest of the country of the value of this basin development.

Here in Nebraska you know what irrigation and public power mean. Nebraska was among the pioneering States in public power development. Your North Platte project in the Scotts Bluff area was one of the first reclamation projects undertaken and is an outstanding example of what can be done with dry land through irrigation. You are now among the leaders of those who are working for more irrigation and your work has been rewarded.

The Republican River is being brought under control from its headwaters in Colorado to its confluence with the Kansas River in Kansas. This is being achieved by a series of flood-control and irrigation dams.

Work is under way preparatory to the development of the lower Platt River Basin, including areas up and down the river from Grand Island, and the Loup and Elkhorn areas. Potential irrigation undertaking that may cover more than a million acres along the Platte and its tributaries are now being investigated.

In Nebraska, you still need more flood control, and you still face other unsolved problems. There are certain water-division questions that you will have to settle among yourselves before current plans can go forward into construction. I need only point out that the people down on the Republican River, too, had a difficult water-diversion problem to work out before we could move effectively there. In some respects, their problem was even more difficult to solve for the project reached across State lines into Colorado and Kansas. But they solved it, as I am confident you can solve yours within the State.

The significance of the lower Platte irrigation and power development is dramatically shown by what has happened on the North Platte. Between 1910 and 1940, the population of Scotts Bluff County rose from 2,500 to 33,000 people. During the 1930–40 census period, while the rural population of Nebraska as a whole was declining by some 10 percent Scotts Bluff County gained about 18 percent.

Acre for acre, the consumption of goods in Scotts Bluff County is more than three times that in central Nebraska, and these goods come from all over the country. The seven-thousand-and-some-odd carloads of freight unloaded at Scotts Bluff station in 1942 came from 39 States.

Most of you have a good idea of the irrigation and power construction now going on in Nebraska, and I assume you have seen the President's budget proposals for the fiscal year 1951.

The Frenchman-Cambridge division again will receive more money than any other single element in the Missouri Basin program, and the Bostwick division also will be one of the major items in the budget. The Mirage Flats project is already complete except for finishing activities.

A sizable share of our proposed transmission-line expenditure will go into Nebraska. We expect to complete three lines and to begin on some of the smaller feeder lines. We also want to build a tie line between the garrison and Fort Randall power plant to the northward.

I will avoid statistical details, but I do want to say something about the rate and distribution problems that have delayed the marketing of public power in Nebraska. You cannot afford, nor can we afford, much more delay. We are actively negotiating and planning for definite contractual arrangements in every basin State except Nebraska.

We realize that you have an unusually difficult problem here. We know that it is a temporary by-product of your progressive public-power program—a program for which we have full sympathy. Nevertheless, we are obligated to proceed in accordance with the dictates of the Congress and the interest of the program as a whole.

One way or the other—through your transmission lines or through Federal lines—we must make it possible for thousands of Nebraskans to share the benefits of low-cost public power from these Federal power plants.

Ultimately the power plants included in the Missouri Basin program, as now conceived, will be linked into a single backbone grid, extending from western Montana into Iowa. We used to hear that we would be producing power for the jackrabbits. Yet, with the Missouri Basin program scarcely begun, it is already apparent that we have not planned for enough power to meet the demands of your region.

Your growing power needs illustrate the impossibility of setting any limits to the potentialities of an undertaking like the Missouri Basin program. Once the resources of a region are opened, there begins a process of economic expansion which is incalculable in size and inconceivable in extent. That has been the history of America. It will certainly be the history of your region.

When the Missouri River Basin program was planned, we contemplated developing only the more advantageous power sites. It appears now that we must consider the possibilities of expanding power from other sites, including installations at some of the smaller dams.

I cannot over-emphasize the importance of power to your economy, and to the successful development of the entire program. We must

UNIVERSITY OF MICHIGAN LIBRARIES

have power to pump irrigation water, and we must have power revenues that can carry the financial repayment load which exceeds the water users' ability to repay.

Power production and transmission are being firmly and intelligently integrated, basin-wide, into the physical and financial structure of this program. The Department of the Interior adheres fully to this integration.

The possible power requirements of the basin are so great that we must develop the highest potentiality of power that can be produced from dams.

Your experience here in Nebraska will give you a good idea of the rough road ahead on public power development. Resolution No. 1, adopted by your association in 1948, showed that you are aware of the constant attempts of special-interest groups to block the public-power program or to divert it for selfish purposes.

So far, the legally established and approved public-power program has withstood all assaults. In the 1950 appropriations, the Congress gave the Bureau of Reclamation the funds necessary to make vigorous progress on power. The 1951 budget request contemplates more progress.

Attacks upon the public-power program will continue. They will be both direct and indirect, open and under cover. But as long as the people and their Government remain alert, and fully informed, these attacks will fail.

Our reclamation laws are still sound. They attest to the vision and the superb craftsmanship of the far-sighted men who have fashioned those laws over the past half century. But they need some modernization to help us do the everchanging job ahead.

We are also giving attention to the important question of sharpening our administrative and technical skills, in order that we can do a better, more efficient, and more economical job.

The Missouri River Basin program presents one of the biggest and most complex planning, construction, and operating jobs ever to challenge the American people in peacetime. Though we are making progress, there is still much room for improvement. We must be constantly alert for defects and inadequacies in legislation and policy, and in administrative machinery, and courageously take action to correct them. As the program develops, we must be prepared to make the changes that are necessary in the best interest of the region and the country.

To plan and build and operate this project requires the efforts of many Federal and State agencies, working together with the people who are in full partnership in this undertaking.

Out here, the 10 State governments are playing a vital role. Sometimes, I wonder how your own Governor Peterson can find the time and energy, away from the multiplicity of his other duties, to give this undertaking the prime and effective attention that he is devoting to it. All of the Missouri Basin States' Governors are demonstrating to the world how democracy, in the highest sense, can really serve the people.

Each of the Federal departments and agencies, and each of the States, has its own complex problem of adjusting and integrating conflicting interests. Just as we in Interior must thresh things out among ourselves and settle upon policies that best serve our mutual interests, so must the people within each State resolve their problems before they can participate fully and effectively in the Missouri Basin program.

This program is a tremendous undertaking in teamwork, and in reaching great common goals through the democratic process. Its results will be worth everything we put into it.

The Government's Social-Security System

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 1 (legislative day of Wednesday, January 4), 1950

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The I O U Fraud," published in the Omaha World-Herald of January 26, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE I O U FRAUD

Some months ago this newspaper proposed that the Government's social-security system be placed on a pay-as-you-go basis.

It is pointed out that the present system of accumulating huge reserves is a fraud, because the money is invested in United States bonds and is used by the Government to finance its deficits. Those bonds eventually will have to be retired by the taxpayers. Thus the people will have to pay for their "benefits" twice—once when the pay-roll taxes are collected, and again when the bonds are retired.

The only way to prevent that fraud, this newspaper pointed out, would be to change the system—to collect each year, in pay-roll taxes, only enough to meet the expected requirements of that year.

That proposal was criticized rather vehemently at the time by Government officials and some of our public-pulse writers. But this week it received the full indorsement of the Brookings Institution, perhaps the most highly respected research organization in the land.

In a report made after long investigation and study, the Institution said:

"The present collection of (social security) taxes on all covered workers produces far more revenue than is immediately needed to pay benefits. The reserves thus created to take care of the heavy future benefits are borrowed and used by the Government for current expenses. Thus the assets of the reserve fund are simply promises that the Government at some future time will obtain the cash by one means or another and place it in the fund."

In discussing the same point, this newspaper said Uncle Sam was putting his I O U in the strong box in place of the people's cash. It amounts to the same thing.

The report continues:

"The so-called reserves will not reduce the taxes future generations will have to pay to meet the costs of social-security benefits coming due in their day. The reserves do not give financial security. Real security rests first on the capacity of the Nation to produce, and second on the use by the Government of its power to tax to compel workers of each generation to support the dependents of that generation."

In other words:

Social-security payments in 1950 necessarily will be paid by the workers and earners of that year. The same will be true in 1960 and the year 2000. Pay-roll taxes, above the amount needed for the current year, serve no purpose except to give the Government ready cash with which to pay its deficits.

Up to now the social-security bureaucrats have managed to keep Congress thoroughly confused. The unbiased, nonpartisan Brookings report should give new light and provide a new weapon for those Congressmen who are trying to put a stop to the I O U fraud.

Public Welfare Needs of North Carolina

EXTENSION OF REMARKS
OF
HON. CLYDE R. HOEY
OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 1 (legislative day of Wednesday, January 4), 1950

Mr. HOEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by Hon. W. Kerr Scott, Governor of the State of North Carolina, and a statement by Ellen Winston, commissioner of the North Carolina State Board of Public Welfare, touching the public welfare needs of North Carolina.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

STATE OF NORTH CAROLINA,
GOVERNOR'S OFFICE,
Raleigh, January 20, 1950.

Senator CLYDE R. HOEY,
Senate Office Building,
Washington, D. C.

DEAR SENATOR HOEY: North Carolina, as you know, is greatly interested in H. R. 6000 now before the Senate Finance Committee because of the need for expanded welfare services to the citizens of the State. The 1949 general assembly, with my full support, made increased efforts to help finance the public-welfare program through much larger State appropriations than in the past, but we are still unable to meet many pressing needs.

We are particularly concerned over the sharply rising case loads in aid to the aged and aid to dependent children due to the fact that farmers and farm workers are not covered by old-age and survivors insurance. We realize that the net result is a much heavier financial burden proportionately for this State in terms of helping pay the cost of public assistance than is borne by the industrial States where the great bulk of older workers and surviving children are taken care of through insurance. We are hopeful that the Senate Finance Committee will expand the coverage of old-age and survivors insurance to include agricultural groups.

At this time I am also particularly concerned over the fact that the Federal Government does not participate in the cost of care of needy persons who do not fall into one of the categories of aged, blind, or dependent children. The bill now before the Senate Finance Committee provides for only a limited additional group, namely, the totally and permanently disabled. The 1949 general assembly went on record with regard to the State's responsibility in this area by enacting a general-assistance statute and setting up State funds to be matched by Federal funds to take care of this group. Unless effective action is taken to modify H. R. 6000 in the Senate, we shall still have many economically unfortunate people who are entirely dependent upon the limited amount of assistance their individual counties can provide. This seems to me to be one of the most important next steps in the program for State and Federal participation in welfare activities.

I am greatly pleased over the new matching formula contained in H. R. 6000 which I

believe is known as the Mills formula. While not a variable grant formula in the strict sense, it will mean much needed additional money for this State and appears to be a sound approach to helping the low-income States care for their needy citizens.

I would like further to call your attention to the need for additional Federal funds for child-welfare services. In this State, I am informed, we now have counties spending at the rate of about twice our annual appropriation under the present provision for Federal funds for child welfare. In order to carry forward this important aspect of the child-welfare program, we urge careful consideration of not only doubling the present allocation for this work as provided for in H. R. 6000, but increasing that amount substantially. Certainly, we would all agree that more attention shou'd be directed toward preventive and protective services for our boys and girls.

I greatly appreciate your own interest in an expanded social insurance and public-welfare program designed to meet more effectively the needs of this State. Please enter this expression of my deep concern for an expansion of our social security provisions in the official hearing record of the Senate Finance Committee.

Sincerely,

W. KERR SCOTT.

TESTIMONY ON H. R. 6000 BY ELLEN WINSTON, COMMISSIONER, NORTH CAROLINA STATE BOARD OF PUBLIC WELFARE, BEFORE COMMITTEE ON FINANCE, UNITED STATES SENATE, JANUARY 23, 1950

I appreciate the opportunity of presenting the public-welfare needs of North Carolina with particular emphasis upon major lacks in the present program and upon how the provisions of H. R. 6000 may be expected to affect the situation.

That North Carolina is a progressive but relatively poor State is well known. In spite of substantial increases in recent years the 1948 per capita income payment for the State was $930 in comparison with a per capita income payment of $1,410 for the Nation as a whole. There are many reasons for this, not the least of which is the high birth rate resulting in approximately 40 percent of the population of the State, July 1, 1948, being under 18 years of age, in comparison with approximately 30 percent for the United States as a whole.

In spite of the disproportionate burden upon the population of working age which results from the large number of children, tremendous effort is being made by the State to provide services commensurate with current needs. On both sales and income taxes, which provide the bulk of the State's general fund revenue, the rates are among the highest in the country. State appropriations for 1949–50 provide that 86.6 percent of the total general fund shall be spent for health, education, and welfare. Even so, not one of these areas of public service is being financed at an adequate minimum level.

The State has made steady progress in its efforts to provide more adequately for its needy people. The State appropriation for old-age assistance for 1949–50 represents slightly more than a 100-percent increase over the appropriation for 1944–45. The State appropriation for aid to dependent children for 1949–50 is almost three times the appropriation for 1944–45. The 100 counties of the State have made comparable increases in appropriations for these purposes. Even so, with present Federal matching formulae these increases make possible an average grant for January 1950 of only $22 per needy person 65 years of age and over and $43 per family of three children. In view of steadily rising case loads, some counties are already reducing these substandard average grants. Since the State appropriation is the same for 1950–51 as for this year the situation is critical. It is impossible to even approach the grants which the Congress has anticipated in providing for matching Federal funds up to a maximum of $50 per aged person and $63 for three children.

A partial approach to this situation of hungry children and needy aged in North Carolina, and to a comparable extent in other low-income States, appears to be variable grants on a formula basis, such as that included in H. R. 6000 which will take into account, more than the present law does, the differences in the fiscal ability of States. We cannot anticipate sufficient State and county appropriations to pay 50 percent of the cost of raising grants from the present inadequate State levels to minimum subsistence needs. The matching provisions in H. R. 6000 together with inclusion of the responsible relative in aid to dependent children families would make possible an increase in average monthly grants from the current $22 to $27 for the aged and from the current $43 for a family of mother and three childen receiving aid to dependent children to $64 or $16 per person. Thus even with increased Federal matching the State must obviously continue to increase its appropriation from biennium to biennium if we are to attain adequate grants.

The State has long accepted the principle of equalization. We know that aged persons and children can be just as much in need in one of the poorer counties as in one of the more well-to-do counties of the State and hence a larger proportionate share of the State appropriation is allocated to the poorer counties. We are convinced that the well-being of the State as a whole and the rights of our citizens wherever they may live demand an equalization procedure. We likewise believe that equalization of opportunity to have minimum subsistence needs met should be a primary concern of this Congress in revising social-security legislation. Are we to take the position that because a child happens to be born in a high-income State he shall have his basic needs met in full while a child who happens to be born in a low-income State must grow up as best he can with inadequate food, clothing, shelter, and medical care? It is well to remember also that many of these underprivileged and undernourished children will eventually migrate to large urban centers. For example, in spite of a high birth rate the population of North Carolina increased only about half as much proportionately as the population of the entire country from 1946 to 1948. We export young people to urban centers. Hence it becomes a matter of, enlightened self-interest, as well as the essence of democracy, for the high-income States to join with the low-income States in the support of the variable grant principle for assistance programs.

It is unrealistic, however, to look only to increased aid to the aged and to dependent children through the variable grant principle to solve the problem of minimum security. We must also consider expansion of old-age and survivors insurance. We are greatly disturbed by the marked increase in recipients of aid to the aged in North Carolina from 45,000 in August 1948 to 53,800 in January 1950 and of aid to dependent children from 9,500 families to 14,000 families during the same period.

Farm leaders within the State are increasingly seeing the problems created by lack of coverage of agricultural workers by the old-age and survivors-insurance program. The large public-assistance loads in rural States as compared with highly industrialized States is a matter of record. The burden of helping care for a growing number of needy persons is becoming a more and more acute problem for agricultural States. It is the expectation of public welfare administrators that we can look forward over a period of years to a substantial reduction in the public-assistance load as a result of expansion of OASI coverage to include farmers, farm workers, and part-time domestics, and of increased benefits under the old-age and survivors-insurance program. We believe that probably 60 percent of the present old-age-assistance load in North Carolina consists of persons who would be receiving retirement benefits today if the OASI coverage had included these occupational categories when first enacted.

While expanded coverage and more liberal eligibility provisions under OASI and the matching formula for public-assistance categories included in House Resolution 6000 will materially aid in meeting the needs of the aged and dependent children, we will still be faced daily with the problem of children without adequate food, clothing, and shelter who are ineligible for either survivors benefits or an aid to dependent children grant. A liberalized definition for eligibility for ADC would make possible the same help for large numbers of needy children now ineligible that is made available to thousands of children otherwise in similar circumstances. Again, we are concerned not only about the handicaps from which children suffer but also about the inequities in meeting comparable needs of children.

We also want to stress the importance of Federal assumption of a share of responsibility for all needy persons, not just for the three categories of aged, blind, and dependent children. North Carolina is one of the few States which has traditionally left the entire burden of caring for needy persons not covered by the three public-assistance categories to the counties. The 1949 general assembly took account of this and enacted a comprehensive general-assistance law. It also set up a special new appropriation of $350,000 annually, a sizable appropriation in our State, to match any Federal funds which may become available for general assistance.

H. R. 6000 has recognized another group of needy persons in providing for a fourth category, namely, the permanent and totally disabled. It is too limited at present, however, to meet the problems which exist and, at the same time, would be exceedingly difficult to define for proper administration. We hope, therefore, that Senate revisions will provide for aid to the disabled in such a way that we can use this category for periods of temporary need in order that individuals and families may become self-supporting or return to self-support. The importance of ah adequate fourth category is clearly revealed by a recent North Carolina study which showed that 70 percent of all recipients of general assistance from county funds, the only source at present, are unable to work and the 30 percent able to do some work are only marginally employable. One-third require physical care. Two out of three recipients are 45 years of age or older. Two-thirds are women. Major causes of need are illness or disablement or loss of the breadwinner. Yet we would probably only be able to certify 25 percent of these desperately needy people as totally and permanently disabled. Federal participation in aid to all needy persons will fill in the tremendous gaps in the present public-assistance program.

The data cited also reflect the need for medical care. The higher and higher costs of medical care and hospitalization are not only bringing people with otherwise adequate incomes into the classification of medically indigent; they are also far outdistancing the ability of local governmental units to provide needed care. Many of our counties have

UNIVERSITY OF MICHIGAN LIBRARIES

already exhausted their funds for medical care and hospitalization for the entire fiscal year in the first half of the year. Thus, poverty prevents needed medical care and lack of medical care promotes poverty in the long-recognized vicious circle. In a far-reaching forward step, H. R. 6000 takes account of this by making special provision for medical care of the needy. However, the method of financing provided would be administratively difficult. In our State the recommendation of the advisory council on social security to this committee that financial aid for medical assistance outside the ceilings on payments under the $6 per adult and $3 per child formula would be more effective in meeting the need and more efficient from the point of view of administration.

It is also important to stress the need for Federal participation in the costs of welfare services. More and more emphasis should be placed upon prompt amelioration of individual and family problems and upon prevention whenever possible. North Carolina's public-welfare program has for a number of years devoted more time proportionately to social services not involving financial assistance than any other State program involving administration of two or three of the public-assistance categories. County departments of public welfare are asking for much-needed additional personnel. They see the value of preventive programs. They realize the need for more effective services to children in particular. Those of us close to the local scene can cite case after case of what happens to children deprived of needed services. If children are our most valuable resource, surely it is time to make the relatively small investments required for more effectively conserving this resource. Services in North Carolina to individual children have increased from 9,800 in October 1944 to 16,100 in October 1949. Under the present annual Federal appropriation of $3,500,000, North Carolina's annual share is just about half what we are spending this year. This is possible because of some accumulation of funds. If the allocation of $7,000,000 for child-welfare services provided for in H. R. 6000 is made it will only make possible maintenance of our present level of services to children. On every hand, we are being urged to provide greatly needed services and to give more children the benefit of social-service programs. The need exists and is clearly recognized in every local community. Counties are already carrying their fair share of the costs. Only by increasing the Federal appropriation for child-welfare services substantially above the $7,000,000 will we be able to continue to advance in this much-needed area.

In conclusion, we urge that this committee take the necessary steps to amend H. R. 6000 to provide for further extension of old-age and survivors insurance and for Federal participation in a more comprehensive public-welfare program.

Potatoes Without Gravy

EXTENSION OF REMARKS

OF

HON. MARGARET CHASE SMITH

OF MAINE

IN THE SENATE OF THE UNITED STATES

Wednesday, February 1 (legislative day of Wednesday, January 4), 1950

Mrs. SMITH of Maine. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD, Potatoes Without Gravy, by Fern Thomas. This gives another side of the potato story.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Mars Hill (Maine) View of January 19, 1950]

POTATOES WITHOUT GRAVY

(By Fern Thomas)

As I read Vance Packard's article in the American magazine entitled "Potatoes and Gravy," I had a feeling of amusement and disgust. Evidently Mr. Packard contacted some tall-story tellers on his trip to Aroostook County, or some people thinking him very gullible and knowing he would swallow all they told him talked for his benefit.

I am not a writer but I would like to state a few truths in regard to Aroostook County.

I am past middle age and have lived in Aroostook County the greater part of my life. Yes, I was born and lived on a farm until I was 16 years of age. Let me tell you people who have read Potatoes and Gravy, which appeared in the November 1949 issue of the American magazine, that there were plenty of potatoes at times without any gravy. I have known years when Aroostook farmers sprouted their potatoes and sold them for 15 and 20 cents a barrel.

Some farmers lost their farms as they could not hold them when potatoes sold for that price. Many Aroostook farms were mortgaged and for years some farmers had all they could do to even pay the interest on the mortgage. Regardless of all these hardships they struggled on for Aroostook people are made of the stuff that is not easily licked. They have courage and perseverance and go on regardless of hardships.

Some of the farmers who lost their homes made a come-back through hard labor and shrewd management and left considerable property and money when they passed on.

It is courage and "guts" that has made Aroostook County prosperous. If outsiders are jealous of Aroostook farmers, cultivate some of the above.

I have known farmers and their wives to arise at 3 o'clock in the morning the year around and work until 10 or 11 o'clock at night. Especially through the farming season this seemed necessary as there was so much work to do.

Many farmers after harvesting their crops and plowing their ground for another year would hike to a lumber camp and earn the munificent sum of $1 a day through the winter in order to pay their bills and provide for their families.

The farmers kept sheep, and their wives, after the wool had been sent to the carding mills, spun it into yarn and knitted underclothing, stockings, and mittens for the family. They also wove woolen cloth and made garments for the men and boys. They knitted stockings and mittens and their husbands carried them to the lumber camps and sold them for a few cents a pair—to men employed there.

The wealthy farmers referred to in Mr. Packard's article made their money long before the Government guaranteed price of potatoes. I remember all those nice homes referred to, as a child, and as I mentioned at the beginning of this article, I'm no spring chicken. However, the size of some of those homes were exaggerated as there are very few 22-room houses in Aroostook County—maybe two or three. If people had been building homes since the Government guaranteed price of potatoes they would have constructed them according to modern types and not built the large houses which were built years ago.

Some of our so-called businessmen accused of not knowing a potato bug when it crawled down their nose would very quickly recognize a two-legged "louse" in the form of a newspaper reporter. Believe me, we have real men in Aroostook County and they would recognize potato bugs as well as other kinds of vermin.

A professional man who moved away from Aroostook County some years ago says he is always glad to return to Aroostook County for a visit in order to associate with he-men.

We have heard people who came here from small towns down State to make their living claim that Aroostook people are not cultured. Just why do people like that stay here? I notice they are glad to remain here and pull down a good fat salary.

People in Aroostook County do try to educate their children and some also travel abroad and to Florida and California winters, but not just since the Government guaranteed price of potatoes. People who had money always did those things. As a youngster some of the people I remember visited Europe and spent winters in Florida and California. In regard to education, I noticed last summer when attending college that nearly every county in Maine as well as Aroostook County was represented.

Many people in Aroostook County have money that was not made by raising potatoes. Some of the nice farms have been handed down from one generation to another. The farm I lived on was owned by my grandfather at one time and he did not make money by raising potatoes but by lumbering.

I can remember when Aroostook farmers raised cows and sold butter for 15 and 20 cents a pound. Eggs brought 12 cents a dozen. Is it any wonder they do not care to go back to those times? Would you?

Farmers are not getting as rich as Mr. Packard would lead people to believe. Farming is an expensive business and I'll venture to say the average farmer is just keeping his head above water.

If reporters for magazines are coming to Aroostook County to write about conditions, it would be a good idea to secure correct information and write up articles accordingly.

Why pick on the Aroostook farmer? Hasn't he as much right to some assistance as people in other walks of life in different sections of the country?

I'm for Aroostook 100 percent. Long may the farmers live and enjoy the fruits of their labor.

FERN L. THOMAS.

ROBINSON, MAINE.

Threat to Oil Exploration

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 1 (legislative day of Wednesday, January 4), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Threat to Oil Exploration," published in the Oil City Derrick of January 26, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THREAT TO OIL EXPLORATION

The Treasury Department has taken its periodic dig at the oil and gas industry over

the question of depletion allowance, a tax adjustment permitted the industry for many years because of the risks involved and the intangible costs which enter into the continuing search for new reserves.

This time the dig came in President Truman's tax message to Congress. He termed the depletion allowance, or special tax deduction allowed oil, gas, and mining interests, the most inequitable "loophole" in the tax laws and urged that something be done about it. He made no specific recommendations, however.

There is nothing new in the President's stand on the matter of the depletion allowance. Over a period of years, the Treasury Department at regular intervals has attempted to whack the allowance but on each occasion Congress has stood firm and has refused to alter the tax-adjustment provision.

Briefly the provisions complained of by the President permit the owner of an oil or gas well to deduct from taxes 27½ percent of the gross income of his property up to a limit of half the net income from that property, and to deduct from his income expenditures for intangible drilling costs.

The President's recommendation is causing grave concern among oilmen in this area, as well as in all other producing areas of the Nation. And rightly so. For it is generally recognized that elimination or any serious reduction in the present tax adjustment allowed the industry will constitute an alarming threat to further oil exploration.

The oil industry is rated as the biggest gambling industry of them all. The continuing search for new reserves with its subsequent drilling of so many dry or unproductive holes makes it such. It was largely to provide the incentive and meet the risks involved in this extensive exploration work that oilmen were granted the benefit of the depletion allowance in filing income-tax returns.

Take the allowance away and there is grave danger that oil exploration will be seriously curtailed. Action such as that recommended by the President would mean an increase in income taxes for the industry and a cut into the working capital now employed to finance the search for new oil reserves.

Oilmen are particularly fearful of the consequences of any such action on the small independent producers such as make up, to a large degree, the Pennsylvania oil industry. For they, undoubtedly, would be less able to pay the proposed higher income rates without injury than would the larger concerns.

The importance of oil to the future of the Nation cannot be overlooked. The continuing search for new reserves must go on. Congress should not take any action that will hamper future oil exploration.

Senatorial Candidate in Indiana

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 1 (legislative day of Wednesday, January 4), 1950

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Confused as to Loyalties?" from the Palladium-Item and Sun-Telegram of Richmond, Ind.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONFUSED AS TO LOYALTIES?

Alex M. Campbell, Fort Wayne attorney, is a candidate for the Democratic New Deal Fair Deal nomination for United States Senator for Indiana.

He is the man who announced that if we Hoosiers would nominate and elect him he would, in substance, not represent us in the Senate. He said he would back President Truman in everything Truman wants. Some citizen to trust with our free institutions, isn't he?

The other night Campbell spoke at a Roosevelt Day dinner at Columbus, Ind. He told all about how that great Red baiter, Harry Truman, was succeeding in driving the Communists out of the Government in Washington, which Truman heads. Campbell did not, however, tell how those Communists happened to get into our Government. How could he at a dinner in honor of Franklin Roosevelt, the man who began giving China to the Reds under the guidance of Alger Hiss?

Campbell praised Truman to the skies for his loyalty campaign. He said Truman has the courage to issue a Presidential directive for an all-out fight on subversives.

Campbell, in case you have forgotten, is speaking about the Harry Truman who snarled at a House committee to investigate subversive activities 2 years ago for bringing out Whittaker Chambers' charges of espionage against Alger Hiss; the Harry Truman who snarled "red herring" at that committee for helping to show up that fair-haired favorite of Franklin Roosevelt and Dean Acheson in the State Department.

Rubber-stamp Alex, he is.

He is willing to back Harry Truman in anything that brainy and loyal American wants.

If Truman wants to protect Reds in the Government from detection, apparently rubber-stamp Alex, as Senator, would support him.

If Truman decides that trying to help the Reds in our Government is getting him in dutch with the ordinary people of the Nation and wants to start a purge of those Reds in order to gain public favor again, rubber-stamp Alex would support him in that.

He is for anything Red-Herring Harry wants.

Wouldn't you rather be represented in the Senate by a loyal American who will always be for what you want under our Constitution?

The National Debt

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 1 (legislative day of Wednesday, January 4), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The National Debt," published in the Christian Union Herald of January 29, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE NATIONAL DEBT

To most thoughtful Americans, one of the very alarming phenomena of the last quarter century has been the rising indebtedness of our Federal Government. Is it any exaggeration to say that an astronomer's measuring stick is needed to compute the accumulated Treasury deficits during the past two decades? In 1926—the year that I finished seminary and entered my profession—the country's financial obligation amounted to a modest $10,000,000,000 or $15,000,000,000. But with the descent of the depression in 1929, a mad spending spree began, which first meant huge outlays of cash to relieve the needy, then involved still greater expenditures to prosecute and win the war, and finally has required such lavish postwar assistance to Europe and Asia, that late reports show our indebtedness to creditors to be $253,000,000,000. No nation in history, to my knowledge, has ever contracted such a debt, and with the Government currently refusing to balance the budget, the end of the sobering spectacle is by no means in sight.

Some political observers make light of the tragedy. They tell us that we need have no concern, because the money is owed, not to any foreign state, but to our own American citizens, and if worse comes to worst, we may cancel the obligation, and small harm will be done. That easy answer to so serious a problem is both morally and economically unsound. Can a country preserve its self-respect and ignore the obligations it owes itself? And what is equally important, would the cancellation of this indebtedness, or even the repayment of the same indebtedness with inflated dollars, not involve the Nation in an immediate and very dangerous crisis? If and when Uncle Sam is unable to redeem with good money his promises to pay, then and there the Government in power will be out, and an emergency government with dictatorial authority would take its place. Such a critical situation could confront our country at any moment now. And you may be sure that no free and democratic society may be maintained if we repudiate our debt, or propose to pay it off with worthless currency.

A few men in Washington who still have a modicum of self-respect, consider the debt to be a moral obligation, but they want to liquidate it by means which would certainly destroy the people's freedom. They hope, through prohibitive taxation of corporations, to make it so miserable for businessmen, that the state may eventually take over all industry and use the considerable profits to clear our country of its staggering debt-load. That move, of course, would mean a socialistic state not unlike the one which obtains in England at the present time. Under such a scheme, free enterprise will flee America as surely as it has flown from the British Isles. And beyond any immediate tampering with business, I dare to think that one area of society after another would be seized by the Government until widespread liberty as we have always known and cherished it, would be cast into the limbo.

This article is written in the interest of American freedom, and is addressed especially to the younger generation. Better than their elders, youth understand the relation of liberty to a country's fiscal solvency, and at the same time have courage to deal drastically with any crisis which affects their future welfare. How may our boys and girls scale down the Nation's great indebtedness, and therefore register victory in a fight where their fathers have so unprotestingly accepted defeat? The answer to that question is anything but pleasant, because it involves both political responsibility and sobering self-denial. The youth of America must, for one thing, demand that the Federal budget be balanced immediately—deficit spending has to stop, even at the expense of dismissing hordes of bureaucrats from the Government pay roll. But they must, for another thing, demand that Federal revenue be increased, not by socialistic controls over industry and

UNIVERSITY OF MICHIGAN LIBRARIES

business, to be sure, but by levying higher personal taxes—upon themselves and their offspring. These are stiff requirements, I know, but they are preferable to abandoning this country's freedom.

E. MARCELLUS NESBITT.

Policy of Appeasement of Communism in the East

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, February 1 (legislative day of Wednesday, January 4), 1950

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial from the Concord Monitor, January 6, 1950, entitled "By Default Again," which is a very good analysis of the Communist appeasement policy which we are following in the East.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BY DEFAULT AGAIN?

It goes without saying that the United States has an interest in what happens to the island of Formosa. National defense alone dictates such an interest, for to have any semblance of defense these days a nation must have far-flung outposts upon which it can depend. These may be possessions, or they may be owned by other, but friendly nations.

If the Chinese Communists take over Formosa, as our administration seems bent upon having them do, we have lost an outpost.

This country has access to the Japanese islands to the north, and to the Philippines to the south, and stepping stones to them in the broad Pacific. Formosa, in enemy hands, would breach the line of potential defenses at the far side of the Pacific.

It is proposed by the administration that we do absolutely nothing to help keep Formosa out of Communist hands. Yet, on the other bastion of communism, in Europe, we have given arms and other aid to such nations as Turkey, Greece, France, etc. Nor has such aid led to war. It has, all agree, helped to stem the advance of communism.

This Nation is spending about $15,000,000,000 a year on its armed services, and for that price they ought to be performing useful services. As a matter of fact our armed services believe that Formosa should be kept from Communist control, but the State Department, and now President Truman, say "No."

Our problem is to maintain peace in this world and to preserve the democratic way of life. To maintain peace we must prevent communism from gobbling up any more nations. Already we have in recent times helped the Communists to acquire a strangle hold upon two continents. In the East we virtually gave them Manchuria and part of Korea, though these lands were not ours to give away. We certainly didn't help the Chinese to keep them from overrunning that country, with weapons we had given the Communists.

In Europe we have said that the Communists must be stopped, and we have taken all manner of steps to accomplish that purpose. But in Asia we are lying down on the job, and the American people cannot understand why.

A show of force by us isn't going to precipitate war upon us by Russia, any more than the constant show of force by Russia. If Russia really wants to take us on she will use any excuse she pleases. To her a show of force is the only thing she understands and respects. She will holler bloody murder, but that she does all the time, even when we are acting like a scared little boy, which is a failing we too often have in our international relationships.

We have soldiers in Japan and Korea. We may as well have some more in Formosa, rather than keeping them in cozy quarters here at home. If we put our own soldiers on the island, to defend it and to protect the Chinese Nationalist Government and to help it, we would be doing more than we already are doing at numerous spots around the earth. We are protecting the Japanese from Communist absorption, and they were our enemy. The Chinese were an ally.

Once more the weaknesses and inconsistencies of this Nation's foreign policies, and their nonexistence in many respects, is forcefully demonstrated by the Formosa situation. Nothing has been anticipated. We have not been prepared for what obviously was bound to develop in time.

The State Department has been at loose ends for some years. It still seems to be, despite the rather rapid succession of Secretaries who have attempted to head the Department. Under Roosevelt the Department was not under its own steam. Under Truman it seems to be left to its own resources, but it still is at loose ends.

Congress may, and it probably should, seek to find out what the answers are. If it does, the Formosa situation will be the inspiration for efforts to end some of the confusion and contentions within the Government as to foreign policies.

Is Prejudice Poisoning Our Kids?

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1950

Mr. BIEMILLER. Mr. Speaker, it has long been the contention of child psychologists and sociologists that children are born without any sort of racial or religious prejudice, but quickly learn them from their elders. A study has recently been made showing how prejudices are acquired by children, and what an appallingly large percentage of our children are indoctrinated with such prejudices. This study, called the Philadelphia Early Childhood Project, brings out facts which are startling and appalling, and should be studied by all who sincerely believe that prejudices must be eliminated if we want to have a true democracy. I wish to insert in the RECORD an article from the November issue of the Woman's Home Companion entitled "Is Prejudice Poisoning Our Kids?"

IS PREJUDICE POISONING OUR KIDS?

(By Howard Whitman)

"What a shock to learn that my own child is prejudiced!" The speaker was a prominent educator, a good parent, a good American in every sense of the word. His 6-year-old daughter had said, "Let's cross the street, Daddy, here comes a nigger."

"If she had measles," he continued, "I'd know what to do. But this disease frightens me."

This disease may well frighten all America. When adult minds are corrupted with prejudice it is tragic. But when the minds of children are poisoned, it is more than a tragedy. It is a strident summons.

How dark is the record?

We never knew until now. This article has the necessary, if poignant, duty of bringing to light the first comprehensive investigation of prejudice in children. It is an unbeautiful report. Look:

"Catholic people are no good."

"Protestants go to hell."

"We don't like Jews on our street."

"I ain't playing with no more niggers."

These are not the statements of full-fledged bigots. They are the words of little children. They are taken verbatim from the record—out of the mouths of kindergartners, first and second graders, ages 5, 6, and 7.

The investigation was made in Philadelphia. Called the Philadelphia Early Childhood Project, it placed the calipers of scientific measurement upon the social perceptions and attitudes of children in six public schools from kindergarten to second grade. The work took three painstaking years. It was conducted jointly by the Bureau for Intercultural Education, of New York; the Research Center for Group Dynamics, of the Massachusetts Institute of Technology; the Philadelphia Fellowship Commission and the Philadelphia public schools.

The findings will startle even experts, many of whom have assumed that children are not prejudiced.

"Actually," comments Helen G. Trager, director of the project, "we found many children saturated with prejudice. Nearly all were tainted in some degree."

What are children—little monsters?

Not at all.

They are little images. They are reflections of the adult world. No child was ever born a bigot, but he can become one incredibly early.

Every child is a blank page, as the Companion pointed out in a memorable article on children's thinking pattern, Your Town Can Do It Too (June 1944) and you can write practically what you will on that blank page. States the Philadelphia report: "The individual (child) not only follows the dictates of his environment concerning attitudes toward Negroes, Catholics, et cetera, but he comes to accept these attitude as his own (and) he uses them conveniently."

The Philadelphia project employed a special tool to measure child prejudice. It is called a social episodes test. The children were shown simple drawings, nine in all, illustrating everyday situations which might evoke an expression of prejudice in a prejudiced person. Social scientists call this a projective technique. There's nothing significant in the picture itself; the significance is in what you project into it.

Thus, when one second-grader looked at a picture of white children playing handball with a Negro child, he commented, "The colored kid wants to steal the ball. That's why the white kids have to go somewhere else." There was nothing in the picture to indicate that anybody wanted to steal anything or that the white kids weren't perfectly happy.

The series of nine drawings deals with racial and religious differences, religious symbols and cultural observances. Nothing is said to the child about prejudice or group relations or anything else which might color his responses. He is merely asked such neutral questions as: "Tell me about this picture: Why isn't this little boy playing?" "Is this little boy glad he is colored?" "Is this little boy glad he is Protestant?" "What are these boys—they are watching children leaving a synagogue—going to do?" "Are

these children—leaving a Catholic church—glad they are Catholic?" "Are these children—white and colored—friends?"

The child who has not been tainted with prejudice will have none to project into the pictures. For example, one second-grader, looking at the picture of a colored boy left out of a game, says, "If the colored boy were white they would let him play. Even if he is colored they should let him play. What's different about him?"

Another second-grader remarks, "I like any kind—Catholic, Jewish, or any kind. Any kind of people except bad people."

But such attitudes appeared in only 7 percent of the children.

By contrast, the project report is swamped with attitudes like these:

Viewing the synagogue picture, one child says, "The Christian children laugh at the Jewish children because they go to synagogue." Another, when the tester asks what the four non-Jewish children are going to do, replies, "I think they're going to beat up the Jewish boys because the Catholics don't like the Jewish people * * * and the Jewish people don't like the Catholic people."

Responding to the Catholic church picture, one first-grader says, "Nobody will play with those children if they're not Protestant." Another child remarks, "I'm glad I'm not Catholic. They are bad."

When it came to the Negroes the children showed the saddest symptoms of all. They showed how deeply the adult world has infected them with racial hatred, fear, falsehood, and distrust. Here are the words of 5-, 6-, and 7-year-old Americans viewing the picture of the Negro boy on the sidelines of a game: "White people don't want to play with that colored boy because they know he cheats and is too tough." "All the other children will go away and leave the little colored boy alone. That's what always happens around my street."

Even when viewing a picture in which a Negro child and white children are playing together, one kindergartner, in answer to the tester's question—"What are these children going to do"—says:

"They are going to make a snowball and wash the colored boy's face with it."

There is abundant evidence throughout the study that children come by their prejudices by aping grown-ups. Not necessarily their parents; they ape grown-up culture as a whole. They take their cues from neighborhood incidents, the talk of a truck driver, a remark of a teacher, conversation of others. As Prof. Gordon W. Allport, of Harvard, remarks, "Children are not born with prejudices. They catch them."

What they catch mostly are the stereotypes of prejudice. These are the sweeping generalizations, the hate capsules. Professor Allport points out, "Some Europeans think all Americans are loud-mouthed spendthrifts. This stereotyped judgment is a prejudice."

We who know Americans can spike the stereotypes with ease. We know that some Americans are loud-mouthed spendthrifts. So are some Englishmen, some Frenchmen, and some Afghanistanians. But all Americans are not loud-mouthed spendthrifts.

Summing up the mountains of data, the Philadelphia researchers rated each child on his attitude of acceptance or rejection of various social groups. Toward Jews, 63 percent were neutral, noncommittal, or evasive; only 10 percent accepted Jews and 27 percent openly rejected them. Catholics were openly rejected by 9 percent and Protestants by 1 percent.

When it came to the white children's attitudes toward Negroes, 32 percent were neutral or had mixed feelings, 68 percent openly rejected Negroes, and none at all accepted them.

The report from Philadelphia—City of Brotherly Love—should do more than make adults shake their heads and say, "Imagine." It should evoke more than the bleats of the self-righteous—"Oh, that may be true of other children, but my children certainly aren't prejudiced." Plenty of parents in Philadelphia said that—until the probing tests showed that their children had the virus, too.

Prejudice hurts the prejudiced, psychiatrists tell us. They now know that prejudice is a personality disease.

And the antidote?

I sat over a child's play table in the experimental school for preschool children at St. Joseph College in Hartford, Conn. Across from me was Sister Mary de Lourdes, director of the school. She was explaining that Protestant, Jew, and Catholic, white and colored children, go to the school together.

"We don't want our children vulnerable to rickets, diphtheria, or typhoid," Sister Mary remarked. "And neither do we want them vulnerable to prejudice. We want to immunize them against it."

This is the new enlightened thinking on an age-old problem.

Sister Mary engaged a Negro teacher for the St. Joseph nursery school. Some of the Hartford parents had been raised in the South and were shocked. But they got over it. One mother, reared in Mississippi, said a few months later—to her credit—"It is a little hard on us, Sister Mary. But I'm extremely happy that my child will never have to get over what I'm having such trouble getting over myself."

How does prejudice harm the prejudiced?

"It restricts the development of personality," says Dr. Frances L. Ilg, assistant professor of child development at Yale.

But the most incisive diagnosis I heard came not from a psychologist or a doctor of medicine—but from a New Haven housewife, Mrs. Gertrude Hart Day, mother of three. Mrs. Day—who has good reason to know about prejudice, as we shall see later—sat in her early American book-walled living room and said:

"The child infected with prejudice is doomed to live a confined life, to build walls around himself and be a prisoner of his own ill feelings. Such a child never can live at ease. He sends out hatred and thus creates enemies—real or imaginary. He must live in fear of these enemies and under the threat that his own hatred will rebound against him."

No one could wish upon his child a life like that. And so thousands of American parents already are doing all they can to bestow free and loving personalities upon their children and not the stingy pinch of prejudice. Many a parent can honestly say, "We've driven prejudice out of our own minds—our children can never catch it from us."

But what about the neighbors, the school, playmates, people on streetcars and street corners, restricted neighborhoods, Jim Crow, college quotas, fraternity exclusion—and all the many clouds of prejudice that hang in our American skies like sultry blots?

Children can catch prejudice on the outside as readily as they can at home.

Willard Johnson, of the National Conference of Christians and Jews, warns: "One family can poison a neighborhood. A few prejudiced children in the block can contaminate your child."

So we who are parents have a special job of protection to do. We must take positive steps to save our children from prejudice as we take positive steps to save them from other diseases. We must start early. Children's attitudes are formed from birth to the age of 6. These attitudes jell from 6 to 12. They solidify from 12 to 18. Thus the Philadelphia project advises us that the saving of children from prejudice cannot be postponed until adolescence, but must be begun in preschool and early school years.

It's the old story: you can stop it if you catch it early. Up to age 6 youngsters' attitudes can be changed with ease; from 6 to 12 the changing is more difficult—but they can be changed.

"We have learned to inoculate against physical disease at earlier and earlier ages. If we do a good job, sometimes we can give the child immunity for life. Immunity against prejudice works quite the same way," counsels Dr. Ilg.

Against the disease of prejudice we ourselves are the health-giving serum. If children catch prejudice from adults, so they catch free and loving attitudes from adults. They can catch from us not just bland and supine lack of prejudice, but powerful democratic attitudes which defy prejudice.

"We can intentionally sit next to a Negro on a bus," suggests Sister Mary de Lourdes.

"We can take our children to visit Catholic, Jewish, and Protestant houses of worship," suggests Willard Johnson.

"We can invite Jewish neighbors into Christian homes and Christian neighbors into Jewish homes," suggests Mrs. Gertrude Hart Day.

When my own daughter was 4 she came in one day and said, "I don't like black people. They're dirty." I felt like my educator friend—shocked that my own daughter was showing prejudice. My wife and I locked horns with the problem then and there. We explained to our little girl, not once but many times over the ensuing months, that God made many kinds of people in this world. He made them many colors, just as He made roses many colors. In color, people are like flowers. Some are red, some are yellow, some are dark, and some are light.

When our little girl is older and studies anthropology she will learn that there are no important differences between peoples of different colors. She will learn that there is actually more similarity between two fat men of different races than between a fat man and a thin man of the same race. She will learn that there is much more similarity between a colored and a white housemaid than between a colored housemaid and a colored schoolteacher.

The first virulent symptom of anti-Semitism often is a child's angry accusation to a Jewish playmate, "Jews are Christ-killers. You killed Christ."

Sister Mary de Lourdes suggests that to spike this stereotype, you give children as much history of the crucifixion as they're capable of understanding.

"Tell them first that Jesus was a great Jewish leader," she suggests. "Tell them that people who were in power at that time were afraid Jesus would come into power. Tell them that finally Jesus was sentenced to death by the Roman governor—who was not a Jew. Above all—help the children realize that all this was long, long ago and that it has nothing to do with the Jewish people of today."

Once at Christmastime Sister Mary sensed that the Jewish children in her school were feeling uncomfortable. She was standing near the Bethlehem scene that had been set up for the holiday. Calling the children's attention to the holy family, she said, "You know, children, Joseph was a Jew and Mary was a Jew and Baby Jesus was a Jew."

Given such attitudes as these, children later can appreciate that it was the hatred in mankind which killed Jesus.

Dr. Ilg, from her years with Dr. Arnold Gesell at Yale's clinic of child development, offers the following suggestions for inoculation against prejudice year by year:

"Age 3," she says, "is a good time to have your child play in mixed groups, if he hasn't already."

Ages 4 and 5, Dr. Ilg suggests, are the times to broaden the child. He should be told about the world and its people; he should learn that China is on the other side of the globe—that its people are yellow; he should know that there are red and black people, Eskimos, Indians, and orientals.

UNIVERSITY OF MICHIGAN LIBRARIES

Six to eight is what Dr. Ilg calls the rhyming stage. Many clichés of prejudices are passed around in the rhymes and chants which 6- to 8-year-olds sing. We harm the child when we let them pass. We miss the chance to give him healthy attitudes instead of unhealthy ones.

Age 9, Dr. Ilg suggests, is a good time for concrete democratic action. "It is a good age to visit churches and temples," she says. Parents and children should go together, for the point is not merely to get acquainted with other religions. The point is to demonstrate to your children that you have a healthy attitude toward other religions. Let them catch it from you.

What Dr. Ilg calls the intellectual approach can come at age 10. The child is then ready for facts about minorities, about color lines, about scapegoating, about discrimination. Help him to understand prejudice—and be mighty glad he is free from it.

Is there anything more parents can do?

Mrs. Gertrude Hart Day, of New Haven, is an eighth-generation American. She was reared in a house built by her New England forebears in 1755. Today Mrs. Day heads the New Haven neighborhood project—one of the Nation's most effective antidotes to prejudice—because, as she says, "I've had a taste of prejudice. I know how poisonous it is."

During the war Mrs. Day's husband was in the Army Medical Corps and she, with her 3 children, followed him for 2 years through 14 cities from Maryland to Texas.

"I, who had always lived a comfortable life as a member of the accepted majority, suddenly found that I had no status," she relates. "Because I had three children, no one wanted to rent a house to me. The children and I were forced to live with other people who 'didn't belong.'

"Yes, I knew I'd be coming back to my comfortable niche after the war. But what about my wartime neighbors—all those minorities who had no niches to return to?"

So Mrs. Day came back to New Haven to her comfortable niche. She gathered a few other women around her. And in June 1946, the New Haven Neighborhood Project was launched. It first set up a playground. Then it started a nursery school. Then a summer play school. All three for all kinds of children, white and colored, Christian and Jew.

The New Haven parents didn't stop at that. They formed adult groups, they went to work on their own prejudices. "There was Mary, a second-generation American, mother of two children. She knew she didn't like Negroes, though she didn't know why," Mrs. Day relates.

"We who loved Mary were able to help her overcome her prejudice in a simple pleasant way.

"We invited a young Negro woman of Mary's own age and educational background to come to our afternoon teas. She and Mary had in common a rare love of music. Little by little they felt their common interest more strongly until one afternoon they sat side by side on the piano bench to play together."

The New Haven parents meet frequently at one another's homes. They don't have formal pep meetings about democracy. Groups with similar interests simply meet casually. People who like music come together for musical evenings—and it's just incidental that some are white and some are Negro and some are Christians and some are Jews.

"The most important thing," says Mrs. Day, "is that our children peek down the stairway and see us."

When they look in on an evening like that, the poison of prejudice can never touch them.

Attitude of the Secretary of State Toward Alger Hiss

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, February 1 (legislative day of Wednesday, January 4), 1950

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an article entitled "Mississippi Legislature Rebukes Acheson," taken from the Washington Times-Herald of Saturday, January 28, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MISSISSIPPI LEGISLATURE REBUKES ACHESON—SUPPORT OF HISS IS CALLED SHOCKING

JACKSON, MISS., January 27—Secretary of State Dean Acheson drew a sharp rebuke from the Mississippi House of Representatives today for his comment on the perjury conviction of Alger Hiss.

"I do not intend to turn my back on Alger Hiss," the Secretary said this week after the Hiss conviction.

The legislators unanimously adopted a resolution branding the statement as shocking and unprecedented.

"We have the spectacle in our country," shouted gray-haired delta planter Walter Sillers, "of a man proved of disloyalty, convicted after two trials, being defended by a man in the position of holding and guarding the secrets of his country, who stands by him (Hiss) instead of standing by the people of his country."

The resolution also slapped at the appearance of Supreme Court Justices Frankfurter and Reed as defense character witnesses in the first Hiss trial. It termed their appearance an unprecedented spectacle.

The resolution called for a congressional investigation of the State Department and other departments of the Federal Government, including the judiciary.

It asked that summary action be taken to rid these departments of all persons, from the highest to the lowest rank, who do not measure up to the strictest test of loyalty.

Preservation of Our National Forests

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Thursday, January 26 (legislative day of Wednesday, January 4), 1950

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two addresses, one delivered by Mr. Lyle F. Watts, Chief, United States Forest Service, at the dedication of Gifford Pinchot National Forest, on October 15, 1949, and the other, also a very able address by Mrs. Gifford Pinchot, on the same occasion.

I am informed that the cost of printing the two addresses will be $205, and that they will require 2½ pages of the RECORD.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

THE GREATEST GOOD OF THE GREATEST NUMBER—ADDRESS BY LYLE F. WATTS, CHIEF, UNITED STATES FOREST SERVICE

In dedicating the Gifford Pinchot National Forest today, we honor one of America's great men.

It was Gifford Pinchot who gave conservation its first great impetus in the United States. It was largely through his tireless crusading efforts that conservation has become a part of our national policy. The ideas and forces that Gifford Pinchot set in motion may well determine the future security and prosperity and progress of this Nation. They may indeed determine the future welfare of the entire human race.

There are many here today who knew and worked with G. P., as Gifford Pinchot was familiarly and affectionately known to all his associates. They remember G. P. as a man of tremendous energy and enthusiasm, as an inspiring leader, as a zealous crusader. They knew him as a courageous, unflinching fighter in the public interest and for the public good. His cause did not need to be popular if it was right. He seemed at times to be fighting almost single-handed; but history has shown that the people were behind him.

Pinchot was the first Chief of the United States Forest Service. He was the first American to hang out his shingle as a consulting forester. He engineered the first conference of State Governors for the consideration of conservation policies. He promoted the North American Conservation Conference, the first conservation meeting on an international level. He was a cofounder of the Society of American Foresters, which is participating in these ceremonies today.

Pinchot was a man of many interests and many capabilities. But forest conservation was his first and greatest concern. Some of us here remember when Gifford Pinchot spoke to a group of foresters a few years ago. He said: "I have been a governor now and then, but I am a forester all the time—have been, and shall be to my dying day." He was indeed. At the time of his death in 1946, he was working over the management plan for the forests on his own land. In his last years, Pinchot suggested and promoted a world-wide conservation meeting—the initial impetus for the United Nations Scientific Conference on the Conservation of Natural Resources held at Lake Success just a few weeks ago.

The conservation movement, which Gifford Pinchot played such a big part in launching, has made much headway. Today we have a splendid system of national forests, making many important contributions to local communities and to national welfare. The timber and other resources of these national forests are managed for a sustained yield, for permanent and continuing production and use in the public interest. Our national forests are furnishing an increasingly significant portion of the country's timber supply; they are protecting vitally important sources of water; their grazing lands contribute to the Nation's supply of meat, wool, and leather; they afford recreational opportunities for millions of people. Their returns to the public in timber production, water supplies, flood control, livestock production, wildlife, recreation, and other services far exceed the costs of administration. It would indeed be difficult to place a dollars and cents value on many of their services and benefits.

We have in the various States, many strong, competent State forestry departments that

are doing notable work in forest protection and development. Fifty years ago, when Gifford Pinchot was beginning his crusade for forestry, only feeble beginnings had been made in systematic protection of the forests from fire. Today, State forestry agencies are heading up a cooperative program that provides organized protection for a total of some 340,000,000 acres of State and private forest land. State forests have been established and developed by many of the States, and in many other activities, State agencies are doing a good job for the advancement of forestry.

And so are many private owners of forest land. The forest-management programs of a number of lumber and pulp and paper companies are noteworthy. The forest industries have sponsored a tree-farm program in which hundreds of forest owners have signed up, pledging to manage their timber holdings for continuous production.

I have mentioned these advances in forestry particularly because they are the things with which I am most familiar and most directly concerned. There have been many other noteworthy advances in conservation. An aggressive program of soil conservation is under way. Wildlife management has made great strides. Deer and elk have made such a strong comeback that in some areas the problem is now to control excess populations instead of bringing back the vanished herds.

All of these things add up to an impressive total of achievement. Conservation is definitely on the move.

But we still have a long, long way to go. There is nothing in the record to justify any complacency. For the United States as a whole, we have yet to reverse the downward trend of our timber resources. The annual drain of saw-timber, though below a desirable goal for future production, still exceeds the rate of growth. Furthermore, much of the drain is of high-quality old-growth timber, and especially of the more valuable softwoods needed for construction lumber, plywood, and other important uses; whereas much of the growth is of inferior kinds of hardwoods and other poor-quality material. Millions of acres capable of producing high-grade timber now have only a scrubby, almost worthless growth. The general quality of our timber stands is steadily deteriorating.

Despite the excellent forestry programs of many forest owners, the fact remains that only 36 percent of all this country's operating private commercial forest land is being handled according to practices that assure the forest being kept in reasonably productive condition. Sixty-four percent of the cutting practice must be classed as poor or destructive.

The average grazing capacity of our western ranges is little more than half of what it was originally, or of what it should be now. Many ranges are badly deteriorated; in some areas nutritious perennial grasses have almost wholly disappeared; fertile top soil is being washed or blown away, increasing the difficulty of restoring range and watershed values.

Nearly all of our major rivers run muddy, much or all of the time. When you see a muddy river, you are seeing soil from farms and hillsides being carried off to the sea, or to be deposited along the way to clog stream channels or silt up the reservoirs. Every year, raging floods take a toll of human life and cause millions of dollars worth of property damage. A lot of this damage could be averted by more adequate attention to the watershed lands where the floods come from. Some watersheds have so deteriorated that a flash flood may start from less than an inch of rainfall.

And while too much water is wasted in floods, adequate, dependable water supplies for irrigation, industrial, and domestic use are becoming an increasingly acute problem in many parts of the West, and even in some parts of the more humid East. Many streams that are raging torrents during a rainy spell dry up soon after because not enough water gets into the ground to feed a steady flow. Many valley wells go dry for the same reason.

Such things as these indicate the big jobs ahead in conservation. If I sound like an alarmist at this moment, it is because I believe there is cause for alarm. In the face of a growing population our natural resources are declining. You cannot build an expanding economy on declining resources.

But I see no need for defeatism or despair. We know which way we should go. Gifford Pinchot and other early day conservationists long ago pointed the way. They were the pioneer pathfinders who first signposted what William Vogt, in his recent thought-provoking book, has called the Road to Survival. We can build up depleted resources. We can see that renewable resources are so managed that they will be continuously renewed. But it will take some aggressive, forthright action.

We need aggressive action to control unwise or destructive timber cutting—to establish certain basic rules of practice that will assure continued productivity of the forests. Some 14 States have already enacted legislation looking toward such regulation of forest practices. Their regulatory laws vary greatly in effectiveness and administration. We need Nation-wide standards and action on a Nation-wide scale to protect progressive owners from destructive competition, to stop further forest destruction and deterioration, and so help to maintain a reasonable growing stock as a basis for future timber production. This need was clearly foreseen by Gifford Pinchot. It has grown more urgent with the passing years.

We need also to tighten up still more our protection of the forests from fire. We need more protection work against destructive insects and diseases.

Along with such urgent defensive measures, we need positive action on a big scale to restore and build up resources. We need intensive education and other cooperative services to help forest owners improve their forests and practice real sustained yield management. We need to strengthen the public forests. We need to eliminate overgrazing and build up run-down ranges. We need to improve the condition of many watersheds. We need to replant or reseed millions of depleted acres to restore them to productivity.

And we need to get on with these things now. Time is marching on. For a century and more this country has been taking much from the land but putting little back. You can't keep on that way indefinitely. We have grown rich in worldly goods, but we are getting poorer in the natural resources that are the basis of those goods. And the longer we delay, the bigger and costlier will be the job of restoration that will have to be done if we are to maintain our high living standards and our strong place in the family of nations.

Ours is a Nation capable of doing things in a big way. We should aim high. Our goal should be continued abundance, not just to get by.

When Gifford Pinchot was Chief Forester, the guiding principle was laid down that our national forests should be managed for the greatest good of the greatest number in the long run. That principle has meaning not only within the boundaries of the national forests. It should motivate all public action. That the public has a stake in all natural resources was basic in Gifford Pinchot's thought. He strove to awaken realization of the fact that ownership of the land does not justify its abuse; that we of this generation hold the land in trust for the generations to follow; that it is our responsibility to see that it is used wisely, that it is kept productive.

One of Gifford Pinchot's achievements was in setting a high standard of public service. Under his leadership, the Forest Service gained a fine reputation for unselfish zeal and devotion. Power, prestige, or pay were not the dominant forces that motivated its actions—the public interest came first. Pinchot and his men did not stoop to subterfuge, special favors, nor secret agreements. Their fight was honest and aboveboard.

I think I am justified in saying—and I say it proudly—that the Forest Service still carries on in those traditions. Today we rededicate ourselves to those high standards. We shall not shrink from responsibility. We shall not be afraid of leadership in public policy. We cannot be content to drift with the tide. In the management of this national forest and of all other national forests, in our efforts to promote wise use of natural resources and sound conservation everywhere, our goal and guiding principle will continue to be the greatest good of the greatest number in the long run.

Our entire national forest system, embracing more than 180,000,000 acres in the United States and its Territories, is, in a large sense, a monument to Gifford Pinchot. But to this beautiful forest here in the Cascades of Washington has come the special honor of bearing his name. This national forest was established when he was Chief Forester. Its administration began under his direction. The basic principles for its management were set up under his guidance.

May the Gifford Pinchot National Forest help to keep forever alive and dynamic his conservation ideals. May it help point the way to wise use of all forests and all resources in the attainment of the good life for all men and all nations.

ADDRESS BY MRS. GIFFORD PINCHOT

You will understand how hard it is for me to speak on this occasion, even to thank you for the thoughts you have so beautifully expressed and the tributes you have so generously paid.

I know that every word has been heartfelt. Surely you realize how profoundly grateful I am.

Each one of you, the governor, the foresters, the soil conservationists, the engineers, have expressed, in your own separate fashions, something of the essence of what was Gifford Pinchot in the various fields in which you knew him. I can add nothing to what you have said.

But there is one point I am concerned to bring you which has not been stressed here.

That is the ideal of conservation that was so truly born of Gifford Pinchot's mind and spirit. The conservation philosophy from which he derives his temporal and earthly immortality.

Beyond the preservation of the forests, beyond the reclamation of the soil, beyond the various techniques of land use and flood control, over and above and back of all of these stands the philosophy itself, without which the former are without meaning.

Conservation to Gifford Pinchot was not a vague, fuzzy aspiration. It was something concrete, exact, dynamic. The very stuff of which democracy is made.

The conservation he preached dealt not only with trees but with the sheep herders, with homesteaders, whose means of livelihood in the forest depended upon the kind of protection that could be given them. It dealt not only with erosion and flood control, but with the wise use and development of great river valleys in terms of irrigation and power, such as you are so magnificently working out here.

UNIVERSITY OF MICHIGAN LIBRARIES

To Pinchot, you see, man himself is a natural resource. The basic resource for whose material, moral, and spiritual welfare the conservation doctrine is invoked. Man, without whose energy, the energy of coal and oil, of electricity, yes, of atomic science itself, is inert and without meaning.

Believing, as Pinchot did, that the planned and orderly development of the earth and all it contains is indispensable to the permament prosperity of the human race, conservation in its widest sense became to him one of the guiding principles through which such prosperity might be achieved.

He was trained as a forester, thought as a forester, felt like a forester, but before he had practiced forestry long, he realized that there were questions to be answered that on the face of them might be said to have little to do with trees.

In his autobiography he writes about going out some 42 years ago "in the gathering gloom of an expiring day to ride in Rock Creek Park," and how he took with him on that ride the difficult problems upon which he was constantly at work.

Particularly he was thinking of the relations of the forests not only to streams and erosion, but to inland navigation, to water-power developments, to fish and game—he was thinking of the dangers of monopoly control of natural resources—about abuses in the exploitation of mineral deposits on public lands.

What had these to do with forestry, he asked himself, and what had forestry to do with them? What was the basic link between them?

Suddenly the idea flashed through his mind, Here were no longer a lot of different, independent, often antagonistic questions, each on its own separate little island—as he, a forester, had been in the habit of thinking. Instead there was one central question—many-sided, yes—but still a unit. All so closely connected as to make it imperative they be coordinated and treated as part of one coherent plan.

Seen in this new light, all these separate issues fitted into and made up one central problem—the use of the earth for the good of man.

To him it was like coming out of a dark tunnel. He had been seeing one spot of light ahead, and then of a sudden the whole landscape rushed into visibility.

It was a new policy that was needed. A policy not merely national—but world-wide in its scope. A policy that involved not only the welfare of man but his very existence on earth. An international policy in which all nations must cooperate for its fullest development.

In these terms conservation becomes a matter not primarily of techniques, as some moderns seem to think, but of policy, of Government policy on the highest level.

Possibly there are some of you old-timers—old-timers he loved so well—here who still remember the great meeting in 1908 called at the instigation of Pinchot by the then President Theodore Roosevelt. For the first time in history the idea of conservation was spelled out to the American people in terms so simple as to be understood by all.

First they were made to realize that our natural resources are not inexhaustible. That, on the contrary, they were being destroyed and wasted at a rate that was disastrous and might soon become fatal.

The point was then driven home that the natural resources of the country are a national heritage to be made use of in establishing and promoting the welfare, the prosperity, and the happiness of the American people.

Hitherto, said the President, our national policy has been one of almost unrestricted destruction of these natural resources. It was a policy that had led and was leading to exhaustion of many of them. Moreover, it was a policy that gave unequalled opportunity for private monopoly—he proclaimed over and over again.

"In the past," Roosevelt continued, "we have admitted the right of the individual to injure the future of the Republic for his own present profit. The time has come for a change."

Always the protection of the rights of the people marched side by side with the technology of forest management, with the development of water power, extraction of minerals, etc.

Always the emphasis was laid upon the social (humanistic we would call it today) purpose of conservation—the greatest good to the greatest number for the longest time.

Two years later Gifford Pinchot projected his insight into the conservation philosophy still further—this time into the international field—to the relationship between conservation and questions of peace and war.

Why, in the long role of history, had man so persistently gone out to do battle with his neighbors? Could one central issue be traced that underlay and explained such endless wars?

Obviously from time immemorial men had fought to grab from their neighbors or defend their own possession of the best hunting grounds, the most fertile plains, the protected harbors, the richest agricultural lands, the mineral deposits, etc. In early days the thinking was in terms of iron, copper, gold—later of coal and oil.

In our own day it is chrome, rubber, tin, manganese, molybdenum and bauxite, uranium. Natural resources all of them. Nonrenewable at that.

No single nation is self-sufficient in essential raw materials. Pinchot pointed out the welfare of each is dependent upon access to those it lacks. Access without recourse to war. Moreover, the world is beginning to understand that, instead of its being in the interest of any one nation to see another depressed, it is to the interest of each and all to see the rest secure.

Could such access to raw materials be brought about by mutual consent on an international basis?

Well, Theodore Roosevelt, Franklin Roosevelt, President Truman all in their time believed that conservation on the international level could help to remove one of the most dangerous of all obstacles to a just and permanent world peace.

In 1909 a formal invitation was sent out by Theodore Roosevelt to 48 nations to join together in an international conference on the subject of natural resources and their inventory, conservation, and wise utilization.

Some 30 of these countries, including among them Great Britain, France, Germany, Canada, and Mexico, accepted. Most unfortunately, however, for the cause of peace, Roosevelt's successor, President Taft, whose failure to support domestic conservation precipitated a major political revolt, decided to recall the invitation and to kill the conference.

Wilson, Harding, and Hoover were in turn approached but each of them failed to act.

In 1944 we went to see Franklin Roosevelt. The story of that meeting is both exciting and dramatic. For F. D. R. with his broad and imaginative understanding of history, immediately grasped and welcomed the full implications of the idea; pledged himself to the calling of such an international conference and authorized Pinchot to draw up an agenda; and to draft whatever government officials he might want in the doing.

In a letter to Cordell Hull, dated October 24, 1944, F. D. R. wrote:

"In our meetings with other nations I have a feeling that too little attention is being paid to the subject of the conservation and use of natural resources.

"I am surprised that the world knows so little about itself.

"Conservation is a basis of permanent peace. Many different kinds of natural resources are being wasted; other kinds are being ignored; still other kinds can be put to more practical use for humanity if more is known about them. Some nations are deeply interested in the subject of conservation and use and other nations are not at all interested.

"It occurs to me, therefore, that even before the United Nations meet for the comprehensive program which has been proposed, it could do no harm—and it might do much good—for us to hold a meeting in the United States of all of the united and associated nations for what is really the first step toward conservation and use of natural resources—i. e., a gathering for the purpose of a world-wide study of the whole subject.

"The machinery at least could be put into effect to carry it through.

"I repeat again that I am more and more convinced that conservation is a basis of permanent peace.

"I think the time is ripe."

After F. D. R.'s death, President Truman, who had followed the matter with close personal attention, went ahead on it. In August 1946, he sent to the United Nations a formal proposal as the American plan for such a conference.

This conference, so conceived and so borne, took place last August at Lake Success. It was known as the Conservation and Scientific Conference.

Its story is too long to go into here. Suffice it to say that the humanistic and moral, the economic and political sides of conservation were ignored.

Even more tragic is the fact that mention of peace and war in relation to conservation were deliberately excluded from the agenda.

The sterile little mouse that emerged, while magnificent on the technical side and adequate on much of the scientific, could lay no claim to the name of conservation in which it was conceived.

Such a tragic sidestepping of a major opportunity was bitterly resented by many of the delegates who had looked forward to a great upsurge of sentiment from the people of the world.

However, to dwell too closely upon the details of the past, while it may be good history, is not necessarily sound conservation.

The problems of today differ in many respects from those of yesterday.

How could that not be? Many permanent victories have been won since conservation was first developed as an American policy.

And more than that, many new needs of the American people have come into being.

Much has been learned since that time. New and breathtaking techniques worked out. Scientific clues laid bare that were not even foreshadowed in the old days.

Basically, however, the central purposes of conservation remain the same, spelled out in the clear, simplified words of Gifford Pinchot, "that the greatest good, to the greatest number, for the longest time."

Conservation is central to the domestic and international objectives of the American people. It is still dynamic humanism. It is still a philosophy of government at the highest level.

That fact is what gives the philosophy of conservation its force; its central basic unity.

Gifford Pinchot was always the first to proclaim the principle of growth, of development, of renewal, as central to the conservation idea.

He welcomed, always, the rediscovery of conservation by successive Presidents and politicians. Conservationists always welcome the renewal of natural resources, you know. And the renewal of the Christopher Columbus of conservation is certainly a prolific resource.

Certainly Gifford Pinchot understood that the battlefields of the past would not be the battlefields of the future.

But he also understood that the victories of yesteryear are not to be conceived as an excuse for present-day inertia. The fight for conservation, exactly as the fight for democracy, must be reinvigorated, revived, remanned, revitalized by each succeeding generation.

Its implications, its urgencies, its logistics, translated in terms of their own day by each generation. In other words, conservation is never a static doctrine. It is a doctrine of growth and development, of science, and of insight.

Gifford Pinchot blazed the trail. A man who never turned his back but marched breast forward. He looked to the rest of us, the young men and the young women as they come along, to continue on the long march ahead.

Our Foreign Policy

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, February 1 (legislative day of Wednesday, January 4), 1950

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article from the New Hampshire Morning Union, of January 13, 1950, entitled "Our Foreign Policy, Who Makes It and Accepts Responsibility?"

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR FOREIGN POLICY, WHO MAKES IT AND ACCEPTS RESPONSIBILITY?

(By Betty Knowles Hunt)

A friendly China is gone, lost to our side, written off, done with. As the key to all Asia, Communist China now menaces the freedom and independence of the whole Far East, to say nothing of our own American defense.

How did it happen? Who is to blame? Currently, the Saturday Evening Post is publishing a series of articles by Joseph Alsop, entitled: "Why We Lost China," which throws considerable light on the facts of the whole disaster. After conceding that the Nationalist regime was far from all-wise or good, Mr. Alsop writes:

"The question is whether we did our best to save China. The answer to this question is contained in the strange, still-secret inner history of our China policy. And this true history—for which the State Department could find no room in all the 1,054 pages of the white paper—may be simply, if grimly, summarized:

"Throughout the fateful years in China, the American representatives there actively favored the Chinese Communists. They also contributed to the weakness, both political and military, of the National Government. And in the end, they came close to offering up to the Communists, like a trussed bird on a platter, over 4 years before the eventual Communist triumph."

For the State Department now to insist that Chiang alone is to blame, that he lost the battle by the incompetence, corruption, and default of his administration, and to say not one single word about the pro-Communist aims and efforts of our own American authorities and advisers in China, is a shameful and disgusting low in American affairs.

Our first big authority in this sorry China story was Gen. Joseph Stilwell, who was anti-Chiang and pro-Communist when he accepted this important assignment in 1942. Almost from his arrival, he insulted, humiliated, and attempted to undermine Chiang in every way he could. He was aided and abetted by his chief political advisers, John Davies, John S. Service, and Raymond Ludden, all of whom favored the Communist side from the start. It was this group, our leading American representatives in China, who sold President Roosevelt on the idea of forcing Chiang into a "coalition government with the Communists." Did these advisers know this would mean a Communist China? The fact that they did is revealed clearly and unmistakably in their own writings.

All of which leads to the question: "Who makes our foreign policy, and accepts the responsibility for it?" Did the American people know that our own leaders were undermining Chiang, even while he was our wartime ally? They did not. Has the administration in Washington ever admitted any responsibility for appointing pro-Communist representatives in China? It has not. It does not even mention them.

Which brings us to Formosa. President Truman on December 27 called a special meeting of the National Security Council, for the avowed purpose of formulating a policy on Formosa. Press reports tell us that the Joint Chiefs of Staff urged an advisory military mission to the Nationalists, while Secretary of State Acheson argued against it. The President sided with Acheson, and that was that. But 6 days before this meeting, on December 23, the State Department had sent a secret dispatch to its officials in the Far East, writing off Formosa in advance to the Chinese Communists, and instructing our officials to play down the island's strategic importance. Why then, did President Truman call a policy meeting on December 29 when our policy had already been made and dispatched secretly 6 days earlier?

Who decided our Formosa policy? Apparently the Joint Chiefs of Staff were not consulted. Apparently our congressional leaders on foreign policy were not consulted. Who was consulted? Is our foreign policy now made solely by the Secretary of State? Or by him and the President?

This would seem to be a far cry from government of the people, for the people, and by the people. Not only are major decisions being made for all the American people by a person or persons unknown, without reference either to us or to our elected representatives in Congress—but the odds are heavy against anybody's taking any responsibility for any errors of judgment. About the most we can hope for is a series of whitewash papers, such as we have had to defend Yalta, Pottsdam, and now our China policy. But white papers don't pay the cost of tragic errors. The American people do.

It would seem advisable, therefore, that the major decisions of this crucial era be made by as wide and as representative a group of Americans as possible. The executive branch of our Government is assuming too much power, and accepting too little responsibility for its acts. This is highly dangerous in a land of the free.

Save Two Million

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. WEICHEL. Mr. Speaker, with the entire country and the Members of Congress demanding the stopping of waste and spending by the Government, everyone is amazed by the Government agreeing to give the D. & C. Navigation Co. $2,000,000 with interest at 4 percent from the time of taking of the land-locked passenger ship *Greater Buffalo* which operated on Lake Erie. The agreement for this was made in October 1949, after the D. & C. Navigation Co. said it would hold such an offer open for acceptance by the executive side of the Government to October 31, 1949.

Mr. Speaker, by agreement and not after trial on submission of evidence the executive side of the Government agreed to give away $2,000,000 with interest at 4 percent from the time of taking of this ship in face of the fact that the ship was built in August 1924, and had been depreciated at 5 percent per annum, and that the ship for 12 years previous to its taking by the Government earned nothing. In fact the earnings of the ship from 1931 to the date of taking are as follows:

Year	Earnings before depreciation	Earnings after depreciation
1931	−$8,714	−$161,771
1932	−86,139	−256,625
1933	−40,576	−211,032
1934	−70,151	−240,637
1935	−43,742	−214,228
1936	−1,923	−172,410
1937	13,411	−157,075
1938	−56,629	−227,115
1939	54,449	−116,037
1940	62,902	−73,486
1941	72,737	−63,651
Jan. 1, to Aug. 8, 1942	−33,348	−115,555

So that at the time of taking on August 8, 1942, the ship *Greater Buffalo* had an operating loss of $2,009,622 for the previous 12 years and was nothing more than a land-locked fresh-water white elephant with no place to go. The Maritime Commission determined its value as to what a prudent private person would pay at not more than $60,000 plus $35,000 for equipment making a total of $95,000 for the scrap value of the ship at the time of taking. The *Greater Buffalo* had no paying use, for passenger ships operated on the Great Lakes from 1920 to 1948 had gone down more than 50 percent. In 1920 there were 51 American flag passenger ships on the Great Lakes certified to carry 300 passengers or more and this had dwindled to a mere 21 ships by 1948. The fleet of passenger ships operating on Lake Erie from Cleveland, Buffalo, and Toledo had practically ceased to exist, including the large passenger ship *Seeandbee*, of the Cleveland-Buffalo Line, for which $129,000 was paid by the Government in 1941. And which the Maritime Commission says is the nearest instance of a sale of a ship with similar characteristics. And further, at the time of taking, the *Greater Buffalo*, as well as other such fresh-water ships, were worth scrap prices. They were charged off, they had no income, and they made no profit.

Yet, in the face of all this information which was available this agreed payment for the *Greater Buffalo* exceeds by 2,000 percent the administrative determination of just compensation for the taking of ships as previously carried on by the Government, and for which in other

UNIVERSITY OF MICHIGAN LIBRARIES

instances criticism was leveled when agencies previously paid 169 percent of such administrative determination of just compensation.

The company carrying out its depreciation of 5 percent annually would leave undepreciated book value of approximately $300,000, and the fact is that it had no earning capacity. This was all done after a tender was made of the actual value of the ship at the time of taking which was set at no more than $95,000 by the Maritime Commission which has had all the Government experience with nonnaval ships.

Mr. Speaker, such offer to pay $2,000,000 of Government money seems to be less than lip service against wasteful spending and Treasury raiding. In view of all this I am asking that an investigation be made covering the cost, the value, and that everything be brought to light covering the agreement for the Government to give $2,000,000 with interest after the Maritime Commission has represented that the ship was worth no more than $95,000 at the time of taking.

I believe that the public is entitled to all of the facts, that the investigation should be held by the House Merchant Marine and Fisheries Committee so that the public might know and so that the Appropriations Committee will not be called upon to appropriate more than 20 times the claimed value of a ship that was nearly 20 years old, that earned no profit, and that did not earn its depreciation, and that in fact lost dollars like most American passenger ships on the Great Lakes.

Mr. Speaker, I ask that the whole matter be investigated by the House Merchant Marine and Fisheries Committee and the House Committee on Expenditures so that the public might have all the facts and also that the Committee on Appropriations will not be called upon to appropriate for this raid on the Treasury.

Young Republicans Show Sound Judgment

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, February 1 (legislative day of Wednesday, January 4), 1950

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the CONGRESSIONAL RECORD an editorial entitled "Young Republicans Show Sound Judgment" which appeared in the New Hampshire Morning Union of January 25, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

YOUNG REPUBLICANS SHOW SOUND JUDGMENT

The resolution adopted by the Manchester Young Republican Association denouncing American policy in the Far East and calling for defense of Formosa reflects sound judgment and a true appraisal of world affairs.

This resolution is given weight by the large number of veterans who shared in its adoption. These men fought the battle of freedom in the Pacific and they realize the dangerous implications of Soviet Russia's maneuvers there today. It is the supreme tragedy that the present administration in Washington has not shared this realization. Instead, as the Young Republicans say, it failed to appraise the intent of the Chinese Communists realistically, and then it tried to cover up its failure by charges of weakness and corruption on the part of Chiang Kai-shek's government. This over-all attitude was inspired by General Marshall's bitter opposition to Chiang because of his refusal to take Communists into his government.

The utter unreasonableness of the administration's position is set forth clearly by the Young Republicans in their statement that a friendly government in China, even if it had weaknesses, was surely better than a government devoted to promoting Soviet Russia's program of world domination. There has never been any doubt that Mao Tse-tung and his associates are the avowed disciples of Communist expansion under Soviet direction.

The administration's policy in the past has been exceedingly unfortunate, and it can only be made worse and our national security jeopardized to a greater degree by further appeasement and retreat in the Far East. The Young Republicans are absolutely correct in their decision that the time has come to make a definite stand against communism in the Far East—to draw the line against a further Communist advance in that part of the world. This means that Formosa should be kept out of Communist hands and that steps should be taken to forestall a Communist advance into Indochina, Siam, Burma, and Indonesia.

This is not a party issue. The Young Republicans speak as Americans. The issue involves the future security of all Americans. The American people generally should, therefore, get behind the proposal for decisive action in the Far East before it is too late, and our national defense and that of all democratic peoples is irreparably undermined.

The Reds March On

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1950

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial with respect to our Asiatic policy which appeared in the Washington Daily News of January 31, 1950:

THE REDS MARCH ON

There can be little doubt that the Chinese Communist forces and the Red Indochina insurrectionists headed by Ho Chi Minh have joined hands to drive the French out of Asia, as Chiang Kai-shek charges.

Both of these Communist forces get their orders from Moscow.

Now that they are in contact along the French Indochina border they would be expected to work together.

But what can be done about it?

China held the key to the situation on the Asiatic mainland, and when the United States abandoned Chiang Kai-shek's government, the door was opened for the Reds to move down upon the smaller countries on China's borders.

When the State Department issued its white paper, washing its hands of China, Secretary of State Acheson left himself an escape clause. He said: "Should the Communist regime lend itself to aggression against China's neighbors, we and the other members of the United Nations would be confronted by a situation violative of the principles of the United Nations Charter and threatening international peace and security."

But he didn't say what "we and the other members of the United Nations" would do when confronted by that inevitable situation.

Indochina is French territory—the last major foothold of European colonialism left on the Asiatic mainland.

Moreover, the French are backing Emperor Bao Dai in a war against the Communists who are hiding as usual behind the banners of democracy and nationalism.

Having denounced Chiang Kai-shek, the head of a constitutional government, as a dictator, and having accepted the Red cry that anyone supporting Chiang is an imperialist, the State Department couldn't very well go to the front now for a French-sponsored emperor.

The Communists know that, and are picking their spots.

This Red drive, in the opinion of many military men, could have been stopped at the Yangtze River 2 years ago.

Now it is rolling out of China in all directions and it will be difficult to stop anywhere because the anti-Communist forces are divided. They are in danger of being knocked off one at a time.

The New Chaplain of the House of Representatives

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1950

Mr. HOEVEN. Mr. Speaker, I am highly pleased over the appointment of Rev. Bernard Braskamp, D. D., as Chaplain of the House of Representatives, to succeed retiring Rev. Shera Montgomery. My home town of Alton, Iowa, is greatly honored to have one of its native sons selected for this distinguished position, for this little town of Alton, where I reside, is the place where Dr. Braskamp was born and grew to manhood.

Another lifelong friend of Dr. Braskamp and one who takes particular pleasure in his election as Chaplain is Claude S. Schekel, one of the Official Reporters of Debates in the House of Representatives. Dr. Braskamp, Mr. Scheckel, and I have known each other since childhood, all three being from Alton. It is a remarkable coincidence that the three of us meet again here in the great forum of the House of Representatives.

Dr. Braskamp, who has spent his entire ministry of 39 years in Washington, is the dean among the 42 pastors of the Washington City Presbytery in length of service. It is stated that among the several hundred clergy in Washington of the Protestant, Catholic, and Hebrew faiths there is only one in the active pastorate who exceeds him in the record of length of service. In 1951, when he completes his 40 years in his Washing-

ton pastorate, he plans to write a book entitled "Forty Years a Minister in the Nation's Capital."

The Gurley Memorial Presbyterian Church, which was his first church after being associated with Dr. Charles Wood in the Church of the Covenant, is in fact still his one and only church. It was named in memory of Dr. Phineas D. Gurley, Chaplain of the United States Senate and pastor of the historic New York Avenue Presbyterian Church where President Abraham Lincoln worshipped. Dr. Braskamp was the leader when the Gurley congregation built a new house of worship, and 7 years later he became the leader in merging the Gurley and Gunton-Temple Congregations and in the erection of their present church at Sixteenth and Newton Streets.

During the past 10 years he has officiated more than 175 times as Acting Chaplain in the House, substituting for Dr. Montgomery. During these past 10 years he has also been the Acting Chaplain in the Senate on more than 75 occasions and during the entire 1948 Special Session of the Congress and the vacation periods of Chaplain Dr. Frederick Brown Harris and the late Chaplain, Dr. Peter Marshall.

Dr. Braskamp pursued his education and received degrees from the following schools: Public school in Alton, Iowa; graduated from the Northwestern Classical Academy at Orange City, Iowa, in 1903; first 2 years of college study at Grinnell, Iowa; graduated from the University of Michigan with the degree of bachelor of arts in 1908; first year of theological training in Hartford, Conn.; last 2 years of theological training in Princeton Seminary, graduating in 1911; received the degree of master of arts from Princeton University in 1911, having taken his studies in the department of philosophy. In June 1930 Hanover College of Hanover, Ind., gave him the honorary degree of doctor of divinity.

In June 1947 he was made a Knight of the Order of Orange Nassau, the decoration being bestowed on him by Queen Wilhelmina at a ceremony conducted by Ambassador Loudon in the Netherlands Embassy.

In 1929 he was elected to the office of moderator of the Washington City Presbytery which is composed of 42 churches and in 1940 he was made the moderator of the Synod of Baltimore which is composed of the 153 Presbyterian Churches of Washington City, Baltimore, and New Castle.

Dr. Braskamp has for 15 years been the president of the Princeton Theological Seminary Alumni Association of Washington and is a member of the Washington Princeton University Club.

In September 1925 he married Anna C. Bull, of Milford, Pa. They have two children, a daughter, Anne Bernice, age 22, who graduated from Wilson College, Chambersburg, Pa., with a bachelor of arts degree in June 1949, and entered the law department of George Washington University in September 1949. Bernard, Jr., age 18, graduated from Calvin Coolidge High School in June 1949 and is preparing to enter West Point Military Academy in 1950.

Dr. Braskamp was born of humble, God-fearing Dutch parents in Alton, Iowa, a small town of 1,000 inhabitants in the northwestern part of the State where the temperature one winter, during his boyhood days, registered 42° below zero although on the 18th day of February 1887, when he was born, it was only 15 below.

His father and mother were childhood friends and schoolmates in Holland, both having been born in Appeldorn, where the queen has her summer home. His mother was 15 years of age when her parents and their nine children emigrated to America. His father, who was the same age, was a young tinsmith in Appeldorn and when he reached the age of 21 and had earned enough money at his trade to pay for his passage, he also went west to America, the "land of opportunity," where his boyhood sweetheart was living. A few years after his arrival they were married, the bride having been employed as a seamstress and the groom having found work as a tinsmith and clerk in the small hardware store in Alton.

Dr. Braskamp speaks the Dutch language fluently and keeps his command of that language by reading his mother's Bible which she brought with her from Holland. He often calls to mind those pioneer days in the prairies of Iowa when life was a tremendous struggle and there were many hardships.

The house in which he was born was a small frame building with no heat in any room except in the kitchen where there was a cook stove in which corn cobs, purchased from farmers at 75 cents per wagonload, were the only fuel material. He and the other four children in the family slept on straw beds in rooms without heat. The mother, after kneeling with them in prayer, would tuck them in, the last in bed having the great thrill of blowing out the lamp which she carried.

Dr. Braskamp's parents made every possible sacrifice to give their five children a college education. After completing his grammar-school studies in Alton, he went to the Northwestern Classical Academy at Orange City, Iowa, which was 4 miles to the northwest. He usually walked this distance, leaving home at 6:45 in the morning, the starting time being determined by the weather. It was pretty tough going to face the cold northwest wind in the winter months. Like every normal boy he often wished that he could hear the news that the academy had burned to the ground and that there would not be any school.

On the evening of the academy commencement exercises the principal, in his introductory remarks, announced that the 16-year-old Braskamp boy in knee-length pants who was the next on the program to give an oration, had never during his 3 years been late for the 8 o'clock chapel services. Dr. Braskamp gives his mother all the credit for that record for she got up every morning at 5:30 to start the cook-stove fire and to melt enough water in the ice-covered basin so that he could wash his face and hands before sitting down to his breakfast which usually consisted of a large dish of oatmeal, toast, and a cup of hot chocolate. His mother would always put a few home-made cookies or doughnuts in his overcoat pocket which would tide him over until he returned from school at about 1:30 in the afternoon after walking the 4 miles.

After graduating from the academy he went to Grinnell College, Iowa, entering at the age of 16. In his freshman and sophomore years he was the shortstop on the varsity baseball team and the pitcher on his class team. There is one intercollege game whose memory haunts him. Grinnell was playing the University of Iowa and the game was a tie at the beginning of the ninth inning with Iowa University at bat. There was an Iowa runner on third base and two outs. The batter on the third pitch drove a sizzling grounder to the shortstop which he handled cleanly just as he had done with the seven other grounders but something happened and he threw the ball about 20 feet over the first baseman's head and into the grandstand. The game was over for Grinnell failed to score during the last half of the ninth inning. A heart-broken player went home in tears.

Dr. Braskamp completed his first 2 years at Grinnell College in a creditable manner but his parents were financially unable to assist him in continuing his studies. There was very little opportunity for a student to work his way through school at Grinnell. He consequently found it necessary to stay home and spent the year as a clerk in his father's hardware store. It was his job to open the store every morning at 7 o'clock, start the fire in the stove, sweep the floor, and dust the counter. After those chores he was ready to do a rushing business. The hardware business, however, was not a lucrative one, especially during the cold winter months. Frequently, when his father and he were getting ready to close the store at 9 o'clock in the evening, they would find, upon counting the money in the till, that they had sold less than $2 worth of merchandise.

Dr. Braskamp's parents, always ready to make every sacrifice for their children's education, sold their last small tract of farm land, which they had purchased for $8 an acre, in order that he might be privileged to pursue his education. He decided to go to the University of Michigan for those last 2 years. Realizing what tremendous sacrifices his parents were making, he immediately upon arriving at Ann Arbor, Mich., started out in search of work which would help pay expenses. He found work waiting on tables and cutting the lawn of one of the professors. In the wintertime he took care of the professor's furnace. He did not have time, however, for the practice and training that was required of a student who was trying out for the varsity baseball team and therefore gave up his boyhood dream of being a major-league player.

One week in the spring he made big money. He was given charge of the sale of the librettos for the May festival. He made $32 that week but his duties, as sales manager, deprived him of the inspiration and pleasure of hearing

UNIVERSITY OF MICHIGAN LIBRARIES

Schumann-Heink who was on the program that year. It was a question of business before pleasure.

In the summertime, during his vacations, he sold maps and the Century Book of Facts. He also made an extra few dollars at the Fourth of July celebration in his home town and the nearby towns for he was quite a sprinter, usually winning first or second place in the 100-yard dash. The men who bet on him would always give him at least 50 cents or a dollar whenever he was the first to hit the tape.

Having been a shortstop on a college baseball team he also frequently made a few dollars by playing for neighboring towns.

At the beginning of his senior year at the University of Michigan he decided to enter the law department after receiving his bachelor of arts degree but a few months before graduation he felt the urge to enter the ministry. Then in September he went to Hartford Theological Seminary, Hartford, Conn., where he was given a scholarship.

While a first-year student in the Hartford Seminary he had the great privilege of hearing an address by Woodrow Wilson, president of Princeton University. He was so inspired by that message that he decided to go to Princeton for the remaining 2 years of seminary training where he could have an opportunity to hear Woodrow Wilson more frequently. It became his great ambition to obtain a master of arts degree from Princeton University. Consequently the following year he went from Hartford to Princeton. In addition to taking the regular studies in the theological seminary he went over to the university to enroll in the graduate department. At the end of the 2 years he not only graduated from the theological seminary but received the degree of master of arts in philosophy from Princeton University.

He was licensed and ordained to the ministry by the presbytery of Brooklyn, N. Y., in May 1911. In September 1911, he was invited to Washington to become the assistant pastor of the Church of the Covenant, now called the National Presbyterian Church, where Dr. Charles Wood was then the revered pastor.

Address of Hon. Kenneth B. Keating, of New York, Before the New York State Bar Association

---

EXTENSION OF REMARKS

OF

HON. JOHN DAVIS LODGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1950

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am inserting an address made by my good friend and distinguished colleague, the Hon. KENNETH B. KEATING, of New York, member of the New York bar, before the New York State Bar Association on January 27, 1950.

It will come as no surprise to those of us who know Representative KEATING that he deals with depth and understanding with the proposition that Supreme Court Justices should be prohibited from giving character or reputation evidence on behalf of a defendant charged with a crime in the Federal courts.

I hope that my colleagues will read his thoughtful and penetrating exposition of a very difficult subject. For Representative KEATING shows not only a judicial mind but a statesman's vision in analyzing the implications of this question. These implications are portentous for our entire judicial system. They bear also upon our ability to meet effectively the godless challenge of communism.

The subject selected by the association for discussion this afternoon is: "*Resolved*, That no judicial officer shall testify in any action or proceeding as to the reputation and character of any person or as to any matter of opinion."

As I told President Neil Harrison when he called me to ask me to participate in this discussion, I am not at all sure that I would advocate such a sweeping prohibition as is envisioned in this resolution. I do feel strongly, however, that a bill should be enacted along the general lines of the one which I introduced on July 18 last to prohibit Supreme Court Justices from giving character or reputation evidence on behalf of a defendant charged with a crime in the Federal courts. Whether this proscription should extend to opinion evidence is debatable. My inclination is to think that it should for some, though not all, of the reasons advanced for barring character evidence.

The universality of condemnation which greeted the appearance on the witness stand of two Justices of our highest court in the first Hiss trial to act as character witnesses for the accused, prompted my introduction of this legislation. The legal admissibility of this evidence is not open to challenge. It was the impropriety of their appearance which disturbed the American people, who look with awe and reverence upon our Supreme Court. In the cloistered shelter of our law offices, many of us may lose touch with the reactions of the general public. But I can assure you that one in public life, with his ear to the ground, soon becomes accustomed to catching the trends in thinking among our people. I can assure you that public sentiment, if it could be metered on this issue, would overwhelmingly support such legislation as I have offered. True, that is by no means the only test. Democracy itself would probably fail if every issue were determined by majority vote of the people. But orderly government does require that those charged with legislative responsibility give heed to the articulate wishes of the people.

I intended in the introduction of this measure, and intend now, no harsh criticism of Justices Frankfurter and Reed, both of whom are outstanding and able men. Nor do I imply in the slightest degree any impropriety in the action of the distinguished counsel for Mr. Hiss in his first trial, who happens to be my able adversary today. He conducted a brilliant defense of his client and properly employed every legitimate weapon at his command. Whether the more nearly successful result which he achieved than was reached in the second trial is attributable in part to the appearance on the witness stand of the Supreme Court Justices in the first trial, only the masters of surmise and conjecture would essay to state.

Supreme Court Justices should not, of course, be barred from giving evidence as to facts in any controversy of which they may have knowledge. In other words, if they have seen some actions done or heard words spoken which are material in pending litigation, there is no reason why they should not testify about them in the same manner as anyone else. Existing law would disqualify them from sitting in judgment on an appeal to their Court, so that no litigant would be injured through permitting such testimony.

On the other hand, character evidence or opinion evidence seems to me to be in an entirely different category. No case comes to mind where this type of testimony from such a source would be essential to promoting the ends of justice. A Supreme Court Justice could conceivably have been the only witness to an automobile accident or the only person who overheard a crucial conversation. To deprive him of the right to testify in such a case might defeat the ends of justice. It would always be possible, however, to secure other expert or character witnesses without reliance on the Supreme Court as an exclusive source of supply.

Although it is reported that this question has never arisen before, since no other Supreme Court Justice in all our history has sought to testify as a character witness in a criminal trial, it is important that a precedent for such action in the future be not established.

Alger Hiss has now been convicted. If his case reaches the nine Justices of the Supreme Court of the United States, I invite your thought about the embarrassing situation there presented. Justices Frankfurter and Reed, will, of course, be disqualified, leaving seven to make the decision. If a larger number of Justices, conceivably all nine, had elected to disqualify themselves, paralysis of our judicial system would have been the result. It seems to me the most extreme embarrassment will be caused the brother jurists of these two Justices in sustaining the conviction of one to whose high character their daily associates have attested. Indeed in the zeal of their brethren not to give undue weight to such testimony, it is conceivable that they may bend over backward to the prejudice of the accused. It is simply a situation which should never arise.

In addition, the very presence in one of our Federal courts of a Justice of the appellate tribunal, either as a witness for the prosecution or defense, results in an influence on the presiding judge and jury out of all proportion to the importance of his testimony, when he is there only to support someone's character. As we all know, those of previously spotless reputation often commit serious crimes. General character evidence is not of too great value at best. Its introduction should, therefore, be surrounded with the necessary safeguards to insure that its value and effect be not exaggerated.

I realize the serious implications surrounding the suggestion that anyone of high or low estate be deprived of the privilege of testifying in our courts. The extension of such prohibitions should be cautiously approached. Yet it is well established that physicians, lawyers, and clergymen are barred from disclosing confidential communications. The preservation of the sanctity of their relationship is considered of paramount importance. I can think of nothing more vital to the welfare and security of our Nation than the perpetuation of the position of eminence and respect which our highest tribunal has enjoyed throughout its history among our people. To permit the Justices of the Supreme Court to vouch for the character of defendants on trial in our Federal criminal courts represents a source of imperilment of the standing of that revered tribunal.

The contention has been advanced that barring Supreme Court Justices as witnesses might be an infringement of a defendant's

constitutional right to produce any relevant evidence to establish his innocence. It may be conceded that a person generally has a right to compel testimony. This right, however, is not absolute, but is subject to certain exceptions such as the well-settled exclusion of privileged communications. Thus it is universally conceded that communications between husband and wife, attorney and client, fellow jurors, Government and informer are barred. In most jurisdictions, the same applies to priest and penitent, and physician and patient. There can be no question but that these exemptions are not invalid under the Constitution, even though the exclusion of such testimony may be a great or fatal hindrance to a party or to the ascertainment of truth. Moreover, State legislatures are constantly adding new groups to these exemptions, as, for example, journalists barred from disclosing sources of information, accountants, as to communications made by a client, social workers, as to information given to them, confidential clerks or stenographers, licensed detectives, and others.

It may be highly relevant and material for a priest to disclose facts given to him in the confessional, or a lawyer, or a physician, facts elicited from a client or patient. Yet to seal their lips does not violate the constitutional protection. No more certainly does it infringe on constitutional guaranties to provide that nine men, while sitting as justices on the highest court in the land, shall not serve as character or reputation witnesses for a criminal defendant in a subordinate Federal tribunal from which an appeal may be taken to the very bench they occupy.

Another analogy may be found in the well-recognized doctrine that the President of the United States is not amenable to the service of process. Indeed, that goes far beyond any contention advanced here, since, as pointed out, it is here sought simply to prevent Supreme Court Justices from giving evidence of a certain narrowly defined character.

Thus Willoughby in his learned work on the Constitution—second edition—at page 1498 says:

"In the trial of Aaron Burr for treason the amenability of the President to a judicial process was brought directly into issue. Marshall, who was conducting the examination, issued, at the request of the defense, a subpena duces tecum directing President Jefferson to appear and bring with him a certain letter to himself from General Wilkinson. Jefferson refused to appear or to bring the letter. That a compulsory process should be thereupon issued to the President does not appear to have been even considered, but upon a discussion as to whether the Attorney General should permit the defense to have the examination of a copy of the letter which had been put into his, the Attorney General's, possession, Marshall said: 'I suppose it will not be alleged in this case that the President ought to be considered as having offered a contempt to the Court in consequence of his not having attended; notwithstanding the subpena was awarded agreeably to the demand of the defendant, the Court would, indeed, not be asked to proceed as in the case of an ordinary individual.'"

Jefferson, likewise, was of the view that the President was beyond ordinary process. He wrote:

"Laying down the position generally, that all persons owe obedience to subpena, he admits no exception unless it can be produced in his lawbooks. But if the Constitution enjoins on a particular officer to be always engaged in a particular set of duties imposed on him, does not this supersede the general law, subjecting him to minor duties inconsistent with these? The Constitution enjoins his constant agency in the concerns of 6,000,000 people. Is the law paramount to this, which calls on him on behalf of a single one? * * * The leading principle of our Constitution is the independence of the legislature, executive, and judiciary of each other, and none are more jealous of this than the judiciary. But would the executive be independent of the judiciary, if he were subject to the commands of the latter, and to imprisonment for disobedience; if the several courts could bandy him from pillar to post, keep him constantly trudging from north to south and east and west, and withdraw him entirely from his constitutional duties?"

In the case of *Mississippi* v. *Johnson* ((1867) 71 U. S. 475), the question was raised whether the President could be restrained by writ of injunction from executing a law believed by Mississippi to be unconstitutional. The Supreme Court did not explore the subject at any length, but did hold that the writ would not issue on the ground mainly that if the President refused to obey the writ the Court was powerless to enforce it.

Commenting on this case, former President and Chief Justice Taft, in his work, Our Chief Magistrate and his powers, said:

"The Supreme Court has a number of times intimated that the President's office is of such high character that officially he is beyond the compulsory processes of the Court."

Despite occasional assertions to the contrary, the weight of judicial opinion and legal scholarship is to the effect that the President, so long as he remains unimpeached, is not subject to judicial process. If this is so, it follows that a defendant charged with a criminal offense would not be permitted to force the attendance in court of the President of the United States to act as a witness for him on any subject.

The bill which I have introduced in Congress does not render a Supreme Court Justice incompetent as a witness generally or prohibit compulsory process to force his attendance. It merely prohibits the giving of a certain type of testimony which concerns the interest of the witness in relation to the interests of the State and the proper administration of justice. Paramount considerations of policy always prevail over the purpose of judicial investigations and the interests of the parties involved in the litigation.

Regardless of the conclusions reached today by those who listen to this discussion, it is certainly a wholesome matter to discuss fully and freely anything which directly affects judicial officers, for whom all of us who practice at the bar are accustomed and desire to maintain at all times the utmost respect. I congratulate the bar association in the selection of this timely subject and express my gratitude for the invitation which you have extended to me to present my views and, no less, for the privilege which you accord me of hearing a statement of the position of those who may differ.

Post Mortem on China White Paper

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following pungent article on the incredible errors our State Department has made in dealing with Communist aggression in China and its alibis for its mistakes. The article is by Mr. Ross N. Young, editor of the Marion (Iowa) Sentinel. I did not think it proper to insert it prior to the conclusion of the trial of Alger Hiss:

FACING THE FACTS
(By Ross Young)

The State Department has issued a book of over 1,000 pages to explain its Chinese policy. St. Matthew required only a few words to describe the betrayal of Jesus. Give Judas credit for three things. He offered no alibis, he confessed his sin, and he hanged himself.

Secretary Acheson, whose principal contribution thus far is having his left profile photographed, does not add to his stature by this report. Serious omissions, alibis, and considerable double talk convict him of dishonest reporting.

If even half the criticisms of Chiang Kai-shek are true, nevertheless, he has been fighting the Japs and the Communists or both for 25 years. In doing so, he was in part fighting our battles.

The decline of Chiang increases the mathematical probability that your boy or his sons may some day be drafted to protect this land from world communism. Even at best, the necessary increases in defense appropriations will take a heavy toll from the standard of living.

We have been told that there is graft in China. There was graft in China when we forced Japan's hand to protect China. Those who make the loudest complaints about Chinese corruption have shown an amiable tolerance toward graft in this country.

The people are baffled by the conduct of their Government toward China, and millions of them are asking angry questions. Why was it necessary to betray China at Yalta? Why did they take to Yalta as an adviser Alger Hiss of all people?

Why didn't the State Department consult such authority and men of character as General MacArthur? Why was the State Department influenced so greatly by those of its employees who not only followed the Russian line but who also used almost the same words as the Communists propagandists?

This is no time to be cute or clever. We have had an expensive amount of that. This is the time for penitence, confession, and penance. Let the whole truth be told at whatever cost. Patriotism requires the protection of America rather than certain reputations.

Discontented Should Move Out

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, communism is a way of life in Russia, Yugoslavia, China, and other satellite countries.

Socialism is a way of life in Great Britain and other European countries.

Fascism is a way of life in Spain and Portugal.

Capitalism is a way of life in the United States.

Those people who do not like the American system can select the one under which they would like to live. They have a wide choice and their passage should be on a one-way ticket.

Those who are sabotaging our system are not asking for passports so they can live under communism, socialism, or fascism. Yet millions of people who live

UNIVERSITY OF MICHIGAN LIBRARIES

under those foreign systems are begging to come to this country. How come?

The answer is a simple one: Only under capitalism does everyone have enough to eat. Only under capitalism is there opportunity to progress. Only under capitalism is there freedom to say and do as you believe. Only under capitalism is there the dignity of self-respect.

Let those who do not like eating nor opportunity, nor freedom, nor self-respect—let them remember there are plenty of places on earth where they can go and do without these great privileges.

China Grumbles, But Reds Push Relentlessly on With Their "Reforms"

EXTENSION OF REMARKS
OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 20, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include an article from the Washington Post by William Lewisohn, the correspondent of the London Times in China, where he has lived 40 years. He was the last foreign correspondent to leave Peiping when the Communists, true to type, permit no observation by neutrals of the "democratic" utopia they install. The article demolishes several of the myths which have been so successfully cultivated for years by the Far Eastern Division of the State Department and pro-Communist and liberal writers: First, that nothing could be worse than the Kuomintang; second, that the Communists give land to peasants; third, that the Communists improve the lot of the people; fourth, that there is either democracy or freedom under the Reds; and, fifth, that the Communists cannot rule China because it is too big and the people too individualistic. What a problem our country faces in Asia because of these myths which were so largely believed by misled citizens of our land.

[From the Washington Post of December 18, 1949]

CHINA GRUMBLES, BUT REDS PUSH RUTHLESSLY ON WITH THEIR "REFORMS"

(By William Lewisohn)

In last Sunday's article, the foreign relations of the Communist Government of China were discussed. There remains to be described the effect of the recent upheaval on the domestic side.

The people of China have been between the devil and the deep blue sea. There is no need to enlarge on the misrule of the Kuomintang in recent years. This party had become extremely unpopular with all sections of the population or, as the Chinese say, had forfeited the mandate of Heaven. That is not to say, however, that the Chinese public looked forward to the rule of the Communists. When, in 1946, you asked a Chinese who was complaining about the Kuomintang whether he preferred the Communists, he would shrug his shoulders and reply, "Well, they can't be any worse."

When, therefore, the Communist armies entered Peking, Tientsin, and Shanghai, they were received by the mass of the population with only moderate enthusiasm. The attitude was one of indifference or, rather, one of curosity not unmixed with suspicion. Indeed, after a few weeks the old Chinese saying was much quoted: "The names on the menu are changed, but not the contents of the dishes."

A small section of the population, curiously enough, seeing that the Communists claimed to represent the proletariat, not among the poorer classes, was loud in its demonstrations of welcome. These enthusiasts included the students, among whom the Communists had long been carrying on secret propaganda, and who in recent years had got completely out of hand. Sit-down strikes in the colleges, and violent anti-government demonstrations and parades were the order of the day under the Kuomintang.

After a few months of Communist rule, however, there has been a certain revulsion of feeling among many of the students, and much grumbling, though it is no longer expressed openly. The reasons for this are that the quality of the meals, which are supplied free to students, has deteriorated, and that they are no longer allowed to express their opinions in public by parades and demonstrations. The only public demonstrations allowed are those planned by the new rulers for some political purpose of their own.

Actually, the number of the students at some of the universities has fallen off considerably, because many of them have been lured away by the special school set up to train administrators. They are promised a job after only 6 months, saving them the more strenuous university course, even though that has been cut to 2 years.

There is also a large body of university professors and disgruntled politicians, who had hitherto shown no particular enthusiasm for Communist principles, now climbing onto the Communist bandwagon.

The wealthy classes, needless to say, with few exceptions, are violent opponents of the new system, though they do not venture to air their opinions publicly.

REAL-ESTATE FIZZLE

Among the peasantry and the urban working class, there is also considerable discontent with the new government. These mostly uneducated and completely unpolitical groups had been led to expect a great and immediate improvement in their living conditions. The peasants are bitterly disappointed over the redistribution of the land. It seemed wonderful when they were given their acre—or whatever the amount was—to dispose of if they wanted to. Actually, it did not work out that way, for their were no buyers. Nobody was anxious to acquire land beyond his own holding, for fear he would then be regarded as one of the wealthy landowners and the extra land would be taken away from him in some fresh redistribution.

Moreover, the peasants are very heavily taxed, the government taking 40 percent of their produce for the army. The remaining 60 percent the peasant has to hand over to the farmers' union which controls the village or group of villages, and each family then receives a daily ration from this general store.

Then, too, the life of the peasants is strictly regimented. At the head of each district there is a Communist commissar, generally some young student, who even decides what crops are to be sown and what labor is to be commandeered for public works. The peasants have to attend political meetings several times a week, and the details of their life are interfered with in every way.

PRICES STILL CLIMBING

The urban workers are little better pleased with the new dispensation. After the extravagant promises made them by Communist propaganda, they are disappointed that the cost of living not only has not gone down, but has increased. Wages have not been increased, owing to the bad state of trade, while the quality of commodities has fallen off because of the lack of imported material.

Many workers had expected that when the Communists took over the cities, the capital and stocks of the big concerns would be divided up among them in the same way as had been done with the land in the countryside. Communists had considerable difficulty in explaining that such a division would ruin the businesses of which the workers were now the owners. The only advantage the workers appear to have reaped so far—if it is an advantage—is that in all factories, businesses, and public offices, workers' councils have been set up to fix wages, salaries, working hours, the distribution of profits and sometimes even the whole business policy.

Large numbers of workers have been thrown out of employment by the Communist campaign against the wealthy classes, part of which has been the suppression of all so-called unproductive trades, such as goldsmiths, silversmiths, and the production of luxury goods.

Undeterred by the undercurrent of grumbling, however, the doctrinaire Communist leaders are pursuing their Marxist economic policies. Their efforts to impose their theories on the people are supported by an intensive campaign of propaganda through the press, radio, and government bookshops selling only Marxist literature, and by complete control of all the arts, including theater and cinema. Privately owned newspapers have either been suppressed or taken over by the government. The official newspapers contain nothing but propaganda and are unutterably dull. There is no local gossip or general news about China, and the only foreign news is from the Russian news agency, Tass.

The old Chinese plays, which used to be so popular among the lower classes, have been forbidden, as tending to spread superstitious, feudal, or counter-revolutionary ideas. The propaganda plays which have taken their place bore the public, with disastrous results on the box office. Painting, sculpture, literature, and the other arts are permitted only if they draw their inspiration from the lives of the workers and peasants.

CHILDREN ARE INFORMERS

The Communists are making the most determined efforts to undermine the family, which was once such an important influence in Chinese life. Children are ordered to attend Communist schools for indoctrination, whether their parents like it or not. Marriage without parental consent is encouraged.

In general, it may be said that the Communist rulers pay little attention to that part of the population over 30. Their interest is concentrated on the generation now growing up. A widespread informer system has been introduced, in the countryside, in each village, and in the towns in each street; and children are encouraged to report criticisms of the regime by their parents or other relatives.

The argument that communism is opposed to the character and the whole tradition of the Chinese people, even if true, does not necessarily mean that it cannot be imposed on the country. The Chinese are a reasonable and practical-minded people with a strong strain of individualism. But the point to be remembered is that they have no democratic traditions, they are accustomed to being ruled from above and they have always accepted such rule with complete docility, provided it gave them peace and order and reasonable living conditions.

On the other hand, the new Communist rulers are a close-knit, well-disciplined body of fanatics, prepared to go to any extremes in order to introduce the Communist system. It would seem to be highly improbable that any revolt against the system from outside the Communist Party could ever succeed. If the Communist rule in China were overthrown, it could only be by an external war or by a split in the party itself, leading to fresh civil war.

Let's Get Together

EXTENSION OF REMARKS
OF
HON. HENRY J. LATHAM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. LATHAM. Mr. Speaker, under permission already granted to me, I wish to set forth in the Appendix a questionnaire, which I intend to send to my constituency:

LET'S GET TOGETHER

DEAR FRIENDS: Let's get together on how you, the people, feel on current legislative proposals.

If you will check off the following questionnaire, it will give me your detailed views, and aid me in deciding how to vote. This is the best way I know for an individual to help decide the legislative policies of his Government. These questions are intended to be unbiased, and not an indication of my own feelings.

I shall be grateful for your cooperation in this project.

INTERNATIONAL AFFAIRS

1. Do you favor President Truman's European foreign policy? Yes ☐ No ☐
2. Do you agree with his Latin-American policy? Yes ☐ No ☐
3. Do you favor his policy in China and Asia? Yes ☐ No ☐
4. Do you favor continued aid under the Marshall plan? Yes ☐ No ☐
(a) If so, should this be substantially reduced? Yes ☐ No ☐
5. Do you favor recognition of the Communist regime in China? Yes ☐ No ☐
6. Do you favor use of American arms and men to keep Formosa from the Communists? Yes ☐ No ☐
7. Do you favor Truman's "point 4" program to use American money and know-how to build private business in foreign countries? Yes ☐ No ☐
8. Do you favor the present reciprocal trade agreements policy? Yes ☐ No ☐
9. Do you favor the United States joining a world government? Yes ☐ No ☐

NATIONAL ECONOMY

10. Is our present budget figure of $15,000,000,000 too much to spend on national defense? Yes ☐ No ☐
11. Do you favor Secretary Johnson's method of administering unification of the armed forces? Yes ☐ No ☐
12. Do you favor complete enactment of the Hoover plan of reorganization and economy? Yes ☐ No ☐
13. Do you approve of peacetime Government spending of more than its revenues—for any reason? Yes ☐ No ☐
(a) If so, for what? ——— ———
14. Would you impose additional taxes to meet a deficit or cut Government expenses to eliminate it? Raise taxes ☐ Cut expenses ☐
15. Do you favor increase of taxes on corporations? Yes ☐ No ☐
16. Do you favor elimination of overlapping and duplication of taxes by Federal Government and the States (i. e., gasoline, tobacco, income)? Yes ☐ No ☐
17. Would you eliminate wartime Federal luxury taxes? Yes ☐ No ☐
18. Do you favor continuation of Federal rent controls? Yes ☐ No ☐

SOCIAL SECURITY, HEALTH, AND WELFARE

19. Would you further expand social-security benefits and coverage? Yes ☐ No ☐
20. Do you favor socialized medicine? Yes ☐ No ☐
21. Do you favor a national health program which would not socialize health services but would supply Federal grants and aids to the States and communities for health purposes? Yes ☐ No ☐
22. Do you favor any Federal aid for education? Yes ☐ No ☐
(a) If so, do you favor such aid to children attending nonpublic schools where the laws of the States of residence permit? Yes ☐ No ☐
23. Do you favor Federal old-age pensions of $100 per month for persons 65 years or over, the cost to be raised by taxation? Yes ☐ No ☐
24. Do you favor more subsidized public housing? Yes ☐ No ☐
25. Do you approve of subsidized slum clearance? Yes ☐ No ☐
26. Do you approve of the present system of Government guaranty on home mortgages? Yes ☐ No ☐
27. Do you approve of the Federal Government making mortgages directly to individuals? Yes ☐ No ☐

AGRICULTURE

28. Do you favor the Brannan plan to permit farm prices to seek their own level in the market place, resulting in low prices to consumers, and having the Government pay the difference between the farm price and parity out of higher taxes? Yes ☐ No ☐
29. Do you favor continuance of present high, rigid price supports to farmers? Yes ☐ No ☐

LABOR

30. Should the Taft-Hartley law be repealed? Yes ☐ No ☐
(a) Should it be amended? Yes ☐ No ☐
31. Do you favor increased minimum-wage laws? Yes ☐ No ☐

VETERANS

32. Should present veterans' benefits be further expanded? Yes ☐ No ☐

CIVIL RIGHTS

33. Do you favor Federal laws to prohibit discrimination in employment because of race, creed, or color? Yes ☐ No ☐
34. Do you favor Federal laws against lynching? Yes ☐ No ☐
35. Do you favor Federal laws against poll taxes imposed by certain States? Yes ☐ No ☐

GENERAL

36. Would you favor a national lottery to help defray Government expenses? Yes ☐ No ☐
37. Are you in favor of the move to enact uniform divorce laws throughout the States? Yes ☐ No ☐
38. Would you approve substantial Federal appropriations to help States and cities eliminate pollution of their beaches and harbors? Yes ☐ No ☐

Please return to Congressman HENRY J. LATHAM, 1118 House Office Building, Washington, D. C.

Feel free to use reverse side for comments and remarks.

An Effective International Organization or Anarchy and War

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Minneapolis Tribune of January 1, 1950:

TURN OF THE CENTURY

This New Year's Day is widely celebrated as the beginning of a new half-century, the midpoint of mankind's journey through the twentieth millennium of the Christian era.

Those people are right, of course, who say it is nothing of the sort, and that the second half of the twentieth century won't begin until January 1, 1951. They have logic on their side; but they lose the argument. The world insists on celebrating the turning point of the twentieth century right now. And there is sense in that, if not logic, for it reflects the unquenchable human instinct to make a new start, and to invest that new start with a special significance and hope.

So this is a super-New Year's Day—one on which to study the entrails of the last half century in search of an omen for the next.

Where do we stand, we humans, at this turn of the century? What, in history's long view, has been the thing, in the last 50 years, which more than any other suggests the shape of the problem of the 50 years ahead?

It may well be that the first half of the twentieth century saw the end of nationalism as a sound basis for peace and world order.

If that is true, it is the most important happening of this century.

For almost four centuries the British Empire had been the stabilizing force in the world—fountainhead of liberal institutions, source and stimulator of economic development, world policeman through its navy. Like Rome and Spain before it, Britain had widened human horizons and fostered human progress; and no listing of its mistakes or tyrannies (and they were many) can outweigh the record of what it did to set men's energies and spirits free.

In this last half century, the world has outgrown the British political and economic framework. Two great world wars, a grievous economic depression, and now a cold war between two powers grown greater than Britain—these are symptoms of man's groping for a new basis of world order, something not only to take the place of the British system but to be the framework for a better way of life for all mankind.

That new framework of peace and order and progress cannot be imposed by any one nation. We in the Western World are determined that Soviet Russia shall not be the new Rome, the new Spain, the new Britain. The American people have no ambition to make Washington the capital of a new world imperialism. Even if there were less resistance to a Sovietized world than there is, even if there were a hot desire to set up American imperialism in the world, the chances are that neither would happen or could be brought about.

For it is not likely that any nation ever again can or will rule the world as Rome or Spain or Britain did.

Mankind has "grown up" to a point where every segment of it insists increasingly on a voice in determining its own destinies and conditions of life.

UNIVERSITY OF MICHIGAN LIBRARIES

That, of course, is all to the good; it is progress toward government by the consent of the governed.

But it means international anarchy until nations join together in an effective international government with the powers that any government must have to be effective.

To create an effective international government is, therefore, the foremost problem of the next half century. We shall never again know peace, or military or economic security, or an end to "cold war," until we achieve it.

The arguments over what and how will be long and hard and hot. United Nations? North Atlantic Union? World federalism? Or something else? The Tribune has expressed its views on all of these, and will again—as have and will millions of other voices. But we need have no doubt of mankind's ability to work out the best answer, in such a great debate, if we keep our eye on one central fact.

That fact is that we must want and work toward international government not just because we think idealistically that it would be nice to have, but because we are convinced that it is the only answer to the problem of peace and security and progress in today's and tomorrow's world.

If we will carry that conviction, that lesson of the first half of the twentieth century, into the second half of the twentieth century, the travail of the last 50 years will not have been in vain.

Address by Hon. Herbert H. Lehman, of New York, at Roosevelt Day Dinner

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, February 2 (legislative day of Wednesday, January 4), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by the junior Senator from New York [Mr. LEHMAN] on the occasion of the Roosevelt Day dinner sponsored by Americans for Democratic Action, held at the Hotel Shoreham, Washington, D. C., on January 27, 1950. I commend the address to the reading of Members of the Senate and others who read the CONGRESSIONAL RECORD. It is a statesmanlike presentation of a great liberal philosophy by a great liberal.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am not making the usual perfunctory statement when I say that I am happy to be here tonight, to be sitting on this platform, in my capacity as a national cochairman of the Roosevelt Day dinners. Of course, this is my second year in that position. But this year I have a somewhat new distinction, of which I am very proud, that of being a Member of the United States Senate. I am not unmindful of the part played in that development by members of the ADA, the organization which is sponsoring these dinners, and by others not so affiliated who are here tonight in this common tribute to him who was my leader and yours, Franklin Delano Roosevelt.

I am happy to see here tonight many of the good, familiar faces of the members of that true Gideon's army which fought the mighty battles of the New Deal. Those faces are a little older now and not quite so eager as when I first saw them 17 years ago. But it is good to be reminded that there are so many who are still strong in the faith. This occasion, like the others on which we meet, is a glad reunion of the alumni of those days.

But I am happiest of all to see among us many young faces—faces strangely similar to those of 1933—full of hope and full of resolve to carry on the battles led so long, so valiantly, and so successfully by our honored and beloved Franklin Roosevelt.

Five years ago he died. Was it 5 years, or was it 50, or was it yesterday? Time has as little meaning for a figure as towering as his, as inches have for the measure of a mountain.

In those 5 years the world has turned a full circle. The great military victory which Roosevelt conceived and planned was won, but the laurels of that victory have faded and withered away. The world of peace and security which was almost within our grasp has eluded us. Again the heavy clouds of international conflict hover over us.

The outlook in the world and in our country is less dark, it is true, than a year ago, and even less so than 2 years ago. Nevertheless, while we have cause to rejoice, we still have great cause for concern. Sometimes I think we are much too blind to our present dangers, both from within our country and outside it: Like peoples who live at the foot of a smoking volcano or in the shadow of some great overhanging rock, we have become adjusted to our hazards, and accept them as commonplace, although they menace us at every moment.

Yet all this is quite natural. People cannot live forever in a state of passion and alarm. But we need to recall, on every possible occasion, that we do face great perils. We need also to hear the clear and ringing voice of the good cause and the moral principle, the call to arms—not for war, this time, but for peace and for justice. In such a situation it helps to focus our eyes on the heroic figure of Roosevelt and the example he gave us.

Yet it is not easy to guide our steps today by the light of Rooseveltian policies. President Roosevelt was not an inventor of new political principles, ready to be handed down to his disciples and apostles. Roosevelt was rather a translator and an adapter of already existing principles. He was above all a leader and an organizer.

Thus, we cannot easily guide ourselves, in our present predicament, by Rooseveltian aphorisms. We cannot determine from what Roosevelt said in the past what Roosevelt would do if he were alive today. All we can determine is how Roosevelt would have set about solving these present problems. The Rooseveltian method was to marshal the facts and then try by every possible means to solve the problem, using the tools, the materials, and the legal devices which were at hand. He was not interested in brands or labels. He was not interested in theories or in isms. He was interested only in the answers to the questions, "Will it work? Will it meet the need? Can it be done this way?"

That is why the program of the New Deal was neither static nor dogmatic. It was based on neither Marxism nor McKinleyism. Its strength was in its realism. It was designed to meet the needs of the people and the Nation, at the time, and to function within the frame of the American Constitution. How well it succeeded is now history.

Thus the one lesson we can learn from this recent and heroic past is a lesson of method. To solve our problems, today, we need to remember that method and that approach. We need also—and I mean you and I and all of us—to remember, as Roosevelt often said, that any problem was capable of solution. It was just a question of persisting until a solution was found. I think that this contains a profound truth, although it sounds too simple to be important.

The heart of the matter is this: We can succeed in solving our problems as long as we remain free to seek the solution and persist in that search. And that brings me to the subject which is the theme of the Roosevelt Day dinners this year—freedom of inquiry.

This freedom of inquiry is the promise to every man that he is at liberty to seek intellectual, religious, and spiritual fulfillment. Today that liberty is challenged not only by those who openly declare their allegiance to totalitarianism, but also by some who solemnly swear their devotion to democracy. Some of these latter individuals view democracy as a frail and frightened thing. They insist that we must suppress free inquiry in order to preserve our institutions and our way of life.

I judge this attitude to be heresy of the worst kind. I judge it to be, in fact, the denial of democracy. The very soul and spirit of democracy is the toleration of opinions different and even conflicting with those of the majority. The right of criticism of the prevailing government and the prevailing institutions is sacred in a true democracy.

This right of criticism—the right to hold and to preach opinion contrary to generally accepted doctrines—is the greatest guaranty of the vitality and the validity of our form of government. Thus we must even tolerate the holding of completely heretical beliefs, however much most of us might hate these heresies.

Today, in the year 1950, the world shudders under the impact of an aggressive force which calls itself communism. This force is international in form, although it is national in fact. It has found its home in Soviet Russia, and its partisans are now spread everywhere. Moscow is the Mecca of this new faith. Stalin is its prophet. The leaders and chief architects of this movement are cynical men who would use the freedom inherent in democracy to destroy both freedom and democracy. The problem is, How do we in America defend ourselves against this subversive force without at the same time sacrificing some of our democratic principles?

This is a real and ominous danger. Make no mistakes about it. For what will it profit us to fight the Communist conspiracy if, in order to do so we adopt police state methods and abandon the principles we live by?

I do not believe that this is necessary. I do not believe that democracy is so weak and brittle and so lacking in fibre and resource that it cannot handle this problem within a democratic framework. I believe that we can and must continue to protect individuals in their right to hold such beliefs as they choose. But we can and must prosecute vigorously any actual conspiracy against our form of government or against freedom or democracy. We can and must punish acts of subversion and treason and disloyalty. But we must not depart from our principles of democracy or our principles of Anglo-Saxon jurisprudence in so doing. The safeguards of our Constitution must be extended to all our citizens. In this, and in this alone, is the true strength of democracy.

I abhor communism, but we cannot afford to have our feelings or our fears color our actions. I am firm in my faith in democracy. I am firm in my faith that the American people or any freedom-loving people will never freely choose communism or follow Communists as long as the people have the alternative of a representative government, freely chosen, and fully responsive to their needs and desires. I want no defeatist faith. We need a vigorous and dynamic faith, which willingly accepts challenge in the free market place of ideas. Of course these are words and generalities. It is easy to say words. It is much harder to apply them to specific situations. One such specific situation is the Federal Government's loyalty program.

Certainly the Government has a right to expect and demand that persons holding what are defined as sensitive positions be fully loyal to the Government, and to its philosophy and principles. Any person holding views inconsistent with our present form of government or our philosophy of government seems to me to be obviously disqualified for any position with access to policy formation or confidential and restricted information.

This would certainly apply to Communists and to fellow travelers. But it should also apply, with equal strength, to Fascists and to believers in racial superiority and other equally un-American concepts. I think that anti-Negroism, and anti-Semitism, anti-Protestantism or anti-Catholicism should be as positive grounds for disqualifying individuals for sensitive Federal Government positions as membership in the Communist Party.

I have heard of a recent case in a foreign country—I will not name the country because I am in the process of making an inquiry into this case—where a responsible American official, when asked why he seemed to prefer individuals of a particular political party in that country, replied—and this was in an official conference—"Do you want me to pick Jews instead?"

If the facts are true this official is certainly no better a representative of America than a member or follower of the Communist Party.

But I have wandered a trifle. My general conclusion is that persons of alien or truly Un-American viewpoint have no place in representative or sensitive positions in the Federal Government. All such persons should be discharged, after the facts are established, as lacking the proper qualifications for the job. And any doubts must be resolved in favor of the Government. But I do not believe that the brand of disloyalty should be placed upon such individuals by any administrative body. These individuals should be discharged, yes. Or if applying for a job, they should not be hired. The integrity of the Government service must be protected. But the basis of this action should be disqualification, rather than disloyalty. Disloyalty stands hard by treason. No such finding should be made for any individual, except after a judicial proceeding, with all the safeguards for the accused which Anglo-Saxon and American law provides.

It deeply disturbs me to think of all the shame and suffering which has been needlessly visited on hundreds and thousands of Government employees over the past 2 years in the process of the loyalty program. Bookkeepers and file clerks, statisticians and messengers, without access or connection with any confidential or restricted material, have been, I have been told, exposed to great expense and suffering in being required to prove, affirmatively, their loyalty to their country. A chance association with a suspected Communist, or a family relationship with one so suspected, or even the holding of some unorthodox view in no way connected with politics has frequently been the basis for charges against some of these individuals.

I hope that some way can be found to bring the extreme and unfortunate aspects of this program to an end. I understand and endorse, as I have said, the objectives of the loyalty program. I also realize that there are those who have criticized this program as being far too lenient. Some reactionaries would be satisfied only if there were public executions, at dawn and at dusk, of every Government employee caught in the act of having a liberal thought. But I sincerely hope that the entire loyalty program may be reviewed, and a better system, more consistent with the American tradition, be developed and established.

This is one of the specific ways in which we must defend and preserve freedom in America. But there is still another way in which we must defend and enlarge the area of freedom and free inquiry. There is still another front on which the battle of freedom must be fought. That is the economic front.

There are those in our midst who would deny to the American people the full economic rights reserved to the people under the general-welfare clause of the Constitution. That clause provides for what has been called the welfare state. I would like to take a moment to explore the relationship between the welfare state and freedom.

The welfare state simply recognizes that government must accept its responsibilities to all the people, and must not merely serve the vested interests of industry and commerce. The people, as well as the privileged and the powerful, must be served.

The connection between freedom and the welfare state is simple. The welfare state provides the people with the means by which individual freedom may be secured and enjoyed. For we have long recognized that no man who is a slave to economic fear or insecurity can be politically or spiritually free.

How can a man who is scarcely able to nourish his body develop his full intellectual capacities and appreciate the full meaning of freedom in any form? Such a man is sometimes persuaded to exchange what appears to him an empty slogan for the promise of a crust of bread.

Freedom of inquiry can have no meaning either, for the uneducated and the unenlightened.

The welfare state must maintain a balance between freedom and security. Through the programs of the welfare state, we must bring to the people adequate housing. We must secure the aged against the degradation of pauperism. We must raise minimum wages, and develop and conserve our natural resources. Through these programs and the maintenance of full employment and purchasing power, we will enable our people to enjoy freedom of inquiry. When we secure jobs and health and education for our people, we remove the fetters of insecurity and ease the awful struggle for existence. Only then will people have the time and the strength and the incentive to nourish their souls and seek spiritual and intellectual fulfillment.

Nor do we intend to restrict the development of the welfare state and the assurance of freedom of inquiry to the United States alone. We have come to understand that only in a democratic world, where other peoples are also free and secure, can we hope to live in peace. We intend to bring to the depressed areas of the world the benefits of our technological skills and thus enable them to raise their living standards, so that they, too, can enjoy the blessings of freedom. Our intentions are made explicit in President Truman's point 4 program. I hope we will press forward with our efforts to make that program a reality for those people who look to us with so much hope.

The way is long. The way is hard. I have outlined a few of the qualities of democracy, a few of the dangers of freedom, and indicated a few of the directions we must travel to meet these dangers. But there are many other dangers which I do not have time to mention tonight. There are many problems to be solved and many tasks to be undertaken. But we are moving forward. We are fortunate in having as President of the United States a man who is in the tradition of Roosevelt, and whose advocacy of the people's cause, and of freedom's cause, is strong and sincere. But we need to give him the tools. We need to give him strength. This organization, the ADA, is one of those which can be counted on to support the President in the liberal programs which he has adovcated and to suggest and to urge other new programs which are vital and necessary. Carl Schurz, a refugee from Germany in his day, and a great American, said in a speech in the United States Senate in 1872, "Our country, right or wrong. When right, to be kept right; when wrong, to be put right." I think that is as fine a slogan for today, as it was in 1872.

Let us not for a moment relax our efforts. Let us not for a moment be satisfied with things as they are. Nor let us abandon hope, because things are no better than they are. We shall suffer some disappointments. We shall lose some battles. But if we know where we are going, and remain constantly on the march, we shall arrive at our goals.

Soak the Rich a Myth

EXTENSION OF REMARKS

OF

HON. HAROLD O. LOVRE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1950

Mr. LOVRE. Mr. Speaker, recently I completed an analysis of the tax structure of this country with results so startling that I believe they should be called to the attention of the Congress as a whole. This analysis was made public through the medium of a news release issued from my office. The facts revealed speak for themselves and under leave to extend my remarks in the RECORD, I call the attention of the House to the statement issued from my office on January 9, 1950:

SOAK THE RICH A MYTH

It is very doubtful if the average person with a low or moderate income is impressed by the statement often made by advocates of reduction in taxes and Federal spending that 25 percent of peoples' income goes to support government.

The fact that Federal, State, and local taxes totaling $56,000,000,000 in the fiscal year ending June 30, 1949, were almost exactly one-fourth of the estimated 1948 national income of $225,000,000,000—and yet not enough to pay the cost of government—doesn't make too much of an impression on the average wage-earning taxpayer.

The wage earner making $60 a week, the 1949 average for industrial States, is aware—but it doesn't hit him very hard as he doesn't see the money—that, if he has a wife and a dependent child, the Government takes $3 each week from his pay envelope for Federal income taxes. This amounts to $150 a year or about 5 percent of his gross income.

This same wage earner knows that he contributes 1 percent, $30 a year (this year it will be more) for social security. If he owns his own home or lives in a State where there is a sales tax, he is aware of State and local taxes. He knows he pays some excise taxes, particularly on tobacco, gasoline, liquor, and a host of so-called luxury items. He vaguely realizes that there are many taxes upon goods and services which are hidden in the sale price.

SKEPTICAL OF SHARE

Accordingly, he will believe that 25 percent of the national income is drawn off for support of government, but he assumes that high-income people and corporations pay the big share of it. He does not realize that he pays a share of corporate taxes in the price of the things he buys. And it would surprise him to learn that high income taxes by high-income people are a very small portion of the total taxes. Former President Herbert Hoover estimated that if all incomes of over $8,000 annually were confiscated it would cover less than 10 percent of the actual and proposed spending of the Federal Government.

UNIVERSITY OF MICHIGAN LIBRARIES

From official figures obtained from Federal Government agencies and through reliable estimates, an analysis has been compiled which shows that a family of three with a $3,000 annual income contributes 23.55 percent of their income to the support of government. A family of four with a $5,000 income kicks in 24.75 percent of their annual gross salary. For a family of four with a $7,500 income, 18.88 percent goes to the Federal Government and their total share of State, local, and Federal taxes is 26.27 percent.

ACCURATE ANALYSIS MADE

The analysis was based on actual withholding taxes and upon the ratio of current consumption expenditures for each type family to national personal consumption expenditures in 1948 and application of percentage ratios obtained to fiscal 1949 tax collections as reported by the Commissioner of Internal Revenue in the case of manufacturers and retailers' excise and communication and transportation taxes. In computing the individual's share of corporate taxes, it must be realized that these taxes are usually figured in the selling price of goods or services and hence are borne by the consumer. Some, of course, are borne by the stockholders, but since they are also consumers, corporate taxes were charged in full to the consumer.

Manufacturers and retail excise taxes include the 5- to 25-percent tax on such items as automobiles, radios, gas, electric and oil appliances, photographic equipment, gasoline, jewelry, baby oils, cosmetics, luggage, soap, furs, etc.

Alcohol taxes of $2.25 per quart, cigarette taxes of 7.5 cents per pack and the 20-percent amusement taxes were based on average expenditures for the types of families as reported by the Bureau of Labor Statistics for 1947. No charges of gift or estate taxes were made. State and local taxes were allotted on the assumption that these taxes were in the same ratio to Federal taxes (72.25 percent Federal) borne by them as the total State and local taxes were to Federal taxes.

Summary table

	Family of 3, $3,000 income	Family of 4, $5,000 income	Family of 4, $7,500 income
Individual income	$153.60	$351.00	$731.80
Social security	$30.00	$30.00	$30.00
Share of corporate taxes	$201.60	$316.80	$414.00
Alcohol taxes	$26.00	$40.00	$48.50
Tobacco taxes	$25.00	$28.00	$28.00
Amusement taxes	$19.00	$40.00	$55.60
Manufacturers' excise taxes	$27.90	$43.85	$57.30
Transportation and communication	$17.70	$27.85	$36.40
Retailers' excise taxes	$7.10	$11.10	14.50
All others	$3.45	$5.45	$7.10
Total Federal taxes	$510.75	$894.05	$1,423.20
Percent of income	17.02	17.88	18.98
State and local taxes	$196.15	$343.40	$546.60
Total taxes	$706.90	$1,237.45	$1,969.80
Percent of income	23.56	24.75	26.27

Displaced Persons

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, February 2 (legislative day of Wednesday, January 4), 1950

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address dealing with the subject of displaced persons, which I delivered over Station WSPR, Springfield, Mass., on Sunday, January 22, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Today, as Congress goes forward in another important session, it faces numerous major problems upon whose solution depends the welfare of hundreds of thousands of men, women and children in our own and other countries.

Not the least of these problems involves displaced persons, the human aftermath of the most devastating war in our history, those victims of totalitarian cruelty and aggression.

Despite the great progress already made toward alleviating this human misery, much remains to be done, particularly by the United States. Even though we have done much, we in this country have yet to discharge more fully the responsibility which we accepted upon passage of the Displaced Persons Act of 1948.

It is true that of the 205,000 displaced persons which that measure authorized to be brought to this country, 110,909 had arrived here as of November 30, 1949, and 2,547 others were en route. It is also true that of the 122,556 visas issued as of November 15, 1949, more than 61,000 had been issued to displaced persons whose quota country is Poland.

Yet the very law under which these people are being admitted to the United States may prevent admission of the full authorized total of 205,000 displaced persons. The restrictions, limitations, preferences, and priorities as established in that law have been proved unworkable in many cases.

Furthermore, if the United States is to carry out its full responsibility in this great international problem, the authorized total should be raised so that additional deserving persons may be admitted.

Thus, it is imperative that Congress at this session pass legislation to amend this act to liberalize it and to make it more workable.

I had hoped, along with many other Members of Congress and such organizations as the Polish-American Congress, that the act would be liberalized in the first session of the Eighty-first Congress. That was not accomplished.

We must not permit further delay. We are dealing with human beings—men, women, and children. Many of them have been without homes for years. To them time means everything.

H. R. 4567, the measure passed by the House of Representatives during the first session of the Eighty-first Congress, would accomplish considerable liberalization of the displaced persons law.

One of the last acts of the Senate during its first session was to send back to the Senate Judiciary Committee the DP bill with instructions to report it back to the Senate not later than January 25, 1950. So I hope that very early in this session favorable action will be taken to make the DP bill more workable and fairer to those persons the people of the United States are genuinely trying to help.

Time is rapidly running out with respect to making the desired changes. Human beings are waiting. Human hopes and aspirations are involved.

The proposed bill will make several important improvements if passed.

First, it would increase from 205,000 to 339,000 the number of displaced persons to be accepted by this country. Of the additional number, 18,000 would come from the Polish Army, which fought along with us in World War II, and who are now in England. Another 15,000 would be recent political refugees from behind the iron curtain. Refugees from Shanghai would account for 4,000 more, while another 5,000 would be orphans not now eligible.

Second. H. R. 4567 would advance the date line for eligibility from December 22, 1945, to January 1, 1949. This would eliminate one of the major provisions of the present law which has resulted in a pattern of discrimination. The December 22, 1945, date line arbitrarily cuts off 130,000 to 135,000 Jews and Catholics who would be eligible under the January 1, 1949, date line.

Third. This bill would eliminate other discriminatory restrictions. It would establish the basic principle that the selection of displaced persons "shall be made without discrimination in favor of or against a race, religion, or national origin." It deletes the 40-percent reference for de facto annexed areas, the so-called Baltic preference. It omits the 30-percent preference for agriculture but retains farming as preference. It eliminates priority for in-camp displaced persons over those not in such camps.

Fourth. The proposed changes broaden the definition of orphans as to permit admission of many children now barred.

Fifth. The bill would enable displaced persons who arrived in the United States prior to April 30, 1949, to receive benefits of the status of those who had been admitted under the 1948 act.

Sixth. H. R. 4567 would assist American sponsors of displaced persons by providing a $5,000,000 revolving loan fund to meet the expenses of transportation and reception of displaced persons in the United States. This would encourage the widest possible distribution of displaced persons throughout this country.

Seventh. This bill would double the number of ethnic Germans and expellees who may be admitted under the law. The number would thus be increased to approximately 52,000.

Eighth. The House-approved bill would provide additional safeguards to insure the internal security of the United States.

I need not tell you of the cruel sufferings and terrible deprivations of displaced persons, herded like cattle into concentration camps and fleeing into the night from Communist terror. You know and I know that they have no homes to which they can return and that they now live in displaced-persons camps situated for the most part in Germany and Austria who do not want them and whose economies cannot absorb them.

Some persons have questioned the need or the wisdom of increasing to 339,000 the number of displaced persons the United States will accept, arguing that there will be no displaced persons left on June 30, 1950.

Yet the Displaced Persons Commission, in its semiannual report released recently, states:

"The truth, perhaps, is better stated in a recent cable from the Director General of the International Refugee Organization that there will be some 200,000 resettleable displaced persons, plus some 100,000 to 160,000 persons of limited resettlement possibilities left on that date if the present law is not changed."

To me there is no doubt that the people of the United States want to do their part in providing opportunities and new life for a fair share of these displaced persons.

The best evidence of this is the fact that the Displaced Persons Commission, in its latest semiannual report, disclosed that the people of America have been requesting displaced persons on an average of 6,000 every week. The Commission is still receiving and accepting these assurances for jobs and housing.

Of course, the economic situation has changed somewhat in the United States since

the Displaced Persons Act of 1948 was passed. But we have accepted responsibility in the solution of the displaced-persons problem, and we cannot shirk it.

You may rest assured that I shall continue to do what is in my power to have Congress improve this existing displaced-persons law. What this committee will report I do not at the moment know, but I am hopeful that it will be helpful, and I want to be one of those to help.

In closing I wish my many friends who may be listening on this Polish-American hour my best wishes for a happy new year.

The Truman Spending Record

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news bulletin:

THE TRUMAN SPENDING RECORD

Receipts, expenditures, and the public debt of the Federal Government by selected periods from the founding of the Republic through the fiscal year ending June 30, 1951

Period	Receipts	Expenditures	Debt at end of period
All Presidents, Washington to Roosevelt, 144½ years, 1789 to 1933	$91, 586, 076, 130	$112, 203, 367, 065	$22, 538, 672, 164
Administration of F. D. Roosevelt, 12 years, fiscal 1934 to 1945	165, 760, 825, 357	372, 235, 200, 271	258, 000, 000, 000
Administration of Harry S. Truman, 6 years, fiscal 1946 to end of fiscal 1951	248, 884, 679, 597	271, 461, 104, 992	263, 800, 000, 000

Details of the Truman spending record

Fiscal year	Receipts	Expenditures [1]	Public debt
1946	$43, 037, 798, 808	$63, 713, 969, 417	$269, 422, 099, 173
1947	43, 258, 833, 189	42, 505, 045, 529	258, 375, 003, 294
1948	44, 745, 542, 077	39, 326, 072, 233	252, 365, 707, 331
1949	42, 773, 505, 520	40, 057, 107, 857	252, 797, 635, 267
1950 [2]	37, 763, 000, 000	43, 297, 000, 000	258, 797, 000, 000
1951 [2]	37, 306, 000, 000	42, 439, 000, 000	263, 800, 000, 000
Total	248, 884, 679, 597	[3] 271, 338, 195, 036	

[1] Expenditures include statutory debt retirements (sinking funds, etc.)
[2] Estimates for fiscal 1950 and 1951 from the Budget.
[3] For the fiscal year 1949, actual expenditures were first reported at $40,057,107,857, but at one time they were reported $40,150,017,813. The figure used is the Treasury's figure of Jan. 3, 1950.

PAUL O. PETERS.

Liquor Advertising in Interstate Commerce

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, February 2 (legislative day of Wednesday, January 4), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD the testimony of Rev. Gerald B. Winrod, a minister of the gospel, one of the most public-spirited citizens of the State of Kansas. It is a statement prepared by Dr. Winrod for presentation to a subcommittee of the Committee on Interstate and Foreign Commerce, dealing with the bill which I introduced to prevent liquor advertising in newspapers, by radio and television, and in interstate commerce. I may say that Dr. Winrod for years has been one of the outstanding men in the State of Kansas in the fight for high morals for the youth of Kansas and of the Nation.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

To the Honorable Members of the United States Senate Committee on Interstate and Foreign Commerce:

My appearance before your esteemed committee is dictated by a desire on the part of our organization, the Defenders of the Christian Faith, to serve the cause of national sobriety.

Others, better qualified than I, to give expert testimony on the important subject under consideration, will appear before you during the course of these hearings. The record when completed will be a reservoir of information, dealing with both sides of what many believe to be our country's most serious domestic problem.

With your permission, my testimony will be narrowed, first, to a discussion of fraudulent liquor advertising as a menace to national morality, and second, a personal statement regarding conditions in Kansas where we are feeling the effect of a wrong decision made in the election of November 1948, at which time our 69-year-old law against intoxicating beverages was repealed.

Enactment of the measure (S. 1847) proposed by Senator LANGER will go far in correcting evils which are bringing moral decay and death to western civilization. A vitalized conscience to lift the American people out of their alcoholic stupor is the supreme need of the hour.

The following summary of the bill, which appears in the first of its seven sections, will commend itself to all who understand the relation of national character to national security:

"Be it enacted, etc., That it shall be unlawful for any distiller, brewer, vintner, manufacturer, wholesaler, or retailer, or for the agent, broker, or factor of any of them, engaged in the sale of alcoholic beverages to cause to be transported in the mails or otherwise from any State or Territory or the District of Columbia to any other State or Territory or the District of Columbia any newspaper, periodical, newsreel, photographic film, or record for mechanical reproduction advertising alcoholic beverages or containing the solicitation of an order for alcoholic beverages."

I

Our theory of government presupposes sound national character. The final safeguard of a constitutional system lies in the right purpose of those who vote. There is an intimate connection between moral consciousness and safe government.

Roger Babson says: "Under the old system of centralized government, conditions depended only upon the character of the rulers and not upon the character of the masses. Once a government could prosper, whatever the condition of the churches, or even without any educational system for the people, but today, with every man a voter and with all votes counting the same, the stability of the government depends not upon wealth nor armies, but on the character of the electorate."

Anything that tends to loosen the foundations of national morality must be regarded as a foe of constitutional democracy. The liquor narcotic comes under this indictment because it deprives the user of his normal faculties, dulls the conscience, and when allowed to run its course, destroys the capacity for moral responsibility.

The story of Dr. Jekyll and Mr. Hyde has found tragic duplication in the lives of many people who started out as temperate drinkers. Robert Louis Stevenson describes Dr. Jekyll as an honorable man and discoverer of a potion by means of which he can change himself into Mr. Hyde, a loathsome creature who lives without restraint.

He uses another potion to retrieve his position as Dr. Jekyll. After changing character several times, he finds himself lapsing into Mr. Hyde without consuming the potion. Sinking into despair, he commits suicide.

Alcohol is a demoralizing agent, as deadly to society as Dr. Jekyll's fatal potion. We cannot afford to be indifferent to an evil that breeds mass immorality, wars against physical health, befuddles the mind and deadens moral sensibilities.

No prophet is needed to anticipate the future of the America we love, if present trends toward the Hyde level are not reversed. Rome maintained a democratic system until her moral structure sagged beyond repair. Thus weakened, the masses were incapable of governing themselves, and the long line of the Caesars began. Moral discipline must be regarded as a necessity in a democracy.

The conscience of a large segment of our population has become ossified, under a barrage of fraudulent liquor advertising reaching them through magazines, newspapers and by radio. A way needs to be found for arresting the torrent of propaganda, which is sweeping multitudes to destruction and weakening the moral base of the American social order.

Manufacturing and distributing agencies seem intoxicated with power. Standards of decency and ethics in the advertising field mean nothing to them. Integrity has been discarded. They appear willing to resort to any scheme or trick to intensify the appetite of potential patrons and produce wealth for their cankered coffers. The situation has become intolerable.

Logic would seem to demand that both the company engaged in the manufacture of alcoholic beverages, and the periodical which publicizes it, should share responsibility for suffering resulting from its consumption.

A friend of mine was recently killed on the outskirts of Wichita by a drunken driver who had been drinking heavily at a nearby night club. He left a widow and two small children. The victim was parked 6 feet off the highway, repairing a tire, when the tragedy occurred.

UNIVERSITY OF MICHIGAN LIBRARIES

The woman companion of the murderer stated that she looked at the speedometer just before the crash, and it registered over 80 miles an hour. The driver, being out of his senses, did not know how fast he was going and had no knowledge of approaching danger.

My friend was murdered.

Who was responsible for the crime? Both the manufacturer and the advertiser.

The man who dished the poison over the counter was a mere incident between these two enemies of humanity.

II

The fall of 1943 witnessed a hard fought battle between friends and enemies of sobriety in Kansas. The struggle was regarded as pivotal because this State had been the first to adopt constitutional prohibition.

The law, enacted in 1880, stood the wear and tear of 69 years. It was repealed by a narrow vote. The liquor interests brought up their heaviest artillery. All the arts of wet propaganda were employed. The public was for weeks bombarded by the kind of falsehoods, with which we have become familiar, through magazine, newspaper, and radio advertising. Liquor groups were especially concerned to win because of Kansas, tradition as a citadel for sobriety.

Kansas has been called the moral battleground of the Nation. The first blood for the abolition of slavery was shed on its soil. John Brown was among the early immortals who helped make Kansas a reform State. His efforts kept the territory west of the Missouri river, including the Pacific Northwest, from yielding to the slave traffic.

When he died on the gallows, Victor Hugo exclaimed, "That ends slavery in the United States." Abraham Lincoln was elected President 11 months later on an antislavery platform. The Emancipation Proclamation was issued within 3 years from that date.

There stands in Ossowatomie, Kans., a log cabin, built by John Brown as a fort, from which to beat off armed ruffians who swarmed in to establish a slave-holding empire. This unpretentious structure was dedicated as a national shrine by Theodore Roosevelt.

The visitor reads these words inscribed on a marble shaft: "In commemoration of the heroism of John Brown, who died and conquered slavery on a scaffold at Charlestown, Va., August 10, 1856."

This man was a relentless foe of both slavery and liquor. Wendell Phillips said: "He feared God so much that he never feared the face of man."

Maj. J. B. Merwin, who was present when Lincion signed the Emancipation Proclamation, records the latter as saying: "Merwin, after reconstruction, the next great moral battle is to destroy the liquor traffic, and in that conflict I pledge you my heart, my head, and hand."

Kansas played an active part in both of these moral crusades. In fact, she was the State chosen by divine providence, to blaze the trails.

There was, however, an uprising against the white man's firewater among the Indians in Kansas Territory, which antedated both the John Brown crusade and enactment of the State's prohibition law. This occurred in 1836, when advance agents of slavery and the saloon sought to debauch red men by pouring poison down their throats.

The Otoe and Cherokee Indians are credited with having organized the first temperance society west of the Missouri River. Their chiefs forbade drinking in these tribes.

Mr. Clif Stratton, the well-known author and journalist of our Sunflower State, says: "Kansas' claim to greatness—or at least to attention, is not so much the production of material things as it is in its men and women with ideas and ideals. * * * The crusader spirit has persisted."

Members of the committee will recall Mr. Stratton as a long-time associate of the Honorable Arthur Capper, who recently retired voluntarily after 30 years' service in the United States Senate.

We are reminded that Senator Capper, reflecting the spirit of the Kansas tradition, introduced a bill before the Senate to prohibit fraudulent liquor advertising similar to, if not identical with, the one now under consideration. It is significant that the fight again both the Senator and our 69-year-old prohibition law, was led by newcomers into the State, namely, the Levand family, owners of the Wichita Daily Beacon.

The solemn promise to reject liquor advertising made by these editors in advance of repeal, and the violation of that promise immediately after the 1948 election, demonstrates the need of legislation anticipated by Senate bill 1847. The facts, briefly stated, are as follows:

The Levands were vociferous in promising that they "would not accept liquor advertising," but the votes were hardly counted before their pages began to drip with paid putrescence. It is estimated that they have realized between thirty and forty thousand dollars revenue, from this source, during these intervening months. Moreover, the public has since learned that they had made plans for going into the wholesale distributing business before the election.

Senator Capper probably never received a more insulting communication from a constituent than the telegram sent by Louis Levand on May 14, 1947, an abridgment of which reads:

"We always believe in cleaning off our own doorstep first. And we are wondering why you are taking up the important time of the United States Senators in discussing advertising of alcoholic beverages throughout the Nation in magazines, radio, and newspapers when in Kansas we have a prohibition situation that is a national disgrace. * * *

"How can you honestly defend a situation that you know loses this State millions of dollars in tax revenue while the bootleggers and the mobsters and the dishonest public officials line their pockets with money which should go to support our public schools, for higher teacher salaries and for good roads.

"Every decent citizen in this State is disgraced by this situation.

"Why don't you use your newspapers in Topeka and Kansas City and your radio station and your farm journals to fight this situation? We can't recall a single crusade you have ever carried on in this State in an endeavor to enforce the prohibitory law through your newspapers and your radio station—although we have conducted many such crusades.

"And make no mistake about this, Senator: The Wichita Beacon will not carry any liquor advertising even if this State does vote for repeal a year from next November. * * *

"Will you please have this telegram read before the Senate committee and have it placed in the CONGRESSIONAL RECORD?"

It is often amusing to see notorious wets, like members of the Levand family, use pious and hypocritical phrases to cloak their true purposes. The man who sent the foregoing telegram professed deep love for Kansas and a desire to save it from disgrace—but his real concern was to derive personal income from the liquor business.

This message was included as part of a front-page Beacon editorial, published May 14, 1947, under scare headlines. The promise was repeated in the body of the article as follows:

"The Beacon informed Senator Capper that even though this State might vote for repeal of its prohibition amendment a year from next November, it would not accept liquor advertising."

Not only did these editors willfully and flagrantly break their promise by accepting advertising, but they directed the formation of a company for engaging in the sale of liquor.

The name of the corporation under which the Levand family operates is the Standard Mercantile Co., central offices, 1104 Union National Bank Building, Wichita, Kans., Leonard A. Levand, resident agent, and the capital stock is recorded as being $150,000.

Legal papers filed with the State describe the nature of the corporation's business as being to "Engage in the distribution and wholesale of alcoholic liquor and beverages. To sell, purchase, and otherwise deal in alcoholic liquors and beverages and articles of a like or similar nature, etc."

When Kansas voted repeal, it became necessary for the State to set up a system of regulation. The head of the new department was given the title, "Director of Alcoholic Beverage Control."

Last week's press reports announced that the Standard Mercantile Co. had been caught violating laws which govern the sale and distribution of Kansas liquor. A directive was issued forbidding a certain firm outside the State from making future deliveries to the Levand organization.

This promises to be a hard blow—because it strikes the pocketbook.

I have tried to avoid being tedious in reciting the foregoing details. The case of the Wichita Beacon seems pertinent to the present hearings because it offers a clear illustration of the utter absence of integrity where the sale of liquor advertising is involved.

* * * * *

Only by a firm hand can American citizens be rescued from the sea of alcohol in which they are presently engulfed.

Under a democratic system, the people must look to elected representatives for deliverance from evils that threaten the moral foundation upon which their government rests. Our country cannot be considered safe as long as advertisers of alcoholic beverages, who put self above health and money above morals, are given ungoverned latitude to spread pernicious propaganda which can only weaken and contribute to the downfall of our Republic.

As a minister of the Gospel, editor of a religious and patriotic magazine with over 70,000 circulation, radio speaker on nightly and Sunday morning chain broadcasts and president of the Defenders of the Christian Faith—I beg you to report this bill out of committee for full and free debate on the floor of the United States Senate.

May I, in closing, remind us of the solemn admonition found in the book of Habakkuk, chapter 2 and verse 15:

"Woe unto him that giveth his neighbour drink, that puttest thy bottle to him, and makest him drunken."

Limit on Medical Students

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, February 2 (legislative day of Wednesday, January 4), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed

in the Appendix of the CONGRESSIONAL RECORD an article entitled "College Heads Assail Doctors for Limit on Medical Students," written by Benjamin Fine, and published in the Minneapolis Morning Tribune of January 12, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COLLEGE HEADS ASSAIL DOCTORS FOR LIMIT ON MEDICAL STUDENTS

(By Benjamin Fine)

CINCINNATI, OHIO.—An unusually sharp attack on the medical profession of this country, rarely before heard in academic circles, was voiced here from a committee of prominent college leaders, studying preprofessional education.

The Nation's doctors were accused of using Petrillo and Fishbein economics in keeping down the number of students admitted to medical schools.

The reference was to James C. Petrillo, president of the AFL American Federation of Musicians, and Dr. Morris Fishbein, former editor of the Journal of the American Medical Association.

CLAIM THOUSANDS BARRED

Thousands of qualified premedical students are not admitted to these schools, even though the Nation needs more doctors, the committee maintained.

The charges were made before the American conference of academic deans, which met here in conjunction with the annual convention of the Association of American Colleges. One thousand college presidents, deans, and university administrators attended the 3-day sessions, considered among the most important in higher education.

A year ago the American conference of academic deans appointed a committee, consisting of the deans of Wayne, Ohio State, Northwestern, and Kentucky Universities to study the problems involved in admission to the medical colleges.

The report, presented here, assailed the medical profession for its short-sightedness in not keeping pace with the Nation's health needs.

When the committee presented its resolution, a number of college officials sprang to the defense of the doctors. Many delegates were upset over the effect the resolution would have upon the medical profession. The conference eliminated this portion of the resolution:

"Annually several thousand students fully qualified in training, personality, and temperament are denied admission to the professional training of their choice. This set of conditions constitutes a most serious threat to the continued health and well-being of the American people."

FEAR ANTAGONISMS

One of the delegates exclaimed: "A good many people in the medical profession do not believe this to be true. If we adopt the resolution we will create a lot of antagonisms."

According to Dr. William S. Guthrie, dean of the College of Arts and Sciences at Ohio State University, college students face strict rationing of careers in medicine, dentistry, and veterinary medicine without respect for the country's need.

Dr. Guthrie urged the medical profession to utilize the medical colleges to full capacity, as was done during the war years. During 5 years the schools trained 7,214 extra doctors.

LAG BEHIND POPULATION

His report, presented to the conference, contrasted the number of medical students today with the number in 1905. In 1949, he brought out, 79 medical schools had an enrollment of 23,670 students, with a graduating class of 5,094.

In 1905, there were 160 medical schools in this country, with a student enrollment of 26,147 and a graduating class of 5,606. During this period the population has virtually doubled while the number of students in medical school has decreased, Dr. Guthrie pointed out.

Moreover, in 1905 college students totaled 150,000, contrasted to today's 2,500,000. In 1905, the ratio of medical students to college students was 1 to 5.

"U" DOCTOR STRESSES SCHOOL LIMITATIONS

"I think everybody would agree there should be some expansion of medical education," Dr. Howard L. Horns, assistant dean of medical sciences, commented at the University of Minnesota.

However, he added, two things should be pointed out:

1905's 160 medical schools included "many inferior schools," two or three in Minnesota alone. They have been consolidated into today's 79, mostly of high quality.

A medical school is limited by facilities and staff, and cannot add students beyond capacity without harm.

"Lab space and equipment limit us," Dr. Horns said. "In the final 2 years, furthermore, much of the teaching is in very small groups of four to eight students."

Enrollment in the university medical school is now some 430, and 89 seniors will be graduated in June. Subsequent graduating classes will be larger—there are now, for instance, some 120 freshmen.

During World War II instruction was on a 12-month schedule, but the teaching year has since been reduced to 10 months, a month longer than prewar.

Federal Aid to State and Local Governments

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news bulletin:

FEDERAL AID TO STATE AND LOCAL GOVERNMENTS

Federal aid to State and local governments will be more than 80 percent higher in fiscal 1951 than actual payments in fiscal 1949, according to the President's budget request. Greatest advance will be in payments to the States for social welfare, health, and security, which will increase $670,000,000, and funds for education and general research will increase $325,000,000.

A summary of the proposed spending for 1951 and the actual spending in fiscal 1949 follows:

Grants-in-aid	Expenditures, fiscal 1949	Budget request, fiscal 1951
Veterans' Administration, grants to States, etc.	$31,587,221	$11,248,185
Social welfare, health, and security	1,091,224,052	1,761,635,549

PAUL O. PETERS.

The Federal Deficit

EXTENSION OF REMARKS

OF

HON. JAMES P. KEM

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, February 2 (legislative day of Wednesday, January 4), 1950

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Cause for Worry," published in the St. Louis Globe-Democrat.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CAUSE FOR WORRY

Edwin G. Nourse, ex-chairman of the President's Council of Economic Advisers, is not an administration gadfly. Had he been averse to Fair Deal goals, he would never have joined Mr. Truman's official family. But he is a hard-headed economist. As such he interposes blunt, objective realism into the President's political concept of national economy.

Like many others with far less understanding of conditions, Dr. Nourse is deeply concerned over the prospect of a Federal deficit that promises to snowball above $10,000,000,000 in a 2-year period. He warns that such a deficit ballooning is a threat to the stability of the dollar, a harbinger of more and frightening inflation.

This man is not a gloom gabbler. It was he who, during the jittery slump early in 1949, told the Nation there was nothing to fear, that we were merely passing through a healthy disinflation. He was right. It was he who predicted a lower cost of living, without demoralizing business. We found out last year he was right. Living costs were scaled down a jot, and prosperity kept rolling.

There is reason for tacking confidence to his danger signs on the deficit highways. It is a rough row he seeks to hoe. The administration is dedicated to deficit spending, the Nation has become accustomed to vast national debt, and the average citizen hasn't the faintest notion of what the whole question means. Dr. Nourse says unless government gets back into black-ink financing, we are setting the stage for a new reveling inflation.

Maybe the average citizen is numb when confronted with the hazards of debt pyramiding. But we ought to have a pretty clear

UNIVERSITY OF MICHIGAN LIBRARIES

idea of what inflation means. We struggled with it for a decade. The Government passed laws and made incessant patriotic appeals to stave off a gobbling inflation. Now Washington is casually hurtling down a fiscal road with inflationary perils lurking at every turn.

Dr. Nourse is alarmed because Government in an era of bulging prosperity is making no real effort to balance its budget. The administration—and Congress—has booted fiscal prudence out the window. Faced by a public refusal to accept more big taxes, the administration has listened to purveyors of economic fantasy and adopted deficit spending as a way of life.

The President's former adviser suggests that Government could get back to a sound fiscal condition within a year or two, and with production and employment kept at a high level. But that means retrenchment. It means, he thinks, Government economy and the reduction or deferment of Mr. Truman's pet schemes of social welfare.

Mr. Truman is an economic dilettante. Dr. Nourse was vice president of the Brookings Institution, a scientific research organization, and headed its institute of economics from the time it was established in 1922. He left there to head the economic advisers and make national studies of the economy.

But the President is a politician. He accepts the recommendations of deficit-spenders who, one suspects, whisper the advices they think he wants. He won't abandon a single social panacea. He makes genuflection to budget paring, then breezily whisks on down the path of high deficit piling.

Dr. Nourse is worried. There is plenty of cause for national anxiety.

The Genocide Treaty

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, February 2 (legislative day of Wednesday, January 4), 1950

Mr. TOBEY. Mr. President, I ask unanimous consent to place in the RECORD two letters addressed to me and one to the editor, Union-Leader, Manchester, N. H., in regard to the proposed Genocide Treaty, which is currently being considered by the Senate Judiciary Committee. These letters were written by one of New Hampshire's most prominent and thoughtful lawyers, and it is my belief they merit sincere and serious attention.

In its deliberations, I feel confident that the committee will ascertain the exact meaning of the measure. They will not fail to heed the warnings of the legal experts whose duty it is to point out to the American people and to their elected representatives the dangers that lurk in the written words of a legal document.

As for myself, I am anxiously awaiting the conclusion of the committee hearings before formulating my own judgment in this matter.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

WYMAN, STARR, BOOTH,
WADLEIGH & LANGDELL,
Manchester, N. H., September 21, 1949.

Hon. CHARLES W. TOBEY,
Senate Office Building,
Washington, D. C.

MY DEAR CHARLES: I thank you for sending me the Christian Science Monitor editorial on genocide. It is precisely because of such editorials that I wrote to the Union a very brief review of the genocide situation which was published in both Union and Leader on the editorial page of the Friday, September 16 papers. Though I know it was inadequate, nevertheless I would like to have you read it if you have not already done so.

I may be presumptuous in saying that the editors who write such editorials do not fully understand what they are talking about, but I feel strongly that is so. It is by no means certain that individual human rights—involving such matters as discrimination against Negroes and Jews—are not in question under the proposed convention, as stated in the Monitor editorial. They surely would be if the Declaration of Human Rights and the Covenant of Human Rights were adopted in their present form. It seems to me that Negroes and Jews would be within the description of ethnical, racial, or religious groups under the genocide pact. The measure of mental harm or birth prevention is not given, and no one can know what might amount to conspiracy, incitement or attempt to commit or complicity in genocide.

I might refer for example to the declaration which asserts the right of miscegenation as a human right and ask what may become of those who favor or enact a State law against it—would they be guilty of mental harm to a racial group? And those who advocate birth control?

I am no isolationist. I believe we should take our responsibility as a strong Nation in world affairs, but I do not believe we should enter into a pact which obligates us to interfere with the internal affairs of other nations in times of peace and subjects us to their quite possible interference with our domestic affairs which to date we have handled pretty much to our own satisfaction and without any genocide or human rights violation as we understand those terms.

I put to you another question—having in mind that I understand that protest has already been made to United Nations against the Communist trials now going on in New York—if the Communists here follow Moscow direction, would our action against Communists be interpreted as an act of genocide against a national group for which individuals, officials, and our State or Federal Governments could be brought to the bar of an international tribunal?

The fact that reservations were suggested demonstrates that the pact should not be ratified as submitted, yet no one can be sure that those reservations as suggested would be fully sufficient to protect us against international litigation. It seems to me that such litigation would be a form of war and if after the pact was adopted we ourselves preferred charges against any in another country, we would be accused of warmongering.

I fear the use that might be made of such a pact as a sounding board for Communist attack on our institutions, and I fear the present assumption by us of an obligation to participate in the use of force to stop in other countries what we condemn and what we ourselves will never be guilty of.

I am sorry this is so long—but it might be longer.

Your humble constituent,

LOUIS E. WYMAN.

WYMAN, STARR, BOOTH,
WADLEIGH & LANGDELL,
Manchester, N. H., December 27, 1949.

Hon. CHARLES W. TOBEY,
Temple, N. H.

MY DEAR SENATOR: This acknowledges your letter of December 24 with enclosures which, as requested, I am returning to you herewith.

It may be presumptuous for me as a small-town country lawyer to place myself in opposition to the illustrious gentlemen whose names appear on the literature favoring the adoption of the genocide pact, but I am quite convinced that their propaganda is fully answered by the report of the American Bar Association committee on peace and law. You may have seen the brief summary of my ideas on this subject which was printed in the Manchester Union in September. My thought is, very briefly, that for us to adopt this pact as a treaty is not only dangerous to our institutions, but is also misleading the world. The little pamphlet entitled "Killing One Man Is Murder, Killing a Million Is Not," recites events which shock the conscience and states, "There was no law against it," and that the UN is forging a law against it, and that the United States should be foremost to ratify such a treaty. This sounds to me like nonsense. There is not the slightest possibility that under our form of government this Nation will ever be guilty of genocide as we interpret the pact, yet there is a danger that others might seek to bring us before an international court on some theory of their interpretation that we had violated the pact in seriously injuring the feelings of a minority group. However, if there is no danger of our being guilty of genocide, why must we undertake by treaty to legislate for other countries? If you assume that by the adoption of this treaty there will be a law against it, do we not thereby pledge ourselves to enforce that law? Written law does not seem to me to be particularly valuable unless it is to be enforced and I see no hope of enforcement of this pact under present world conditions unless we are prepared promptly to go to war. It seems to me far better that we should keep our own house in order rather than to enter a pact under which we must police the world.

It seems to me conceivable that under article II, defining genocide, it may be argued that a Communist is a part of a national group and when we undertake to pass laws to restrict and even to outlaw communism we may be charged with doing them serious mental harm or with undertaking to destroy them in whole or in part. If this convention passes we certainly can be charged with such conduct before some tribunal and the proceedings would then constitute a sounding board for further recriminations by persons who do not like our form of government.

I am not here referring to the legal effect of such a pact on our constitutional set-up. That is dealt with in the committee report above referred to, and that alone should be sufficient to warrant rejection by the Senate at this time. I am merely trying to say that no matter how well the proposed convention may sound, no matter how lofty may be the motives which prompted agreement between those who did agree upon its language, it is more likely than not to get this country into trouble. It is not an isolationistic point of view to assert that we cannot cure or eradicate all evil which exists anywhere. This country can no more feed the starving millions of India and China or undertake to bring their living standards up to ours than an individual traveler could undertake to meet the demands, in any degree, of individual beggars with whom in his travels he might come in contact. This is not intended to suggest that any national group should be compared with

a beggar. I know of no nation in any such position. I am merely undertaking to illustrate a financial comparison. I have seen beggars whose condition appeared to be heartrending, but so many that even a few pennies to each would have left me bankrupt, and that general situation of the impossibility of our assuming financial responsibility for the world to me also demonstrates that we cannot assume moral responsibility for the world. As I read the papers it seems to me that there are countries even now guilty of violating such a pact, and if one of the countries were Russia what would we do about it?

Sincerely yours,

LOUIS E. WYMAN.

MANCHESTER, N. H., *September 16, 1949.*

THIS EVENTFUL PRESENT—GENOCIDE—A CASE AGAINST TREATY RATIFICATION

EDITOR, UNION-LEADER:

With reference to your editorial of September 13, headed "Genocide Convention," I respectfully submit the following:

Genocide is a new word to denote race killing. The Genocide Convention or treaty as submitted to the Senate for ratification would make genocide a crime in peace or wartime which the parties to the treaty undertake to prevent and punish.

Genocide is defined as "any of the following acts committed with intent to destroy in whole or in part a national, ethnical, racial, or religious group as such." The following acts are described as "(a) Killing members of the group; (b) causing serious bodily or mental harm to members of the group; (c) deliberately inflicting on the group conditions of life calculated to bring about its physical destruction in whole or in part; (d) imposing measures intended to prevent births within the group; (e) forcibly transferring children of the group to another group." It is then provided that genocide or conspiracy, or direct and public incitement, or attempt to commit, or complicity in, genocide shall be punishable. Penalties are provided and persons shall be tried before a tribunal of the state or an international penal tribunal. Any contracting party may ask United Nations to take action and any dispute as to the meanings or fulfillment of the treaty obligation are to be submitted to the International Court of Justice.

MORE CENTRALIZED POWER

Under our own Constitution a treaty once ratified becomes the law of the land; hence this treaty would inevitably further concentrate authority in the Federal Government and deprive the States of their rights to suppress crime. That subject is beyond the scope of this paper, but the threat is serious.

Anyone who is inclined to think that the Genocide Convention should be ratified by the United States Senate, or that the American Bar Association should be criticized for opposing ratification ought to pause long enough to weigh a few simple facts. The historical background and the legal complications which may be involved are vital and complex beyond the limits of a brief review such as is here submitted. We now call attention to only a few basic facts.

The convention was transmitted to the Senate of the United States for ratification as a finished document. The President made no suggestion of any need for reservations or declarations of the understanding upon which the Senate should approve the treaty although the State Department, in submitting the convention to the President, did express its understanding of some of the phraseology with which other nations or the international court contemplated by the pact might or might not agree. A point which this survey makes is that this convention received careful consideration by (a) the American Bar Association special committee on peace and law, and by (b) the ABA section of international and comparable law. No member of the special committee and no member of the section recommended that the convention should be ratified in form as submitted to the Senate. In the debate which followed in the ABA house of delegates, no one argued that the convention should be approved as drafted. Even the Solicitor General of the United States, who is a member of the house of delegates and who came from Washington (presumably as the representative of the State Department) to speak to the house in favor of ratification, did not suggest ratification without reservations.

WHAT BUSINESS THIS?

We therefore ask what kind of a document is this which this country is asked to ratify as a treaty when all lawyers agree that it cannot be ascertained from the language used in it that it means what it says or says what it means. As a treaty under our Constitution it would become the law of the land. Lawyers are men specially trained in legal effect of language, and all agreed that as drawn this treaty should not be ratified. If the lawyers of this country and especially the able men of the ABA house of delegates do not know the meaning and effect of treaty phraseology, no one can know it.

Some of these lawyers of the section thought the convention might be saved by reservations, and it was argued to the house that the treaty ratified with reservations would not become effective as to this country until the reservations had been accepted by the other ratifying countries.

To this writer, at least, this seems an unnecessary complication of the complicated. In the first place, it is impossible to be certain that the reservations, submitted at the last moment to the house, are sufficiently complete fully to protect the interests of the United States; and in the second place it would seem more desirable to know in advance whether or not the reservations are acceptable to other countries. If any committee brought in a draft proposal requiring such extensive amendments, as this convention clearly must have before it can be acceptable to this country, the proposal would be promptly sent back to the committee for further consideration. And that is precisely what the vote of the house suggests that the Senate of the United States ought to do.

SATISFACTORY TO RUSSIA

If we remember correctly, the representative of the United States on the committee which framed this convention at one time said in effect that concessions in language had been made to satisfy Russia and that she was not certain that they should have been made. There is today no way in which we can be sure that the reservations proposed are broad enough or definite enough to avoid our becoming involved in controversy through the challenge by some other country of acts or of treaty applicability.

As we understand the meaning of genocide, no lawyer or layman in America believes that there is the slightest chance that anyone in this country is likely to be guilty of that crime. The first reservation proposed undertakes to limit the crime by requiring that the acts enumerated must directly affect thousands of persons. It does not change the intent. The reservation further provides that criminality in the United States is to be determined only by the Federal court of the district wherein the act is alleged to have been committed. Passing what might be a protracted argument as to the meaning of language in the original convention and in the reservations, it is apparent that by the reservations the section on international comparative law has tried to avoid any possibility that a citizen of the United States might be summoned to trial before an international tribunal. Yet the reservations do not make it clear that our States shall retain jurisdiction of crimes committed within their borders if the acts which would otherwise constitute such crimes could be construed as coming within the definition of genocide, and there is nothing in the reservation that will prevent a foreign country or a citizen of a foreign country from filing a complaint that the conduct of some one or more citizens of this country constitutes the crime. Whereupon we would have an international episode.

We wonder if it is not true that some well-meaning citizens of this country believe that other countries may commit genocide. They want this country to be a party to a treaty that will make genocide punishable, and if this is done, then upon request of the United Nations this country would be obligated to step in and stop it. As we said, nobody in this country expects that this country will be guilty, but the proponents of this convention want the force of the United States back of the general condemnation, and if other parties signatory, including Russia, become guilty—as many now think some countries are guilty—we would become involved in the effort to clean up the mess.

OF RUSSIA, CAN WE BE SURE?

It is said that Russia has signed the convention, but we all know that Russia permits no one to know what is going on within her borders. Nor can we tell what interpretation Russia may choose to ask to be placed upon the language of the convention. Inasmuch as the Declaration of Human Rights includes an approval of miscegenation, may it not be that someone will charge that laws against miscegenation in some way involve genocide.

Briefly, then, we have a proposal for a treaty which will make criminal and triable before an international court acts which no one in the United States has ever dreamed of committing, and which will not be committed so long as our form of government shall endure. Why, then, should we not continue our form of government and so govern ourselves as to furnish an example for the rest of the world without undertaking to bind ourselves to take action against the internal conduct of another nation. In the form in which this convention is submitted to the Senate for ratification, we would be subject to international tribunal decisions as to matters which we now consider of purely domestic concern while if we undertook to enforce the covenant against some other country we would certainly be again accused of warmongering.

LOUIS E. WYMAN.

MANCHESTER, *September 14.*

Alien Property

EXTENSION OF REMARKS

OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, January 27, 1950

Mr. BECKWORTH. Mr. Speaker, I desire to include in the CONGRESSIONAL RECORD the following data pertaining to enemy property:

[1] Because of the nature of patent, copyright, and trade-mark properties, it is impractical to attempt to value these properties.

[2] These are supplemental returns with no specific order number assigned. They consist of property returned through judicial proceedings and the return of property vested in error.

[3] This item pertains to the return of Italian ships which were still afloat at the end of the war. Originally 27 Italian ships were seized by the U. S. Government of which 18 were lost while being employed in the war effort. The return was authorized by Public Law 370, 80th Cong., 1st sess. No value was placed on these ships at date of vesting or date of return.

UNIVERSITY OF MICHIGAN LIBRARIES

H. R. 87

EXTENSION OF REMARKS
OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1950

Mr. MILLER of California. Mr. Speaker, the Rules Committee have presently recommended a rule on H. R. 87, relating to the promotion of veterans of World War II in the field service of the Post Office Department.

There has been some controversy of the cost of this bill. I have had the bill analyzed in the light of the report of the Postmaster General and submit these findings for the information of my colleagues:

In the report of the committee the cost of section 1 of the bill is estimated at $27,500,000 for the year 1950. This cost is based on an estimate of approximately 120,000 veterans being eligible for benefits under this section, indicating an average benefit of $229.16. The estimate of the number of employees eligible to benefits is at variance with the figures presented by the representative of the Post Office Department who appeared at the hearings, who testified that approximately 20 percent of the total of 503,000 employees would be affected. (See p. 107, House committee hearings.)

In the form in which H. R. 87 was reported, it would be applicable only to those employees who enter the service prior to July 1 of this year, while the Senate counterpart of this bill, S. 689, would be applicable to all employees who enter the service within a period of 3 years after its enactment. The estimated cost of section 1 of the Senate bill is only $22,000,000; notwithstanding that the Senate bill by its more liberal provisions for those who will enter the postal service at a subsequent date would apply to a larger number of people.

It would appear, therefore, that the estimate of the representative of the Post Office Department that the bill would affect approximately 100,000 veterans, is in line with the Senate figure. At an average benefit of $229.16, the cost of section 1 applied to 100,000 veterans would be $22,916,000.

Any estimate of the number of persons affected by this legislation can only be based on the annual reports of the Postmaster General which indicate an increase of 113,611 employees in the field and departmental services from June 30, 1944, to the last published figures. It appears that these figures are the basis of the cost estimate given in the committee report.

It should be noted, however, that while these figures are valid for most purposes, they do include departmental employees, post office inspectors, assistant postmasters, supervisors, and war service substitutes who are not eligible to the benefits of this legislation. While many of the war service substitutes have been replaced with veterans having civil service status, it is extremely doubtful that this section could under any circumstance be applicable to more than 100,000 employees.

Using the annual reports of the Postmaster General as a base, it is estimated that section 2 of the bill would be applicable to 67,000 veterans. This figure is arrived at taking the total number of employees added to the rolls between June 30, 1945, and June 30, 1948, the last published figures. There were 435,955 employees on the rolls on June 30, 1945, and 503,411 employees on the rolls on June 30, 1948, an increase of 67,546 employees. Of this increase, 206 employees are in the departmental service and are not covered by the proposed legislation; 8 are in the post office inspection service which has a requirement of a minimum of 5 years of service before an employee may even take the examination; 97 are postmasters who are not included in the definition of employee; an indeterminable number are supervisors who must have reached grade 9 before being eligible for promotion and, therefore, could not have entered the postal service from the military service within the prescribed dates; 663 are clerks in offices of the third-class who were not classified employees prior to July 1, 1945, and could not, therefore, be credited with service prior to that date; 1,740 are special delivery messengers who were not classified employees prior to July 1, 1945; and 15,296 are part-time employees, many of whom are not eligible for the benefits of this legislation. It seems certain, therefore, that not more than 50,000 employees are eligible for the benefits of section 2 of this bill, providing that all of them had been in the military service between September 16, 1940, and June 30, 1946. Actual experience demonstrates that only some 75 percent of those who have entered the postal service since July 1, 1945, are veterans and the cost of section 2 of this act should, therefore, be not in excess of $15,000,000 rather than the $26,400,000 given in the committee report.

The total first year cost of the bill H. R. 87 should not therefore, exceed $38,000,000 under any circumstances and will probably be a lot closer to $30,000,000 due to the fact that all employees in the groups eligible to benefits are not veterans and would not be affected by this legislation.

The attached table showing the increase in personnel for the years involved will indicate the maximum number of employees in each group that can receive benefits from this legislation.

Number of employees by groups	1944	1945	1948	Eligible to benefits	
				Sec. 1	Sec. 2
Departmental employees	1,483	1,526	1,732		
Post-office inspectors	1,134	1,153	1,161		
Postmasters	42,707	41,792	41,695		
Assistant postmasters	3,372	3,420	3,415		
Clerks and supervisors	90,116	93,941	124,087	[1] 33,971	[1] 30,146
Clerks, office of third class			663		
Village delivery carriers	298	188	71		
City delivery carriers	58,046	57,993	78,127	20,081	20,134
Special delivery messengers			1,740		
Rural letter carriers	32,035	32,031	32,342	307	311
Railway mail service	20,587	20,546	24,451	3,864	3,905
Motor vehicle service	3,596	3,631	4,264	668	633
Public buildings operating force	18,387	18,606	15,471		
All others	1,067	3,615	1,383	316	
Total number full-time employees	272,328	278,442	330,602	58,274	55,129
Total number part-time employees	117,472	157,513	172,809	[2] 55,337	[2] 15,296
Total of all employees	389,800	435,955	503,411	113,611	67,456

[1] Includes supervisors not eligible to benefits.
[2] Includes temporary and war-service employees not eligible to benefits.

Opinion by Marvin Jones, Chief Judge, United States Court of Claims, in Pedersen Against the United States

EXTENSION OF REMARKS
OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, February 2 (legislative day of Wednesday, January 4), 1950

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the RECORD the opinion rendered by Hon. Marvin Jones, chief judge, United States Court of Claims, in the case of Pedersen against the United States.

There being no objection, the opinion was ordered to be printed in the RECORD, as follows:

OPINION BY MARVIN JONES, CHIEF JUDGE, UNITED STATES COURT OF CLAIMS, IN THE CASE OF PEDERSEN AGAINST THE UNITED STATES

A dog and a cat may cause complications.

This is a suit by an employee of the State Department who claims per diem allowances for himself and wife, while delayed in Egypt en route from Turkey to the United States during the spring of 1945. Under the regulations plaintiff is entitled to a per diem for himself and his wife "during the time necessarily spent at ports awaiting sailing."

The issue turns on how much of the delay was necessarily spent in awaiting transportation, and how much of the delay, if any, was due to Mr. Pedersen's reluctance to travel without his wife and to Mrs. Pedersen's refusal to travel without being accompanied by her pets, two dogs and a cat, which she refused to leave behind.

The plaintiff claims that none of the delay was caused by the animals, while the defendant claims that all but a few days of the delay was thus caused.

We can well understand Mrs. Pedersen's anxiety about her pets and her reluctance to travel without them.

In our youth we always had dogs, mostly of the mongrel variety, but nevertheless dogs. We placed them just behind people, and when on rare occasions we fell out with any of our playmates, our hounds usually forged ahead.

We have very little respect and no affection for anyone who has not at some time in his life loved a dog. Throughout history the dog has been known for his loyalty and faithfulness. He has been celebrated in song and story. Even books have been written about the dog, his character, intelligence and attributes. The dog has been able to awaken affection in the hearts of every race of people. Wherever man has gone, on the frontier, in the great woods, in the frozen north, the faithful dog has been his constant companion, sharing his hardships and his poverty. When in trouble, humanity finds consolation in his company.

Alcibiades had a handsome dog. Senator Vest described the dog as man's best friend.

We meet him first in Homer's verse

"The dog by the Aegean seas."

Scott referred to him as the "companion of our pleasures and our toils," and Mark Twain said the difference between a dog and a man is that "if you pick up a starving dog

and make him prosperous he will not bite you."

It was a dog that licked the wounds of Lazarus in his rags. Rin Tin Tin was a movie star. Neither poverty nor riches, success nor failure, affects his loyalty. It was the dog that served as a test for the army of Gideon. He also performed heroic services in the most modern and greatest of all wars. The poet said that high in the courts of heaven the one sure welcome that awaited was a little dog angel that "sits alone at the gates" and would not play with the others until his master arrived.

The cat also has always been a favorite pet with many people.

But, coming back to the practical, the testimony of the respective witnesses is no more alike than the dispositions of the "gingham dog and the calico cat." It is difficult to determine from the conflicting testimony just what per diem should be allowed. The State Department regulations make no provision for the transportation of animals at any time. Whether or not they can be taken along even in ordinary times depends wholly upon the attitude of the captain of the ship on which passage is booked.

These were not ordinary times. The dogs of war had been unleashed and were running like mad over the face of the earth. In an effort to track them down whole families were separated for years. Our everyday wants, desires, and whims were in most cases sacrificed to the common cause. Anyone who couldn't willingly do this needed to kindle anew the altar fires. Any allowances must be measured in the light of these circumstances.

We must find from the evidence, if we can, the time necessarily spent at Cairo and Port Said awaiting sailing. The plaintiff was not required to travel by air. He was privileged to await sailing accommodations. He could probably have secured transportation for himself and his wife, without the pets, within approximately 30 days, or for himself alone by Army transport within about 15 days.

On May 9, 1945, the vice consul at Cairo informed plaintiff that he thought transportation by plane could be secured if plaintiff would consent to leave his wife in Cairo. This offer was accepted and plaintiff left by plane on May 14, 1945.

We find that plaintiff necessarily waited at Cairo for a period of 15 days. He is, therefore, entitled to a per diem allowance for 15 days.

It is more difficult to determine the allowance for Mrs. Pedersen. Because of wartime restrictions, she could not travel by plane. She was told by Mr. Miller, the American Consul at Cairo, that if she and Mr. Pedersen wished to travel together without the animals, he would obtain transportation as soon as possible, though it would mean a delay of a few weeks; but that if she insisted on carrying her pets, there would be an indefinite delay. She declined to travel without her pets. In giving her reasons for so declining she testified, "I [have] traveled my whole life with dogs and cats."

Mrs. Pedersen actually waited until July 6, 1945, before finally securing transportation that permitted her to take the dogs and the cat along. In the meantime she irritated the officials at both Cairo and Port Said. At the latter place the official stated the innkeeper wanted her to leave because she insisted upon bathing her two large dogs in the public bathrooms. She finally sailed on an American freighter. She had carried her point. The dogs and the cat went along.

The testimony does not disclose either the type or the names of the pets. For the record they must remain nameless. However, they must have been remarkable animals either in pedigree or disposition.

Mrs. Pedersen was certainly within her rights in refusing to travel without her pets. One can appreciate her unwillingness to leave them behind. On the other hand, she had no legal basis for charging the defendant $10 a day for the extra delay cause by her attitude, especially in a time of national peril, when family separations were the rule and not the exception, however appealing her sentiment may have been. We must apply the law as we find it.

Under the regulations Mrs. Pedersen was not justified in refusing to travel without the animals and charging the delay thus caused to the defendant.

The testimony is not quite clear as to the time Mrs. Pedersen would have been compelled to wait had she not refused to travel without her pets. From the record as a whole, we find that such period was 30 days.

Plaintiff sues for a total of $1,742, covering the entire period of delay for himself and his wife. He is entitled to recover for the 45 days which he and Mrs. Pedersen were necessarily delayed, or a total of $450.

It is so ordered.

Title to Submerged Lands

EXTENSION OF REMARKS
OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Thursday, February 2 (legislative day of Wednesday, January 4), 1950

Mr. O'CONOR. Mr. President, there was printed in the CONGRESSIONAL RECORD of January 6 a statement of the Honorable A. A. Carmichael, attorney general of Alabama, in which he espoused the cause of the Federal Government, as opposed to the position taken by the various States, on the question of ownership of submerged lands within the State boundaries.

A letter from the Honorable Walter Johnson, of Nebraska, special counsel for the National Association of Attorneys General and formerly for five terms attorney general of that State takes issue with the Honorable Mr. Carmichael and presents the position of the States with regard to this vital question of submerged oil lands.

As a former President of the National Association of Attorneys General, and later as Chairman of the Governors' Conference and President of the Council of State Governments, I have been in close touch with the officials of the various States, in their resistance to the efforts of the Federal Government to take over title which in the century and a half of our country's existence, has never been questioned until the past few years.

In the interest of keeping the record complete and correct I ask unanimous consent that Mr. Johnson's letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JANUARY 21, 1950.

Hon. A. A. CARMICHAEL,
Attorney General, State Capitol,
Montgomery, Ala.

DEAR GENERAL CARMICHAEL: There has been called to my attention your statement printed in the CONGRESSIONAL RECORD of January 6, in which you opposed the States, including your own State of Alabama, and favored the Federal Government on the question of ownership of submerged lands within the State boundaries.

* * * * *

In your statement, you speak of "the weird assortment of State attorneys general." The National Association of Attorneys General has been in existence for 43 years and is made up of the attorneys general of each of the States. This group has considered the Federal attempt to seize submerged lands within State boundaries as the most serious threat ever made against our American system of constitutional government and have gone on record accordingly. General Carmichael, you have attended the last three meetings of the association and as you know, outside of yourself, there has been only one other States attorney general who has opposed the position of the association.

You and other Federal seizure advocates would give the impression that the issue is nothing more than "tidelands and oil" for a few coastal States. The truth is, the Federal claims cloud the rights of each State in the Union to its lands, harbors, improvements, waters, fish, mineral, and other resources in or under navigable waters and filled lands. The fact that the Governors' Conference (by unanimous vote of 44 Governors), the Council of State Government, the American Bar Association, the National Institute of Municipal Law Officers (representing 503 cities), the National Conference of Mayors, the American Association of Port Authorities, the American Title Association, National Reclamation Association, the National Water Conservation Association, and many other organizations which have no interests in oil, have joined together to fight the Federal seizure, should be evidence enough that the issue is broader than the tidelands oil of three or four States. Officials representing 46 States appeared before the recent Senate and House Judiciary Committees hearings in support of this legislation and not one State official appeared against the same.

The House of the Eightieth Congress passed a bill favorable to the States by a vote of 257 to 2. In other words, more than 89 percent, practically 90 percent of those voting were in favor of the bill. There was not a single vote cast against the measure by the Members from 35 States and in no States was there a majority against the bill. Surely, these elected Representatives of our people were moved by something more than propagandized "tidelands oil."

You and the other "Federal seizure advocates" would give the impression that confirming title in the States to the lands involved would constitute a gift or donation to the States. If a law enforcement officer returned a watch that had been taken from you, would that constitute a gift? The States now have, and from the beginning have had, full use and possession of the property involved.

* * * * *

You and other Federal seizure advocates would make it an unpardonable sin for State officials to express an opinion that the Supreme Court of the United States was wrong in its conclusions in the California case. The Supreme Court of the United States has repeatedly held—

"The shores of navigable waters and the soils under them were not granted by the Constitution to the United States, but were reserved to the States respectively."

Such was the holding in one of the leading cases on the subject, *Pollard* v. *Hagan* (3 How. 212), decided by the Court in 1845.

It is interesting to note that this case originated in your own State of Alabama, where the United States attempted to grant to private persons, lands which were covered

UNIVERSITY OF MICHIGAN LIBRARIES

by the tidal waters of Mobile Bay. Mr. Justice McKinley, in speaking for the Court, stated as follows:

"When the Revolution took place, the people of each State themselves became sovereign; and in that character hold the absolute right to all their navigable waters, and the soils under them for their own use, subject only to the rights since surrendered by the Constitution."

* * * * *

"Then to Alabama belong the navigable waters and soils under them in controversy in this case, subject to the rights surrendered by the Constitution to the United States, and no compact that might be made between her and the United States could diminish or enlarge these rights."

This case has been cited with approval in 52 subsequent United States Supreme Court decisions and 244 State and Federal court decisions, and was considered the settled law of the land. Furthermore, all of the members of the Court were not in full accord in the California case as you would imply, and I would suggest that you read the dissenting opinions of Justices Frankfurter and Reed.

I would also like to call your attention to the following language in the majority opinion of the Court as reflecting an obvious hint that Congress should act. We find these words therein to arrest our attention:

"For article IV, paragraph 3, clause 2 of the Constitution vests in Congress 'Power to dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States.' We have said that the power of Congress in this respect is without limitation. * * * Thus, neither the courts nor the executive agencies could proceed contrary to an act of Congress in their congressional area of national power."

Another clear hint of the Court's thinking on this point is found in another portion of the decision in which it was said:

"But beyond all this we cannot and do not assume that Congress * * * will execute its powers in such ways as to bring about injustices to States, their subdivisions, or persons acting pursuant to their permission."

You and other Federal-seizure advocates would give the impression that continued State ownership of submerged lands would deprive the Federal Government of minerals necessary for national defense. The truth is that an examination of the record will show you that oil production under State control has been far more successful than similar operations. We maintain that in our system of government, socialized ownership of minerals and property would retard production and development of resources. This has been the history of national ownership of coal in England; oil in Mexico, and general nationalization of minerals in Russia. The National Petroleum Council, a group appointed by the former Secretary of Interior Krug, in its report last year, outlining a national oil policy for the United States, stated:

"7. The petroleum resources of the lands beneath the marginal seas extending to the outer edge of the Continental Shelf can best be explored and developed under State, rather than Federal, control."

* * * * *

You and other Federal-seizure advocates would give the impression that the States are claiming all the Continental Shelf, while the truth is that the total area within the original State boundaries is only 26,600 square miles or about one-tenth of the total area of the Continental Shelf which is approximately 262,500 square miles.

Your own State of Alabama has 159 square miles of tidelands. Even though you may be willing to surrender to the Federal Government A'abama's 100-year-old claim to these lands, I regret to see you condemn the attorneys general of all the other coastal States and most of the inland States for defending their State's ownership and opposing Federal claims.

General Carmichael, I ask that you make a real study of the history of this matter, and I feel strongly that when you have learned the true facts, you will join the other State officials in advocating confirmation of title in the States of the submerged lands within their boundaries.

Respectfully,

WALTER R. JOHNSON,
Special Counsel, National Association of Attorneys General.

A Cowboy's Views on Government Spending

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, February 2 (legislative day of Wednesday, January 4), 1950

Mr. MUNDT. Mr. President, recently I had the opportunity to read a letter written to Mr. W. M. Rasmussen, secretary of the South Dakota Stock Growers Association. This letter was written by a cowboy named "Neckyoke Jones" and dealt with his opinions on Government spending. As editor of the South Dakota Stock Grower magazine, Mr. Rasmussen published this letter in the November 1949 issue of the magazine. In my opinion this letter expresses in an unusual and amusing style the thoughts of many citizens of the West regarding Government spending. I ask unanimous consent to have printed in the Appendix of the RECORD, at this point, a copy of this letter.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DERE SECERTARY RASMUSSEN: "I see where our Congressman has come home to git busy with the post bar an' the wire stretcher to do a little fense mendin'," I sez to Greasewood, as we was drivin' over the chuck holes in the county road early this week. "Yep," sez Greasewood, who runs a few head of cows along with me here on Long Pine Crick, an' who is awful smart, "you know Congressmen ain't like us stockmen. We got to patch fence up about twict a year—but a Congressman don't do no fence repairin' exceptin' at long intervals—an' it began to look fer a while like Harry Trooman was not goin' to let the boys go home to shake hands with the constitchewints at all. He dog gone near had 'em roped an' picketed out down there on the Patowmick bottom. They wasn't too happy either." "I don't reckon that any Congressman is a very happy feller anyway," I offers, "in fact he is ridin' the rough string most of the time—kinda whip-sawed between the White House an' the old home ranch, so to speak."

"Yessir," sez Greasewood, "an' he is allus tryin' to guess which way the dill pickel will squirt. The city folks wants low prices—an' the farmer, he wants high prices—labor wants to ramrod the outfit—an' industry is spurrin' the boys where the hair is short. I would guess that a Congressman is a most unhappy feller."

"Wha do you make of this here Hoover idea of savin' some blue chips by reducin' the force of hired hands?" I requires, rollin' myself a smoke, "it sure sounds like horse sence to me—an' I hope they lay into it right off—an' I'm writin' our Congressman tomorra tellin' him how we feel about it." "You an' about five millyun others," he sniggers. "Well if so many of the people wants this here economy—an' reduction of hands—why the blazes don't Congriss put the screws on. It seems to me its dog gone simple—an' they kin whack off a passel of these flunkeys an' let 'em go sheep herdin'. I hearn as how there ain't many herders these days—an' the sheepmen has to pay awful high wages to git a feller to go out an' rustycate with the woolies." I orates, gittin' kinda hot under the collar.

"You ain't got no more idea what's going' on than a Cree Injun," he sez, "the way the sign reads is this. Everyboddy wants that goviment help should be stopped—exceptin' help that they are gittin'. Out here in the West we are jest as bad as anyboddy. The chambers of commerces, an' plenty farm outfits wants irrigashun. They also want subsidizin'—which is killin' two birds with one stone, so to speak—business an' agerculture bein' the two stones. Either way the taxpayer plays it he loses.

"Now take this here joinin' the army an' navy an' the flyers, fer instunce. Like as not throwin' the 3 outfits together would probibly be a savin'—but who is goin' to run the outfit? The soldiers thinks a sailor is no good on land, an' the sailors thinks a soldier couldn't paddle a raft on Fryin' Pan Crick. The flyer he thinks neither the soldier nor the sailor could fly even iffen you fed 'em bird seed, an' each one wants to boss the rest of the crew.

"It looks to me like Presydent Trooman thinks along with the Army. What does he know about boats?" I ast, now bein' real intrusted. "He's been doin' a lot of sailin' recent like," sez Greasewood, "you know every time Congriss don't do what he wants he goes out for a boat ride on his yatch. They been turnin' him down so much recent like—that he's been doin' a lot of sailin'—which should make him as smart as a admirel—iffen he stick clost to bizness." "What about this here Demfield—this here admirel—who the Presydent jest fired? What about him?" "Well, I'll tell you," sez Greasewood, "as fer as I am concerned it looked like cold-deckin' a man to me. Now, me, I don't know nothin' about bein' a admirel, my only experience bein' a sea-farin' man was when I crossed the Yellerstone on a ferry in the ice—an' the cable broke an' we landed on a sand bar about 8 miles below. That was in 1906, an' I ain't had no hankerin' for water—either inside nor out since. Whatever this here admirel done or didden done don't make no difference. He was fired—an' didden know he was fired until he seen it in the newspapers. Ushully when you bounce a feller—you come up an' tell him so. When it come out in the papers—they said the boss of the Navy in Washinton sed it was done for the good of America—an' naval officers should ort to be Americans first. Them was kinda rugged words to use to a admirel who had won medals an' had done a top hand's job durin' the war. It don't set well with most folks who likes to have the cards dealt fair an' square. There was a lot of fellers like this here Hess, an' Whittiker Chamber, an' that feller Eisler who took a run-out powder an' jumped his bail an' run off to Rooshey with the only Oregon boot in Washington. Them boys had a finger in the Goviment pie in Washington. They was holdin' top jobs—an' noboddy, even the Presydent, didden call 'em much more than a red herring. To rope an' bust this here admirel an' tell folks he wasn't no American was like rubbin' salt into a saddle sore—an' as near as I could tell firin' him ain't savin' no money fer the taxpayer."

"Well what are we goin' to tell our Congrissman when we write him, or mebbe he

comes around to supper some night? That's what I'm waitin' fer you to tell me?" I demands to know. "You can't tell him nothin'," orates Greasewood, "you probibly want the goviment to fight grasshoppers for you. The cotton grower wants the goviment to fight weevils an' keep the price of cotton up. The wheat farmer he wants the price of wheat up. The chambers of commerces wants big dams built and plenty money spent in town. The old folks wants pensions—an' the young folks also wants 'em—so they don't have to keep paw an' maw—but have money to spend for cocktails, movies an' slot machines. The laborin' man wants unemployment inshurance—so he kin loaf fer a few weeks an' go duck huntin'. A lot of folks wants the goviment to buy 'em wigs, false teeth, wooden legs an' glass eyes with doctor's bills throwed in. Everyboddy wants somethin' but he also wants security—an' he wants that the goviment regulate everyone but him—an' the dog gone country is goin' Sochilist so fast you can't see the trees go by. The goviment is in the hole so fer you couldn't haul it out with a ten horse string team—an' noboddy gives a hoot. They don't want to think about it. Accordin' to some we owe the money to ourselves so it don't make no difference. All I kin say is that if we owe the money to ourselves we sure got a bum banker. So what kin a Congrissman do? Iffen he votes to cut here—he'll have a bunch of voters steppin' on his hocks—an' iffen he votes to cut spendin' there—he's got another tribe trampin' on his tail. Yessir—a Congrissman, I'll bet, is in a awful confusin' condition. It don't do no good to worry about it. I reckon the happiest man in the world would be like ol' Sam Yakey I met once down in the Ozarks when I went through there. He had a cupple acres of corn, a mule, a melon patch, an' a few razor back hogs. He had a jug of corn likker under the floor boards of the lean-to, some smoked side meat hangin' in the shed—an' spent most of his spare time coon huntin'. A city feller come along one day an' ast ol' Sam iffen he was contented. Ol' Sam sez, "I don't owe nothin', don't own nothin', never had nothin' an' don't expect nothing'—an' I don't know nothin' an' I don't give a darn no how!' Looks like to me Secertary Rasmussen that Greasewood's friend Sam Yakey was a awful happy man. Hopin' you are the same, I am

Yure fren,

NECKYOKE JONES.

P. S.—Sody Crick Smith wants to know iffen the goviment gives out subsidy—iffen he should take in a jug to get his'n!

Medical Economics

EXTENSION OF REMARKS
OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Thursday, February 2 (legislative day of Wednesday, January 4), 1950

Mr. O'CONOR. Mr. President, the question of an adequate health program for all our people is uppermost in the minds of legislators and the public at this time. In this connection an address delivered by Dr. R. B. Robins of Camden, Ark.—who by the way, is Democratic national committeeman for Arkansas—presents a number of pertinent facts about medical economics and other phases of the health situation which enter very definitely into any consideration of an adequate program of medical care.

I ask unanimous consent that the attached excerpts from the address be printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

WHY MEDICAL ECONOMICS?

(By R. B. Robins, M. D., FACS, Camden, Ark., professor of medical economics, University of Arkansas School of Medicine; read before section on general practice, Southern Medical Association, November 15, 1949)

Mr. Chairman and fellow physicians: I have chosen today to develop my subject by posing five questions and then giving the best answers that I can. The five questions are these:

1. Why has medical economics come to forefront in the last few decades?

2. How much has the cost of medical care increased during he past 2 decades?

3. Since economics is the study of supply and demand, what about the alleged doctor shortage?

4. What do the people get for their medical expenditures? (Health progress chart.)

5. Can we ever have adequate medical care?

In answering my first question I shall try to explain the more important reasons why the problem of medical economics has come to the forefront in recent decades. It is certainly true that for centuries physicians were almost exclusively concerned with the problem of what we today choose to call the scientific side of medicine. We have always had poor people in our midst and I suppose we always will. Over the centuries the physician has treated the people who are truly medically indigent without charge and has made a lower charge for people with modest incomes. And that continues to be the situation where I practice. I think the explanation for the increasing importance of the economic aspects of medicine is not to be found in the traditional problems of medical indigency but, rather, in the great change in certain medical procedures. Medical care is expensive and some types are becoming more expensive. I particularly like the statement of Dr. Harrison H. Shoulder, in his presidential address to the house of delegates of the American Medical Association in June 1947 (JAMA, June 21, 1947, p. 703) in which he said:

"When appendicitis was treated largely by the administration of opium pills and the application of poultices to the abdomen, the cost of administering such treatment was low but the resulting mortality was high. When the physician acquired an understanding of the disease and perfected a technique for its proper treatment, the mortality from the disease went down to a low level but the cost of treatment went up. When diabetes was treated largely by diet and the administration of codeine, the cost of such treatment was low but the mortality was high. The diabetic patient lingered in discomfort for a relatively short while. But when the members of the profession acquired an understanding of the disease and developed a specific method for its treatment and management, diabetic patients were given an almost normal life expectancy in comfort and usefulness. Thus the problems in medical economics have been brought to the forefront."

So, one of the reasons why medical economics has been coming to the forefront recently is that our increasing knowledge of treating the sick has introduced some expensive and complicated procedures. The physicians must undergo longer and more expensive training; indeed, it is quite a task to keep abreast of these new developments.

In my own practice, however, I have observed certain contrary tendencies. As late as 1935 (?) a pneumonia case meant about three dozen calls for me. Today a pneumonia case means not more than five calls. The wonder drugs have brought about a sharp reduction in the medical cost of treating pneumonia. To the pneumonia patient a great gain has come in getting him back on his feet and back to work quickly, as well as in the sharp reduction of the number of fatal cases of pneumonia.

As another illustration of this contrary trend toward lower cost, I might mention the almost complete disappearance of mastoid operations, which were so common up to a decade or so ago. As one outstanding ear specialist in New York City said: "The general practitioner can administer penicillin just as efficiently as my nurse. If the penicillin is administered in time, mastoid surgery is almost always unnecessary."

Yet it seems to me that in the over-all picture of medical care there has been a trend toward more expensive procedures, despite these significant exceptions in the other direction of pneumonia and mastoid surgery.

My answer to the first of these five questions—"Why did medical economics come to the forefront in the past few decades?"—is that, with the exceptions noted, we have developed new procedures which cost more money but which reduce the mortality rate from certain outstanding diseases; secondly, the purchase of medical care is a negative expenditure by the consumer and can never be made as attractive as the advertisers make the purchase of cars, radios, refrigerators, and, I might add, alcoholic beverages.

Finally, how is organized medicine meeting these new problems of medical economics? I would not answer that question fully without making a separate speech. We have encouraged the development of voluntary insurance—Blue Cross-Blue Shield plans as well as coverage by insurance companies. Since the premium for a family membership of the Blue Cross-Blue Shield type costs about 20 cents a day, we have developed a new test for medical indigency for the millions of people to whom these plans are available. This new test of medical indigency for the broad benefits provided by Blue Cross-Blue Shield plans is the ability of a family to pay 20 cents a day—that is, the price of a package of cigarettes, a bottle of beer, or a gallon of gasoline a day. Prior to the 1940's the test of medical indigency for most people was the ability to postpay the cost of an illness which occasionally ran up to several hundred dollars. So, in brief, voluntary insurance has helped the people meet this new problem of medical economics by giving them an opportunity to prepay in small regular amounts instead of postpaying in very irregular amounts. Subscribing families can now choose between "budget and bludgeon" in the matter of medical-care costs.

II

The second of my five questions is: "How much has the cost of medical care increased during the last two decades of rapid advance in scientific medicine?"

According to the bureau of medical economic research of the American Medical Association, these expenditures by the people for medical care for physicians, dentists, hospitals, drugs, etc., have fluctuated closely around 4 percent of the amount spent by consumers for food, clothing, shelter, and all other goods and services (Bulletin 66, The Cost and Quantity of Medical Care in the United States, 20 pp., 1948.)

My statement that these expenditures have been about 4 percent of total personal consumer expenditures in each year since 1929 may seem to contradict the answer to my first question that certain improvements in medical science, which reduce mortality from certain diseases, have made medical care more expensive.

UNIVERSITY OF MICHIGAN LIBRARIES

What I am trying to say is that although the number of dollars spent for medical care has increased from $3,000,000,000 in 1929 to $6,500,000,000 in 1947, total consumer expenditures for all goods and services have kept pace with this increase. The American people have chosen to spend about 96 percent of their family budgets on items other than medical care. This is not my decision, it is not your decision, it is not the decision of any offical in Washington; it is the decision of all the people. It represents their collective judgment and decision. It is not that they could not afford to spend more for medical care but that they have chosen to spend 96 percent on items other than medical care. The physicians' share of the medical-care dollar has decreased from 32 cents in 1929 to 26 cents; the hospital's share has risen from 13 to 21 cents; while the dentists' share has declined slightly from 16 to 14 cents. I consider the maintenance of this cost level at 4 percent one of the great accomplishments of American medicine.

Some of you may be more interested in the matter of unit prices than in the total dollars spent. Again quoting from the same source we find that, according to the United States Bureau of Labor Statistics, physicians' fees during the 1940's, hospital-room rates, dentists, drugs, and other basic items in medical care rose about 41 percent while the cost of living was rising 71 percent. Considering the two largest medical-care items separately we find that physicians' fees, according to this Government source, rose 36 percent but hospital-room rates soared 112 percent. Those of you who are familiar with hospital operations, whether you are laymen or physicians may appreciate that the hospital buys labor, food, and fuel, items which have risen very rapidly in price, and sells these soon after purchase in the form of food, shelter, and services to patients. The hospital is exposed to the full pressure of contemporary inflation and cannot dodge it. I do not mean to criticize hospital administrators. In summarizing this point I repeat that the prices of all medical-care items, even including hospital-room rates, have risen only slightly more than one-half as fast as the general cost of living, of which these medical-care items constitute about 4 percent. Secondly, for physicians' fees alone the increase is almost exactly one-half the increase in the cost of living.

We physicians are proud of our increasing ability to provide more and more medical care. We appreciate that among the major reasons for this increase in technological efficiency are the wonder drugs and the increasing number and efficiency of our technical assistants—for example, laboratory and X-ray technicians.

Therefore, my answer to this second question on what it costs is that the consumer still spends only 4 percent of his budget dollar on medical care; that the prices of medical-care items have gone up much more slowly than the cost of living, and that 1,000 doctors can deliver much more medical care today than they could 10 years ago.

III

My third question is, What about this alleged shortage of doctors? Is it real or imaginary? I believe it is real. I think that prosperity means shortage. I think that there is a shortage of doctors in exactly the same way that there is a shortage of household help, bricklayers, and school teachers. If there wasn't a shortage I don't think we would be enjoying this period of prosperity which has become somewhat less robust in recent months. But I do not think that this is what most of the advocates of compulsory sickness insurance are talking about when they discuss this alarming shortage of doctors. They often mention the deficit for 1960, placing it at something like 40,000 doctors and at other times as low as 25,000 doctors. What they really mean is that we have a permanent doctor shortage in the United States. While I agree that at first thought there does seem to be a temporary doctor shortage; certainly there is in the armed services—I absolutely deny that there is anything that may be called a permanent, alarming doctor shortage.

There was a real doctor shortage for civilians during World War II when about 40 percent of the physicians were in the armed services taking care of the 9 percent of the population in uniform. The civilians, however, did not die off like flies. The civilian doctors were badly overworked, I admit, but the health of civilians during World War II was very good. Aided by technical assistants who relieved them of routine tests, and by new drugs and methods, which are continuing to increase steadily, the civilian doctor was able to maintain the health of civilians at a high level.

And what of our present situation? The United States has more doctors per 100,000 people than any nation in the world except Palestine, where there is a temporary situation of a large number of refugee doctors who are doctors but are not in the medical practice. Secondly, the medical population of the United States has increased about 15 percent since 1940, whereas the total population has increased only 13 percent. Even the people who are talking about the alarming shortage of doctors predict that the number of doctors per 100,000 people will be greater in 1960 than it is now.

Is there a shortage of doctors in certain communities and areas in the United States? Before I consider that point, I want to tell you that there are 10 counties in South Dakota that do not have a doctor and yet the people of South Dakota are healthier than the people in any of the States that have a large number of doctors per 100,000 population. I do not think these facts regarding South Dakota belittle the medical profession; rather, these facts support the contention that there is more to health than the number of doctors in the county or State.

Now I turn to the supply situation in rural areas. Some small towns are not increasing their population and some are actually losing population. The system of hard roads and automobiles has made small towns a part of a larger trading area. This change in the trading habits of the people has affected the practice of medicine and the distribution of physicians. I doubt that we shall ever again have in the small towns in America the number of physicians that we did before World War II. After all, accessibility of a physician is not so much a question of distance as it is of time, and the time is being constantly reduced by more and better highways and better means of transportation.

Finally on this doctor shortage I should like to point out that an economic depression would reduce the demand for medical services less than it would for some other services, but the reduction would be sharp enough to warrant caution in reaching conclusions during this period of frenzied prosperity about a shortage of doctors in 1960.

The estimates which the advocates of compulsory sickness insurance have made about the doctor shortage in 1960 are based upon guesswork, mechanistic formulas, and an unrealistic approach to the problem of supply. When somebody tells you that there is an undue concentration of physicians in large teaching centers, you should ask him if he means an undue concentration of interns and residents.

IV

My fourth question is: "What do the people get for the 4 percent which they spend for medical care?" What medicine has done in this century, aided by better food, better sanitation, and better houses, is to reduce the fear of death.

V

My last question is "Can we ever have adequate medical care?" A physician may know, for a particular patient suffering a well-known ailment, what constitutes adequate care for that particular patient at that particular time but I doubt that the problem of adequate medical care for the entire American people is that simple. Federal Security Administrator Ewing has been claiming that with socialized medicine he could eliminate 325,000 deaths each year or, in other words, cut the annual number of deaths from the present figure of approximately 1,400,000 down to approximately 1,100,000. I want to say emphatically that he can do no such thing; nor can all the physicians of this country. Why, 1,100,000 deaths a year would be fewer deaths than we had in 1900 when we had only one-half as many people in the United States as we have now! It stands to reason that the number of deaths depends upon the number of people in the country and the death rate at each age. As we get more and older people in the United States, the number of deaths will increase from the present 1,400,000 to 1,600,000 or 1,700,000 in the next quarter century. Administrator Ewing doesn't understand that health progress is one idea and the annual number of deaths another idea.

Medical progress has been so rapid that fatal accidents rather than any of the great natural killers is the No. 1 death hazard of the working people of the United States. Heart disease kills four and one-half times as many persons as accidents, but many heart victims are retired persons, who have completed their working period of life. In 1945, the average age at death of persons dying from heart disease was 69; from accidents, 46. More unrealized working years of life—age 20 to 65—are cut off by fatal accidents than by deaths caused by diseases of the heart.

My answer to the fifth and final question can be summarized in a single sentence—as long as pain comes too often and death comes too soon to us mortals medical care can never be adequate. It can and will be better.

FEPC

EXTENSION OF REMARKS

OF

HON. JOHN W. HESELTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1950

Mr. HESELTON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an analysis and comparison of H. R. 4453, as reported in the House from the Committee on Education and Labor, of H. R. 6841, which has recently been introduced, and of the Massachusetts law enacted in 1946, prepared by the American Law Section of the Legislative Reference Service. I hope and believe that the analysis and comparison will be useful to my colleagues who are interested in developing the best legislation possible in this field, if and when the House is permitted to consider the problem.

FEPC, an analysis and comparison of H. R. 4453, H. R. 6841, Eightieth Congress, and the Massachusetts FEPC law, 1946 acts, chapter 368

H. R. 4453 (as reported in House)	H. R. 6841	Massachusetts acts, 1946, chapter 368
A. Name of act (sec. 1).	A. Name of act (sec. 1).	A. Name of act.
1. Federal Fair Employment Practices Act.	1. Fair Employment Practices Act.	1. None.
B. Findings and declaration of policy (sec. 2).	B. Findings and declaration of policy (sec. 2).	B. Declaration (sec. 1).
The rights of some persons to employment without discrimination because of race, color, religion, ancestry, or national origin are being denied. It is essential to the general welfare that these rights be protected. Declares it to be the right of the individual to be free from such discrimination and that this act is necessary: (1) To remove obstructions to commerce. (2) To insure complete enjoyment of constitutional rights. (3) To promote observance of rights and freedoms undertaken by the United States under the United Nations charter and to further national policy with respect to the universa' declaration of human rights proclaimed by the General Assembly of the United Nations.	Declares that the denying of employment opportunities and discrimination against properly qualified persons by reason of race, creed, or color deprives the United States of the fullest utilization of its capacities for production and defense, and burdens, hinders, and obstructs commerce. Declares it to be the policy of the United States to eliminate discrimination because of race, creed, or color in employment relations.	Declares the right to work without discrimination because of race, color, religious creed, national origin, or ancestry to be a right and privilege of the inhabitants of the Commonwealth.
C. Definitions (sec. 3). Definitions include: "Employer"—a person engaged in commerce employing 50 or more, etc., except States or their municipal or political subdivisions or religious, charitable, fraternal, social, educational, or sectarian organizations not organized for private profit but includes a labor organization employing 50 or more individuals which is engaged in commerce. An exemption is made from the act of employers employing aliens outside the continental United States, its Territories, and possessions (sec. 4).	C. Definitions. None.	C. Definitions (sec. 4, ch. 151 B, sec. 1). Definitions include: "Employer" does not include employers of 5 or less persons, social clubs, fraternal, charitable, educational, or religious associations not organized for private profit but does include the State and all political subdivisions, etc.
D. Unlawful employment practices (sec. 5). It shall be an unlawful practice— (a) For an employer: (1) To refuse to hire, to discharge, or discriminate against a person with respect to terms, conditions, or privileges of employment because of race, color, religion, ancestry, or national origin. (2) To utilize in hiring any employment agency, placement service, or other source which discriminates. (b) For a labor organization: (1) To discriminate against any persons. (2) To limit, segregate, or classify its membership because of race, color, etc. (c) For either an employer or a labor organization: (1) To discharge, expel, or discriminate against a person because he has opposed such unlawful employment practice or participated in any proceeding under this act.	D. Unlawful employment practices. None.	D. Unlawful employment practices (sec. 4, ch. 151 B, sec. 4). Makes it an unlawful employment: (1) For an employer because of race, color, etc., to refuse to hire, to bar, or discharge an employee or to discriminate in compensation, or in terms, conditions, or privileges of employment unless based upon a bona fide occupational qualification. (2) For a labor organization, because of race, color, etc., to exclude from full membership rights, expel, or discriminate against any of its members or any employer or any individual employed by an employer unless based on a bona fide occupational qualification. (3) For an employer or employment agency to print or circulate or use any form of application for employment, make any record or inquiry which expresses any discrimination as to race, color, etc. (4) For any person, employer, labor organization or employment agency to discharge, expel, or discriminate against any person for participating in any proceeding under this act. (5) For any person to aid, abet, incite, etc., the doing of those forbidden acts.
E. Fair Employment Practice Commission (sec. 6). Creates a Fair Employment Practice Commission in the executive branch composed of five members appointed by the President with advice of the Senate for 5-year terms. The Commission shall have: (a) Powers: (1) To appoint officers and employees under civil-service rules. (2) To cooperate with regional, State, local, and other agencies. (3) To pay witnesses the same fees as in United States courts. (4) To furnish technical assistance to further compliance with the act.	E. Fair Employment Practice Commission (sec. 3). Creates a similar commission with: (a) Powers: (1) To appoint officers and employees. (2) To cooperate with and utilize regional, State, local, and other agencies and to use volunteer and uncompensated services. (3) To pay witnesses the same fees as in United States courts. (4) To make, amend, and rescind in such manner prescribed by the Administrative Procedure Act, rules and regulations to carry out the act.	E. Massachusetts Fair Employment Practices Commission (sec. 3). Creates a Massachusetts Fair Employment Practices Commission composed of three members appointed by the Governor with the advice of the council for 3-year terms. The commission shall have powers (sec. 4—ch. 151B, sec. 2 and 3): (1) To formulate policies to effectuate the purposes of the act, and to make recommendations to officers and agencies of the Commonwealth in aid thereof. (2) To function anywhere within the Commonwealth. (3) To appoint officers and employees within the limitations provided by law. (4) To obtain and utilize the services of all executive departments and agencies.

UNIVERSITY OF MICHIGAN LIBRARIES

H. R. 4453 (as reported in House)	H. R. 6841	Massachusetts acts, 1946, chapter 368
(5) To assist an employer acting in good faith whose employees refuse or threaten to refuse to cooperate in effectuating the provisions of the act. (6) To make technical studies to effectuate the act. (7) To appoint local, State, or regional advisory and conciliation councils to aid in effectuating the act and to make studies and recommendations for that purpose.	(5) To serve processes and other papers, etc. (6) To make technical studies to effectuate the purposes of the act.	(5) To adopt, amend, and rescind rules and regulations to carry out the act and the policies of the commission. (6) To receive, investigate, and pass upon complaints of discrimination in employment. (7) To conduct hearings, subpena witnesses, take testimony. (8) To create local, regional, or State-wide advisory and conciliation agencies and councils to aid in effectuating the purposes of the act. (9) To issue publications and studies to aid in effectuating the act. (10) To render an annual report to the Governor and general court.
(b) Investigatory power (sec. 9). (1) To issue subpenas. (2) To administer oaths, examine witnesses, and receive evidence. (3) To apply to United States district courts to enforce subpenas, etc., against contumacious persons.	(b) Duties (sec. 4). (1) To make comprehensive studies of discrimination in various sections of the country and of the best methods of eliminating it. (2) To formulate plans in cooperation with interested public and private agencies for its elimination. (3) To publish reports relating to elimination of discrimination. (4) To cooperate with and furnish technical assistance to employers, labor unions, and other public and private agencies. (5) To receive and investigate complaints. (6) To make specific and detailed recommendations to interested parties for its elimination. c. Investigatory powers (sec. 5). (1) To examine and copy evidence. (2) To issue subpenas. (3) To administer oaths, examine witnesses, receive evidence, and conduct investigations. (4) To apply to United States district courts to enforce subpenas, etc., against contumacious persons.	
F. Self-incrimination (sec. 9 (e)). No person shall be excused from testifying or producing evidence in obedience to a subpena on the ground that the testimony or evidence may tend to incriminate him or subject him to a penalty or forfeiture but no such person shall be prosecuted or subjected to any penalty or forfeiture on account of such testimony or evidence except perjury in so testifying. Limited to natural persons only.	F. Self-incrimination (sec. 5 (f)). Same, except no express limitation to natural persons.	F. Self-incrimination (sec. 4—ch. 151 B, sec. 3, 7). Same, except no express limitation to natural persons.
G. Prevention of unlawful employment practices (sec. 7). The Commission shall have exclusive powers to prevent unlawful employment practices under the act but may cede jurisdiction to State and local agencies where State and local acts are comparable to this act. The Commission on a written sworn charge shall investigate and endeavor to eliminate the unlawful practices through informal conference, conciliation, and persuasion. On failure to obtain voluntary compliance by informal methods, a formal hearing may be held before a member of the Commission or designated agent with the right to counsel and to cross-examine witnesses, etc. At conclusion of the formal hearing the record thereof shall be transferred to the Commission (or three designated members) for decision. The Commission shall then issue a cease-and-desist order or an order of dismissal. The whole proceedings hereunder shall conform to the Administrative Procedure Act.	G. None.	G. Prevention of unlawful employment practices (sec. 4–ch. 151B, sec. 5). The provisions here are, in general, similar to those of H. R. 4453, except that the formal hearing, after the informal methods have failed, is held before the commission itself and an order is issued thereafter.
H. Judicial review (sec. 8). Provides for a petition, by either the Commission or a party aggrieved by a final order of the Commission, to the United States court of appeals under the procedures established by the Administrative Procedure Act. Decision of the court of appeals is subject to a review by the United States Supreme Court.	H. None.	H. Judicial review (sec. 4, ch. 151B, sec. 6). Similar, in general, to H. R. 4453 with review by the superior courts of the Commonwealth in the counties with further review by supreme judicial court.

H. R. 4453 (as reported in House)	H. R. 3841	Massachusetts acts, 1946, chapter 368
I. Enforcement of orders directed to Government agencies and contractors (sec. 10). Authorizes the President to make Federal practice conform to the policies of the act and to prescribe administrative remedies by Executive order with no judicial review. The Commission may request the President to take such action as he deems appropriate to obtain compliance with the Commission's orders. Authorizes the President to make regulations to prevent Government contractors (contracts exceeding $10,000) from continuing unfair employment practices. The Commission shall enforce such regulations.	I. Discrimination in employment by the Federal Government (sec. 6). The Commission shall make a study of discrimination in the Federal Government and recommend to Congress a specific plan for its elimination together with the necessary legislation.	I. None.
J. Notices to be posted (sec. 11). Requires employers and labor organizations to keep a notice prepared by the Commission, with excerpts from the act, posted in conspicuous places on their premises under penalty of a $500 fine.	J. None.	J. Similar with fine of from $10 to $100.
K. Forcibly resisting the Commission or its representatives (sec. 14). To forcibly resist, oppose, impede, intimidate, or interfere with a member, agent, or employee of the Commission in the performance of duties under the act or because of the same is punishable by a $500 fine and/or imprisonment for not more than 1 year or both.	K. Willful interference with Commission agents (sec. 7). Similar, in general, with $5,000 fine and/or imprisonment for not more than 1 year or both.	K. Willful interference with the Commission (sec. 4–ch. 151 B, sec. 8). Similar, in general.
L. Veterans' preference (sec. 12). This act shall not modify Federal, State, Territorial, or local veterans' preference.	L. None.	L. None.
M. Rules and regulations (sec. 13). The Commission shall make, modify, and rescind rules and regulations to carry out the act. The regulations must conform to the Administrative Procedure Act.	M. None.	M. None.
N. None.	N. None.	N. Construction of the act (sec. 4–ch. 151 B, sec. 9). The act is to be liberally construed.
O. Separability clause (sec. 15). The usual provision.	O. None.	O. Similar (sec. 4–ch. 151 B, sec. 10).

Freeman W. Sharp, American Law Section, January 30, 1950.

First Annual Report of Massachusetts Fair Employment Practices Commission

EXTENSION OF REMARKS
OF

HON. JOHN W. HESELTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1950

Mr. HESELTON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the major portion of first Annual Report of the Massachusetts Fair Employment Practice Commission covering the period from November 10, 1946, to November 30, 1947.

So as to emphasize one of the most outstanding administrative principles adopted by the Massachusetts commission may I call your attention to the following sentence from the report of the commission to the Governor and the legislature in 1946 when the law was implemented by the creation of the commission:

It has not chosen to conduct a punitive expedition in Massachusetts but has preferred to steer a conservative course of educating employers and workers alike as to their responsibilities and obligations under this law.

I think anyone familiar with administrative law and procedure realizes that the entire success of any such law depends upon the policies adopted by those charged with the administration of the law. If they are such as to turn the administration into a punitive expedition, this will bring violent criticism and justifiable resentment and the administrators alone will be responsible for the possible repeal of the law. If a Federal law in this field is enacted, those who are chosen to administer it will have much of value in the experience in Massachusetts and in other States where similar laws have been so successfully initiated and administered.

May I point out also that in this first report you will find another significant sentence, as follows:

The fact that the commission has not been obliged to proceed to a formal hearing with respect to any complaint of employment discrimination filed with it is, itself, a silent endorsement of the wisdom of the act and the manner in which it has been administered.

The following is from the report:

ADMINISTRATION OF THE FAIR EMPLOYMENT PRACTICE ACT AND ITS EFFECTS

On August 21, 1946, the Massachusetts fair employment practice law became effective, thereby giving to inhabitants of the Commonwealth the right to work without discrimination because of race, color, religious creed, national origin or ancestry.

In the report of this commission to the Governor and to the legislature last year appeared the following paragraph:

"The commission has approached the administration of the law with a keen appreciation of the necessity of dealing fairly and peaceably with all persons who are subject to its provisions. It has not chosen to conduct a punitive expedition in Massachusetts but has preferred to steer a conservative course of educating employers and workers alike as to their responsibilities and obligations under this law. The commission has been continuously mindful of this policy in the formulation of its regulations, in the conduct of its educational program and in the investigation and conciliation of complaints."

During the past year the commission has administered the Fair Employment Practice Act with the same approach to the problem of eliminating employment discrimination in Massachusetts. The results have shown clearly the wisdom of that course of administration.

The processing of each complaint of employment discrimination where investigation showed that there was probable cause to credit the allegations of the complaint resulted in the elimination of the alleged discriminatory practice by conference, conciliation and persuasion. Not only did the respondent eliminate the discriminatory employment practice complained of, but also adjusted his entire employment policy to give equal opportunity to all people in the Commonwealth.

Investigations by the commission, subsequent to the conciliation of cases, has shown that changes in the personnel practices

UNIVERSITY OF MICHIGAN LIBRARIES

agreed to in conference with the Commission have been faithfully carried out. In almost every case workers of hitherto excluded minority groups have proven to be satisfactory to the employers and have dispelled by their harmonious relationships with other employees the fears of employers that prejudice within would disrupt their organizations.

The fact that the commission has not been obliged to proceed to a formal hearing with respect to any complaint of employment discrimination filed with it is, itself, a silent endorsement of the wisdom of the act and the manner in which it has been administered. Yet the large number of complaints processed by this commission does not tell the whole story of the effect of the Fair Employment Practice Act on employment. The existence alone of the law has awakened many employers to their obligations to give equal opportunity in employment to all people and the evidence of the voluntary cooperation of these employers against whom no complaints whatsoever had been filed is very impressive.

Statistical report of the commission—Nov. 10, 1946–Nov. 30, 1947

Complaints:	
Complaints initiated and received	306
Complaints adjusted by conciliation	153
Complaints dismissed for lack of probable cause	41
Complaints dismissed for lack of jurisdiction	9
Cases withdrawn	1
Complaints in process of investigation	102
Investigations:	
Investigations initiated by the commission	35
Investigations adjusted by conciliation	15
Investigations dismissed for lack of probable cause	14
Investigations pending	6

NEWSPAPERS

In January and February 1947, members of the commission met with representatives of the papers of Boston and other cities and towns of Massachusetts and discussed with them the duty of these publications not to print help-wanted advertisements which specified or limited the race, color, religious creed, national origin, or ancestry of applicants for employment. At these meetings the newspapermen manifested complete willingness to cooperate with the commission.

A study of classified advertisements appearing in newspapers published throughout the State was commenced in December 1946. One hundred and four violations were noted during the first month. In November 1947 the number was 14, which is evidence of fine cooperation.

LABOR ORGANIZATIONS

The commission has undertaken a survey of employment discrimination in the A. F. of L. and CIO organizations with encouraging results, particularly because these branches of the organized-labor movement are apparently complying with the law and in most cases are showing a disposition to cooperate with the commission. A study of the policies of these unions has not been completed, but the majority of their constitutions and bylaws have been screened and no discriminatory clauses found.

The commission is at the present time investigating a number of complaints in which violations of the fair employment practice law by independent labor unions are involved.

EMPLOYMENT AGENCIES

The commission has had occasion to investigate discriminatory practices of some employment agencies. In addition, it has met with representatives of employment agencies with beneficial results. This includes the cooperation which the commission has received from the division of employment security, which operates the Massachusetts State Employment Service.

EMPLOYERS

The largest number of complaints filed with the commission has been against employers allegedly responsible for employment practices which are unlawful under the statute, particularly in the refusal to hire qualified applicants for employment because of considerations of race, color, religious creed, national origin or ancestry. In the processing of these complaints, the Commission has received good cooperation from employers in the following fields: insurance, retail marketing, manufacturing, restaurant and liquor sales, motion picture distribution and exhibiting, transportation, hotel management, packing, general distribution and sales.

EDUCATION

The statute empowers the fair employment practice commission to establish councils throughout Massachusetts.

"The commission may empower them to study the problems of discrimination in order to foster through community effort * * * good will, cooperation and conciliation among the groups and elements of the population of the Commonwealth * * * and make recommendations to the commission for the development of policies * * * and for programs of formal and informal education which the commission may recommend to the appropriate State agency."

Under this authority the first fair employment practice council was established in Springfield with an outstanding membership. Also under the authority of the law a State advisory council of the fair employment practice commission was appointed with an equally outstanding membership and constant efforts were made by all concerned to carry out a State-wide program of education and conferences with many civic, business, industrial, labor, and fraternal organizations.

Second Annual Report of the Massachusetts Fair Employment Practice Commission

---

EXTENSION OF REMARKS
OF

HON. JOHN W. HESELTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1950

Mr. HESELTON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the major portion of the second annual report of the Massachusetts Fair Employment Practice Commission covering the period from November 30, 1947, to November 30, 1948.

May I emphasize two significant paragraphs from that report, as follows:

From the beginning, this commission has recognized that the elimination of discriminatory employment practices based upon individual and group prejudices could be accomplished most effectively by reason instead of force. It has endeavored to deal fairly in every instance with complainants and respondents. It has appealed to the intelligence and sense of justice of employers and workers alike in each attempt to break down the barriers of racial and religious intolerance.

In short, the commission has not conceived of the fair employment practice law as an instrument of compulsion. Rather, it has regarded the statute as presenting an opportunity to wipe out the ignorance and doubts and fears which men have of other men who are different with respect to color, religion, or natural origin. Thus in its whole work, it has attempted to substitute understanding for intolerance.

I am sure you will be interested also in the statement that from the beginning of its administration the Commission had handled a total of 445 complaints but had not had a single occasion to conduct a formal hearing, or have a matter which it had settled in conference brought into a court of law for further consideration.

The State advisory council in this period initiated a study of what the public school authorities were doing by way of developing democratic attitudes and behaviors. The findings of that study, as tabulated, revealed what the Commission describes as "an encouraging increase of interest on the part of Massachusetts educators in one of democracy's most pressing problems."

In addition to the Springfield council a greater Boston council was organized during this period again with a membership of outstanding citizens, and a local council was being organized in New Bedford.

The following is from the report:

INTRODUCTION

Two full years have now passed since the effective date of the fair employment practice law. The law declared that equal opportunity to work without discrimination because of race, religion, or origin is an express right and privilege of the people of Massachusetts. It authorized the establishment of a commission whose duties are to eliminate discriminatory employment practices and to foster good will and cooperation among all groups and elements of our population.

From the beginning this commission has recognized that the elimination of discriminatory employment practices based upon individual and group prejudices could be accomplished most effectively by reason instead of force. It has endeavored to deal fairly in every instance with complainants and respondents. It has appealed to the intelligence and sense of justice of employers and workers alike in each attempt to break down the barriers of racial and religious intolerance.

In short, the commission has not conceived of the fair employment practice law as an instrument of compulsion. Rather it has regarded the statute as presenting an opportunity to wipe out the ignorance and doubts and fears which men have of other men who are different with respect to color, religion, or national origin. Thus in its whole work it has attempted to substitute understanding for intolerance.

The question is often asked, "Is FEPC really working out?" It can be frankly stated that because of FEPC people of this Commonwealth of all races, creeds, and origins have today economic opportunities which they never had before. These people are sharing now the benefits of American citizenship along with its obligations. They have a growing faith in the American doctrine of equal opportunity.

Important are every single new job opportunity which is created by FEPC and each old barrier which is broken down among people of different races and religions. For every time that opportunity and recognition are granted to any individual for achievement regardless of race, color, or origin, the cause of our national ideal of equality of opportunity is advanced.

ENFORCEMENT ACTIVITIES

In 1948, the fair employment practice commission processed 142 complaints of economic discrimination and settled 135 of these after investigation and conference, indicating thereby that some discriminatory employment practice had been eliminated in each case. From the beginning of its administration in the fall of 1946, the commission has handled a total of 445 complaints, involving business organizations employing over 350,000 people, and has not yet had occasion to conduct a single formal hearing or have a matter which it has settled through conference brought into a court of law for further consideration.

In addition, it is true that the procedures which employers established to remove barriers against the employment of workers because of their color, religion, or national origin have had a marked effect in certain fields of employment. So it happens, that the settlement of one case in a given field has opened up scores of job opportunities to persons belonging to a group which has been the victim of racial or religious discrimination for years.

For example, employment opportunity in the railroad industry in Massachusetts, which gives work to over 75,000 people, has been shackled for years by the restrictive racial policies of the big brotherhoods. In 1948, the railroad carriers sat down with the Massachusetts FEPC and the New York State Commission Against Discrimination and effected an agreement in the matter of certain complaints whereby Negroes have been employed as stewards and machinists and have been placed in other categories of employment from which they had been barred hitherto because of their color.

Again in 1948, as a result of a complaint, the Massachusetts FEPC conferred with representatives of the automobile industry in an atmosphere of respect and cordiality and worked out an agreement which resulted in the hiring of Negro workers in that field on the same basis as white workers.

More and more, captains of industry are becoming convinced, when agreements like these prove of benefit to the employer as well as to the worker, that there need be no real reason to fear friction among qualified American workers of different colors or religions.

Then there is the retail merchandising field. Some employers in this industry had been extremely skeptical about the employment of any but white people in selling jobs. In 1948, FEPC can point to many stores where, as a result of complaints, Negro salesgirls are employed in good number and are no longer a novelty. In these same stores, as a result of the successful experience of employers with Negro salesgirls, equal opportunity is now being given to men and women regardless of their color, religion or origin, in clerical, operating, and supervisory positions. Some of the recent changes in this field have come about by agreement with FEPC, others have occurred through voluntary recognition of the spirit of equal opportunity before and after the fair employment practice law became effective.

In view of what is happening in Massachusetts, it is not at all surprising that the United States Department of Labor in 1948 pointed out that the cities which lead in the number of Negroes employed in white collar, technical and professional jobs in private enterprise are found in areas which have FEPC legislation.

Likewise, a recent Nation-wide survey by the National Community Relations Advisory Council disclosed that queries on religious affiliations by employers in Massachusetts (and in New York and New Jersey, which also have FEPC laws) have been occurring only one-sixth as often as in States not having FEPC laws.

Statistical report, Nov. 10, 1946, to Nov. 30, 1948

Complaints:	
Initiated and received	445
Closed after investigation and conference	288
Closed for lack of probable cause	89
Closed for lack of jurisdiction	13
Withdrawn	11
Pending investigation and conference	45
Investigations without formal complaint:	
Initiated by the Commission	60
Closed after investigations and conference	21
Closed for lack of probable cause	26
Transferred to complaint	3
Pending investigation and conference	10
Nature of complaints and investigations:	
Based upon alleged color discrimination	391
Based upon alleged religious discrimination	71
Based upon alleged discrimination because of national origin	39
Based upon alleged discrimination because of ancestry	4
Types of complaints:	
Against employers	313
Against employment agencies	30
Against labor unions	16
Against employees	2
Others	145

In noting the progress which has been made during the past 2 years in accomplishing the purposes of the fair-employment-practice law, attention should be called to the splendid cooperation which the commission has received from the daily and weekly newspapers which are published in the metropolitan areas of Massachusetts. Not only have they been fair and considerate in their reporting of the activities of this commission, but they also have been keenly alert to their own obligation under the law to eliminate help-wanted advertisements which specify or restrict color, religion, or ancestry of the applicant. For example, in December 1946, 104 violations of this type were noted in the help-wanted sections of Massachusetts newspapers. By November 1947 this figure had decreased to 14. A check of the newspapers in October 1948 revealed no advertisement at all of this sort.

In the summer of 1948, the staff of the commission conducted a survey of all cases which had been disposed of by May 1948 to ascertain the extent of and reaction to compliance with the fair employment practice law. This survey revealed: (1) That there had been a considerable increase in the employment of workers belonging to groups which had been discriminated against in the past because of color, religion, or national origin; and (2) that the policy of giving equal opportunity to all people regardless of color, religion, or national origin had proved to be no burden upon employers with respect to either management-employee relationships or employer-customer relationships.

EDUCATIONAL ACTIVITIES

Investigations

Under the section of the statute which provides that the commission may study problems of discrimination in fields of human relationship outside of employment, 60 such investigations have been made in 2 years. Among these investigations, FEPC has looked into the matter of certain discriminatory practices which are alleged to exist in Massachusetts hospitals. Also, the commission was active in the summer of 1948 in eliminating discrimination against colored people by certain restaurants and other public places of recreation in the Cape Cod area. It has already taken the first steps to erase religious discrimination from the accommodation policies of certain inns and hotels in the resort areas of this Commonwealth. It should be noted with reference to these investigations that the commission has no power of enforcement but must rely solely upon educational methods.

Police departments

The executive secretary of the commission is contacting the various police departments in metropolitan Boston, which includes 39 cities and towns. A former member of the police force, he has done graduate work at Harvard in human relations. He is suggesting that any instances of tension between groups in the various communities be reported to the commission and is also available as a consultant in such matters. By invitation, he has addressed groups of policemen in different parts of the Commonwealth and has contacted the heads of police departments in many cities. As a result of this work, police officers and executive heads of police departments have taken steps to allay religious and racial tensions in certain areas and have assisted in enforcing the provisions of the act.

The report concludes as follows:

OTHER EDUCATIONAL ACTIVITIES

1. A quarterly news letter Toward Racial and Religious Understanding was published containing contributions from 49 organizations, most of them private. Increasingly, this news letter is becoming a record of the various efforts to promote intergroup understanding, respect, and good will.

2. Among the educational materials distributed are a summary of the act and an explanatory pamphlet, entitled "What Is the Fair Employment Practice Law?," both of which have been widely read. The Associated Industries of Massachusetts, the Massachusetts Technical and Commercial Employment Association, the A. F. of L., the CIO, and many other groups have helped greatly in the distribution of these materials.

3. The Scrapbook for Teachers, a cooperative undertaking of the commission and the Massachusetts Committee of Catholics, Protestants, and Jews, contains book reviews and summaries of noteworthy magazine articles. It has been very popular with the general public as well as with teachers, for whom it was especially compiled.

4. Over 600 kits of material concerning the Fair Employment Practice Act have been sent to superintendents of public and parochial schools and to junior and senior high-school principals throughout the State, together with a letter offering the services of the commission in furnishing speakers for assembly programs. The response to the letter has been enthusiastic, and a schedule of speaking engagements has been arranged with the schools.

5. In an effort to extend the work of the commission throughout the State, plans have been made for members of the staff to be located during 1 day or more in some of the larger cities for consultation concerning the purpose and functioning of the law and the taking of complaints.

6. The commissioners have welcomed opportunities to explain the philosophy and provisions of the act. Over 200 addresses have been made by them, and about as many conferences have been held with widely varying groups in the offices of the commission.

The commission feels that its law-enforcing program, as well as its educational program, has been benefited by educational

UNIVERSITY OF MICHIGAN LIBRARIES

work preceding the passing of the fair-employment-practice law, governmental groups and private organizations have worked hard, and are still working hard, to promote good will and fair play in Massachusetts. Their success has helped our commission, and their continued cooperation is earnestly desired.

Third Annual Report of the Massachusetts Fair Employment Practice Commission

EXTENSION OF REMARKS
OF

HON. JOHN W. HESELTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1950

Mr. HESELTON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the important portion of the Third Annual Report of the Massachusetts Fair Employment Practice Commission covering the period from November 30, 1948, to November 30, 1949.

It is most significant that in 1949 the commission could report that not once had a complaint required judicial review but rather each case had been settled through conference. I call your attention to this most important statement of policy and principle by the commission:

Once more the commission acknowledges the wisdom of the provision of the law requiring that the first efforts to adjust complaints be made through "conference, conciliation, and persuasion." This process invites cooperation and is the antithesis of swinging a big stick.

The following is from the report:

INTRODUCTION

This is the third annual report of the administration of the fair-employment practice law.

During the years since 1946, when the law became effective, this Commission has processed several hundred complaints alleging unlawful discrimination in employment because of race, religion, or national origin. In addition to this quasi-judicial function, and through its educational activities, it has brought about solutions of other problems involving discrimination outside the field of employment and has endeavored with gratifying results to educate employers and employees to the realization that full and complete opportunity in employment on an equal basis is the best answer that Americans can give to the subversive doctrines that this kind of equality is not possible under our form of government.

Now, in 1949, the progress of the Commission may be evaluated in a preliminary way. It is certain that industry as a whole has taken a long step forward and many industrialists appreciate that racial and religious tensions are not heightened when fair-employmen' policies are practiced. Likewise it has been demonstrated that working men and women suffer no dire consequences from working side by side with persons of other races and religions; and that those individuals enjoying new job opportunities are better able to assume their obligations in our society.

While the accomplishments of these 3 years may be notable, the Commission realizes much work lies ahead. Benefits from anti-discrimination legislation can be more generally enjoyed than at present, especially in the populous areas outside Greater Boston.

Investigations made prior to 1946 indicated that economic discrimination against minorities was not confined to any particular section of the State. However, possibly because of the fiscal necessity of establishing the Commission's only full-time office in Boston, a distorted picture of the extensiveness of illegal discrimination may be developing. Only 5 percent of all complaints reaching the Commission have come from that area beyond 20 miles of the State House. Yet 46 percent of the State's inhabitants live outside the metropolitan district.

It is apparent to observers that an imbalance continues in the proportion of workers of minority groups who fill the menial jobs requiring little or no special abilities. Time alone can correct these inequities. Educational opportunities for minority groups must be enlarged, and the way must be kept clear of discriminatory obstructions for those members of the minorities who take full advantage of their educational opportunities.

ENFORCEMENT ACTIVITIES

In the past 12 months FEPC processed 117 complaints alleging employment discrimination. More significant, however, than the number of cases handled in the past year or the 562 complaints processed since the inception of the Commission is the fact that business organizations employing more than 350,000 have been concerned and have gained first-hand knowledge of the operation of the law. The Commission has settled each concluded case through conference. Not once has a complaint required judicial review.

Once more, the Commission acknowledges the wisdom of the provision of the law requiring that the first efforts to adjust complaints be made through conference, conciliation and persuasion. This process invites cooperation and, is the antithesis of swinging a big stick.

An illustration of how this works may be found in the following: A complaint charging religious discrimination was received against a company of moderate size. During a routine investigation, the investigating Commissioner came to the conclusion that the general policy of the company did not comply with the law, and on a friendly and cooperative basis the Commissioner and respondent sat down together and surveyed the employment pattern of the concern. When the Commissioner later recommended the employment of the complainant and a change in employment policy, the company readily complied. A review has shown the company has since employed many of the same religious persuasion as the complainant, and it has, for the first time, employed colored persons, the most recent example being a cashier.

During the past year FEPC conducted its first industry-wide investigation, involving 55 concerns and 10,700 employees. The study grew out of a series of complaints filed against labor organizations alleging unlawful discrimination in referrals for jobs on the basis of color. The situation reflected a pattern of apparent discrimination, manifested by the almost exclusive use of or segregation of workers according to their color and ancestry. Working in cooperation with the leaders in these concerns, the Commission is convinced that gradually complete and equal job opportunities will be opened to all in this field regardless of color and ancestry.

This year saw the first complaint adjusted by FEPC on the basis of compensatory damages to the complainant, in addition to a provision of employment.

Interstate cooperation among agencies of Government similiar to the Commission has proved successful, particularly in cases where the employees of a concern cross State lines in their regular duties.

Statistical report, Nov. 10, 1946–Nov. 30, 1949

Complaints:	
Initiated and received	562
Closed after investigation and conference	341
Closed for lack of probable cause	130
Closed for lack of jurisdiction	17
Withdrawn	19
Pending investigation and conference	55
Investigations without formal complaint:	
Initiated by the Commission	75
Closed after investigation and conference	34
Closed for lack of probable cause	35
Transferred to complaint	3
Pending investigation and conference	3
Nature of complaints and investigations:	
Based upon alleged color discrimination	431
Based upon alleged religious discrimination	88
Based upon alleged discrimination because of national origin	60
Based upon alleged discrimination because of ancestry	8
Types of complaints:	
Against employers	418
Against employment agencies	39
Against labor unions	20
Against employees	3
Others	157

EDUCATIONAL ACTIVITIES

Investigations

During 1949 the commission conducted investigations of problems of discrimination in fields of human relationships outside employment "for the purpose of promoting goodwill, cooperation and conciliation among the groups and elements of the population of Massachusetts." The subject matter of these investigations was discussed in a number of voluntary conferences with the organizations and associations concerned. For a time the Commission suspended this type of activity but will resume such discussions beginning January 1950.

It is of some significance to note the kind of progress which the Commission was able to accomplish in areas outside of employment. For example, as the result of voluntary conferences with key representatives of hotel and resort owner's associations, the Commission was able to effect an agreement that the matter of discriminatory policies with respect to the admis:'on of guests would be brought to the attention of the proprietors concerned and that means would be adopted to change such undemocratic practices.

Similar voluntary conferences with the appropriate officials of the city of Boston, following an investigation of alleged discrimination against Negro doctors by the Boston City Hospital, resulted in the appointment this year of the first Negro doctor to the staff of that hospital in its history.

In the voluntary conferences on such subjects as have been mentioned, the Commission emphasized that its investigations and studies had been conducted as part of its general educational program. Furthermore, it was careful to point out in each instance that the Commission had no power of enforcement with respect to any suggestions or recommendations which it made to correct the situations under discussion.

Other educational activities

In cooperation with the commission, the Boston Public School Department has developed a unit of study based on the work of this body. This unit is to be taught in history and government classes. It is written for high-school seniors who shortly will find themselves either employees or employers. While other school systems have not developed such a detailed plan of study as Bos-

ton, many have used educational materials provided by the commission. In addition, members of the commission and field representatives have addressed school assemblies and pupils in social-study classes in both public and private schools. The commission stands ready to send its field representatives throughout the State to explain the operation of the law and to receive complaints.

The Scrapbook for Teachers, a joint project of the commission and the Massachusetts Committee of Catholics; Protestants, and Jews, is being revised once more for general distribution.

The commission has continued to publish a quarterly news letter, Toward Racial and Religious Understanding, containing contributions from 49 private and public organizations in the State. The news letter is considered a record of the efforts of these various organizations to promote intergroup understanding, respect, and good will. The commission wishes to express its indebtedness to these many agencies, private and public, that have helped in the success of its work.

Pamphlets and other material explaining the workings of FEPC have been printed and given wide distribution.

The police departments of the Commonwealth have been helpful in assisting in enforcing the law and have cooperated with the educational program of the commission. Conferences with the heads of 36 of the larger police departments have been held by the executive secretary, who came to the commission from the Boston Police Department where he worked on intergroup understanding. Several of the large communities hold training courses for their police officers and he has taken part in these courses. Assurances have been given that the commission will assist any police department in instances of tension between racial or religious groups.

Councils

Assisting the commission in its studies of the problems of discrimination have been the State advisory council and three regional FEP councils with headquarters in Springfield, Boston, and New Bedford. Another council is now being organized in Worcester. Mr. Philip M. Morgan, president of the Morgan Construction Co., will be its chairman.

The State council advises the commission on matters of general policy, and has helped greatly in promoting school activities. The three regional groups have spread knowledge of the operation of the Fair Employment Practice Act through addresses, radio broadcasts, conferences, and of especial significance, through surveys of industrial concerns, banks, insurance companies, and public utilities. These regional councils have been of assistance to the commission not only through educational activities, but by reporting to the commission on local conditions.

The Federal Trade Commission

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1950

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement by former Senator James M. Mead, Commissioner of the Federal Commission:

THE FEDERAL TRADE COMMISSION

Mr. MASON. Mr. Chairman and gentlemen of the committee, the Commission has taken on a new look. Two newly appointed members of the Commission have insisted that they must know about what the Commission is doing and have insisted upon acting upon questions of policy themselves as Commissioners. This means that in order to carry out the mandate of the Commission, it is necessary that the work be divided among the Commissioners. When it came to considering who should represent us before this distinguished group, we felt if it was possible to get a Commissioner who had had 20 years' experience in this particular body, who had had two terms in the United States Senate, and who had had considerable experience in his legislative work with budget matters, that we would indeed be fortunate.

So it is with a great deal of pleasure that I have the distinguished honor of presenting to the committee, Senator, now Commissioner, Mead, who has been designated by the Acting Chairman as the Commissioner to make a special study of our budget problems and our budget requests. So I take a great deal of pleasure in turning over this particular part of the Commission's work to Senator Mead.

GENERAL STATEMENT

Mr. MEAD. Mr. Chairman and members of the subcommittee, as you know, I am a member of the Federal Trade Commission, and at the request of the Commission I am appearing before you today in support of the appropriation estimates for the Federal Trade Commission for the fiscal year 1951. As you also know, I was a Member of the House of Representatives and of the Senate for many years and, although in a different capacity, I am returning today to very familiar and pleasant surroundings. It is necessary to intelligent representative government that those persons charged with the execution of the laws periodically appear before the appropriate committees of the Legislature to give an account of their stewardship of the great public trust of public office.

REQUESTED APPROPRIATION FOR 1951

I have a long statement here; but, from my experience on the Committee on Appropriations, I realize that sometimes we might say too much and, as a result, receive too little. So I think I had better just proceed to get right down to the meat of the statement I have by telling you that the Federal Trade Commission is requesting for fiscal 1951 an appropriation of $4,225,000; that this represents an operational increase of $450,000 over the appropriations for 1950 plus a $43,000 estimated increase of the cost of the pay-raise bill. That makes a total of $493,000.

BREAK-DOWN OF INCREASES REQUESTED

This increase allowed by the President and the Bureau of the Budget, together with certain intra-agency transfers, contemplates, as reflected in our proposed method of operations, (1) an increase in the antimonopoly program of $476,200, (2) a reduction of expenditures in the unfair-, deceptive-, and fraudulent-practices program of $64,700, and (3) an increase in the administrative and general operating expenses of $38,500.

In terms of personnel and specifically the operating costs, the increase of $450,000 will provide $68,100 for 16 additional attorney-examiners for the antimonopoly work in the field offices; it will provide $214,300 for 6 employees to establish and maintan an index of concentration and 48 employees for the expansion of the corporation financial reports program to include the wholesale, retail, and mining corporation segments of the industry. It will provide $73,500 to meet the required automatic within-grade promotions and $94,100 for increased travel funds, the cost of work performed by other Government agencies for us, and general operating expenses.

INTEGRATION OF WORK PROGRAM

For the past 2 years, the Commission has been engaged in the execution of a planned, integrated program of work, placing major emphasis on restraint of trade in the basic industries. The Commission now has in the course of trial and/or decision cases in the steel, paper, plywood, furniture, food, clothing, and many other industries dealing with basic commodities, the cost of which affects the well-being and the pocketbook of every individual in the country. It is in the public interest for the Commission to investigate all those matters and, if restraints of trade or unfair practices are found to exist, to take prompt corrective action under the applicable statutes.

PRIMARY DUTY OF THE COMMISSION

While I have only been recently appointed to membership on the Commission, I am keenly aware of the vital importance of the Commission to our economic life and well-being. The President of the United States in his recent State of the Union message again emphasized that business in this country should maintain a spirit of initiative and operate in a competitive economic system. The primary duty of the Commission is to utilize all of the powers delegated to it by the Congress in order to keep our economic system competitive and free from those unfair restraints which injure competition. That is a large order, and the Commission must have adequate tools with which to do its job. These tools can only be made available by adequate appropriations from the Congress.

ACTS ADMINISTERED BY THE COMMISSION

The Commission was created in 1914 on the recommendation of President Woodrow Wilson. The Commission administers the Federal Trade Commission Act, certain sections of the Clayton Act, as amended by the Robinson-Patman Act, the Webb-Pomerene Export Trade Act, the Wool Products Labeling Act of 1939, and certain sections of the Lanham Trade Mark Act of 1946.

REQUESTED APPROPRIATION FOR 1951

The Bureau of the Budget has recommended that the Congress appropriate $4,225,000 for the Commission for the fiscal year 1951. This is an increase of $493,000 over the amount appropriated for the fiscal year 1950.

ANTIMONOPOLY PROGRAM

The greater part of this increase will be used on the Commission's antimonopoly program, which includes both the case work and the economic and financial reports. The Commission contemplates spending an additional $476,200 on its antimonopoly program, of which $64,700 will be transferred from its unfair- and deceptive-practices program. The Commission is fully cognizant of the importance of its work in the deceptive-practices field, but believes the significance of the antimonopoly program is of such fundamental importance to the economy of the country that this transfer of funds is necessary. The antimonopoly program includes legal investigations, economic studies, and formal proceedings in cases involving such practices as collusive price fixing, restriction of production, full-line forcing, exclusive dealing, tie-in sales, and unlawful geographic pricing practices. It also includes the very important compliance investigations, studies, and enforcement proceedings. After a cease-and-desist order has become effective, the Commission has a continuing policing job in order to insure observance of the terms of the order.

UNIVERSITY OF MICHIGAN LIBRARIES

ELIMINATION OF FALSE ADVERTISING

The elimination of false or deceptive advertising of commodities sold in interstate commerce is also a responsibility of the Commission. The public interest in this field is great, because tens of millions of our people purchase goods relying upon the truth of the advertisements they hear on the radio or read in publications. Your constituent, the housewife, is entitled to protection against fraud or deception in these advertisements. In addition to the litigation method in this field, the Commission has developed informal and cooperative procedures designed for wider coverage of law enforcement at a lower unit cost. In the trade practice conference procedures, all members of an industry may meet with the Commission and, in a spirit of cooperation, agree not to use certain practices which may be violative of the laws administered by the Commission. Pursuant to the provisions of the Wool Products Labeling Act, the Commission makes frequent inspections of the goods represented to contain wool on the shelves of processors and distributors in order that the purchasing public may be assured that the wool products they purchased are correctly labeled as to fiber content.

GENERAL ECONOMIC INVESTIGATIONS

The Bureau of Industrial Economics of the Commission, in addition to assisting in the investigation of matters preparatory to the initiation of antimonopoly litigation, also makes general economic investigations and prepares reports to the Commission which are transmitted to the Congress. These reports include studies of the trends and concentrations of economic power, and in the past have served as factual background for very important legislation enacted by the Congress. The financial reports on corporations prepared by this Bureau have proved very helpful both to other agencies of the Government and to private parties. The Commission has other important functions which are described in the justification document presented to the subcommittee.

The Commission is constantly surveying its own procedures so that any duplication or waste may be avoided and that the Commission's business may be handled promptly and efficiently. The Commission has delegated to its secretary and executive director many of the routine duties that were formerly done by the Commission in order to free the Commission for its more important functions.

INCREASE IN JURISDICTION OF COMMISSION

To paraphrase the words of Daniel Webster in speaking of Dartmouth College, the Commission is only a small agency, but it has a great responsibility. The Commission has a smaller number of employees than it did in 1941 prior to World War II. The value of the goods sold in interstate commerce, over which the Commission has jurisdiction, however, has increased by billions of dollars, and the problems of monopoly and concentration of wealth have increased, due, in large part, to World War II. We respectfully ask your favorable consideration of our request for funds and assure you that we will do our best to prevent unfairness in interstate commerce and give the taxpayer a fair deal for his dollar.

So, Mr. Chairman, under the circumstances and by reason of the fact that the President and other authorities have pointed up the antimonopoly program, we are asking for certain increases that will fit the Commission to do that particular task without neglecting its other tasks.

CONCENTRATION OF ECONOMIC POWER

There is no continuously available information, either in or outside Government sources, as to the trend of the concentration of economic power. Knowledge as to these facts is of major importance to the Congress in the formulation of legislative policy as well as for the Commission in developing its program for enforcement of the Federal Trade Commission Act and the Clayton Act. In a staff report of the Committee on Small Business of the House of Representatives on economic concentration and monopoly, it was recommended that an index of concentration be developed to meet the existing need and that investigation as to the extent and seriousness of such concentration be centered in the Federal Trade Commission. Approximately $46,000 is included in our budget request to establish this index in the fiscal year 1951.

FINANCIAL INFORMATION REGARDING BUSINESS ENTERPRISES

For many years, there has been a great demand, both in and out of Government, for a current continuing series of reports to provide accurate financial information regarding the operation of business enterprises. Section 6 of the Federal Trade Commission Act grants it the authority to require reports from corporations except those exempted by other acts of Congress, and prior to the war the Commission had exercised this authority and had prepared a large number of such special reports. There are many important demands for basic factual financial statistics about current business conditions which are not being met. The Bureau of the Budget, early in 1946, appointed an interagency committee on needs for financial data in Government, and this committee recommended that a continuing series of quarterly and annual business statistics be instituted as a part of the Federal statistical system.

SCOPE OF INITIAL REPORTS

The recommendation provided that the initial work be confined to manufacturing corporations and then expanded as rapidly as possible to cover wholesale, retail, and mining corporations. Ample safeguards have been provided to avoid duplication of Federal activities in this matter. The Bureau of the Budget designated the Federal Trade Commission and the Securities and Exchange Commission to operate this joint program because only these Commissions have clear-cut statutory authority and responsibility for mandatory collection of such data.

INFORMATION CONTAINED IN REPORTS

These reports provide information on a current quarterly basis as to aggregate assets, sales, and earnings of manufacturing corporations by industries. The use of approved sampling methods insures the highest degree of accuracy obtainable. The information made available through these financial reports enables the Commission to follow the changes in the relative importance of different industries and to compare the profits of large and small corporations.

SOURCE OF REQUESTS FOR REPORTS

Many requests for these reports are received from individual Members of the Congress. They are also regularly used by the Council of Economic Advisers, the Federal Reserve Board, the Department of Commerce, the Department of Agriculture, the Bureau of Labor Statistics, and the Securities and Exchange Commission, which cooperates with the Federal Trade Commission in the preparation of the reports. They are furnished only upon specific request. Presently there are about 8,000 active continuing requests and additional specific orders are received in substantial numbers for each quarterly report as it is released. The requests come primarily from banking, industrial, and labor groups.

EXTENSION OF PROGRAM

The Commission is now prepared to expand this program to cover the distributive trades and mining, as originally planned under the auspices of the Division of Statistical Standards of the Bureau of the Budget, and funds approximating $200,000 are included in our 1951 request to provide the necessary employees to effect the completion of the original plan of operation.

Although we have streamlined the other divisions and cut their appropriations in some instances as low as we deem advisable in order to minimize the request that is being made by our Commission to carry the work forward, that is necessary under present conditions, and that is in keeping with the recommendations of the President.

Very naturally, I am pleased to be here and happy to renew my old associations, and I hope I will be able to make a constructive contribution to the relationship between the agency I now hav the honor to represent in part and the committee that has to do with our appropriations.

Mr. THOMAS. That is a good statement, Mr. Chairman. We appreciate it. It is very helpful.

Mr. MEAD. Thank you.

Freedom: How You Can Guarantee It

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks an article by Dr. Norman Vincent Peale entitled "How To Guarantee Your Freedom." The original article appeared in Guideposts:

HOW TO GUARANTEE YOUR FREEDOM

(By Dr. Norman Vincent Peale, minister, Marble Collegiate Church, New York City)

What are the essential elements of our heritage which we would preserve? Two basic beliefs underlie the American structure of government—the sovereignty of God as the ruler of this land, and the sacredness of the individual human soul.

Broadly speaking, the American tradition flowed down two streams. One stream took its rise in the teachings of Socrates, Aristotle, and Plato. These great thinkers discovered that the human mind is sacred, that it is—and rightly ought to be forever—free, that no man has the right to make a slave of the mind of another man.

The other great stream took its rise in the teachings of Moses. Standing upon some great rock in the wilderness, he proclaimed that God had instructed him to tell men they were, in their own souls, utterly sacred, and as such no man had a right to enslave them. Said he: "You are created in the image of God."

Thus it went across the centuries until finally there came walking into the human story a great sun-crowned, radiant Soul who amplified this teaching, who told men they are brothers and sons of a common Father. He told men they should know the truth and the truth should make them free. He uttered wise sayings, all dealing with the greatness and dignity of the human soul touched by God. These sayings were gathered together in a Book.

Men put this Book under their arms and set forth in little ships across a stormy sea, driven by a mighty conviction that as sons of God nobody could make slaves of them. Thus, landing upon an immortal rock they

consecrated this new land to the ideal of the greatness and sacredness of the human soul and spiritual worth of men.

Never before had a nation been established upon a religious and philosophical base. It was revolutionary; it was unique. There was a strange power in it all. In a century and a half, out of this fertile soil was proclaimed more wealth, more freedom, more human happiness than ever in the history of mankind.

An Irish patriot, John Philpot Kern, back in 1790 declared: "The condition under which God hath given liberty to man is eternal vigilance: which condition, if you break, servitude is at once the consequence of your crime and the punishment of your guilt."

It has come about that today freedom is imperiled and our traditions are in jeopardy.

The solution of America's problem is not in terms of big government, nor big labor, but it is in big men over whom nobody stands in control but God.

Because we have encountered some difficulties, some among us seem to have concluded that we should go back to Europe for types of governmental philosophy which have failed whenever tried. They look to Russia, for example, which has never produced any abundance or creative values worth speaking of, and say with eager impetuosity: "Ah, there is what we want for America."

Foolish men who would barter away the priceless heritage for a mess of pottage. This free society has demonstrated its value. Never in all the history of the world have there been research laboratories where such wonders have been wrought. Never anywhere have men developed the genius to create astounding marvels out of the earth, even out of the air around them.

Samuel B. Pettingill says: "Socialism, fascism, and communism would not have a chance to outlive this generation if they were not financed and subsidized at home and abroad from the earnings, ideas, and inventions of individual competitive enterprise."

In this land of wealth with only 6 percent of the world's land area, we have 35 percent of the world's railroads, 60 percent of the world's telephones, 66 percent of the world's wealth. Too many of us think negatively of the American system. Let us think positively about it and see it for what it is—the greatest system ever devised in the history of mankind, with all its faults, and this system grew out of the philosophy of freedom.

What is wrong with it that they wish thus to change it? Is it because of racial and discriminatory matters for which we must find improvement? Is it because there have been and are selfish men and injustices? Is it possible that they see no discrimination in communism, no cruelties of class, no selfishness?

It is curious and sad the way much of the intellectual climate of this country has changed. Once we roared like lions for liberty, now we bleat like sheep for security.

Fear is lack of faith.

From the very beginning Americans have recognized Almighty God as their Supreme Ruler. He towers above state. The American Republic is predicated upon the Divine Will and the principles of Jesus Christ.

Long ago William Penn said: "Unless we are governed by God, we will be governed by tyrants." Man must have a god. If he abandons the God of the Old Testament and the New Testament, there is only one god left—the superstate. Piteously, then, freemen will quail before the colossal power of the state, their freedom gone.

Let us resolve that our prayers and our service be given to the perpetuity of these sacred principles which make for human freedom and the well-being of mankind. Let us again pledge ourselves to preserving the American tradition.

From the Frying Pan Into the Fire

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. HOFFMAN of Michigan. Mr. Speaker, in my comments over Station WHFB, covering southwest Michigan and northern Indiana, from Benton Harbor, I endeavored to show how Republicans jump from the frying pan into the fire. That talk was as follows:

Fellow Americans, through the courtesy of WHFB of Benton Harbor, Mich., it is again my privilege to give you an idea of what is happening to the people's economy drive as spearheaded by the junior chambers of commerce.

As said last week, when bills are introduced by Members of Congress, they are referred to the appropriate legislative committee.

If deemed worthy of consideration and acted on favorably by that committee, its chairman then presents the bill to the Rules Committee for consideration.

If the Rules Committee considers the bill has merit, the bill is reported to the House. Otherwise, it is pigeonholed for the session unless, and this is important, a majority of the House membership signs a petition to discharge the committee.

If a majority of the House desire to bring a bill to the floor, nothing can stop it.

For many years, the Rules Committee has been screening proposed legislation. The result? Many a bill, unworkable or calling for ruinous appropriations, has never reached the House floor nor would a majority of the Members, aware of the situation, sign a petition to bring the bill before the House. Bills calling for $9,000,000,000 are now being held by the Rules Committee.

Last year, Mr. Truman and his political advisers changed the rules so that if the Rules Committee fails for 21 days to report a bill, the chairman of any committee can bring it to the House floor, if the Speaker will recognize him.

By that amendment the chairman of a committee and the Speaker, instead of the Rules Committee, program legislation.

A coalition of conservative (some call them reactionary) Republicans and southern Democrats sought to restore the power of the Rules Committee.

Although 85 Democrats voted with us, we lost that fight because 64 Republicans voted with the Democratic leadership, which was fighting for Mr. Truman's program.

Some Republicans who voted with Mr. Truman's forces do not favor his socialistic program, but were fearful of retaliation by powerful pressure groups which favor parts of that program. In this case, the group backing FEPC, consideration of which they thought the Speaker would permit on Monday, frightened them.

Perhaps a few Republicans voted with the Truman forces because bills in which they were interested had not been favorably reported by the Rules Committee.

Other Republicans argued that the Rules Committee was altogether too dictatorial; was acting as a czar.

Unfortunately, the House just jumped out of the frying pan into the fire. This was demonstrated Monday when Speaker RAYBURN refused to permit the FEPC bill to come to the floor.

As the rules stand now, it is up to the Speaker on the second and fourth Mondays of each month and on Wednesday of each week, unless there is a two-thirds vote to the contrary, to recognize or refuse recognition to the chairman of a standing committee.

The Speaker and the majority leadership go all out for Mr. Truman's program. Some Democrats on the Rules Committee—and Democrats outnumber Republicans eight to four—are inclined to apply the brakes on the President's proposals for increased taxation, social legislation—vote with nonspending Republicans.

Republicans who turned down their leaders just traded the more favorable Rules Committee boss for a Speaker boss, who is a dyed-in-the-wool Truman supporter.

So far as the Republican Party is concerned, that defeat last week makes it more difficult, if not impossible, to stop or even slow up during this session of Congress the President's spending campaign, his drive for dictatorial power.

It may be that another attempt will be made to change the rules. If so, those of you—and especially the junior chambers of commerce, who have been doing such effective work—who favor the adoption of the Hoover Commission's recommendations, the defeat of socialized medicine and similar measures, ask your friends and neighbors to urge their Congressman to oppose appropriations for desirable but unnecessary projects—to oppose socialistic measures.

If the issue has not been made clear in this brief time, will endeavor to be more explicit if you write me.

So thanks and good luck until I hear from you.

The Columbia Basin

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1950

Mr. HORAN. Mr. Speaker, under permission to extend my remarks this date, I include the second and third articles in the series by Mr. Leon Starmont, of Spokane, Wash., on the Columbia River region, its past, present, and future:

[From the Spokesman-Review, Spokane, Wash., January 23, 1950]

LET'S EXPLORE THE BASIN

(Art. 2)

(By Leon Starmont)

The news wires are carrying and will carry articles on the "coordinated, comprehensive plan of development" for the Columbia River Basin. The State Columbia Basin Commission has approved this program and has sent emissaries to Washington to help the Northwest Congressmen in getting it over the hurdle of the Budget Bureau, the House and Senate. One Senate committee has already stamped it "O. K."

Just what is this plan, how did it start, and how did it get this far?

It is, briefly, a program for the orderly development of 405 new Columbia River projects, of which only 93 are marked for immediate authorization.

ADVOCATED IN 1926

A plan, like a river, has not one source but many. A rough outline of basin planning was delivered in Seattle in 1926. The occasion was the annual meeting of the Columbia Basin Irrigation League. The speaker was Herbert Hoover, then Secretary of Commerce in the Cabinet of President Calvin Coolidge.

UNIVERSITY OF MICHIGAN LIBRARIES

Hoover, of course, had many advisers. As these articles explore the files of the Army engineers, Bureau of Reclamation, Federal Power Commission, and interested private groups, it may be possible to date the origin of the "comprehensive plan" much earlier than 1926.

The plan today, however, as related by the Corps of Engineers and the Bureau of Reclamation, involves a grand total of 405 projects, large and small, single-purpose and multiple-purpose. Of these projects, 93 are recommended for authorization at this time, under the interdepartmental agreement signed on April 11, 1949.

TWENTY-FOUR INVOLVE IRRIGATION

Of these 93 projects, 24 involve irrigation, 16 power, 34 water storage, 71 flood control, and 24 will contribute to improvement of navigation.

The irrigation projects will water 217,386 acres of new land and provide supplemental water for another 90,390 acres.

The power projects will generate 5,337,600 kilowatts.

The storage dams will hold back 21,663,800 acre-feet.

Thirteen projects are those of the Bureau of Reclamation. The others will be handled by the Army's Corps of Engineers.

Only six of the projects are costly enough to be considered big in 1950. Figured at construction costs of last December, they are:

Priest Rapids	$326,124,000
John Day	279,826,000
The Dalles	286,286,000
Libby (Jennings)	239,077,000
Hells Canyon	333,986,000
Payette division	253,234,000

Three of these are down the Columbia from Grand Coulee Dam, where construction is just starting at Chief Joseph (Foster Creek), and McNary Dam (Umatilla Rapids) is already well along.

Libby Dam is projected at Jennings, Mont., on Kootenay River. Hells Canyon is up the Snake above Lewiston, Idaho. The Payette division of the Mountain Home project involves both Boise and Payette Rivers in southern Idaho.

THE OTHER 312

The 312 projects covered in the comprehensive plan but placed in the deferred list for authorization includes 234 for which cost data are available based on December estimates. They run to $4,960,681,000. Call it $5,000,000,000.

Of these projects, 196 involve irrigation, 152 power, 295 storage, 180 flood control, 34 navigation, 2 drainage, and 7 domestic water supplies.

In this deferred list is an item of $17,920,000 for addition of irrigation features to the Chief Joseph Power Dam, now being started 52 miles down the Columbia from Grand Coulee.

Deferment of this conversion has caused much concern among residents of northern-central Washington. Working hard for its acceptance are the chambers of commerce from Wenatchee up the river, the Greater Wenatchee irrigation district, and the Chief Joseph Irrigation League, formed last fall at Bridgeport.

Kirby Billingsley, former managing editor of the Wenatchee World, now a part-time employee of the Columbia Basin Commission, has long been working for inclusion of the irrigation feature. The commission sent him to Washington 2 weeks ago, with instructions to work for the comprehensive plan, including the basin account provision.

[From the Spokesman-Review, Spokane, Wash., January 24, 1950]

LET'S EXPLORE THE BASIN

(Art. 3)

(By Leon Starmont)

Thomas B. Hill, assistant secretary of Washington State Development Association, has started a movement for publication, perhaps by the State Columbia Basin Commission, of an authentic history of the Big Bend project, later called the Columbia Basin project.

Such a history has been written. It is in the files of the University of Washington.

Its author is E. K. Vande Vere, chairman of the department of social science at Emmanuel Missionary College, Berrien Springs, Mich. The article was his thesis for a university degree. It is actually a history of irrigation in Washington.

SPOKANE-TO-COULEE DITCH, 1903

The idea of using Grand Coulee as a reservoir for Big Bend irrigation dates at least to 1903, according to chapter V of Vande Vere's work, entitled "The Columbia Basin Project." He credits it to T. A. Noble, a Seattle civil engineer employed in 1902 to make an investigation of what was then called the Palouse project, for the Reclamation Service.

In 1909, the manuscript continues, Joseph Jacobs, a former consulting engineer of the Reclamation Service, in contract with the Quincy Valley Water Users' association, inaugurated a preliminary survey for watering about 300,000 acres in Grant County from Lake Wenatchee, under an earlier plan suggested by David R. McGinnis, agricultural agent of the Great Northern Railroad in 1906. Its cost estimate: $12,000,000.

The Jacobs survey report, the next year considered several possible water sources, one of which was from a dam, power plant and pumping station near Priest Rapids, cost of which he figured at $75,000,000. It appears that Jacobs also had access to the earlier reports by T. A. Noble.

GRAND COULEE DAM, 1909

Because of some contradictory accounts recently in circulation, the following passage from the Vande Vere manuscript, with its inside quotation from Jacobs, is given verbatim:

"In a second plan, one that was destined to assume great importance and the credit of which was to be claimed by others at a later date, he 'considered the possibility of a lower pump lift by going to some point higher up on the river, as for instance at the head of Grand Coulee, and thence by gravity canal to the irrigable lands, but this proved too inordinately expensive.'

"His third and fourth plans he thought feasible. In these he considered two water sources, namely, the Pend Oreille River in Idaho, and Wenatchee Lake, but favored a canal heading at the lake, where the water level could be raised 150 feet by a storage dam. The cost of this construction was placed as high as $40,000,000."

The Jacobs report resulted in passage of the Quincy Valley Irrigation Act, which, subject to referendum, called for a $40,000,000 State bond issue. The voters rejected the bond issue in the fall election of 1914.

NOBLE AID STILL ON JOB

The annual reports of the United States Reclamation Service (now Bureau of Reclamation) for 1902 to 1905 carry references to several plans for irrigating the Big Bend, Coeur d'Alene, and Spokane Rivers, as well as Pend Oreille and Palouse Rivers, Lake Chelan, and Lake Wenatchee were studied and considered.

Singularly little attention was given to the Noble plan for use of Grand Coulee as a storage reservoir for a gravity canal.

His detailed draft is now in the office of the Bureau of Reclamation at Coulee Dam, Wash.

Also on the Bureau staff at Coulee Dam is a veteran engineer, C. B. Cox, who was chief assistant to Noble on the Spokane-to-Coulee ditch survey.

"It was all very hush-hush," Cox remarked. "Members of the party were not taken into the confidence of the chief. I gathered the impression that about 3,000,000 acres could be irrigated if the project became a reality but exactly where these acres were I had only a faint idea."

SAW REPORT AFTER 47 YEARS

Just why this survey was not mentioned in later reclamation reports, or in the Army's first "308" report, or in the preliminary discussions after the Columbia Basin project was revived in 1918, it is difficult now to determine. This reporter, who started following Columbia Basin developments in 1918 and writing about them in 1920, did not know of the existence of the Noble survey until early in 1950.

"Maybe," said a Bureau executive at Coulee Dam, "you just didn't ask the right questions then."

Neither did anybody else.

C. B. Cox himself had not seen the Noble report until a few weeks ago, nearly 47 years after the survey was made and the report written.

The actual map started at Lake Coeur d'Alene, and comprised 20 separate sheets, which would make a map 30 feet long. At Coulee Dam last week he made up a map on a smaller scale, part of which is reproduced on the Spokesman-Review's back page of pictures today.

The survey was 160 miles, following the left bank of the Spokane River from the Monroe Street bridge to old Fort Spokane, thence down the Columbia's left bank. Tunnels cut the ditch total to about 130 miles.

Tennessee Walking Horse

REMARKS

OF

HON. PAT SUTTON

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1950

Mr. SUTTON. Mr. Speaker, I am delighted today to advise the House that the United States Department of Agriculture in a letter to me dated February 1, 1950, has recognized the Tennessee walking horse as a distinct and standard breed.

Since 1935 the Tennessee Walking Horse Breeder's Association has been diligent in their efforts to establish this specific breed, the greatest of all pleasure and plantation horses, recognized in Farmers' Bulletin No. 952. The people of the great Volunteer State of Tennessee and the numerous breeders of the Tennessee walking horse in America, will welcome this news as a recognition that is long overdue.

For the benefit of those who are not familiar with the history of the Tennessee walking horse, I am inserting the material which will go into the farmers' bulletin above-mentioned.

To the horse lovers of America the Tennessee walking horse will be recognized as a strain of horse blue blood. He is not only noted for his easy and cradle-like gait, but likewise his gentleness, poise, confirmation, and loving disposition. The sire of the walking horse belongs to Tennessee. The dam of the walking horse belongs to Tennessee. Tennessee has given this useful and beautiful horse its name and Colonel Tennessee is now happy to share his equine with his neighbors and horsemen throughout the world.

[Farmers' Bulletin No. 952]

The Tennessee walking horse originated and was developed within the middle basin of Tennessee. Allan F–1 (7623 A. T. R.) is designated the foundation sire of the breed, and has been recognized as such by the Tennessee Walking Horse Breeders' Association of America. These horses trace their blood lines back to the thoroughbred, and the standard bred, and the Morgan, and the American saddle horse.

Melted in the crucible of time the breed today has become distinct and is an entity of its own. It undoubtedly came about through a crossing of the thoroughbred with the sturdy stock of saddle horses which the Virginians brought across the mountains in early pioneer days, and through an admixture with the pacer. To this was added the blood of Morgan and the saddle breed.

Thus, throughout a century and more of meticulous breeding, the Tennessee walking horse has emerged as a distinct breed. The Tennessee walking horse averages around 15½ hands in height and will weigh from 1,000 to 1,200 pounds. In color they are sorrel, chestnut, black, roan, white, bay, brown, gray, and sometimes yellow.

In general conformation the Tennessee walking horse has an intelligent and neat head, well-shaped and pointed ears, good big bright eyes, and tapered muzzle. They are short in the back, deep in the body, and well ribbed. Full in the flanks and of good proportion and width in chest. Their necks are long and graceful and are set on well-muscled shoulders that are sloping. They have flat cordy legs and feet of ample size. Their hides are thin, hair is soft and silky, and their bone is smooth, dense, and hard.

The Tennessee walking horse, like all other breeds, has been bred pure for a purpose. This purpose in the beginning and in the early days of the Volunteer State was for utility.

Today, however, they have won recognition on the bridle path and in the show arenas of all sections of the country.

The three gaits of the Tennessee walking horse are all natural gifts. They are called the flat-foot walk, the running walk, and the canter. The running walk has a smooth and gentle spring of limbs, and is where the Tennessee walking horse does his famous nod of the head as he goes along. He sometimes swings his ears and snaps his teeth while in this rhythmatic movement.

Tennessee walking horses are now stabled and are being bred in practically every State in the Union.

The Tennessee Walking Horse Breeders' Association records purebred animals of this breed. Nine volumes of the stud book have been issued and more than 40,000 have been recorded. Miss Syd Houston, Tennessee Walking Horse Breeders' Association of America Building, Lewisburg, Tenn., is secretary of the association.

Investigation of Texas Medical Association

REMARKS

OF

HON. KEN REGAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1950

Mr. REGAN. Mr. Speaker, our country rightfully points with pride to being the healthiest nation in the world.

Our medical profession has been outstanding in research and untiring in its efforts through the recent decades in bringing about this condition, which has relieved our people of many former fatal and frequent outbreaks of smallpox, yellow fever, influenza, typhoid fever, and the many other epidemics that once decimated our people, until today we are enjoying longevity of three score years and ten that was a rare exception 50 years ago.

For the past few years, Mr. Speaker, our entire medical profession have been faced with the increasing clamor of those in our midst who, while being fortunate in sharing the freedom of our country and the many benefits and blessings that our citizenship is privileged to enjoy, are now seeking an ever-increasing service from our Government without giving anything in return, including the so-called socialized-medicine proposal that would regiment our entire medical profession.

Now, Mr. Speaker, I am informed by the El Paso Medical Society of El Paso, Tex., through its president and secretary, that the Texas Medical Association is undergoing some type of investigation by the FBI for alleged antitrust violations, and it is the apparent belief of many highly respected members of the medical profession that a political effort is being made to beat down opposition by the Nation's physicians to the so-called socialized-medicine proposals, to which I am thoroughly opposed as being against the welfare of our people, un-American, and a step toward the socialization of our country, which has become the greatest Nation in the world through its safeguards of freedom of our people, who in addition to their rights of freedom of religion, freedom of the press, and the many other protective provisions of individual rights, have the further freedom of selecting their own doctors, dentists, or specialists without Government interference or dictation.

Surely, Mr. Speaker, the FBI who have earned, and continue to merit the respect of our people, would not lend themselves or their fine reputation to a cheap political program such as many good members of the deservedly honored medical profession have some reason to suspect.

I wish to include with these few remarks the full text of a resolution recently furnished me to which I referred to above.

The resolution:

Whereas El Paso newspaper stories report that the Texas Medical Association is currently under investigation by the FBI for antitrust violations; and

Whereas more than 20 such investigations of National and State medical societies have occurred in recent weeks; and

Whereas these investigations are no coincidence but rather a political effort to beat down opposition by the Nation's physicians to socialized medicine; and

Whereas such tactics are strongly opposed by El Paso County Medical Society as un-Texan, and un-American, and tending dangerously toward totalitarianism and police-state methods: Now, therefore, be it

Resolved, That El Paso County Medical Society herewith protests the current investigation of the Texas Medical Association and so informs the elected Senators of Texas and the Representative of the Sixteenth Congressional District of Texas.

RALPH H. HOMAN, M. D.,
President.

JOE R. FLOYD, M. D.,
Secretary.

World Health Organization

REMARKS

OF

HON. JOSEPH L. PFEIFER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1950

Mr. JOSEPH L. PFEIFER. Mr. Speaker, permit me at this time to speak in behalf of the World Health Organization, commonly known as WHO. It is a young organization. It has only existed since September 1, 1948. It began with 50 nations, now its membership consists of 64 nations. In its short period of existence it has already showed good results, and therefore certainly worthy of continuation and expansion.

The forward-looking aspect of its program is and has been in the field of technical assistance the value of which has been firmly established by the League of Nations.

The President, in his inaugural address, visualized the importance of small expanded programs, and recommended a supplementary operating program to extend the phase of the WHO to a point that it can meet the most urgent demands particularly in the underdeveloped areas.

The first WHO assembly took place in Geneva in 1948. The second was held in the Palazzo Venezia in Rome on June 13 and lasted until July 3, 1949. I had the pleasure of being there as a congressional adviser. I was very much elated of the sincerity and the great ability that our delegation exercised and the high respect that was shown to them by the many other organizations. Our delegation was looked upon as the best assembled. It was headed by Dr. Leonard A. Scheele, our surgeon general. Dr. H. van Zile Hyde also played an important part. In fact every member of the United States delegation is a well-known technical expert with great administrative experience. They were just wonderful; they worked in unison and earned the respect of all present. Mr. Speaker, permit me at this time to congratulate them on their splendid work.

The WHO has a broad program which is divided into short and long terms. It realizes the necessity of establishing effective relations and close collaboration with the United Nations and other existing governmental organizations. It also realizes the advantages from cooperating with the existing health facilities of the countries in which help is to be given.

It strives to develop in those areas that are deficient in their health personnel, educational facilities that would tend to make them more efficient. This WHO tends to create a feeling among nations, of betterment to their citizenry, by not only making them a more healthful nation but indirectly a more productive one. In doing this, let us not forget, that by helping them we indirectly help ourselves. One only has to learn of the large sums of money that are expended at present to prevent disease from entering our shores, and how much easier and cheaper it is to eradicate it at its source.

UNIVERSITY OF MICHIGAN LIBRARIES

This holds true for many of the communicable diseases, whether the carrier be flies, mosquitoes, insects, vermin, person, or poor hygienic and sanitary conditions. Certainly, personal contacts should be more easily eradicated and finally eliminated, provided there is full international cooperation. Let us, for example, consider syphilis, its relationship to industry, production, loss of manpower and costs. Do you know that according to the Beerman report of 1940, the cost of syphilis in labor lost in industry — man-hours alone — approaches $100,000,000 yearly in the United States of America. Also the cost of national curative program in the United States was estimated at from twelve to twenty-five million dollars per year and the cost of blindness from syphilis at $10,000,000 per year.

Only by international teamwork operating under international health regulations for venereal disease together with the ILO can one expect some degree of success, and only through stringent international controls can one expect results that would cause a reduction in the number of and perhaps eliminate reservoirs of venereal infections.

One only has to look at the report of Maj. Gen. Raymond W. Bliss, Surgeon General of the United States Army, and in his address in June 1949, in which he stated:

> The primary mission of any public health and welfare program in an occupied country is to improve medical, sanitary, and social conditions.

This, I may say, holds true as well as for unoccupied countries. The general then goes on and tell us what can be done to improve civilian public health by means of an aggressive and cooperative program. Let me quote from his recent address:

> An organization to handle the anticipated public health and welfare problems in Japan was formulated tentatively in Washington, D. C., even before the Japanese surrender. Japanese standards of public health and sanitation, although better than in many underdeveloped countries, were far below those of some of the more modern progressive nations. Smallpox had been on the increase since 1938 and the existing immunization law had not been enforced by the Japanese Government. In 1946 there were 17,800 cases of smallpox. During the following year, the entire 75,000,000 inhabitants were vaccinated or revaccinated, with the result that only 29 cases of smallpox occurred in 1948.
>
> An outbreak of cholera in 1946, when there were 1,229 cases, was cleared up effectively through cholera immunization of about 34,000,000 persons and through use of stringent measures for isolation, quarantine, and disinfection in areas where the outbreaks occurred. At present there is no cholera in Japan.
>
> An epidemic of typhus fever in the fall of 1945 resulting in a total of 31,141 cases by the spring of 1946, was broken after about 48,000,000 persons were dusted with DDT and over 8,000,000 were vaccinated. From a mean morbidity rate of 41 cases per 100,000 of population for 1946 and a peak of nearly 147 cases per 100,000 in April of that year, typhus fever had dropped to a mean of less than one case per 100,000 during 1948.
>
> A large-scale diphtheria-immunization program for children has resulted in marked reduction in the incidence of diphtheria, also, with a decrease of 73 percent below the average for the 1938–45 period and a decrease of 83 percent in the present morbidity rate as compared with 1945.
>
> To control and prevent outbreaks of dysentery, typhoid fever, malaria, and other diseases, Nation-wide health education and sanitation programs have been conducted. Over 9,000 sanitary teams of 6 men per team, or a total of 54,000 persons, were trained and equipped in the spring of 1946 for environmental sanitation programs including insect and rodent control, education of the people to make them sanitation conscious, and so forth. The control program has involved improvement of water supplies, installation or repair of sanitary facilities and sewerage systems, and education of Japanese health officials as well as the general public in the importance of control measures.
>
> Tuberculosis has always been prevalent in Japan and the leading cause of death there since 1934. A broad tuberculosis prevention and control program inaugurated in October 1946, resulted in a reduction in the tuberculosis death rate from 280 per 100,000 of population in 1945 to 180 per 100,000 in 1948. Mass chest X-raying of small school children, factory workers, and others; tuberculin testing and the vaccination of over 23,000,000 persons with BCG; education of the medical and nursing professions in diagnosis, treatment and care; return of active tuberculosis cases to hospitals under a reorganized program as well as inauguration of a school-lunch program with a more adequate diet for children as a means of resistance to infection have been integral parts of the tuberculosis program.
>
> I may say that similar work was carried on in other countries of the world, particularly as to the detection and the checking of tuberculosis, the antimalarial program in Italy and Greece, and the cholera program in Egypt. From the results already obtained one cannot help to realize the importance of WHO.
>
> Since we are a part of this world's civilization, it becomes the duty of all of us to do all we can, personally and collectively as a Nation, to help our fellowmen, yes, human civilization. Let us not forget that in helping them we help ourselves.
>
> The authorization calling for the continuance of the WHO is small enough in comparison to the work required to obtain the desired results. Let us not forget that this authorization is a part of House Joint Resolution 334. It should pass unanimously for it attempts to make the world a better place to live in.

Poultry Raising $48,000,000 Connecticut Industry

EXTENSION OF REMARKS

OF

HON. ANTONI N. SADLAK

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1950

Mr. SADLAK. Mr. Speaker, several days of Connecticut Poultry Week are still before us, the celebration having been set for January 30 to February 5. Poultry raising throughout Connecticut, my district, is an important industry, annually aggregating $48,000,000. Emphasizing its importance to the people of the Constitution State and to its neighbors everywhere, an article in the Bridgeport Sunday Post of January 29 gives more detail regarding this celebration, the industry and the programs for the week. Under leave to extend my remarks, I ask that the newspaper article be reprinted here, but before that, Mr. Speaker, I am sure that my colleagues will recall the centennial of the American poultry industry stamp which was issued at New Haven, Conn., in September 1948 as a result of Public Law 621 which I had sponsored. That stamp commemorated the devoted efforts for 100 years of men and women, poultry raisers to an agricultural industry that annually approaches $4,000,000,000 in the United States. Incidentally, Mr. Speaker, I am told, the total sale of this outstanding stamp exceeded all but one of the commemorative stamps issued in 1948.

POULTRY RAISING $48,000,000 CONNECTICUT INDUSTRY—CHICKENS, EGGS MAJOR PRODUCTS OF STATE FARMS

The $48,000,000 Connecticut poultry industry will celebrate Connecticut Poultry Week January 30 to February 5. According to Arthur Guzman of Vernon, vice president of the State poultry association, "poultry week is an effort on the part of the industry to acquaint the people of Connecticut with the importance of poultry in our State economy and with the superior quality of poultry and eggs raised right here in Connecticut."

PRODUCERS FOR NEW YORK

More than $26,000,000 worth of eggs and $20,000,000 of chickens are marketed each year by Connecticut farmers. Though much of it is consumed within the State, Connecticut is the largest shipper of live poultry to the New York market. About 2,000,000 pounds of fowl, broilers, fryers, and pullets are shipped each month to New York and usually command better prices than poultry from other areas.

New London and Windham Counties are known as the eastern Connecticut broiler area. As many as 226,000 baby chicks are placed on farms each week in that area alone. Most of these will be marketed in about 13 weeks as broilers or fryers. The tremendous growth of this business has rehabilitated certain areas unsuited for other types of agriculture.

The increased production of chickens and eggs in Connecticut as well as in other parts of the country has resulted in overproduction and below cost of production prices on the farm. Connecticut farmers through Connecticut Poultry Week bring to the attention of housewives everywhere that both poultry and eggs are selling at the lowest prices since before the war.

POULTRYMEN MEET TUESDAY

Several hundred poultry farmers will attend the annual meeting of the Connecticut Poultry Association at the Hotel Bond, Hartford, on Tuesday, according to George Wells of New Milford, president.

The program, starting at 10 a. m., will feature talks on many of the pressing problems that confront the Connecticut poultryman today. Walter Berger, president, American Feed Manufacturers Association, Chicago, will speak on Where Do We Go From Here on Poultry Feed Price and Supply? Poultry-disease problems will be thoroughly aired by Dr. Nelson Waters, East Lansing, Mich., Dr. Erwin Jungherr, Storrs, and Dr. R. K. Cole of Cornell University. Other speakers will be professor W. C. Skogland, University of Delaware, Dr. H. R. Bird, United States Department of Agriculture, Washington, D. C., and Homer I. Huntington, Poultry and Egg National Board, Chicago.

A banquet, featuring Connecticut fried chicken, will be held in the evening. Dr. Earl Butz of Purdue University, Lafayette, Ind., nationally known speaker, will have as his subject Prince or Pauper. The 25 voice Beethoven Glee Club of Manchester will provide entertainment.

Hidden Excise Taxes

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1950

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks I am glad to bring to the attention of the membership of the House an example of how unfair excise taxes are. In my opinion, many articles covered by these taxes cannot be considered luxuries. I shall continue to exert every effort to bring about a more equitable classification of excise taxes. Below you will find an illustration showing the effect of hidden excise taxes on the price the consumer pays for gas and electric ranges:

Without excise tax:	
Manufacturer's selling price (average)	$100.00
Retail price (40-percent mark-up)	166.66
With excise tax:	
Manufacturer's selling price	100.00
Excise tax (10 percent)	10.00
Dealer cost	110.00
Retail price (40 percent mark-up)	183.33
Consumer cost with excise	183.33
Consumer cost without excise	166.66
Extra cost to consumer	16.67

Thus on production: 150,000 units per year, the consumer public pays ($16.67 times 150,000) $2,500,500 more than necessary, out of which the Federal Government receives $1,500,000 in excise taxes which are collected at no charge.

When expanded to national production (2,000,000 gas ranges plus 1,500,000 electric ranges total 3,500,000 units) the consuming public pay $58,335,000 extra for these products and the Government collects $35,000,000 in taxes.

John L. Lewis

REMARKS
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1950

Mr. FORD. Mr. Speaker, the village of Cedar Springs, Mich., is about 20 miles north of Grand Rapids. A fine weekly newspaper is published in that community by two very able journalists, Miss Nina Babcock and Miss Grace Hamilton. Recently Miss Babcock wrote a letter, a public editorial if you please, to John L. Lewis, and with your permission I will read it to the Members of the House. The letter is as follows:

AS THE WORLD WAGS
CEDAR SPRINGS, MICH.,
January 24, 1950.

DEAR JOHN L.: I ran afoul of the law recently. I disobeyed a traffic ordinance. The cop caught me at it. He gave me a ticket and I paid a fine. I tried to argue a little. (You know how that goes.) But even for too much lip we little folks often pay heavily. It was evident I had no leg to stand on. There was a law, you know—made for the general welfare, as all laws are supposed to be—and I was an offender. I knew I was wrong, and anyone familiar with the incident knew I was wrong.

It didn't take more than 30 minutes for me to be showed up as a law evader, and as a person who selfishly thought my own interests were more important than the general welfare.

No politics was involved. I had no pull. I'm only a country editor, running a weekly newspaper. I don't control the vote of the some 9,000 people who read my paper. (Some borrow it, some steal it, but they all read it.) The big boys don't even know I exist. Harry doesn't know me, even though we are both native Missourians and were born and reared only a few miles apart in the "Show Me" State. He doesn't know my newspaper, the Cedar Springs Clipper, but I wish he read it every week.

I've been reared and schooled to know that the laws of this land are the laws by which I must live, and that the welfare of the whole people is paramount to my own selfish desires. My more than 13 generations of forefathers in this land believed that, and it has seeped into my blood.

Now, Mr. Lewis, I'm in a mental quandary. And I find that many of my neighbors are in the same mental state. I am scared about this country of ours. I'm scared when the votes of men are more important than the welfare of the land. I'm not too bright about politics, but it is plain that getting votes is controlling Washington and the men elected to look after the welfare of all of us. You probably know more about this than anyone else, but you might not want to divulge political secrets. I've found that it's pretty hard to get dependable statements from politicians.

Here I've rambled on and on, and haven't come to the matter I intended to talk to you about. We haven't any coal in our newspaper plant. We've been cold here since last Thursday. We had to close our office over the week end. You see, we tried to conserve the little coal we had so we could get The Clipper out this week. Our folk expect The Clipper every Thursday, and we have an obligation to our community. We've worked in a cold shop all week. If it weren't for our red flannels we'd be frozen now.

Here I am again off the track, talking about red flannels.

The question is: How can you jeopardize the welfare of so many people? How can you break laws without punishment? How long is this great United States going to give you a free rein to trample on us? How long are you going to be able to evade the Taft-Hartley law? When are we going to get coal?

When are you going to get your ticket?

NINA E. BABCOCK.

Is the Kremlin's Aim Conquest of the U. S. A.?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address given on the Town Meeting of the Air program, January 17, 1950:

Ten years ago some of us who had lived under the Japanese conquest in China tried to convince our Government and the American people that Japan's real aim was a program of conquest which required the defeat of the United States. We failed, and Pearl Harbor became inevitable. My concern now is that we not make again the same tragic mistake we made 10 years ago. For I am convinced by both the declarations of Communist leaders and the unmistakable pattern of their actions that the ultimate aim of the masters of the Kremlin is—yes, must be—conquest of the United States.

The methods they use are not those of the past—like Hitler's legions marching openly across a nation's border. Their more clever and successful techniques seek to weaken a nation until their agents and followers can seize control from within. That, of course, is conquest.

Moreover, the Kremlin is already well on its way toward achieving this goal. It has gained control of half the land and one-third of the people of the world and their program is steam-rolling in high gear.

What would you do if you were a member of the Politburo, without moral principles, without conscience, without scruples, and embarked on a great program of expansion? Wouldn't you have to make your aim destruction of the one thing standing between you and complete victory—the free government of the United States of America?

How would you go about achieving that aim? Surely the same way the Kremlin has. You would try to soften up and isolate the United States by undermining its friends and shaking their confidence in its Government, cutting off our trade, and forcing us either, as Lenin put it, to spend ourselves into bankruptcy to help our allies stay free; or to let them be taken over, one by one, by this new type of aggression, internal conspiracy, and we thus be left standing alone. That is precisely the pattern the Soviets have followed.

When after the war they tried directly to get control of all of Germany and then western Europe, we were intelligent and forceful enough to prevent it. When they moved against the Middle East, Greece and the Mediterranean, we were vigilant enough to recognize that as a skillful attempt to turn the flank of our roadblock in Germany, and we stopped that move also.

But our State Department has not been alert enough to recognize Communist aggression in China and Asia as merely a wider flanking attack—aimed ultimately at Europe and then at ourselves.

The Chinese understood and resisted. But now, abandoned by us, free China is on the ropes. As a result the Communists feel strong enough to seize American consular property in Peking in order to eliminate all American and pro-western influence in China and completely pull the iron curtain down.

What reason is there to believe the Kremlin's next steps into southeast Asia will falter or fail? If deprived of access to the resources and markets of Asia, how can Europe recover? Where would that leave the United States?

Yes, the pattern of Soviet expansion in our direction is clear; the pronouncements of their leaders are equally clear.

A recent example is the message which Mao Tse-tung, head of the Chinese Communist regime, broadcast last October to Chairman William Z. Foster and other Communist officials in the United States. We have been led by the State Department and by pro-Communist propagandists in this country to believe that Communist aggression in China is merely a struggle to overthrow the allegedly feudalistic, landlord,

UNIVERSITY OF MICHIGAN LIBRARIES

warlord government of China. But the Communists know better. Mr. Mao didn't even bother to mention Chiang Kai-shek. Rather, he said, "It is the present imperialistic government of the United States which * * * has met with decisive defeat."

How can conquest of China mean decisive defeat for us? Because it produces a drastic shift in the balance of power in the world—for the Soviets and against us.

For there are four main factors which determine power: Territory, resources, manpower, productive capacity.

If Asia falls under Communist control, the Kremlin will have gained preponderance in territory, resources, and manpower. The Russians have demonstrated by constructing the atomic bomb that they can gradually overtake us where we now lead—technical skills. But how can we ever overtake them where they will lead—in territory, resources, and manpower? Time is not on our side.

Yet, our Government still plays the diplomatic game of striped pants. We don't act—we just react. We are reduced to hoping that the Kremlin will make enough blunders in China and elsewhere to save us from our own blunders. That is too risky a policy—or no policy.

Unless there is a change of policy promptly, all Asia will be lost. Then the Middle East and Europe will be in mortal peril. Then we will have world war III—or lose the United States, or both.

Actually all this can still be prevented and we certainly need not have a shooting war, if only we will stir from our slumbers in time. We are in danger only if we fail, one, to understand the nature and the objectives of the enemy we face; and, two, to mobilize quickly and fully all the forces of freedom everywhere.

Fair Trade in Foreign Trade

EXTENSION OF REMARKS
OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1950

Mr. HORAN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am pleased to include a most comprehensive letter from Mr. H. V. Simpson, executive vice president of the West Coast Lumbermen's Association.

As the chaos of recovery continues, it is well for us seriously to study the problems of our great industries. We want competition in commerce—domestic and world. We cannot have it if, by sins of omission or commission, we grant special concessions to anyone in any way.

WEST COAST LUMBERMEN'S ASSOCIATION,
Portland, Oreg., January 25, 1950.

The Honorable WALT HORAN,
House of Representatives,
House Office Building,
Washington, D. C.

DEAR MR. HORAN: The largest industry in western Washington and western Oregon is the forest products industry. The value of forest products from this area greatly exceeds that of any other industry and exceeds the value of the products of agriculture. In a large measure the economic welfare of the region depends on the welfare of its forest industries. Forest products provide the largest pay rolls, by far the largest inflow of money from other sections of the United States, the principal cargo for both rail and ocean carriers, and the principal source of taxation.

The welfare of the forest products industries should be the concern of every resident of the area. It directly or indirectly affects the lives of all who are residents of the territory and serious difficulty affecting the industry will seriously affect all those who reside in the territory.

The largest and most important segment of the forest products industry is lumber. This association represents the majority of the lumber production in this territory in many activities. It is one of the responsibilities of this association to represent the industry in foreign trade, both imports and exports.

We are presently concerned with the increasing volume of imports of lumber from western British Columbia, Canada. Lumber produced in that region is of the same species as that produced in western Oregon and western Washington, manufactured in similar plants under similar conditions. The one major difference is in the wage scale. The base wage (minimum) in Oregon and western Washington is $1.45 per hour. In western British Columbia the base wage is $1.07½ per hour. The American labor cost of lumber production is therefore about 35 percent greater than is the Canadian labor cost. In nearly all markets British Columbia lumber is in direct competition with Oregon and Washington lumber. On the basis of wage costs alone most Canadian mills can undersell most American mills and have frequently done so.

Last summer the Canadian Government fixed the exchange rate on the Canadian dollar at 90 cents. One Canadian dollar is now worth 90 cents in American money. To the lumber industry this means that Canadian sawmills can sell their product in the United States, or any other world market where American dollars are available, at the current market price in American dollars and receive a net return at the mill 10 percent greater than can an American mill selling at the same market price. As an example, when common lumber is selling in New York for $60 (freight charges eliminated) the Canadian receives $60 (American) plus 10 percent or $66 (Canadian) net to the mill. Competing American mills receive $60 only.

Large quantities of western British Columbia's lumber are shipped by water from their ports to American Atlantic coast ports, Boston, New York, Philadelphia, and others. Largely such shipments are made on tramp steamers of various foreign nationalities. Under the provisions of the Transportation Act of 1920 and amendments thereto shipments of lumber from Oregon and Washington ports to other American ports must be made in ships of American registry. Costs of operations of American ships are substantially higher than costs of operation of any foreign ships, principally due to the much higher wages paid by American shipowners. Freight rates on American ships are therefore nearly always higher than those applying on foreign ships. In recent months the rates on lumber on tramp steamers from British Columbia to the United States Atlantic coast have been $4 to $8 per thousand feet less than rates available from American ports to the same destinations. These freight savings accrue to the advantage of sawmills in British Columbia, giving them that much additional competitive advantage in that market.

Freight on shipments of lumber by rail and by water from Oregon and Washington to any point within the United States are subject to the 3-percent transportation tax. Lumber shipments from Canada are not subject to this tax. Under the terms of the Smoot-Hawley tariff of 1932 most lumber imports into the United States were subject to a $2 per thousand excise tax and a $1 per thousand duty. At the same time, under the Ottawa agreements most American lumber exports to the United Kingdom were subject to a 10-percent ad valorem duty, which duty did not apply on shipments into the United Kingdom from Canada. Other parts of the British Empire had varying duties on American lumber which likewise did not apply on Canadian shipments. Under provisions of the reciprocal trade treaties the duty and excise tax applicable to lumber imports into the United States have twice been reduced until it is now 75 cents per thousand excise tax and 25 cents per thousand duty.

At the same time reductions were made in the various duties on American lumber into the British Empire until under today's conditions, duties are not an influencing factor in much of our export business. And certainly the remaining duty and tax of $1 on Canadian imports is so small that its influence is negligible in view of the other substantial advantages enjoyed by British Columbia shippers. At the present time the American duty and excise tax gives not the slightest effective protection to American producers.

Fortunately, the American lumber market has recently been good. The effects of the Canadian advantage have not yet been fully felt. But no one in the industry doubts that the danger is present and the effects will eventually be sharply felt. At the first slackening of demand British Columbia shippers will drop prices until they can secure whatever business they need. Their total production will remain high even if it means that Oregon and Washington production will decline.

As an example in 1948 the lumber market was erratic. Oregon and Washington mills were just able to hold their shipments to the 1947 level; actually, three one-hundredths of 1 percent increase. During that year imports from western British Columbia into the United States increased 355,503,000 board measure or 255 percent. This 355,503,000 feet was valued at about $16,000,000 which was business lost to the American mills with $8,000,000 in direct pay rolls lost to American labor.

We now have another example of the Canadian mills' ability to underquote. Britain's purchase of lumber just completed went eighty-two million to British Columbia, five million to Oregon and Washington. British Columbia mills underquoted American mills on 95 percent of the business. Yet because of Canada's discounted dollar British Columbia mills will receive more in Canadian dollars per thousand feet board measure net than the American mills quoted in American dollars. This purchase was made with American dollars supplied by ECA. American mills got $200,000 in business of which American labor will get $100,000. Canadian mills got $3,800,000 of which Canadian labor will get $1,900,000.

Canadian mills, taking advantage of ocean freight savings, savings on transportation tax and their discounted dollar have sharply increased their shipments by water to the United States Atlantic Coast. Since the war the record is as follows:

Lumber shipment by water to United States Atlantic coast ports [1]

Year	From Oregon-Washington	From British Columbia
1945	16,673,759	
1946	317,261,046	
1947	478,274,306	
1948	552,724,033	96,071,021
1949—January	53,033,956	12,897,383
February	52,148,548	9,688,962
March	105,457,895	17,222,257
April	91,516,750	23,815,149
May	73,018,892	13,708,766
June	98,826,719	9,821,229
July	64,220,723	6,746,534
August	89,939,511	16,026,514
September	99,019,663	25,438,374
October	89,258,565	41,000,201
November	99,610,720	58,234,161
December (estimated)	105,328,887	67,925,929
Total 1949	1,021,381,829	303,525,459

[1] As compiled by the Pacific Lumber Inspection Bureau, Seattle, Wash.

It is our opinion that the United States Atlantic coast market will not continue to use the quantity of lumber currently moving and that British Columbia shippers will at the first drop in demand make every effort to hold their volume at the expense of the American mills. They will ship it on foreign ships at the expense of the American merchant marine.

Under present coditions British Columbia mills can drop their delivered price to the Atlantic coast about $10.60 per thousand and still net the same f. o. b. mill price in Canadian dollars that American mills are today netting in American dollars; that is, for example:

Freight savings	$6.00
Transportation tax	.60
Exchange	5.00
	11.60
Less duty	1.00
Total	10.60

American mills would have to drop their f. o. b. mill prices a disastrous $10.60 in order to compete. And Canadian mills, with their substantially lower wage costs, can in addition reduce f. o. b. prices to a level which would ruin the Oregon-Washington lumber industry.

In 1949 British Columbia mills received approximately US$14,000,000 on shipments to the Atlantic coast of which $7,000,000 went for direct labor. This is business lost to American mills and wages lost to American workmen. In addition approximately $2,500,000 was lost to American ship owners for freight of which $1,075,000 was for labor. This was business lost to American shipping and wages lost to American maritime workers.

We know nothing we can do as an industry about the Canadian wage rate. We doubt also that the Congress can do anything about it. We know of nothing we can do as an industry about the discount on the Canadian dollar and possibly the Congress is also unable to directly do anything about it. We know of nothing we can do as an industry about the transportation tax, the American duties, or the freight differentials. The Congress can take action on these.

These problems have been given much thought by members of our industry. Our concern over them is great. On our many discussions these suggestions have been made.

A limiting quota might be put on lumber imports into the United States of America. An equalizing tax on ocean freight might be placed on imports of lumber. Duties might be increased. Restrictive antidumping laws might be passed. FHA might require that all lumber used in FHA-financed houses be made in the United States. ECA lumber purchases might be restricted to American production. And certainly the transportation tax can be removed.

The lumber industry has so far as possible attempted to solve its own problems. These present difficulties seem however beyond our range of influence. Yet they are certain to endanger the well-being of our industry and with it the well-being of our labor and our communities. We therefore feel we should tell you of our great concern and ask for your suggestions as to possible remedies. We will gladly supply any additional information that may be required and the writer will if advisable proceed to Washington for a full discussion of the problem.

A similar letter is being written to each Member of Congress from Oregon and Washington.

Yours truly,

H. V. SIMPSON,
Executive Vice President.

Georgia Legislature Repudiates Resolution of 1946 Approving Principles of World Federation

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, it is a significant fact that the legislature in Georgia revoked and repudiated the action it took in 1946 approving the principles of world federation. This should be notice to all Members of this House to scrutinize the purposes behind Resolution 64 and others now pending.

Mr. Speaker, all the great patriotic organizations have spoken out against this resolution, and as part of my remarks, I am including a letter from the national society, Daughters of the American Revolution, on the subject of the resolution in question. It is opposed absolutely to any action by the Congress which might involve the United States in a world government.

Also, as part of my remarks, Mr. Speaker, I am including a copy of the resolution adopted by the Georgia Legislature:

NATIONAL SOCIETY, DAUGHTERS OF THE AMERICAN REVOLUTION,
NATIONAL DEFENSE COMMITTEE,
Washington, D. C., January 28, 1950.

HONORABLE MEMBER OF CONGRESS: The action of the legislature of the great State of Georgia in rescinding its 1946 resolution favoring world government is indicative of the will of the people to follow the advice of our first great President, George Washington.

Entanglements proposed by any and all world government advocates will subordinate the sovereignty of the United States and will pull it down to the lowest common denominator of small nations who for ages have hated one another and who are not yet quite ready for a one world government.

Patriotically yours,

ESTELLA A. O'BYRNE,
President General, NSDAR.
LOLA LEE BRUINGTON,
Secretary, Defense Committee.

GEORGIA RESOLUTION

Whereas the General Assembly of Georgia passed a resolution at the 1946 session of the general assembly approving the principles of world federation; and

Whereas due to changing conditions it is best that Georgia be not considered as one of the 22 States seeking world government; and

Whereas the principles announced in the declaration of the federation of the world as set out in said 1946 resolution are not approved by the general assembly; and

Whereas a copy of said 1946 resolution was sent to each of the Senators and Members of the House of Representatives in Congress from the State of Georgia: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), That said resolution of 1946 be now repudiated and that the General Assembly of Georgia go on record as opposing the principles of world federation; be it further

Resolved, That a copy of this resolution be sent to each of the Senators and Members of the House of Representatives from the State of Georgia.

Passed in Atlanta, Ga., January 1950: Georgia House of Representatives, unanimously; Georgia Senate, 34 to 8.

The Brooklyn Eagle on Mr. Acheson

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1950

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Brooklyn Eagle of Monday, January 30:

UNWISE TO DISCREDIT ACHESON FOR INDISCRETION ON HISS

The Republican Party has apparently found in the policies and the somewhat unfortunate utterances of Secretary of State Acheson acceptable material for political capital. Before they go far with their obvious purpose of trying to discredit Mr. Acheson in the eyes of the American people they should give thoughtful consideration to the political consequences of their attack, and also to its international implications. It is conceivable that the reaction in both instances may be harmful.

Regardless of the violence with which he is being assailed by Republicans in Congress, and the strange reluctance of Democrats to come to his defense, Secretary Acheson's policies with respect to China and Spain reflect practical wisdom and courage. It is significant that informed opinion generally is coming to recognize both the futility and the danger of our deepened involvement in the lost cause of the Chinese Nationalists. They have shown themselves through the years as unworthy of the confidence of their own people and of help from outside. The administration's willingness to restore diplomatic relations with Franco's Spain is a retreat from a policy which, Mr. Acheson frankly concedes, has failed. Nothing is to be gained and advantages may be lost by continuing it.

Unquestionably, Mr. Acheson has played into the hands of his political enemies by reiterating his support of Alger Hiss, the former official of the State Department who is under a sentence of 5 years for perjury. Although there is reason to admire his loyalty to a friend, his discretion must be questioned for taking a position which implicitly expresses lack of confidence in the Government which prosecuted Hiss and the court and jury which passed judgment upon him. There is good reason to criticize Mr. Acheson's utterance but not to make it a political issue.

The loyalty of Mr. Acheson is not open to question. His conduct of foreign relations and his general administration of his office have been marked consistently by sound judgment and fine ability. Yet Republicans in Congress are raising a cry for his resignation.

A logical consequence of this aggressive movement against Secretary of State Acheson is a partisan assault upon the administration's foreign policy. This possibility is cause for deep concern among the American people. It might well be the beginning of a national disunity which would give infinite comfort to the Kremlin and to Communists at home.

UNIVERSITY OF MICHIGAN LIBRARIES

The Legislative Program of the Democratic Party in the New York State Legislature for 1950

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1950

Mrs. KELLY of New York. Mr. Speaker, the distinguished Democratic leaders of the New York State Legislature, the Honorable Irwin Steingut, of the assembly, and the Honorable Elmer F. Quinn, of the senate, on January 29, 1950, announced a most carefully thought out legislative program for the great Empire State. Because of its intelligent and enlightened approach to such pressing problems of government as civil rights, housing, rent control, education, agriculture, and other all-important subjects, I believe this statement to be worthy of the careful consideration of my colleagues in the House. I unhesitatingly commend it to you.

The text of the article follows:

THE LEGISLATIVE PROGRAM OF THE DEMOCRATIC PARTY IN THE NEW YORK STATE LEGISLATURE FOR 1950

Following weeks of intensive study of recommendations made at the legislative hearings sponsored by the Democratic Party in December in New York City, Senator Elmer F. Quinn and Assemblyman Irwin Steingut, Democratic legislative leaders, announced today the party's full 1950 program.

Much of the program has already been implemented by legislation, including the proposal for a $200,000,000 bond issue for State aid for school construction. The remainder will be submitted to the legislature in the next few days.

"This is one of the most carefully thought out programs ever submitted to the legislature of this State for consideration. It is the fruit of considerable research, effort, and study on the part of hundreds of our citizens," the two legislative leaders declared.

"Paul E. Fitzpatrick, the State chairman, deserves the particular gratitude of all citizens of this State for initiating the nonpartisan public legislative hearings in December. More than 100 organizations representing the major social forces within our State proposed more than 1,000 recommendations at these hearings.

"The program that we are submitting to this legislature is the culmination of the recommendations made at these hearings. It expresses the wishes of the people of this State and should have the most careful consideration of this legislature."

The program includes recommendations on many matters of concern to the people, including problems of the aged, agriculture, child welfare, civil rights, education, hospitals, health, housing, labor, legislative reform, mental health, protection of small investors, rent control, social welfare, and veterans.

The program, in full, follows:

AGRICULTURE

We favor:

1. Endorsement and encouragement of cooperative associations among farmers.
2. An immediate report on the progress of the investigation of the milk price spread sponsored by the New York State Temporary Commission on Agriculture.
3. A more adequate milk weighing and butterfat testing program for dairymen. We suggest that activities with regard to weighing and testing in markets with Federal and State orders be delegated to the administrators of these orders, and that the State staff be used among producers not covered by minimum price orders.
4. The relaxation of agriculture and market law B258 relative to restricting the licensing of new milk enterprises.
5. Extension of the principles of the minimum price orders to include producers in upstate markets.
6. Immediate reestablishment of a full-scale agricultural and industrial fair at Syracuse.
7. Completion of rural electrification undertaken by the Federal Government under Democratic administration.
8. Increased State aid to rural schools.
9. Increased State aid for health and hospitalization in agricultural counties.

CIVIL RIGHTS

We favor:

1. Prohibition or forfeiture of any benefits to private housing developments with restrictions of occupancy because of race, color, or creed.
2. The outlawing of restrictive covenants on real estate.
3. A genuine end of segregation in the National Guard.
4. Outlawing of wire-tapping and the use of evidence obtained thereby except in cases affecting the national security, kidnapping, and murder.
5. Repeal of blue-ribbon juries in New York City.
6. State-wide personal registration.

CIVIL SERVICE

We favor:

1. Legislation to implement the veterans' preference system required by constitutional amendment in November 1949.
2. Revision upwards of salary standardization schedules and elimination of inequities in job classifications.
3. Establishment of sound grievance machinery for complaints by civil-service employees.
4. An investigation of working conditions of State employees.
5. Permissive retirement at age 55, with the employee and State sharing the cost of a pension.
6. Legislative investigation of working conditions and executive abuses of the State troopers.
7. Revision of the present 24-hour-per-day duty schedule of the division of State police to one which will allow members of the division to enjoy a reasonable home life.
8. Repeal of the Condon-Wadlin Act.

CONSERVATION AND PUBLIC UTILITIES

We favor:

1. A sound conservation program for all natural resources, including (1) flood control; (2) the improvement of the State's fish and game practices under a competent and active sportsmen's commission; and (3) reestablishment of the purchase of submarginal lands by the State, the removal of these lands from agriculture, and their development as State forests, parks, and game preserves.
2. Preservation of public ownership and control of water-power facilities of the State.
3. A legislative commission to make a thorough study of our water resources.
4. Regulation of utility companies to guarantee that consumers as a matter of right receive lowest prevailing rates. This should include the adoption of uniform accounting procedures by public-utility corporations and publication of rate schedules so that consumers are aware of cheapest rates.
5. Proper regulation of submetering companies.
6. Completion of rural electrification undertaken by the Federal Government under Democratic administration (also agriculture).
7. Protection of the Adirondack Preserve and opposition to any encroachment upon the forest preserve lands.

EDUCATION

We favor:

1. A $200,000,000 bond issue for school construction.
2. Elimination of the superior-merit rating provisions of the Feinberg teachers' salary law.
3. Broader benefits for all pensioned teachers to correspond with the retirement benefits enjoyed by employees of the city of New York under the New York City retirement law.
4. A permanent program of nonprofit school lunches.
5. State aid to public libraries.
6. Immediate appropriation for building of medical, dental, and nursing centers as part of a State university.
7. Community colleges to be paid for and initiated by the State.
8. Provisions that any increase in educational costs be borne by the State.

FOREIGN LANGUAGE

The Democratic State Committee, striving to serve the best interests of all citizens of this great State irrespective of their origin, color, race, or religion, recognizes fully the great contributions made by Americans of foreign descent in public affairs.

The growth and welfare of New York's citizens of foreign descent has always been of vital concern to the Democratic legislators of this State.

The Democratic Party of the State of New York urges upon the Congress a broadening of the present Displaced Persons Act.

HEALTH

We favor:

1. Establishment of a State hospital commission to exercise general supervision over both public and private hospitals.
2. Increased State aid for voluntary hospitals.
3. Immediate construction of mental hospitals to relieve overcrowding, and the setting up of clinics in urban areas for psychiatric examination and preventative treatment.
4. A State-rehabilitation program for alcoholics, including medical and psychiatric care, education and employment counsel and assistance.
5. A State program for drug and sex offenders, to include adequate facilities for examination, treatment, and rehabilitation.
6. Adequate care of cerebral palsy victims.
7. Construction of adequate facilities and the employment of qualified personnel to care for mental defectives under the age of 5 years.
8. We favor a State-wide health plan providing full medical care for all residents of the State on a cooperative basis among physicians, working people, farmers, and professional people.

HOUSING

We favor:

1. Implementing legislation to provide maximum benefits under the National Housing Act of 1949 in this State.
2. Stimulation of home building by private enterprise, giving the State as well as municipalities authorization to make loans to corporations regulated by law as to rent and profits.
3. Approval of a policy of providing for State loans to municipal housing authorities for construction of housing projects without cash subsidies for those families whose incomes are too high to render them eligible for cash subsidized public housing and too low to permit them to rent those private units which may be available at today's costs.
4. Deduction of veterans' and war widows' benefits from income computations in those housing projects limited to persons of a particular income group.

5. Prohibition of discrimination in any housing development projects which profit from tax exemption, condemnation of land, or other public assistance.

LABOR

We favor:

1. A State-wide minimum wage of $1 per hour.

2. Increase of workmen's compensation benefits: The injured employee to get 75 percent of pay, but no more than $40 a week; increased widow and survivor benefits.

3. Extension of unemployment-insurance coverage to employees and firms with one to four employees.

4. Provision of $3 per week for each dependent person and the increase of weekly unemployment-insurance benefits from the present minimum to $15, and from the present maximum to $30.

5. Enactment of legislation to repeal the so-called merit rating of employers and to prevent the raiding of the unemployment-insurance fund in order to assure its solvency and to assure payment of benefits to workers.

6. Immediate establishment of a system of genuine sickness-disability insurance for persons forced into unemployment through temporary illness. The present law is unworkable and unfair. An adequate and fair law should be under the administration of the Division of Placement and Unemployment Insurance, and not under the Workmen's Compensation Board, as provided by the present Mailler-Condon law. An adequate law should provide protection for a period of 26 weeks. An adequate law should be without discrimination. The present law discriminates against Negroes, against certain minority groups, against women, against the aged, and against those workers who, by nature of their jobs—for example, stevedores—are rarely employed by the same employer for four consecutive weeks. Furthermore, while under the present law the worker bears virtually all of the cost of the plan, he has no voice in its administration.

7. Encouragement of collective bargaining. We are opposed to any crippling amendments to the State Labor Relations Act or to any other legislation which will otherwise restrict or impair the right of collective bargaining.

8. Memorializing the Congress to repeal the Taft-Hartley law. We oppose any similar law in this State.

LEGISLATIVE AND ADMINISTRATIVE REFORM

We favor:

1. Creation of a "little Hoover commission" to study the relationship of Federal and State Governments, the relationship of the State and its political subdivisions, with a view to eliminating inefficiency, waste, and overlapping bureaus.

2. A split session of the legislature providing: (1) A 5- or 6-week period for introduction of bills; (2) a month for committee and public hearings and action; and (3) a month for debate and disposition by the senate and assembly.

MUNICIPALITIES

We favor:

1. Prohibiting the State from mandating expenditures upon cities and villages unless the State provides definite means of obtaining revenue to carry out the mandated projects.

2. Elimination of local and State laws requiring counties to reimburse towns for delinquent town taxes.

3. Amendment of State highway law revising the arterial highway formula to provide for payment by the State of a fair share of expenses of maintenance and snow removal.

4. Reimbursement by the State of certain administrative expenses such as rental of quarters, salaries of maintenance workers, postage, which are not now reimbursable by the State.

RENT CONTROL

We favor:

1. A comprehensive State-wide rent-control law to become effective immediately upon the expiration of Federal rent control, and the granting of permission to municipalities to enact local rent-control laws to supplement State law in areas where protection provided thereby is inadequate to extend to June 30, 1951.

2. Amendment of the present State rent-control law to provide protection of nontransients in hotels, apartment hotels, cooperatives, and other accommodations.

3. Amendment of the Civil Practice Act to make State-wide the provisions relating to stays of eviction in summary proceedings and extending such stays to 12 months.

4. Prohibition of excessive and unreasonable deposits and tie-in sales by landlords.

5. Extension of the commercial rent-control law for 1 year.

6. Amendment of the commercial rent-control law to include protection of persons who store automobiles in garages.

WELFARE

We favor:

1. Payment by the State to localities of 80 percent of expenses of indigent sick. At present, the State reimburses cities up to 80 percent of the amount cities pay to persons on relief; the State should pay 80 percent of its share for the indigent sick as it does for the indigent who are well.

2. Reimbursements by the State to the communities of certain welfare administrative expenses such as rental of quarters, salaries of maintenance workers, postage, which are not now reimbursable by the State.

(See child welfare and old age.)

CHILD WELFARE

We favor:

1. Adequate day care centers for children of working mothers.

2. Proper supervision of foster homes for permanent placement of dependent children.

3. Placement of children needing psychiatric care under the jurisdiction of the children's court.

4. Extension of the State youth commission.

5. Provision for adequate facilities to be provided by the State for diversified treatment of juvenile delinquents rather than mere custodial treatment. This should include: (1) A youth court to deal with 16-21 year old offenders; (2) specialized institutions for youthful offenders; and (3) establishment of a youth correction authority.

OLD AGE

We favor:

1. A permanent State commission on aged persons to study and to provide a complete program to combat the problems of the aging.

2. A counseling service division for the aged in the State employment service.

3. A State adult recreation council.

4. An adult hygiene and geriatric division in the State department of health.

5. Increased social-security benefits and widened coverage.

6. Proper incentive to employers and employees to work out old-age pension plans.

7. Reimbursement by the State to private individuals for taking care of aged in boarding homes rather than in county institutions.

8. Establishing the right of a welfare district to erect or supply, or establish homes for the aged who are able to pay a part or all of their maintenance without requiring residents of such homes to turn over all their possessions to the welfare district.

VETERANS

We favor:

1. Streamlining of the New York State Division of Veterans' Affairs by eliminating those efforts which duplicate the services of other State and Federal agencies; placing the division under the State department of education, and assuring the veterans of the best available professional service by putting the division's personnel under competitive civil service.

2. Enactment of legislation specifically granting to students enrolled at colleges or universities within the State, whose intention is that the State is their place of permanent abode, to vote at the seat of their college or university (extending court of appeals decision in Shanks Village case).

3. Provision of supplemental subsistence grants to veterans receiving Federal benefits under the GI bill of rights to equalize higher cost of living in New York as compared with the national average.

4. Extension of the State Soldiers' and Sailors' Civil Relief Act for at least another year.

VEHICLE AND TRAFFIC

We favor compulsory inspection of automobiles every 6 months.

PROTECTION OF THE INVESTOR

We favor repeal of the Coudert-Mitchell law which imposes burdensome restrictions on small stockholders who seek to bring large corporations to account for their actions.

Relief of Americans Who Voted in Italy

REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1950

Mr. ROONEY. Mr. Speaker, there is no more needed or more humane legislation than H. R. 6616, the bill introduced by my good friend and colleague the gentleman from Pennsylvania [Mr. WALTER] which provides for the expeditious naturalization of former citizens of the United States who have lost their American citizenship through voting in a political election or in a plebiscite held in Italy.

The Committee on the Judiciary has filed a very comprehensive report on this excellent measure and I want to congratulate them upon their painstaking and diligent work. As we all know, this bill was introduced after a thorough study and investigation of the situation by a special subcommittee of the Committee on the Judiciary which visited Italy last fall. The subcommittee subsequently submitted a report based on their investigation. It is simple justice to provide relief for American citizens who have lost their citizenship through voting in Italian elections or in a plebiscite held in Italy in 1946 and in 1948.

I am sure that most of us recall the Italian election held on April 18, 1948, in which the Italian people had to make a decision which could either tilt the scales toward democracy or totalitarianism in western Europe. People in the United States and throughout the free countries of the world for some time had been much concerned about the outcome of this election. There was much anxiety about it as communism was riding high in Italy. Soviet Russia was giving substantial support to her anti-Christian Communist agents through a skillful and unscrupulous propaganda campaign in an effort to bring the Italian people behind the iron curtain. Thank God,

UNIVERSITY OF MICHIGAN LIBRARIES

the election was overwhelmingly in favor of a democratic government and the United States was one of the dominant forces in arresting the Communist tide. During the course of the campaign prior to the election of April 18, American citizens of Italian origin were induced to join a letter-writing campaign to their relatives and friends in Italy urging them to vote in favor of our American way of life as opposed to communism and the police state. I have a large number of citizens in my congressional district of Italian origin, all of whom are patriotic, law-abiding Americans. Thousands of them corresponded with their relatives and friends in Italy urging them to vote to put a stop to the Italian Communist campaign of chaos and terror. It is estimated that somewhere between 3,000 and 4,000 American citizens in Italy at that time voted in the Italian election through inducement and persuasion of their relatives and friends in the United States. Under the circumstances, when they went to the polls and voted they never for a moment realized that their vote against communism would result in the loss of their American citizenship.

These former American citizens are surely deserving of some measure of reward for the courageous stand they took in behalf of freedom and independence. In many instances, their anti-Communist vote has resulted in great personal hardship. Parents have become separated from their children. Many married couples have been broken up by virtue of the fact that one of them voted anti-Communist while visiting or temporarily residing in Italy.

The fact that these folks have been denied the privilege of returning to their United States, which in the majority of cases is their native country, has encouraged the Communist elements in Italy to take particular pains in publicizing the unfortunate position in which they have been placed by the terms of the present law.

As everyone can understand, these involuntary expatriates are perplexed about the uncertainty of their future. The adoption of this just and humane legislation will bring back to them peace of mind and reunite them with their loved ones.

May I therefore urge immediate favorable action on this bill. Such action would surely be an appropriate token of our appreciation for the contribution they have made in helping to establish a friendly democratic government in Italy.

Suction Socket Artificial Legs Now Available to Veteran Amputees

REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, today the Administrator of Veterans' Affairs has issued a release to the newspapers informing the public that the Veterans' Administration is making the suction socket artificial leg available to eligible veterans who have suffered leg amputations above the knee of a character which makes its use medically feasible.

This is cheering news to many leg-amputee veterans. As a member of the Advisory Committee on Artificial Limbs, I have been deeply interested for years in the experiments that have been made to determine the best possible artificial leg for veterans who suffered this type of disability. In the last Congress, when I was the chairman of the Committee on Veterans' Affairs, we had several very fine demonstrations of these prosthetic appliances, and the members of the committee were able to see for themselves the progress made under Public Law No. 729, Eightieth Congress, which authorized $1,000,000 annual appropriation to the Veterans' Administration for prosthetic appliance research. Many Members of Congress have remarked to me that they felt that this appropriation was one of the finest ever made by Congress for the disabled veterans. Today's announcement is further evidence of how well that money is being used. I hope every Member will take the time to read it. It follows:

After 3 years of scientifically controlled testing and development, Veterans' Administration is making the suction socket artificial leg available to eligible veterans who have suffered leg amputations above the knee of a character which makes its use medically feasible.

Veterans' Administration said that during the past 2 years, it had tested more than 500 amputee veterans in its experimental program on the suction socket leg. Successful results were obtained in a great majority of the cases, Veterans' Administration said.

This above-knee artificial leg differs from the conventional artificial leg in that it has no pelvic hinges or suspension harness. The leg is held to the stump by moderate suction created in the closed socket each time the leg is lifted from the ground in walking.

The suction socket leg is designed to give greater freedom of movement in all directions, appears more like part of the body and does away with the discomfort of the pelvic belt (a heavy belt with steel hinge fitted to the waist).

The earliest known reference to the suction socket is in a patent issued by the United States Patent Office in 1863 to Dubois D. Parmelee, of New York. The principle of the suction socket was the attachment of the socket to the amputee's stump by atmospheric pressure.

Others, both in this country and abroad, experimented with the suction socket principle of suspension, but it was only after the recent war that this country studied the suction socket leg in a cooperative program of limb makers, medical experts and scientists.

With the joint cooperation of the Advisory Committee on Artificial Limbs of the National Research Council, University of California, Orthopedic Appliance and Limb Manufacturers Association, the Army, Navy and other interested organizations, the Veterans' Administration sponsored an extensive program to determine the possibilities and limitations of the suction socket limb.

Besides the more than 500 veterans who were tested in the Veterans' Administration program, a much larger number of nonveteran amputees have been fitted with successful results by the artificial limb industry.

Also during the past 2 years, short courses have been conducted in various parts of the country to instruct over 300 orthopedic surgeons and limb fitters in the technical details of prescribing, fabricating, and fitting the suction socket leg.

Effective January 18, 1950, the suction socket leg was made available, upon request, to eligible disabled veterans through the established artificial limb program of the Veterans' Administration. When a new limb is required to replace an unserviceable limb previously issued to the veteran, the suction socket leg may be selected by the amputee upon medical prescription by a surgeon certified by the Veterans' Administration. A list of certified surgeons has been distributed to all Veterans' Administration regional offices, hospitals and centers.

Veterans' Administration emphasized that no suction socket legs will be furnished to veterans without prior examination of the stump by a surgeon on the Veterans' Administration certification list and a written prescription signed by the examining physician.

Amputee veterans who are eligible for a new artificial leg, may obtain complete information about the suction socket leg from the prosthetic and sensory aids unit of the nearest Veterans' Administration regional office.

Research on the suction socket leg was only part of a broad Veterans' Administration program in prosthetic devices and for the development and testing of all types of artificial limbs, aids for the blind, orthopedic braces and hearing aids. This research program, Veterans' Administration prosthetics experts said, will not only aid the disabled veteran, but will ultimately be of benefit to the civilian handicapped throughout the Nation.

Loans to Small Business

EXTENSION OF REMARKS

OF

HON. ANTHONY F. TAURIELLO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1950

Mr. TAURIELLO. Mr. Speaker, ever since I have been a Member of Congress, I have been very much concerned about the plight of the small-business man and what the Federal Government could do in order to encourage the growth of small business.

When I mention small business, I refer to the small machine-shop operator, the corner grocer, and delicatessen storekeeper, the butcher and the baker, and in general, the energetic small-business man who finds it difficult to obtain loans from banks for new enterprises because of restrictive banking regulations. I am also concerned about the small firms already in existence which have good business records but are in the class of borrowers whose legitimate credit demands are fulfilled with difficulty by usual sources of credit and who find it almost impossible to obtain long-term capital.

I know of the plight of the small-business man because I was associated with the Reconstruction Finance Corporation in Buffalo, my home town, as an examiner, making loans to small firms after banks had refused them credit for one reason or another.

Big business, on the other hand, can take care of itself because it has the

wherewithal to do it or can obtain financial aid from banks when necessary.

I am most happy to join Senator LUCAS, of Illinois, in introducing a companion bill in the House, similar to the bill he introduced on Monday in the Senate, which will relax the regulations of the Reconstruction Finance Corporation and make it possible for thousands of small businesses to apply for small loans from that agency. The regulations governing loans must be liberalized so that small business can get greater consideration when applying to the RFC for loans.

In his recent state of the Union message, President Truman called attention to the necessity for a comprehensive program for the preservation and encouragement of small business in America and made recommendations for a revision of taxes in order to stimulate small business and to assist new enterprises.

The bill which I am introducing today would authorize the RFC to guaranty up to 90 percent loans made on the basis of demonstrated earnings, management skills, and prospective earnings. Under the present law, the RFC is authorized to take up only 70 percent of a loan when it is less than $100,000.

The bill provides that only in cases where loans cannot be made in cooperation with private lending institutions can the RFC make direct loans.

In most cases, the private institution will make the loan with the understanding that at a later date it may call upon the RFC to take up a certain percentage of the unpaid balance. However, in order to insure fuller cooperation and more active participation from the banks, this bill gives the lending institutions priority against the assets of the borrower for the satisfaction of any debt incurred through such a loan.

This bill also provides for relaxing the maturity date of such loans so that they may be extended for periods of longer than 10 years, which is the limitation set by existing regulations.

It is my understanding that there are approximately 1,500,000 small enterprises which require relatively small amounts of working capital, many of which are unable to secure funds from local lending institutions. In order to obtain funds, many of them must mortgage their entire assets or their accounts receivable at exorbitant interest rates.

Two of the most vital needs of small business at present are access to capital and tax relief. The bill which I am introducing may not be an answer to all the problems confronting small business, but I am convinced that it is a step in the right direction.

Small businesses are the backbone of the Nation and merit the consideration and assistance of the Congress. I am sure that most of the Members of this Congress realize the urgency of the situation and I feel confident that favorable congressional action on this legislation will be the saving of thousands of small enterprises throughout the country.

A bill to amend the Reconstruction Finance Corporation Act, as amended, in order to provide more effective financial assistance for small business

Be it enacted, etc., That subsection (b) (1) of section 4 of the Reconstruction Finance Corporation Act, as amended, is hereby amended by striking out the period at the end thereof and inserting a colon and the following: "*Provided*, That in order to encourage small business the Corporation is authorized to give management skills, past earnings, and prospective earnings consideration over security in the form of collateral, in the making of loans either directly or in cooperation with banks or other lending institutions under paragraph (1) of subsection (a) of this section for the purpose of establishing new business enterprises or for meeting the long-term capital requirements of existing small business enterprises. The Corporation shall make direct loans pursuant to the foregoing proviso only in those cases where loans cannot be consummated in cooperation with banks or other lending institutions."

SEC. 2. Subsection (b) (2) of section 4 is amended by adding before the period at the end of the first sentence thereof a colon and the following: "*Provided further*, That any loan made under section 4 (a) (1) for the purposes set forth in the proviso in paragraph (1) of this subsection as amended may be made for such period exceeding 10 years as the Corporation may deem proper for the encouragement of small business."

SEC. 3. Subsection (b) (3) of section 4 is amended by striking out the period at the end thereof and inserting a colon and the following: "*Provided*, That such participations by the Corporation may amount to 90 percent of the loan outstanding at the time of the disbursement, in the case of loans made for the benefit of small business enterprises in pursuance of the authority set forth in the proviso in subsection (b) (1) of this section as amended. In order to encourage loans in cooperation with banks or other lending institutions under the proviso in subsection (b) (1) of this section as amended, priority shall be given to private lending institutions over the Corporation against the assets of borrowers for the satisfaction of such loans made thereunder."

Ten Years of Fisheries Activities Under the Fish and Wildlife Service

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1950

Mr. JACKSON of Washington. Mr. Speaker, Mr. Albert M. Day, Director of Fish and Wildlife Service of the Department of Interior, addressed the annual convention of the National Canners Association at Atlantic City on January 28, 1950. Mr. Day, during the several years that he has been Director of the Fish and Wildlife Service, has made an outstanding record in the conservation and development of our fish and wildlife resources. I would like to commend to all Members of the Congress, for their thoughtful consideration, the following address by Mr. Day:

It is hardly proper for me as Director of the Fish and Wildlife Service, one of the agencies that is proposed for reorganization by the Hoover Commission, to discuss whether that Commission's recommendations are sound and should be adopted. Rather, I prefer to make some general observations about the background of the Hoover Commission Report on this particular subject and explain what the Fish and Wildlife Service is attempting to do to aid in the broad development and utilization of the highly important fishery resources of this Nation.

In the first instance, it should be well understood that the final recommendations of the Hoover Commission resulted only after a great deal of conflicting and diverse testimony on this important subject had been given careful consideration. The whole problem is complex because fishery management is complex. It must always be woven into the intricate patterns of land and water uses and human needs in our expanding civilization. This fact is well emphasized when we recognize that the three different task forces studying the organization of the Government came out with three different recommendations when it came to fish and wildlife matters.

The report of one committee would have dispersed the conservation agencies through the Government and would have put the Fish and Wildlife Service in a Public Works Department. The Agricultural Committee recommended a transfer to Agriculture of all major public-land administration activities and functions including the Fish and Wildlife Service. The task force on Natural Resources proposed to abolish the Interior Department and create in its place a Department of Natural Resources, among which would have been a division of the present Fish and Wildlife Service into a Fisheries Service and a Wildlife Service, each separately administered. The final recommendations of the entire Commission were that only the commercial fisheries activities of the Service should be transferred to the Department of Commerce. As evidence of the diversity of opinion among the members of the Commission, it should be noted that dissents to this proposal were expressed by Vice Chairman Dean Acheson and Commissioners James Forrestal, James K. Pollack, and James H. Rowe, Jr.

With this divergence of opinion among the members of the Hoover Commission and the various task forces as to the proper place in Government for the Federal responsibility for fishery activities, it is not surprising that the resultant reactions of the public also have been mixed. The American Fisheries Society, organized in 1872 and now the oldest scientific biological organization in the United States, at a meeting in Winnipeg, Canada, last September, passed a resolution endorsing the task-force recommendations of the Report on Natural Resources, with the exception that the Society opposed that portion of the report which recommends the separation of fisheries administration from wildlife administration.

Likewise, a meeting of the International Association of Game, Fish, and Conservation Commissioners, also meeting in Winnipeg, in September, passed a resolution endorsing the general purposes of the natural resources task force report, but also stated that they opposed the recommendation of the report which would separate fisheries from wildlife in the present Fish and Wildlife Service. Within the past few weeks, the executive officers and the legislative committee of the international association again reaffirmed to Secretary Chapman their strong opposition to this proposal. The international association is made up of representatives of all of the State conservation departments in the country, the great bulk of which administer both fisheries and wildlife in a single organization of the State. In fact, of the 48 States only 8 have separate departments devoted to commercial fisheries. In the other 40, commercial and sport fishery and wildlife management activities are all in the same department. The same, of course, is true in Alaska.

To the contrary, the Pacific Fisheries Conference, composed largely of members of industry operating on the west coast and in Alaska, by action taken at a recent meeting in California, adopted the following resolution, and I quote:

UNIVERSITY OF MICHIGAN LIBRARIES

"Whereas the consolidation by Executive order of the former Bureau of Fisheries and the former Bureau of Biological Survey into one bureau in the Department of the Interior, called the Fish and Wildlife Service, has been demonstrated as unsound, illogical, and ineffective, and has not served to further the sound, efficient administration of fisheries; and

"Whereas the Commission for the Reorganization of the Executive Branch of the Government, commonly referred to as the Hoover Commission, recommended that the administration of fisheries should be separated from the administration of wildlife: Now, therefore, be it

"*Resolved*, That the Conference heartily endorses the recommendation that such separation should be made and also urges that the re-established Division of Fisheries should be transferred in toto to the Department of Commerce or to a new Department of Natural Resources if such a Department should be created and now, in whichever Department placed, fisheries should be under direct charge of an officer of the rank of Assistant Secretary."

It is to the assertion of the Pacific Fisheries Conference that the present organization has been demonstrated as "unsound, illogical, ineffective, and has not served to further the sound, efficient administration of fisheries" that I wish to direct my remarks today. I challenge that statement as incorrect and I call upon the drafters of the resolution to furnish proof of their assertions. The present organization is sound, it is logical, and it is effective. In the 10 years it has been in effect, it has done more to futher the interests of fishery management, conservation, and utilization than was accomplished in the three or four decades previously.

Memories about public affairs and previous events are short, and I feel that the drafters of the resolution that I have just mentioned must have been unfamiliar with the background and did not know the original reasons for the consolidation of the Bureau of Fisheries and the Bureau of Biological Survey. Such moves are seldom made without good reasons, as was the case in this instance. At the time of the merger in 1940, both of these predecessor agencies were weak and to a considerable extent were discredited in the public mind. The Biological Survey, which I joined in 1918 and in which, together with the present Fish and Wildlife Service, I have served continuously ever since, had suffered from weak administration for several years prior to the merger. Waterfowl, coming under Federal regulation under a treaty with Canada, had been consistently declining over a period of years. The only remedy that the Bureau seemed to be able to prescribe was ever-shortened seasons and ever-smaller bag limits. Because of resultant public dissatisfaction and clamor, President Roosevelt appointed a special committee of citizens to study the problem and to recommend remedies. "Ding" Darling, the famous cartoonist, prominent in conservation circles in the Midwest, served on this special study committee. It recommended a positive action program—the acquisition and restoration of marshes along with severe restrictions on the take by hunters. Darling was induced to serve as Chief of the Biological Survey, an organization that had been virtually leaderless since the disability retirement of the previous bureau chief. He remained less than 2 years and was succeeded by Dr. Ira N. Gabrielson, an outstanding scientist and able administrator, but in 1940, when the merger came about, the public had not yet regained confidence in the efficiency of the administration of the Biological Survey.

A similar situation existed in the Bureau of Fisheries. It was a small organization and the morale of its employees, as well as the confidence of the public, suffered severely because of the quality of its leadership. Controversy raged, particularly in the Alaska fisheries field, where the Bureau then had, and still has as the Fish and Wildlife Service, sole regulatory authority over the extremely valuable salmon and herring fisheries. We are still trying to live down some of the things that happened in Alaska in those days.

Government reorganizers concluded that there might be a strengthening of the administration of both fisheries and wildlife programs if the two closely related small Bureaus were merged into one larger group. This has been the trend of Government for many years and, with the exception of the recommendations for the transfer of the commercial fishery activities to the Department of Commerce, was also the philosophy of the Hoover Commission.

When the merger of the Biological Survey and the Bureau of Fisheries came about in 1940, the Biological Survey was on its way back into public esteem under the leadership of Dr. Gabrielson. It was, therefore, logical that he should become the first Director of the new Fish and Wildlife Service. As a minor employee in Washington at the time of his "shotgun wedding" of the two Bureaus, with Secretary Ickes, incidentally, holding the old double-barreled gun on us, I can personally testify that it was an unpopular move with the employees of both Bureaus, particularly those who revere tradition and the "good old days" of the past. I also know that the proposal to return to those "good old days" does not fall upon completely unsympathetic ears with some of the present organization. It is difficult to understand their philosophy, because I cannot think of a single individual who has not personally benefited in rank and salary by the creation of a larger and more important agency. With some, tradition is truly a potent factor.

But, of more importance to you and the other people we are paid to serve, did the mandatory trip to the altar pay off? Let us merely check the records.

First, let's review the appropriations for fishery work for the past 20 years—the 10 years of operations under the present system and the 10 years immediately preceding. Granted that during recent years the costs of operations have risen and appropriations have been more liberal to take care of these factors, appropriation figures are probably still the best over-all yardstick to measure the services the Government gives its citizens in matters pertaining to the fisheries.

In 1930, Federal fishery appropriations amounted to $2,498,550; in 1940, $2,421,075. That represents a decrease during the 10-year period of almost $100,000. The average for that period was approximately $2,000,000 per year. The fishery appropriations for the fiscal year 1950 amount to $10,875,251. Of even greater significance, the budget which the President sent to the Congress within recent days and which Fish and Wildlife Service representatives justified before the Appropriations Committee a week ago carry proposed appropriations for fishery items amounting to aproximately $12,000,000 for the fiscal year beginning next July 1. To be more specific as to items in which you are most interested, the work of the Branch of Commercial Fisheries received $229,540 in 1940; $668,500 in 1950. The Branch of Fishery Biology received $390,835 in 1940 as compared with $1,546,000 in 1950; Alaska Fisheries, including the Pribilofs, from $516,460 to $1,480,100 in those 10 years. And the wildlife appropriations have likewise increased at the same time. In 1940, they amounted to $6,149,343, almost 3 times the then appropriated sums for fishery activities. For 1950, they amounted to $16,502,049. This sum included duck stamp and Pittman-Robertson revenues. Not bad for an "unsound, illogical, and ineffective" organization.

At the time of the merger, not a single research or exploratory vessel was owned and operated by the Bureau of Fisheries. Now, the *Albatross III* is carrying on investigations extending from the Grand Banks to the Carolinas on the Atlantic Coast. Within recent months, two vessels, the *Oregon* and *Alaska*, have been acquired through special legislation and appropriations and are now stationed in the Gulf of Mexico. One will do exploratory fishing and the other will do biological research. A new vessel, the *John N. Cobb*, was commissioned at Astoria, Oreg., this month to carry out exploratory and experimental fishing in the North Pacific, reaching far into Arctic waters. The *Black Douglas* is carryiny on experimental and biological work in an effort to find answers to some of the perplexing problems surrounding the pilchard fishery off the coast of California and lower Mexico. The *Hugh M. Smith* is conducting biological and oceanographic research, while the *Henry O'Malley* and the *John R. Manning* are doing exploratory fishing in the waters of the South Pacific in a program that has been developed in close cooperation with the tuna fishing industry of the west coast. The *Spencer F. Baird*, the *Theodore N. Gill*, and the *David Starr Jordan*, three well-equipped research and exploratory vessels, are now completing a 5-year study of the South Pacific fisheries in connection with the rehabilitation of the Philippines. It is planned that the *Theodore N. Gill* will soon be stationed in the Great Lakes to undertake the difficult study of the decline in that great fishery, made possible by special legislation and appropriations passed during the present session of Congress. And that adds up to 11 large vessels compared with not a single one at the time of the merger. In the entire previous history of the Bureau of Fisheries, reaching back to 1871, in fact, there were never at one time more than three ships doing that sort of work and that occurred for only 2 years. None had been in service since 1932—8 years before the merger. Does that add up to the assertion that the present Fish and Wildlife Service is an unsound, illogical, and ineffective organization?

Ten years ago, the famous laboratory at Woods Hole, steeped in traditions of fishery research and oceanography since the days of Spencer Fullerton Baird, had been virtually abandoned. Within the past 2 years, we have rehabilitated the station, have transferred the scientific staff of the New England area there for headquarters, and the *Albatross III* is now berthed at Woods Hole. The laboratory at Beaufort, N. C., is being reconditioned and important studies in cooperation with the Atomic Energy Commission are being conducted at that point. A new laboratory is being constructed in Hawaii and the technology lab at Ketchikan, Alaska, has within recent months been enlarged and expanded. During that decade, a small laboratory was constructed in Puerto Rico, and fisheries research in the Caribbean area was carried on. In addition, the research stations at College Park, Md.; Milford, Conn.; Seattle, Wash.; and Pensacola, Fla., have been expanded.

Never in the 80 years of Government participation in matters pertaining to the fisheries has there been such great activity in the international field as there has been during the past few years. That is perfectly logical because of the increasing influence of the United States in world affairs. I should like to cite some of the more recent developments, however, as proof that fishery matters are not suffering at the hands of the present organization.

The Northwest Atlantic Fisheries Convention concluded just a year ago and ratified by the President last September 1 brings 11 nations having common interests in the North Atlantic fishing grounds under treaty

arrangements for the first time in history. The fisheries of this great area have been the battleground for some exceedingly tough international problems that date back to days prior to American independence. A convention between the United States and Mexico for the establishment of an International Commission for the Scientific Investigation of Tuna was signed at Mexico City in January 1949, and has been ratified by the President. A similar convention between the United States and Costa Rica for the establishment of the Inter-American Tropical Tuna Commission was signed at Washington in May 1949, and was ratified by the President on September 1, 1949. Three years ago 22 nations, including Canada and the United States, met in Washington and arrived at an international agreement which established the International Whaling Commission, empowered to conduct investigations and regulate whaling throughout all the marine waters of the globe. In 1946 a treaty was negotiated with Canada for the protection and management of the Great Lakes fisheries. This so far has been the least effective of the treaty programs because of opposition of one or two States surrounding the Great Lakes.

I have mentioned some of the more recent developments, but I should record also the continuing activities in connection with the Sockeye Salmon Commission which came into being in 1936, and which has now assumed regulatory powers after the first 10 years of investigation. This has included the construction of the $2,000,000 fishway at Hells Gate on the Fraser River. I serve as one of the American members of this Commission. Assistant Director James is a member of the Halibut Commission, established in 1937, which has done a remarkable job of restoring the stocks of halibut along the stretches of the North Pacific coast.

In the field of management of the fisheries of Alaska, I am proud of the progress that is being made. For the first time in history we are now developing a closely integrated program, using all available manpower and equipment for enforcing both the fishery and wildlife laws and regulations in a joint operation. Enforcement of the fishery regulations is now vastly improved because of the use of Alaska game agents as well as about a dozen transferred from the States each season. During the war years the fishing regulations were probably more liberal than they should have been. This was due to the pressure for food for our own people and our allies. Many of our trained personnel were in the Army and Navy and many Service ships were devoted to military uses. Inadequate observations and patrol, together with overfishing, created a serious depletion in the Alaska fishery. I am happy to say that it looks as though the situation is improving rapidly. Following severe restrictions during the past 3 years, the southeastern Alaska pack of pink salmon responded to the point where the pack last year not only returned to but also exceeded the previous normal 20-year average. Two large vessels have recently been secured by transfer from the Navy to augment our Alaskan fleet, and several smaller ships have been built as a result of new appropriations by the Congress. In the Service's combined Alaskan operations there are now owned and operated 18 vessels, ranging from 40 feet to 160 feet in size, with 11 additional patrol vessels, ranging from 30 to 40 feet. There are also about 100 speedboats used in fishery patrol. Within the past 3 months the Service has taken over from the Army one of the best equipped marine shops on the Pacific coast. It is located at Juneau, and is valued at least at $500,000. Surplus planes have been made available since the end of the war, and we now have a very excellent fleet of 20 planes which services both fishery and game agents in the Territory. Congress, last year, appropriated $250,000 for a new airplane hangar and shop at Anchorage, and as a result our facilities for observation and patrol will be much improved in future years. Moreover, Alaska regulations are now being made and enforced without fear or favor.

Ten years ago there were no effective means of correlating the needs of fish and wildlife with the construction programs of the Army engineers and the Bureau of Reclamation. That is not the case today. The Fish and Wildlife Service maintains a river basin staff whose responsibility it is to review the plans of the construction agencies while the projects are in the making. We work in close coordination with these two bureaus. Much has been done to protect and increase the fishery potentials in the reservoirs because of this service.

The relations of the Fish and Wildlife Service with the Congress and the Bureau of the Budget are excellent. The needs of both fisheries and wildlife are given sympathetic attention both as to appropriations and as to legislation. This, in my opinion, is due in large part to the fact that practically every Member of the Congress has a personal interest in something that the Fish and Wildlife Service is doing. If he or his constituents are not particularly interested in the commercial fisheries, it is a pretty safe bet that he either likes to hunt ducks and geese or he enjoys fishing for trout or bass or blue-gills. Maybe he comes from the West and is more interested in the coyote and ground squirrel control program of the Service, or perhaps he wants to go to Alaska to hunt moose or brown bear. It is an assured certainty that if there is a Federal fish hatchery in his district, he is anxious to see that it produces as many fish for his sportsmen constituents as can possibly be done. I doubt that there is another single agency of Government that has such wide interest for so many people as do the varied activities of the Fish and Wildlife Service.

Last year there were 15,500,000 people who bought fishing licenses and almost 13,000,000 who bought hunting licenses. Another 2,000,000 bought duck stamps to hunt ducks and geese. Many probably purchased all three kinds of licenses, but yet the fact remains that approximately one out of every five people in the United States is influenced in some degree by the activities of this Service. As such, the single organization known as the Fish and Wildlife Service wields much more power and influence than either the Bureau of Fisheries or the Biological Survey ever did before or would ever do again, if they were reconstituted separately.

I could continue this recitation for all day, but I fear that I have already used my allotted time. I shall close by inviting the members of the resolutions committee of the Pacific Fisheries Conference, or anyone else for that matter, who believes that the "consolidation by Executive order of the former Bureau of Fisheries and the former Bureau of Biological Survey into one bureau in the Department of the Interior, called the Fish and Wildlife Service, has been demonstrated as unsound, illogical, and ineffective" to take a little more careful look at the record. I sincerely believe that if those members of industry who are not satisfied with the present accomplishments of the Fish and Wildlife Service would tell us, and the Congress, frankly, what in the way of accomplishments they want but are not now getting, they will come closer to seeing it done than if they were to depend upon a much smaller agency, with much less prestige. Remember the appropriation figures I gave you—$2,421,075 in 1940 as compared with $10,875,251 in 1950, and approximately $12,000,000 which President Truman has recommended to the Congress for next fiscal year. Again, I say, study the record.

Jewish Federation of Philanthropies Pays Tribute to Hon. Joseph T. Sharkey, Vice Chairman, City Council, New York City

EXTENSION OF REMARKS
OF
HON. LOUIS B. HELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1950

Mr. HELLER. Mr. Speaker, the Honorable Joseph T. Sharkey, majority leader of the City Council of the City of New York, is a Christian—a Catholic. On January 29, 1950, he was honored with a testimonial dinner sponsored by the Williamsburg division of the Federation of Jewish Philanthropies for his leadership in philanthropic affairs, and for the splendid example of brotherhood and neighborliness he has set in the community.

At this dinner which was held at the Knapp Mansion, 545 Bedford Avenue, Brooklyn, N. Y., the friends of the majority leader who foregathered to pay him tribute contributed in his honor the sum of approximately $30,000 toward the federation's building fund and maintenance campaign. Harvey L. Strelzin, a distinguished lawyer, as chairman of the Williamsburg campaign, presented Councilman Sharkey with a scroll in recognition of his untiring efforts on behalf of Jewry. I had the honor to address the gathering attending the dinner, and I wish to include my speech under my extension of remarks:

Mr. Chairman, ladies and gentlemen, I consider it an honor and privilege to share with all of you present this opportunity to pay tribute to a man whose life and accomplishments have made so profound an impression upon the people of this great borough. For me it is also a personal gratification to participate in this occasion because it is my first opportunity since my election to Congress, which took place almost a year ago, on February 15, 1949, to publicly acknowledge to the vice chairman of the city council my deep appreciation for his loyalty, cooperation, and support. I have stated on numerous occasions that Joe Sharkey is like the Rock of Gibraltar. He is a man of high principle, and once he has made a decision and a promise, nothing and nobody, no matter how powerful are the influences, can sway him from fulfilling his obligation.

The Jewish Federation of Charities in honoring him tonight honors itself and acknowledges that it has a friend all Jewry can be proud of. His magnificent record in public life is full of contributions to human welfare. "Joe," as he is affectionately called by his host of friends, is a leader in the field of tolerance and understanding and cooperation among all peoples. Particularly has he attained a high goal in the affection of Jewry. We have long recognized that he possesses sterling qualities—a strong will power, a strength of purpose, and faith in himself and in God. He is a quiet and unassuming man of simple dignity and he respects the dignity of others. He is a great single force in creating good and friendly human relations. That is why, in a district heavily populated by Jews—and I believe the most orthodox Jewish district in the United States—Joe Sharkey is the undisturbed and undisputed leader of the Democratic Party. If I might digress a moment to make an observation

UNIVERSITY OF MICHIGAN LIBRARIES

of Joe's political philosophy, I will say he has an unvarying and unyielding rule—that loyalty, ability, service, and capacity are the only standards for recognition and promotion. Neither blood relations nor social relations are ever permitted to interfere with his yardstick. Above all is Joe's capacity for friendship. This I can say with literal accuracy and not as a gracious gesture at a testimonial dinner: No man in this great city is more admired, respected, and loved than our guest of honor, Joe Sharkey. Unconsciously, perhaps, he follows the credo: "Always forgive your enemy; remember, you made him one. Always appreciate your friend; remember, he made you one." Just as the light of phosphorus is more plainly seen when all is dark, so friendship can be best observed when the shadows fall. Any friend of Joe Sharkey's—and I speak from my own experience—who finds himself in gloom sees more plainly the phosphorescence of his friendship.

To those who know Joe Sharkey, the honor which comes to him tonight does not come as a surprise but as one richly deserved. Joe did not come here to gather honors. That is why we honor him. He came here to lend his name and prestige to a cause which he believes worthy. He believes in the great work of the Jewish Federation of Charities. He believes that if you take that cause to your heart, then in future years when you recite the twenty-third Psalm, which begins, "The Lord is my shepherd, I shall not want * * *," you may perhaps indulge yourself in the same inspired error the little child made when she said, "The Lord is my shepherd, that's all I want."

In the words of the old toast, "May the sun shine on both sides of the street, Joe, when you, your charming wife, and family pass by."

Tax Revision

EXTENSION OF REMARKS

OF

HON. JAY LeFEVRE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1950

Mr. LeFEVRE. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include an editorial taken from the January 30 issue of the Kingston Daily Freeman, Kingston, N. Y.

Mr. Speaker, I believe there is a great deal of merit in this editorial suggesting that we revise the entire tax framework. There is no question that on this issue of reducing the wartime-excise taxes, the administration is "me-tooing" the Republicans. The Republicans have been urging the reduction of these taxes for a long time and it is not surprising that the President, in this election year, bows on the issue most popular with the great majority. Our own tax history and more recently that of Canada proved definitely that business increases when taxes are held at a reasonable level. Let us hope that there will be no further delay in reducting the excise taxes and revising our tax laws so they will be on a sound basis.

REVISE ENTIRE TAX FRAMEWORK

President Truman's tax program has laudable aims, but it's a real question how close his specific proposals would come to realizing them.

The war saw the Government impose a whole host of excise taxes for the joint purpose of raising money and discouraging civilian consumption. They were declared to be emergency levies only, yet they're still with us 5 years after the war.

Mr. Truman proposes to cut seven of these including taxes on transportation of freight and passengers, long-distance telephone and telegraph, furs, jewelry, handbags, luggage, and toilet preparations. Except for a 3-percent levy on freight, the excises range from 15 to 25 percent.

But the President doesn't say how much the reduction should be nor what should be done about taxes on a wide group of other products.

In view of his past messages on the issue of tax reduction, his new program represents something of a reversal in attitude. Hence it may be expecting too much to imagine he would consider outright repeal of any or all wartime excises at this time. His recommendations nevertheless are disappointing.

There was nothing surprising in his suggestion that money lost through reduced excises be made up—and another $1,000,000,000 drawn in—through closing various tax loopholes and boosting corporate and certain estate and gift taxes.

Whether he may have thought also of advising higher income levies we can only guess. In any event, he bowed to election year realities on that score.

It is plain that if carried out his program would be popular with a majority of citizens and unpopular merely with limited groups affected by proposed increases and loophole-closings. One wonders how accidental that aspect of the President's plan is.

Aside from the excise changes most recommendations are offered as ways of correcting inequities in the tax structure. They may indeed have some value in that direction. But Mr. Truman's sketchy, piecemeal approach to the genuinely complex issue of tax inequity hardly looks sound.

Both Democrats and Republicans concede that the Federal tax set-up is a thing of shreds and patches that has long needed revision. The Republican Eightieth Congress made a stab at a general revision bill but it died after getting through the House late in the 1948 session. Since then nothing has happened.

Mr. Truman and his tax advisers are no help. The notion of revision is always pushed into the future.

We believe it would be a mistake to consider isolated tax inequities without reference to the whole body of tax law. Let Congress and the administration combine to chop expenditures enough to balance loss expected from lowered excises. Meantime, let's get on with at least the real preliminaries of the long-overdue revamping of the entire tax pattern.

International Frequency Allocations

EXTENSION OF REMARKS

OF

HON. STEPHEN M. YOUNG

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1950

Mr. YOUNG. Mr. Speaker, under leave to extend my remarks, I include the following article from the Cincinnati Times-Star of January 16, 1950, regarding the matter of international frequency allocations.

The Clear Channel Broadcasting Service, composed of 15 independently owned and operated clear-channel stations, has reason to be greatly concerned over attempts by foreign nations to make inroads into United States radio channels.

The article is as follows:

RADIO GROUP SEEKS TO PROTECT CHANNELS IN UNITED STATES

"The Clear Channel Broadcasting Service will continue to fight any attempts by foreign nations to make inroads into United States radio channels," Ward L. Quaal, the Washington, D. C., director of the service, stated Monday at the Netherland Plaza, where the group is meeting to discuss matters of international frequency allocations.

Quaal explained that representatives of Canada, North America, the Dominican Republic, Cuba, and Haiti adjourned in Montreal last month following a similar discussion. Mexico, he said, did not participate. He added that there will be a meeting February 1 in Havana between the United States delegation and Cuba in an effort to work out a bilateral agreement. "All the North American nations will meet sometime between April 1 and August 1," Quaal said, at which time it is hoped that Mexico will join in a new attempt to get an international radio treaty.

"We vigorously protested the demands of the Cuban Government made in Montreal," Quaal said. "They would have caused tremendous interference with the stations in the United States known as regional channel stations as well as on clear channels."

Quaal explained that the organization is composed of 15 independently owned and operated clear-channel stations of which the Cincinnati member is WLW.

"Our stations," he added, "serve not only metropolitan communities but also large rural and small town areas which would be virtually without radio if it were not for interference-free clear channel service. All farm organizations in the United States have endorsed our efforts to provide better service for rural America."

Mr. E. W. Craig, chairman of the board of Station WSM, Nashville, and chairman of CCBS, presided at the meeting.

Gifts of Government Employees to Official Supervisors

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1950

Mr. MILLER of California. Mr. Speaker, it has come to my attention that the law prohibiting the collection of money by employees of the Government for presents and gifts to supervisors and other employees is being increasingly violated.

It is a statute "more honored in the breach than the observance."

The law is specific and easy to read and interpret. It is designed to discourage favoritism and that undemocratic practice of fawning and placating the boss or people who are supposed to have an "in" with the boss.

I have written to the Civil Service Commission asking them to repromulgate

the law. My letter to Chairman Mitchell reads:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., January 30, 1950.

Hon. HARRY B. MITCHELL,
Chairman, United States
Civil Service Commission,
Washington, D. C.

MY DEAR CHAIRMAN MITCHELL: During the last few weeks more and more complaints have come to me concerning the vicious practice of collecting small sums of money from Government employees for gifts to superiors and other personnel. This is specifically prohibited by section 113 of title 5, United States Code. Such contributions are solicited for wedding presents, going-away gifts, birthday remembrances, and other tokens. While the sums have not been great, the demands made upon the employees, particularly those in the lower salary brackets, have caused embarrassment and, in many cases, hardships. People generally do not like to refuse such requests. It places them in an awkward position with relation to their fellow employees. Too frequently it destroys the harmony in an office, so essential to good morale.

May I suggest that the Commission publicize the provisions of section 113 above referred to, again calling it to the attention of Government employees.

The law as I read it is plain. It says:

"No officer, clerk, or employee in the United States Government employ shall at any time solicit contributions from other officers, clerks, or employees in the Government service for a gift or present to those in a superior official position; nor shall any such officials or clerical superiors receive any gift or present offered or presented to them as a contribution from persons in Government employ receiving a less salary themselves; nor shall any officer or clerk make any donation as a gift or present to any official superior."

I believe that such action by the Commission would have a tendency to discourage the abuses of which I complain.

If you feel the law is not sufficiently strong I would be glad to discuss with you changes to make it workable and effective.

Sincerely,

GEORGE P. MILLER.

Excise Taxes

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1950

Mr. SADLAK. Mr. Speaker, there is much talk but little apparent action being taken in regard to the removal or reduction of excise taxes. Even the President's message regarding taxes took notice of the harm these continued wartime burdens were having. The facts as I find them reveal to me further injury in lines of endeavor to which I had not readily attributed a serious detriment because of the excise taxes.

One of such has most vividly been called to my attention in a letter received from a manufacturer of hardware and sporting goods in my district, the State of Connecticut. The letter reproduced here almost in its entirety, by itself explains quite fully the urgency of immediate action regarding the war taxes and in particular, the necessity of including this item among those to be removed because of the damaging effect on the manufacture of various sporting goods or their discontinuance of manufacture because of the taxes thus causing unemployment and consequent hardship on the former workers and their families.

The letter follows:

The company closed its fiscal year June 30, 1949, with a disastrous loss, and for the first 6 months of its present fiscal year that loss is running at twice the rate of its previous year's loss.

Employment has been reduced from approximately 1,000 to approximately 275, which force is working but 32 hours per week, with operations in both the roller-skate and ice-skating departments suspended indefinitely.

The company manufactures sidewalk roller skates, rink roller skates, ice skates, bamboo fishing rods, steel fishing rods, and, through its subsidiaries, golf clubs, baseballs, and softballs, all of which are affected by the sporting-goods excise tax. For example, this company manufactures ice skates which they sell to shoe manufacturers, who in turn mount them on shoes and merchandise a complete skating outfit. Normally such shoe manufacturers purchase their ice skates in January and February and start manufacturing outfits for the next season during the months of February, March, April, May, June, etc. If the shoe manufacturers wait too long to start their production, they are unable to fulfill deliveries, and consequently a complete season is lost, both by them and the skate manufacturer. Yet because they have to buy skates now on which they must pay the 10-percent sporting-goods excise tax, which tax may be repealed before they sell their outfits in September, October, November, and December, they won't purchase. The same is true of all other sporting-goods items which are seasonable to the highest degree. If the season is missed, the business is lost for the year.

It is, therefore, urgent that the sporting-goods excise tax be removed and that such action be taken promptly, effective immediately, in order to preserve this spring's business.

I do not have the figures before me, but I am informed that the total amount received by the Treasury Department from the sporting-goods excise tax is comparatively small, and it is certain that, whatever it may be, it would be more than made up in income taxes if manufacturers of these items were placed in a position to reduce price to achieve volume, with consequent profits rather than present losses now being incurred.

To take but one illustration of the economic effect of such tax, consider sidewalk roller skates which are used by children up to 14 years of age whose wherewithal to expend for such items is limited. A 10-percent tax on the manufacturer's price means that the jobber adds one-third to that tax and the retailer two-thirds so that the child finally pays twice what the tax would apparently seem to be. In other words, on a roller skate sold by the manufacturer at $2 the child has to pay, in the final retail price, approximately 40 cents more than if there were no tax. Increased cost of manufacture has raised the price of roller skates to the point that any burden on the consumer's price effectively puts them out of the reach of the average child. We have endeavored to ascertain from the Department of Commerce, Government statistics pertaining to the sales of roller skates for the years 1948 and 1949. We were informed by the chief of the Sporting Goods Division of the Department of Commerce that the last figures that they have available, even in preliminary form, are for the year 1947. Such figures would not show what might be termed the disappearance of the sidewalk roller-skate industry from the current American scene, but from what we have ascertained from other sidewalk roller-skate manufacturers, they, too, have been practically out of production during the past year.

We are also confronted with a refusal on the part of the purchasers of our other sporting goods items who refuse to buy in normal fashion for this spring's business, because of the fact that they do not wish to be caught with an inventory of merchandise on which the excise tax situation is in doubt.

* * * * *

If there is any further information that we can furnish or any other way that we can be of assistance to repeal this unjust war-time levy, we shall be more than happy to cooperate.

Resolutions of Wayne County (Iowa) Farm Bureau

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1950

Mr. LECOMPTE. Mr. Speaker, all of us are interested in a long-range farm program that will be satisfactory and fair to those who are engaged in producing food for our great Republic. I have a copy of the resolutions adopted by the farm bureau of my home county in Iowa, Wayne County, where I have lived all of my life, and I desire to have these resolutions printed in the RECORD so that all Members of Congress may have the opportunity of knowing the position that this great organization has taken with respect to national problems and issues confronting the country at this time. The resolutions were adopted at the annual meeting of the Wayne County Farm Bureau held at Corydon, Iowa, last fall and read as follows:

WAYNE COUNTY FARM BUREAU RESOLUTIONS, 1949

We, the members of the Wayne County resolutions committee, after due consideration, present the following resolutions for the approval of the members of the Wayne County Farm Bureau. These are based upon a summary of township resolutions and the work of the county committee after due consideration:

NATIONAL RESOLUTIONS

1. We believe that it is important to have the farm program developed through a bipartisan approach.

2. We believe guaranties of 100 percent of parity as compared with lower supports would result in more drastic controls.

3. We believe that it is important to keep controls at a minimum.

4. We believe there is danger of losing farm programs if the cost is too high.

5. We favor a minimum guaranty or floors under farm prices.

6. We favor flexible supports tied to the amount the commodity is in surplus with a minimum floor established by law and the Secretary of Agriculture having the authority to set support prices from this minimum up.

7. We do not believe that if production payments are used, the prices of commodities

UNIVERSITY OF MICHIGAN LIBRARIES

to the consumer would drop enough to have a marked influence on consumption.

8. We believe that a cheap food philosophy established in the minds of the consumer would be dangerous to the long-time interests of farmers.

9. We believe that it is dangerous to have the income of farmers dependent to a large extent upon direct appropriations from Congress.

10. We believe satisfactory compliance with soil conservation practices should be a requisite to eligibility for price supports.

11. We do not favor abandoning the parity concept for the income support standard plan.

12. We favor increasing Federal aid to encourage more men and women to enter the medical profession.

13. We favor a voluntary prepayment health insurance plan rather than a compulsory health insurance program.

14. We favor increasing Federal aid for the construction of more hospitals and in such manner as to locate them in rural areas where they are needed.

15. We feel that labor-management problems that are questions of wages, working conditions, etc., are social, ethical, and economic in nature and can best be settled by the human approach of mediation rather than by legal methods (regular channels of our courts).

16. We favor the establishing of a Worker Extension Service similar to Agricultural Extension Service now in operation.

17. We favor the changing of mail routes so that free mail delivery becomes available to many more families.

18. We favor the establishment of a Federal agency for the purpose of setting up telephone cooperatives.

19. We recommend to the next Congress that they place a high priority on the coordination of agricultural agencies.

20. We believe Congress should provide Federal aid for public education in order that all children are guaranteed a minimum standard of education but with minimum of Federal control.

STATE RESOLUTIONS

21. We believe we should revise our health programs and adopt a county health unit program for Iowa.

22. We are in favor of keeping taxation on our REA co-ops in line with our municipal, light, and water organizations or systems.

23. We urge that Farm Bureau increase its attention in the legislative program.

24. We feel that Farm Bureau should put more emphasis on encouraging citizens to participate in the activities of the party of their choice.

COUNTY RESOLUTIONS

25. We urge greater cooperation between agricultural agencies for soil conservation in Wayne County.

26. We recommend that the county board of supervisors and the county board of education jointly plan for the construction and surfacing of school-bus routes and mail routes before other roads are considered for construction.

27. We commend the Wayne County newspapers, chamber of commerce, and the businessmen of Wayne County for their cooperation in Farm Bureau activities. We wish to thank those who have assisted in the program of work, membership drive, and this annual meeting.

28. We, the resolutions committee, submit the foregoing resolutions and recommend their adoption.

FOREST PERKINS, *Chairman.*
HENRY BERNER.
MRS. ONNIE MCKEE.
WAYNE EVANS.
WILLARD HALFHILL.

FEPC Again

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1950

Mr. COLMER. Mr. Speaker, while the politicians are busy pressing for consideration of the ill-advised FEPC proposal under the assumption that the minority group support they will receive thereby will be politically beneficial, there are thinking people all over this country who are worried about the implications of this further proposal to regiment our people.

Because of my opposition to this proposal I receive many letters from people all over the country expressing their opposition. From time to time I have placed letters and other communications in the RECORD in order that my colleagues from the so-called North might understand that this is not a one-way political street.

In that connection I submit herewith a letter just received from the Reverend Joseph E. Gedra, of the Church of the Immaculate Conception, N Street at Eighth NW., Washington, D. C., which I am sure will be of benefit to my colleagues because of its concise language and convincing arguments.

Reverend Gedra's letter follows:

CHURCH OF THE
IMMACULATE CONCEPTION,
Washington, D. C., January 26, 1950.

The Honorable WILLIAM M. COLMER,
The House of Representatives,
Washington, D. C.

DEAR MR. COLMER: It is only because of the far-reaching, bewildering, and cataclysmic effect, I truthfully believe, the passage of the FEPC bill will have upon the fundamental structure of our society, that I write to ask you kindly to consider these few important facts before casting a favorable vote:

1. Cries of antiracial, anti-Semitic, anti-Catholic, etc., will skyrocket beyond calculation. Then, to prove all alleged charges will mean jamming our courts, with the resultant bedlamism.

2. Such a bill is contrary to the God-given gift of selectivity. For instance, we select our food, literature, forms of entertainment, friends, etc. People should exercise that right with regard to employees. There are abuses, of course. But the right which a person enjoys from above will be so smoke-screened if the FEPC bill is passed that one will lose sight of this right.

3. Forced consideration, by pressure groups, of one's race, religion, nationality rather than his qualifications will undermine our national set-up.

There appear to be some advantages in this bill. For instance, Catholics may see in this bill a way paved for a Catholic to become President of the United States. But apart from this, the bill can inflame the emotions of our people, making them supersensitive to their color, race, and religion. Herein lies the grave danger. That something should be done, everyone agrees; but, I believe the solution of this acute problem will not be found in the FEPC.

With every best wish, I am,
Very sincerely yours,

JOSEPH E. GEDRA.

Communist Thinking

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1950

Mr. RODINO. Mr. Speaker, since the Russian Communists are now laying claim to have been first in everything, it is not inappropriate to say that they lead the world with a first place as inventors of half-truths and untruths and as prime inventors of the propaganda of hate and the ideology of godlessness.

Under leave to extend my remarks in the RECORD, I wish to include herein an editorial which appeared in the Kearny Observer of January 27, 1950, entitled "Communist Thinking":

COMMUNIST THINKING

Who invented the electric light? If you say Edison, you're wrong—it was a Russian named Yablochkov. Who invented the telegraph? If you say Morse, you're wrong again—it was another Russian named Yakobi. The radio? No, it wasn't Marconi—it was still another Russian named Popov. How about the first successful flying machine? If you answer "the Wright brothers" you'll have to go to the bottom of the class—a Russian called Mozhaisky flew like a bird near St. Petersburg 20 years before the Wrights took off at Kitty Hawk.

These, and similar revelations, are disclosed by Edmund Stevens in the Christian Science Monitor. He found them in a Soviet mazagine called the Literary Gazette. They show, he says, one of the ways the Soviet Party "woos Russian national pride. The move corresponds to a vital need of Russians to vindicate their self-respect and destroy the residue of an old sense of inferiority. It also increases the Russian's confidence in their capacity to catch up with and outstrip the rest of the world technically at the present time." It is, in other words, an example of the kind of morale-building propaganda the government is now feeding the Russian masses.

Moreover, it is an example of how the Soviet bosses will use any untruth or half-truth to serve their ends. A story has been going the rounds concerning a British Communist who went to a meeting of Russian Communist strategists in Moscow. He was perplexed as to how to argue some ideological point or other in England. The Russians gave him an answer, to which he objected that it wasn't true. The Russians looked at him with amazement—and then burst into gales of laughter over such naivete. It is said that the incident was described to the top Russians, including Stalin, and that they burst into laughter also.

Resolution Adopted Opposing the Proposed Legislation Taxing Insurance Companies

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1950

Mr. JENKINS. Mr. Speaker, a few days ago I addressed the House at some

length in opposition to a bill then under consideration seeking to retroactively tax insurance companies.

Since that time the Equitable field organization, connected with the Equitable Life Assurance Society of the United States, adopted resolutions supporting my view. A copy of those resolutions is as follows:

RESOLUTION ADOPTED BY THE EQUITABLE FIELD ORGANIZATION JANUARY 26, 1950

Whereas there is pending before the House of Representatives a joint resolution proposing a retroactive tax on the income of life-insurance companies for the years 1947, 1948, and 1949; and

Whereas the failure of the life-insurance companies to earn during those years sufficient income on their assets to warrant the payment of income taxes under existing law was due to the low yield on investments resulting from the easy-money policies of the Government; and

Whereas the investment earnings of the life-insurance companies during those years required to sustain their reserves, and to enable them to meet their obligations under outstanding policies, were, as the Ways and Means Committee report indicates, in excess of their interest earnings and therefore produced no taxable net income under existing law; and

Whereas we in the Equitable field organization do not oppose income taxes on the earnings of life-insurance companies in excess of their annual needs to accumulate reserves, but we resist the payment of so-called income taxes retroactively imposed after the income has either been distributed to the policyholders or has become a part of the accumulated property of the company: Now, therefore, be it

Resolved, That we the agency officers and managers of the Equitable field organization throughout the country assembled in our midwinter convention hereby urge upon both Houses of Congress that they refuse to enact this retroactive raid on the funds of policyholders which will increase the cost of their insurance by reducing the capacity of their companies to pay annual dividends; and be it further

Resolved, That copies of this resolution be sent to all Members of the House of Representatives and the Senate and be brought to the attention, through our agency organization, of our policyholders throughout the country.

Foreign Mines Developed With American Capital Will Not Help United States During War

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1950

Mr. ENGLE of California. Mr. Speaker, I present an example of what disgusts and infuriates the American miner. The following item from the Chicago Sunday Tribune of January 8, 1950, indicates that the American Government is spending millions of dollars opening up large-scale mining in Africa while our own mines are permitted to close down. The article states that the Marshall plan has put nearly $230,000,000 into French African territories alone in the last 2 years, and that an example is a recent $3,600,000 contract with an American firm to expand and develop lead and zinc mines of Algeria. This article explains a lot of things. It explains why this administration is bearing down upon the domestic-mining industry and has refused to rescue those mines so seriously in need of help. Obviously there must be a market for the lead, zinc, and other minerals produced with this investment of American capital abroad; that market will not be in the United States if American mines are producing. In addition, this article explains why some American mining firms are opposing help for the American mining industry—they have their hands in the honey pot and are getting immense benefits from this foreign expenditure. I am wondering, though, what will happen if we get into another war and need the copper, lead, zinc, and other strategic and critical minerals and metals here on our own shores where we can use them to keep our tanks, battle fleet, and airplanes fighting. The minerals and metals developed with American money in foreign lands will not help us, and without production of our own we will be easy victims of our own stupidity. The article follows:

[From the Chicago Sunday Tribune of January 8, 1950]

PARIS PARLEY TO PLAN AFRICAN PUMP PRIMING—ROAD-AND-POWER FUZZLE FIRST ON AGENDA

PARIS, January 7.—Ways of pumping Africa's untapped wealth into world trade streams come under study here next week.

Colonial officials from Britain, France, Belgium, and Portugal, who together control most of the continent, are to meet with African representatives Wednesday, Thursday, and Friday.

ROADS AND POWER FIRST

Their first job will be to decide on means of improving the roads, railways, bridges, and power supplies of the wilderness areas to speed development of mineral lodes, forest products, and plantations. Technical experts will aid them. Pest control, soil erosion, and public health are other problems.

Politically, the colonial officers are expected to discuss means of opposing a recent United Nations decision calling for a United Nations investigation of conditions in colonial possessions of member nations.

The Economic Cooperation Administration (ECA), which already has poured millions of Marshall plan dollars into African projects, will keep in touch with the meetings.

A. L. Moffat, ECA Deputy Commissioner, is in Nairobi, Kenya colony, studying a lengthening list of developments for east and central Africa. These include control of Nile waters, electric power production in Uganda, and opening up of large-scale mining and agricultural works in almost every territory from Uganda to northern Rhodesia.

TEN-YEAR BRITISH PLAN

Of the four nations to be represented here, Britain has approved a 10-year public works plan for its African territories.

France is developing a similar plan for French West Africa and equatorial Africa. The French program, still tentative pending parliamentary approval, calls for an expenditure of $300,000,000 a year for 10 years to make the territories more attractive to foreign investors. The money would be partly matched by allocations from territorial treasuries.

The Marshall plan has put nearly $230,000,000 into French African territories alone in the last 2 years. An example is a recent $3,600,000 contract with an American firm to expand and develop lead and zinc mines of Algeria.

Included in the mineral wealth that France's territories are expected to yield is manganese, lead and zinc from Morocco and other northern areas, and graphite from Madagascar.

A Life of Service

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1950

Mr. RODINO. Mr. Speaker, "a life of service." In my opinion no man could wish for finer words to be said or written of him after he has rounded out his span on God's earth.

Dr. John A. Kenney, who has now passed from this way of life, gave just that, "a life of service."

In a world half-bent on destruction, it is well that we pause for a moment and reflect on the life of one who, despite adversities, was so intent in his devotion to his fellow being that he served him well.

Under leave to extend my remarks in the RECORD, I desire to include the following editorial which appeared in the January 31, 1950, issue of the Newark Evening News:

A LIFE OF SERVICE

By any standard, Dr. John A. Kenney, dead at 75, must be accounted a notable figure. His outstanding services to the physical welfare of his race began at Tuskegee Institute, where he was resident physician and from 1902 to 1922 medical director and chief surgeon of the John A. Andrew Memorial Hospital and School for Nurses. He was also personal physician for Tuskegee's two great heads, Booker T. Washington and George Washington Carver.

That was for Dr. Kenney not a wide enough service, so in 1912 he founded the John A. Andrew annual clinics, at which Negro and white doctors, working together, treated Negroes living within a 200-mile radius. Terrorism by the Ku Klux Klan drove him from Alabama for his insisting on the right of Negro doctors to practice at a Veterans' Administration hospital.

Alabama's loss was New Jersey's gain, for on learning that Negro doctors were not welcomed at hospitals here, Dr. Kenney established in this city the Kenney Institute, named for his parents. In 1935 it was turned over to the Booker T. Washington Hospital Association. This organization, representing the Negro population of the State, renamed it Community Hospital.

In a subsidence of Klan feeling Dr. Kenney returned in 1939 to Alabama to head for 5 years Tuskegee Institute Hospital. Subsequently he came back to this State and resumed private practice in Montclair. From earliest manhood he devoted himself to the health of his race, and it is entirely in keeping with the spirit and influence of the man that both of his surviving sons should be physicians. His reputation for service is national and deserved.

UNIVERSITY OF MICHIGAN LIBRARIES

The Flood-Control Job

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1950

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Arkansas Gazette of January 27, 1950:

THE FLOOD-CONTROL JOB

After disastrous floods in 1927 and 1937, an over-all program for controlling the Mississippi below Cairo was drawn up by the Army engineers. The program called for 1,500 miles of levees built to sufficient height to hold back a record flood. Also included in the design were reservoirs and floodways.

Brig. Gen. P. A. Feringa, president of the Mississippi River Commission, has now reminded a House Appropriation Subcommittee that the protective system is still not complete and another major flood may be due. General Feringa pointed out that 400 miles of project levees have yet to be built, and the vital Atchafalaya River Basin floodway is still under construction. Engineers hope to finish this project by January 1, 1953.

During recent high stages of some of the Mississippi's tributaries the retaining walls held and the lower river saw no serious damage. But, as the engineers told the Congressmen, the valley is "living on borrowed time." The day may come when all the tributaries are flooding at the same time. Then we don't want it said that we did too little too late.

What Ails the Shoe Industry?

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Lynn (Mass.) Daily Item:

WHAT AILS THE SHOE INDUSTRY?—NEW ENGLAND NOW PRODUCES ONLY 32 PERCENT OF NATION'S TOTAL—BOSTON TRADE PUBLICATION BLAMES LABOR COSTS, LACK OF DIVERSITY

(EDITOR'S NOTE.—What's ailing the shoe industry in Lynn and other New England centers? New England once produced 62 percent of the country's shoes, but today it produces only 32 percent. It's main troubles are held to be labor costs, lack of diversified output, inadequate merchandizing, and non-identification of its products on the national market, according to an article appearing in the current issue of Leather and Shoes, published in Boston. Since the preparation of the article, some relief has appeared on the horizon with the announcement that the Wage and Hour Division of the United States Department of Labor only this week denied a petition for industry-wide exemptions under the new 75-cents-an-hour minimum wage law and limited individual factory exemptions to 65 cents an hour for the first 6 weeks of a learner's employment and to 70 cents for the second 6 weeks. This is a decided boon to Lynn and other Massachusetts shoe factories since it will restrict the differential between the 75-cent minimum already contracted for in this State and the lower minimums sought in other States—some of them as low as 57½ cents an hour. Because of wide local interest in the topic, the Item has received permission to reproduce the Leather and Shoes article in full.)

For the past 50 years New England's shoe industry has been on the down grade. In this period it has consistently made fewer shoes, operated fewer factories, employed fewer workers. The only thing that has increased has been its mortalities, liquidations, and exodus of its former factories. According to all evidence available, the decline of New England's shoe industry will continue downward. It has apparently lost its once-famed virility and initiative; at least other shoe sectors in the country have superseded it.

The facts and statistics demonstrating this contention provide an impressive array of irrefutable evidence.

Fifty years ago, New England's shoe producing States (Massachusetts, New Hampshire, and Maine), produced 62 percent of the country's total footwear; today it is down to 32 percent, a fall of 50 percent. A half century past, Massachusetts produced 47.1 percent of the total as against about 17.5 percent today, a drop of about 70 percent. Significantly, these declines have been annually consistent over the 50-year period. The following table illustrates it more graphically:

Percent of shoe output

Year	Massachusetts	New Hampshire	Maine	Total New England
1899	47.1	4.9	9.7	61.7
1933	21.4	5.7	6.0	33.1
1948	17.4	5.3	7.7	30.4

The exodus of shoe-manufacturing firms and factories has also been impressive. Twenty-five years ago Massachusetts had 595 shoe plants, but today has only 245; New Hampshire in the same period fell from 65 to 54; while Maine just about held its own with approximately 46.

STEADY SHRINKAGE

New England's once celebrated shoe centers which were the core of the United States shoe industry—Lynn, Haverhill, Newburyport, Brockton, etc.—have shown steady shrinkage. Haverhill, which only 30 years ago accounted for 25 percent of the Nation's total shoe output, today accounts for a mere 3 percent. In 1905 Newburyport was a bustling shoe town with 28 factories, with approximately 6,000 workers. By 1924 the factories numbered only 18. Today there are only four shoe factories there, employing a total of about 1,500, and two of the firms accounting for 1,200 of the workers.

In the past year alone in the Lynn-Haverhill area, 33 of 61 shoe factories have liquidated or moved out. Charles J. Goldman, legal counsel for the Lynn Shoe Manufacturers Association, declares this 55-percent loss in this short period as "the greatest collapse of the shoe industry in history." He further states, "Lynn is the best place in the United States to make shoes. Historically it is the birthplace of the shoe industry. Yet, in spite of all these favorable conditions there has been an exodus of shoe manufacturers to such an alarming extent that recently I caused a bill to be introduced in the Massachusetts Legislature asking that a commission be appointed to ascertain the reasons for the exodus."

A recent and critical blow to New England's shoe industry was the migration of the W. L. Douglas Co. from Brockton to Scranton, Pa. For 76 years this firm has been located in Brockton, but after a 6-month labor-management quarrel, pulled up stakes and left. The firm once employed as many as 3,500 workers.

LABOR'S PART

Much of the plight of New England's waning shoe industry is blamed onto the labor unions. Most of the plants are under contract to one of two unions—the Brotherhood of Shoe & Allied Craftsmen, AFL, a New England local, and the United Shoe Workers of America, CIO.

In 1919 New England's shoe factories employed 114,000 workers. Today it has dwindled to 79,000. Except for Los Angeles and the New York-Brooklyn areas, both of which make mostly high-priced footwear requiring more detailed operations and hence higher rates, New England wage rates are higher than in any part of the country.

The relation of direct labor cost to the factory selling price per pair averages 23.18 percent for the Nation. In the Lynn-Haverhill area the direct labor cost averages between 24 to 40 cents. In this same area the union has negotiated contracts providing for a 75-cent minimum hourly, progressing to 80 cents in 4 months. But the same union contract provides for a 50-cent hourly minimum in Ohio and 60 cents in Maryland.

Walter Espovich, counsel for the Haverhill Shoe Manufacturers Board of Trade, stated: "Twenty years ago Haverhill had a differential in labor. Now it has disappeared. Conditions in New England are not favorable due to high labor costs. * * * Haverhill as a high labor cost area gets only the overflow of business."

Is New England's higher labor cost offset by a higher productivity? A Bureau of Labor Statistics study showed that from 1939 to 1945, for the country as a whole, there was an 8.8 percent reduction in labor time per pair of shoes, and that New England shoe plants increased output per man-hour more than producers located in other major centers.

On the other hand, Charles J. Goldman, counsel for Lynn shoe manufacturers, recently told Labor Secretary Maurice J. Tobin: "Not only has Massachusetts the highest labor cost in the country for workers on women's popular priced novelty shoes but also the lowest rate of production of shoes."

Address Before the Washington-Lewis Chapter of DAR, Fredericksburg, Va., Explaining House Concurrent Resolution To Strengthen United Nations

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1950

Mr. HAYS of Arkansas. Mr. Speaker, under permission to extend my remarks, I wish to include the following text of an address I delivered on House Concurrent Resolution 64, before the Washington-Lewis chapter, Daughters of the American Revolution, at Fredericksburg, Va., recently:

I appreciate very much the invitation to meet with you tonight, to discuss House Concurrent Resolution 64—what it is, what it proposes to do, and how advocates of this form of international cooperation for peace hope to achieve this worthy objective. I

also hope that I can correct some of the misconceptions of the program. I am highly honored that you have invited me here to present, so to speak, my side of the question. Your national organization has publicly expressed disapproval of the idea of world federation, and by asking me here tonight you have demonstrated once again one of the principles which has made our democracy distinctive—a desire to hear both sides of a question.

Federation is no new or revolutionary concept of government. World federation proposes an extension of the idea which binds governments into programs of service, and in this case the proposed service is a truly effective attack upon the war system. It is not, as some of the critics charged, a superworld government with unlimited powers to assume all of the functions of the individual states. The federation I contemplate could not interfere with the internal affairs of the member states; it would not deal with currency or trade problems, nor have authority to consider any matter not related to the world's peace.

The power of a federation such as I envision would be carefully defined and strictly limited. For example, House Concurrent Resolution 64, which I had the honor to introduce and which is sponsored by more than 100 Members of the House, refers specifically to "defined and limited powers," and only in one field—that of preservation of peace. The language is so clear and direct that there cannot be any misinterpretation of the objective of world federation under this measure.

All of us will agree, I am sure, that another war, releasing upon the world terrible weapons of destruction, would threaten modern civilization. All of us are searching for the means whereby peace can be made secure and future aggression prevented. That burning desire, not only on the part of the people of the United States but of other peoples, as well, was responsible for the warm welcome the United Nations received when it was organized in San Francisco in 1945. Since that time millions of freedom-loving people everywhere have placed their faith in the United Nations. We have come to accept it as the world's best hope for enduring peace. But, at the same time, we would be indulging in a dangerous deception to assume that with the creation of the United Nations the fight for world order based upon law has been won. We have made a beginning with the United Nations; the more difficult task lies ahead. The sense of imperfection must not cause us to abandon the United Nations. Those of us who are supporting the idea of federation are careful to point out that we must work through the United Nations and develop that organization into an international agency capable of maintaining the peace.

House Resolution 64 is definite on this score. It states: "It is the sense of the Congress that it should be a fundamental objective of the foreign policy of the United State to support and strengthen the United Nations and to seek its development into a world federation open to all nations with defined and limited power to preserve peace and prevent aggression through the enactment, interpretation and enforcement of world law." A reading of this statment is proof enough of our devotion to the United Nations. We want to give to the United Nations the one thing it lacks—the authority to decide questions of aggression through a judicial system and enforce the decisions so reached. We must recognize that it is still possible for aggression to take place, and this great organization finds itself without power to check potential aggressions.

A system of law, based upon justice, is the only answer. That is the meaning of Resolution 64. We are saying to the world, "What we want is a world governed by law and the principles of justice, not a world of violence and disorder." We are proposing that the principles which have united the people of the United States be extended in this limited sense to the whole world. If we do this, we will have peace and we will have something we love even more than peace itself—we will have justice.

Not many years ago, the State of Tennessee and the State of Arkansas had a sharp clash over the ownership of certain islands in the Mississippi River. Suits and counter suits were filed, and eventually the Supreme Court of the United States was called upon to make the final decision. Both States accepted, without equivocation, the judgment of the Court. Why? Because we have grown accustomed to accepting the rule of law.

The United States marshal of the district which I represent is one of the least violent men I know. He does not often carry a pistol, and yet, he is charged with enforcing mandates of the Supreme Court. No matter how many millions of dollars are involved or how many lives affected, the judgment is enforced and violence is never done. But one day that was not the case. It required force to carry out the mandate of the Supreme Court. In that period we had not, as a people, developed the respect for law and order which governs our life today.

Our goal in international relations is the same universal respect for law but with force sufficient to back up the decisions against aggression if necessary. Certainly that does not call for a world government which would destroy the sovereignty of the member nations.

The world has initiated movements in the past to achieve this ideal but the efforts have ended in failure because we had not developed a system of international justice, nor did we have power to back up decisions. The Kellogg Pact, negotiated by our own Secretary of State, outlawed war, but that treaty was immediately and consistently violated. The League of Nations could only protest, it could not act against the aggressors.

We all realize now that the occupation of the Rhineland by Hitler's troops was an act of aggression. That proved to Hitler that by acting boldly in violation of international agreements he could gain his ends in the face of indecision and timid action on the part of law-abiding Nations who had failed to build a system for unified protection of the peace. We can see now that German militarism could have been stopped then if we had had an international rule of law to brand his actions as violation of world law. Had Hitler persisted, in the face of such a ruling, he would have been confronted by world opinion and then by world police.

Chairman Kee of the House Foreign Affairs Committee had something like this in mind when he declared, during hearings on HCR 64: "If we could have had a world marshal to go in and arrest Hitler and Hitler recognized that the world marshal was backed by a Federation with sufficient power to enforce the orders of the marshal, we would not have had any trouble."

I shall not attempt to outline in great detail the organization of such a federation. I am more interested in having the Congress adopt HCR 64 as a policy statement. Such a clear policy declaration by the Congress would have a great moral effect upon the world. It would demonstrate once again to the world that we in the United States are interested primarily in establishing an enduring peace. We have fought two world wars for the ideals of freedom and justice. We are now in a position of world leadership. By adopting such a policy declaration, supported by the people of all political faiths in this country, we would point the way toward fulfillment of age-old dreams of peace.

Cost Against Saving

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1950

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Arkansas Gazette of January 24, 1950:

COST AGAINST SAVING

As flood crests on the Mississippi and Ohio Rivers have receded, the Army engineers have calculated that works erected since 1937 averted $15,000,000 in losses in the Wabash and lower Ohio Valleys this year. Levees and flood walls on the Mississippi below Cairo, Ill., are credited with saving $100,000,000 more.

These figures, however, give only a part of the picture. It is certain that the Nation-wide flood-control program which Congress set in motion in 1937 prevented loss of human life. While savings in life are not calculable, the engineers point out that hurricane-driven floods on Florida's Lake Okeechobee drowned 2,000 people in 1928. Flood-control works there were finished in 1943, and last year, when the same type of hurricane struck, no lives were lost. In no other year since the Government undertook flood control as a Federal responsibility has the death toll from river floods matched the 423 lives claimed by the Mississippi in 1927. Since 1938, when flood deaths totaled 180, the toll has exceeded 100 only once. In 1943, when the Missouri broke loose, the national toll was 107.

The national flood-control program by the middle of 1948, had prevented losses totaling $5,000,000,000 in the lower Mississippi Basin alone, according to the engineers' estimate. This was accomplished at a cost one-eighth as great. Elsewhere in the Nation the estimated savings on newer works was $500,000,000. This was slightly more than the amount of money spent for completed projects.

When we look at this balance sheet, with lives and property saved listed in one column and the funds spent for flood control in another, the figures are impressive enough. But can losses from floods really be measured in dollars and cents? To people who have known the menace of the advancing water, to people who have lost loved ones to the river, levees, and other protective works mean more than entries on a ledger. They represent guardians against disaster that need not occur again.

Israel's Labor Starts Modern Medical Center

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1950

Mr. MULTER. Mr. Speaker, the following item which appeared in this morning's New York Herald Tribune is a very interesting commentary on how

UNIVERSITY OF MICHIGAN LIBRARIES

the State of Israel is treating its medical problem:

ISRAEL'S LABOR STARTS MODERN MEDICAL CENTER—HISTADRUT PLANS $5,000,000 HOSPITAL AND SCHOOLS FOR PHYSICIANS AND NURSES

(By Paul Tobenkin)

A $5,000,000 medical center, including a 400-bed hospital and medical and nursing schools, has been started 6 miles east of Tel Aviv, Israel, it was learned yesterday. When completed it will be the largest and most modern institution of its kind in the new state.

Dr. Noah Feler, chief surgeon and medical director of the Beilinson Hospital in Petach Tikvah, Israel, said the institution will be part of Kupat Holim, the medical service of Histadrut, the Israel labor federation.

Dr. Feler, sent to the United States by Kupat Holim to study American surgical methods, said that mass immigration, coupled with a serious shortage of doctors, nurses, and hospital facilites, has resulted in an increase of 25 to 30 percent in the civilian death rate since Israel became a state in May 1948.

The new 6-story hospital will be staffed by 100 doctors and 250 nurses. Each year the medical school will graduate from 20 to 30 doctors and the nursing school 60 nurses.

"We have about 1,600 practicing physicians in a land that must have a minimum of 2,500 doctors," Dr. Feler said. "There is a great need for graduate nurses. Kupat Holim alone needs an additional 400 nurses. Half of our present nursing staff consists of nongraduates. Israel vitally needs 6,000 hospital beds, but we must do the best we can with only 3,000 at present."

"In addition to training doctors," Dr. Feler said, "the new medical center will offer refresher and post-graduate courses to physicians already in practice. At present Kupat Holim sends a number of its physicians to the United States for such work."

"Israel plans to establish 400 new settlements within the next 2 years," Dr. Feler said, "and each must have a clinic staffed by at least one doctor and one nurse." He emphasized that Israel will welcome American physicians and nurses who wish to settle there.

A Secretary of State Is Also an Individual

EXTENSION OF REMARKS
OF
HON. CARL D. PERKINS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1950

Mr. PERKINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Louisville Courier-Journal of January 27, 1950:

A SECRETARY OF STATE IS ALSO AN INDIVIDUAL

"I do not intend," said Dean Acheson, "to turn my back on Alger Hiss." Immediately hue and cry arises to condemn him.

It would be gratuitous to comment that the criticism comes from expected sources, from political partisans of known hostility. For many another, in swift judgment, seeing Mr. Acheson as Secretary of State, recalling Alger Hiss as a former employee of the Department of State, would likely join the chorus of condemnation.

Mr. Acheson, however, is not speaking as Secretary of State. He is speaking as a man in whose personal code friendship is impervious to weather changes, fair or foul. He makes an indelible case for the right of individual conscience.

The questions addressed to Mr. Acheson on this subject indeed came as result of public statements of obviously political inspiration. It is to his high credit that he did not evade them, as another might have done, by raising this point. Here I am, he seemed to say, and this is what I believe, and you will have to take me or leave me on the strength of it. Of course, he might have added that he expected the questions and was ready for them, because his answer and its Scriptural reference was, however admirable, quite well assembled. This, however, does not detract from its value, which is that of solid precept, useful as a guide to principled behavior.

It is seldom that an official occupied with high public policy, responsible to political considerations and impersonal routine, has an opportunity to relate conduct to personal conscience. Perhaps we would all be better off if this sort of interpretation of motive and action were called forth more frequently from public men. It is not a question of leniency for improper official conduct or its extenuation in betrayal of the public interest. It is a question whether adherence to conscience, wherever it leads one, is not properly a thing for a single standard, in private or public life.

Tulsa Tribune Suggests They Be Impeached

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I include at this point in the RECORD the following editorial by Mr. Richard Lloyd Jones, editor of the Tulsa Tribune, Tulsa, Okla.:

"No wise man ever thought a traitor could be trusted."—Cicero.

THEY MUST BE IMPEACHED

(By Richard Lloyd Jones)

What's happened to our country? This Hiss conviction has revealed something more than an individual traitor. It has revealed men in offices of high public trust who are defenders of treason.

Justice Felix Frankfurter, one of Harvard's collection of cultural curiosities, should resign from the highest court in our country. And if he hasn't the decency to do that, he should be impeached.

Frankfurter is only one of our high officials who has indicted his own intellect and integrity by sponsoring and repeatedly publicly professing his warm personal friendship for a traitor.

Justice Stanley Reed, also of our highest court, is another friend of traitor Hiss. He should resign, or be thrown out of his judicial robes by impeachment. Our courts and our Congress should be above suspicion.

Frankfurter was the exalted scholar whom the late President Franklin Roosevelt picked as his adviser.

It was Frankfurter who picked Hiss as the prodigy of the Roosevelt administration. It was Frankfurter and Roosevelt who made this traitor Hiss the closest adviser of the President of the United States at a time when not only the security of the American people was imperiled but the peace of the whole world. Roosevelt put the fate of nations in the hands of Hiss.

Added to all this our Secretary of State, Dean Acheson, after the traitor is convicted, reiterates that he is the traitor's friend. If he is the traitor's friend he is not fit to be our Secretary of State.

The people's representatives in their Congress should lose no time to impeach and remove this man who could be a friend to a traitor.

This Hiss who helped our enemy was authorized by our Secretary of State and our President to shape the tragic policies that have brought China into communism, and an ally of Russia.

For 10 years, through the interest of the late President Roosevelt, Frankfurter, and others, this fellow Hiss has gone from one position of power to a new position of greater power. For 10 years this intrigue against our Government has been going on and for 10 years high officials in Washington, with full knowledge of these infamous operations, have protected and covered all these trails of treason. The treason story does not end with Hiss. It begins with Hiss. Washington is now filled with frightened public officials.

Even the President of the United States so far forgot his obligations to the American people that when the facts of treason began to be talked he assured the people that it was nothing but a political trick to distract their attention by dragging "red herrings" before them.

The President should have been the first to authorize and insist upon full investigation. He should have been the first to ferret out the truth. But instead of that our President, and his lieutenants, did everything they could to hide the truth and to keep the people in ignorance of their betrayal.

What is the matter with the Democratic Party that it, professing to be a political champion of the American people, should lend itself to the suppression of the truth and make every effort to smear and ridicule those who, in the defense of our country, have sought to establish the truth?

Senator CONNALLY, of Texas, to his disgrace, is just one of the Democratic Senators who have tried to ridicule those who have brought the truths of the Hiss infamies to light.

On February 11, 1945, at Yalta, Franklin D. Roosevelt was a dying man. He had just been reelected without the strength to go through an exhaustive hard political campaign. Yet there at Yalta, this sick man, the choice of his party, was to determine the fate of nations. Of all the able men in America not one was chosen to be his adviser. He chose Hiss and Hiss alone. And it was at Yalta, under the influence of Hiss, that millions upon millions of people were flippantly handled over into slavery under Stalin.

It was this Hiss who, given the power by a Democratic Party and a Democratic President, gave to Russia three votes to our one in the newly formed United Nations. Everything that Hiss did was done to strengthen communism and to weaken America. And he is still the dear friend of our Secretary of State. And to two of the judges on our Supreme Court. And he is just a piece of "red herring" to the President.

Where are the Americans that they witness this with flippant disinterest? Where is our Congress, every Member of which has taken his solemn oath to defend the interests and protect the integrities of our Republic?

Every loyal citizen of this Republic should write every Congressman he knows or who represents him, Senate and House, and demand the impeachment of Frankfurter and Reed and Acheson. Command every Representative and Senator to command the President of the United States to reveal the names of those who have concealed this Hiss, and

his associates, in the betrayal of this Republic for the last 10 years.

Already, from the floor of the United States Senate, President Truman has been challenged to reveal the identity of those in our Government who, for 10 years, have engineered the concealment of the espionage evidence that convicted Hiss.

But a challenge is not enough. The whole country is now alerted to the fact that our State Department is honeycombed with trusted and confidential workers who have the funny idea that it is intellectually smart to betray America to the communistic forces.

The Senate should do more than challenge. It should command President Truman to come clean with everything, and himself clean out the traitors and the near-traitors and the friends of traitors in all the departments of our Government.

Senator CAPEHART, of Indiana, has demanded the resignation of Acheson and Frankfurter. We would like to see one of Oklahoma's Senators lead the fight for a clean and honest national administration that is above suspicion. It is time that ELMER THOMAS and BOB KERR became articulate with righteous indignation at the "red herring" hypocrisy of Truman.

Cheap and shallow are the gentlemen who sit in the Senate of the United States more concerned with their reelection than they are with the security of the American people. Shallow and sad, are the American voters who think betrayal of a public trust is a clever political trick that merits political award.

Our Congress is what we voters make it. This Hiss trial has proven many things. Chief of which is that we, the voters, have failed to do our duty. We have elected a President and a Congress that have tried to shield a traitor to the Republic.

The Hiss trial has put ELMER THOMAS and BOB KERR on the spot. This Hiss story will reveal them. Do we expect statesmanship performance? Or are we to listen, as do the Texans, to a Senator who said that those who brought this Hiss to trial and those who convicted him are just trying to make a burlesque out of this.

Betraying your country is not burlesque, Mr. CONNALLY. Oklahoma waits for her Senators to speak.

How the Phrase "In God We Trust" Came To Be on the Coins of the United States

EXTENSION OF REMARKS

OF

HON. LOUIS B. HELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1950

Mr. HELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article published by the Chase National Bank:

HOW THE PHRASE "IN GOD WE TRUST" CAME TO BE ON THE COINS OF THE UNITED STATES

The Reverend Watkinson was troubled. In his small parish at the Ridleyville, Pa., he brooded over the low ebb of Union fortunes after Fort Sumter and Bull Run. He deplored the godlessness of a Nation 7 months in civil war.

One cheerless November day in 1861 he sat down at the antique desk in his rectory and wrote a letter of singular eloquence to the Secretary of the Treasury.

"One fact touching our currency has hitherto been seriously overlooked," he wrote. "I mean the recognition of the Almighty God in some form on our coins.

"You are probably a Christian. What if our Republic were now shattered beyond reconstruction? Would not the antiquaries of succeeding centuries rightly reason from our past that we were a heathen Nation?"

Proposing a motto on the theme of God, liberty, law, he concluded, "This would relieve us from the ignominy of heathenism. This would place us openly under the divine protection we have personally claimed. From my heart I have felt our national shame in disowning God as not the least of our present national disasters."

The Secretary of the Treasury was Salmon P. Chase, certainly a Christian and one of Lincoln's ablest Cabinet members. Later he was to become Chief Justice of the Supreme Court of the United States, and it was in his honor that the Chase National Bank of the City of New York was named in 1877.

The Secretary, deep in problems of war financing, read this letter from the Reverend M. R. Watkinson and promptly recognized the merit of his plea. Within a week he had dispatched a note to the Director of the Mint in Philadelphia, James Pollock.

"No nation can be strong except in the strength of God," the note read, echoing the sentiments of the clergyman, "or safe except in His defense. The trust of our people in God should be declared on our national coins.

"You will cause a device to be prepared without unnecessary delay with a motto expressing in the fewest and tersest words possible this national recognition."

The Director of the Mint acted quickly on the Secretary's order. Before the year was out a bronze pattern for a $10-gold piece with the motto "God, our trust" had been submitted. Shortly thereafter, "Our country, our God" was suggested. But it was not until 1864, that "In God we trust" first appeared on a United States coin, a 2-cent piece. Salmon P. Chase himself had proposed this inscription.

Today this motto has the ring of timelessness, as though it had been given on tablets of stone to the founding fathers of a Republic conceived in a deep religious spirit. Yet until 1864 our country's moneys bore only practical and mundane Yankee slogans. The terse injunction "Mind your business" on the Fugio cent, first coin issued by the United States, illustrates the tempo of those times.

Since then many issues of all our coins have borne this simple affirmation of a Nation's faith, "In God we trust."

Justice for Poland

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1950

Mr. PHILBIN. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I am inserting the text of a recent address made by Prof. Carlton Wells, of the University of Michigan, on the Justice for Poland radio program of the western Massachusetts branch of the Polish-American Congress.

In his introductory remarks, Attorney Joseph F. Furtek paid tribute to Professor Wells for his interest and work in the Polish cause. For many years, Professor Wells has kept in close touch with Polish affairs and during the war, he headed a Michigan committee of Americans for Poland.

The western Massachusetts branch of the Polish-American Congress is to be complimented for its fine work in stimulating interest in and making the average American aware of the tragic fate that is Poland's through its regular series of radio programs. We must not give up the fight for this worthy cause. Let all those who believe in freedom, independence, and self-determination join in the fight for the liberation of Poland.

Poland must be free. Let all true Americans rally to the noble cause of the Polish people.

The address of Professor Wells follows:

WHAT CAN AN AVERAGE AMERICAN DO ABOUT THE FATE OF POLAND?

(By Carlton F. Wells)

Let me begin by rephrasing my subject as an average American of Chicopee, Mass., or of Ann Arbor, Mich., might phrase it: How can an average American do anything about Poland? And why should he concern himself about this far-away country behind the iron curtain? To be sure, this average American may sympathize with Poland's present tragedy—her terrible human losses in the war, her devastated territory, her capital reduced to rubble, her political enslavement by Communists taking orders from Moscow.

But an average American is also bound to feel that Poland is, after all, only a small and distant part of a much-troubled world. Our 1950 headlines play up Communist China, Formosa, General MacArthur; Indonesia, India, Yugoslavia; the East-West struggle for Germany; Russia, the atomic bomb, and the cold war; the forthcoming British elections and the welfare state. * * * But Poland? The average American almost never hears of it any more.

And because most of us Americans are practical people and because we usually refuse to worry about problems beyond our power to remedy, we are likely to sum it up by asking the obvious and difficult question: Why should I—how can I—do anything about Poland?

To that question, with all that it implies of hopelessness—I want to give a clear and practical answer. For I believe profoundly that we average Americans have a stake in—and a responsibility for—what is happening today to 25,000,000 Polish people in Poland and to hundreds of thousands of exiled Poles in western Germany, France, Britain, and Italy. I believe that we as Americans ought not to act as though Poland's fate is none of our business, or that we have no responsibilities in the matter.

For we do owe a debt to the Polish people—a debt that I can only summarize here—a debt based on Poland's unique record to the common cause in World War II.

Even the most average of average Americans knows that back in 1939 Poland was first to fight Hitler—and that her bitter, heroic resistance to Germany marked the end of appeasement and the beginning of Germany's ultimate defeat. We average Americans know, too, that subsequently Poland was ruthlessly dismembered by its two totalitarian partners in plunder, Germany and Russia. In the fateful, bloody years that followed, Polish resistance went on—a great army-in-exile stationed in France and later in England, an air corps that played a key part in the battle of Britain, and naval units cooperating with the British Navy. As for Russia's treatment of Poland after 1939—the Communists sent more than 1,500,000 Poles into Siberian mines and into slave-labor camps, and almost certainly murdered at Katyn 10,000 Polish officers. Meanwhile,

UNIVERSITY OF MICHIGAN-LIBRARIES

in German-occupied Poland, the Polish underground—the most effective in all Europe—fought unceasingly. Then, after Hitler invaded Russia in 1941 and Stalin hastened to enlist Poland's aid, a Polish Army formed in Russia under General Anders moved to the Middle East, and in the final years of the war fought skillfully and bravely in Italy (Monte Casino, Ancona, Bologna). A like record was made by Polish troops in the Normandy invasion and after. In short, the Polish record in the war was magnificent—hailed again and again by Churchill, Roosevelt, Eisenhower, by dozens of other spokesmen for the Allies.

And yet—as average Americans are finally coming to realize—Poland was betrayed—progressively and utterly—into the hands of the Russians: at Tehran, in 1943, where the British and Americans gave Stalin half of Poland's territory without so much as informing Poland's loyal coalition government-in-exile; at Yalta, in 1945, in a capitulation to Russian demands that can only be called appeasement; and in our repudiation of the legal Polish Government for the Communist puppet regime, imposed on the Polish people by the Red Army and kept in power by a totalitarian-style election.

No sensitive American can look at our treatment of our wartime Polish ally without a sense of shame—without realizing that an irreparable wrong has been done a valiant and loyal nation. One cannot read our repeated assurances and pledges given to the Polish people by Britain and America—and by Russia too—without realizing that a flagrant injustice without parallel in modern history has been perpetrated.

No American can, I suppose, fully comprehend the tragic plight of Poland, or realize how bitterly betrayed the Polish exiles feel. Let me urge my listeners to look at one book—a graphic, restrained, heroic story recently published: General Anders' An Army in Exile—a book that makes crystal clear why no American can fairly say that Poland's fate is not also, in some measure, America's responsibility.

What, then, can an average American do on Poland's behalf? I have two suggestions to make, which I can only outline briefly. Here they are:

1. In America we can help to keep in living memory the great history and the great cultural tradition of Poland. Here, in free America, the Polish traditions of liberty, of patriotism, of liberal western culture, can be kept in remembrance—can be studied in our colleges and recorded in our libraries and represented in our art galleries and concert halls. This tradition of the Polish nation is, as a recent writer has said, a great spiritual tradition, possessed of such "inner virtue and strength that it can survive ordinary human trials and vicissitudes. But today Poland has on her back a cynical enemy operating with all the modern means of extermination and repression. A good tradition cannot die but it can be killed. Let the cold war last another 20 or 30 years and there will be no Poland." (But see all of this admirable address on Polish Studies—A New Task for Polish Americans by Helen S. Zand, September 11, 1949.)

We can and we should use Polish scholars-in-exile in our schools and colleges to expand our too meager knowledge of Poland's distinctive literature, her unique national history, her contributions to art and music and science and scholarship and religion. We average Americans can do our small part in making certain that our local libraries have the best Polish books and the best books about Poland—Jan Karski's Story of a Secret State, General Anders' An Army in Exile, Arthur Bliss Lane's I Saw Poland Betrayed, the United Nations series volume on Poland, and The Cambridge History of Poland; also, such books as The Art of Poland by Irena Piotrowska and translations of Poland's older writers from Mickiewicz to Sienkiewicz and Reymont. By such small but practical efforts as these, can we help to keep alive the spiritual heritage of the Polish people.

Now—and finally—my second suggestion:

2. The average American must remember, always, that Poland means people—means individual, human, knowable people. And toward some of these Poles we can extend help of incalculable value. I have known a fairly large number of them—exiled Poles who got to America during or after the war—and I count it my rare good fortune to have known them: a Polish-Jewish artist, selflessly patriotic, ardently devoted to Poland's culture, tirelessly anti-Communist; a Polish soldier, whose wartime record included Siberian prison, military service in Italy, and at long last adjustment at Ann Arbor to American education; a Polish woman from the Polish underground, who fought in the Warsaw uprising in 1944 and who endured incredible conditions as a German slave laborer but who, in spite of all, got to America and into scientific work * * * and I could list a dozen others illustrative of Poland's sterling people who have reached our shores.

There are, however, many, many thousands who have not got to America but who want desperately to come——DP's who deserve a welcome and a haven in the United States.

How can an average American help to bring these Poles-in-exile to America? A word or two must suffice. The present DP law, passed in 1948, is "overly complicated, unjust, unfair, and discriminatory"—and a better law can be got, now, if enough average Americans urge it on their Senators and Representatives. You can help here, by getting in touch with the Nation-wide Citizens Committee on Displaced Persons, located at 303 Lexington Avenue, New York City, or by working through your local church or civic organization. Again, as an individual or through a local organization, you can help to bring displaced Polish or other DP's to your home community—an opportunity and a challenge of such human importance that many more Americans should participate. At Ann Arbor a 14-organization DP committee is functioning and effective. In our university six DP students (including three splendid Polish DP's) have been brought this last year by American students. For further information on how you or your community can bring DP's to America and to your community, please write me or write the Polish-American Congress in care of this station.

My modest suggestions, then, boil down to these: We average Americans must not forget Poland's fate. We as a Nation must do all we can as individuals or in organizations, to maintain ties with Poland's great traditions and culture, and to maintain ties with the Polish people—especially at this time by bringing Polish DP's from Europe. We Americans must maintain in the long dark days ahead, an unswerving resolution that Poland's honored dead in World War II should not have died in vain—that by our American efforts, the Polish people shall be brought nearer to the ultimate attainment of Poland's freedom.

The Hydrogen Bomb

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1950

Mr. LeFEVRE. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include an editorial taken from yesterday's New York Herald Tribune.

The fact still remains that all of us have a widespread and sincere desire for peace and although the decision of the President to continue work on the hydrogen bomb seems logical under existing conditions with no apparent cooperation from the Soviet Union to eliminate war, we seem to be forgetting United Nations and what its real function was. What can we do to make this group become something other than a name, when its real function was to break down the tensions between the nations of the world and be an effective instrument of peace? Presently the United States spends over $15,000,000,000 annually for its military defense and approximately $24,000,000 annually for the United Nations. How long can we or any other nation afford to continue this armament race? We should take the lead in an effort to relieve the world of the burden of armaments and pray that by making mutual concessions we might achieve the goal of international security.

The editorial follows:

THE PRESIDENT'S DECISION

On Friday the President simply stated what, under all the circumstances, was no more than simple fact: that the responsibility for decision as to whether or not to proceed with the hydrogen bomb was his and his alone. It is a subject which cannot be submitted to public debate, on which the President alone has access to all relevant sources of information and in regard to which he bears, as Chief Executive, as Commander in Chief, and as director of foreign relations, the direct constitutional responsibility. His decision has now been announced: "I have directed the Atomic Energy Commission to continue its work on all forms of atomic weapons, including the so-called hydrogen or superbomb." This work "will be carried forward on a basis consistent with the over-all objectives of our program for peace and security."

This newspaper has already indicated its belief that this is the only sound decision; that if the bomb can be made, it now must be made. It is not a moral issue and cannot be so regarded. Mr. Lilienthal, in a difficult and embarrassed interview on Monday, intimated that the secret high-level discussions of recent weeks have not turned on ethical scruples. Such hideous weapons as burning phosphorus—which Mr. Lilienthal himself earnestly promoted during the war—or napalm incendiary jelly are just as terrible for the individual victim as an atomic explosion. The issue has been one in military and political strategy, in the proper allocation of the national effort, in evaluation of the weapon as a weapon.

Conceivably the moral problem might arise if American action could in any way determine Soviet action. But then there would be no problem, for no one would attempt to construct this superhorror if there were any assurance that by refraining from doing so the Soviet Union would be prevented from building such a bomb of its own. There is no such assurance. Dr. Urey's informed guess that, given the raw materials, the development of the hydrogen bomb could not well cost more than around a hundred million dollars is sufficient indication that the technical and scientific problems foreseen are not particularly difficult for any nation which has already achieved atomic fission.

The knowledge and materials are now available. The United States really has no choice save to go forward, to acquaint itself with the possibilities and to be ready with

a hydrogen bomb as soon as any other power may be—just as it had no choice during the war save to go forward with the study of such horrible things as modern superpoisonous gases and bacteriological warfare. A moral question can only arise, if it ever does, in connection with the use of the superbomb. We must be very careful how we pin our faith on this thing, assuming that it is successfully developed; we must be wary of the idea that a superweapon can give us a superpower in the world or relieve us of the hard obligations of intelligent policy and diplomacy, of consistency, integrity, and foresight on the basic plane of human relationships. If the bomb can be made, we must make it. The manner of its use is the difficult question, but that cannot arise until we know the results of the directive which has now publicly been given to the Atomic Energy Commission.

Let There Be Laughter

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1950

Mr. RODINO. Mr. Speaker, in a world which is deploring the fate of mankind, the words of His Holiness Pope Pius XII contained in the following editorial which appeared in the Newark Star-Ledger of February 2, 1950, are indeed worth noting.

Under leave to extend my remarks in the RECORD, I wish to include therein the editorial entitled "Let There Be Laughter":

LET THERE BE LAUGHTER

When Pope Pius XII says there should be more laughter in this world of many long faces, he is deserving of an amen from every American. Introduced to Chick Johnson and Ole Olson with the explanation that they are not Catholics, His Holiness responded:

"Laughter has no religion; there should be more of it in the world."

Those two American comedians have done much to bring laughter to all. Their irrepressible good humor, and their zany antics have lightened many heavy hearts.

With his appeal for more laughter, the Pontiff also calls attention, if only by contrast, to a curious lapse among professional world-savers to the left. It has long been noted that most do-gooders seem to lack the gift of laughter. Perhaps they are too busy decrying the woes of society to laugh either with or at Olson and Johnson.

Civil-Rights Program

EXTENSION OF REMARKS

OF

HON. LOUIS B. HELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1950

Mr. HELLER. Mr. Speaker, I commend to the reading of my colleagues the following article which appeared in the New York Times magazine section on January 22, 1950:

TO SECURE THESE RIGHTS EDUCATION HELPS, BUT LEGISLATION IS NECESSARY TO BRING ALL OUR CITIZENS THEIR CIVIL RIGHTS

(By Robert K. Carr, professor of government at Dartmouth, and formerly executive secretary of the President's Committee on Civil Rights)

In the 2-year period since the members of the President's Committee on Civil Rights went to the White House to submit its final report to Mr. Truman the civil-rights problem has become one of the most bitterly fought political issues in American history. While much of the attack upon the President's civil-rights program has been raucous and emotional, some of its critics have been reasonably calm and intellectual and accordingly their arguments are entitled to careful consideration.

These critics specifically have challenged two findings of the Civil Rights Committee which underlie the specific recommendations which the President has submitted to Congress. These are (1) a call for positive governmental action, much of it Federal in character, in support of civil liberty in America, and (2) a conclusion that segregation of people along racial, religious, or nationality lines must be eliminated from American life.

In the face of the renewal of the civil-rights conflict in the final session of the Eighty-first Congress, it is appropriate to reexamine these two findings, to note the nature of the attack upon them, and to restate some of the arguments in their favor which the President's Committee found persuasive.

The idea that civil rights can be strengthened and supported by Government is suggested in the very title to the Report of the President's Committee—"To Secure These Rights"—a title taken from the Declaration of Independence, where it is followed by the words "governments are instituted among men." Thus, the notion that government can be a friend as well as an enemy of basic human liberties finds firm support in our earliest political traditions.

In spite of this fact, opponents of civil-rights legislation argue that the only sound and successful way of strengthening civil rights is through private, voluntary action—through the education of each man to an understanding of the value of the free way of life, of the folly of prejudice, intolerance, and bigotry, of the need to respect his neighbor's rights if his own are to be secure. The more liberal of the opponents also emphasize the need to shore up the social and economic underpinning of our Nation so that civil liberty may have favorable conditions in which to thrive.

Let it be made clear at once that the President's committee by no means urged the use of laws as an exclusive means of safeguarding civil rights. It saw clearly the important roles which education, and economic measures in such fields as employment, housing, and health must play if our freedoms are to be made secure. But it saw no need to choose between these approaches as though they were rival and mutually exclusive means of reaching the goal. All are necessary.

Because legislation in support of civil rights is the most controversial of the means, the committee devoted much of its report to the development of the case in its favor. The argument may be restated as follows:

A careful reading of American history since 1789 shows that private individuals and organizations have been responsible for many of the most serious encroachments upon civil liberties. This assertion is borne out by the treatment we have given the largest of our minorities, the Negro. There is no denying that the Negro's civil rights have frequently been encroached upon by government. But for every Negro who, for example, has been kept from voting by legal restraints there is at least one other who has been kept away from the ballot box through intimidation by private persons. And while there are 17 States that segregate the Negro by law, can anyone doubt that in many of the other 31 States private action still prevents the Negro from associating freely with other men in the place of business, the labor union, the church, the school, the theater?

Traditionally a democracy copes with the antisocial acts of individuals through criminal laws, such as those dealing with murder, arson, and burglary. Why should we not deal with interferences with civil rights the same way? If one man willfully and deliberately interferes with another man's right to vote, why should that not be regarded as criminal conduct and punished accordingly?

Objection is promptly heard to such a proposal. It is said that civil-rights violations have their roots in prejudice and bigotry and that unfortunately prejudice and bigotry cannot be eliminated by passing laws. And it is commonly asserted: "You cannot change human nature by passing a law; you cannot legislate morality."

These assertions, while at first thought seemingly persuasive, are shown by history to be something less than true. It may be impossible to eliminate prejudice and bigotry or to change human nature by passing laws. But human behavior is often controlled by law. Laws against murder cannot be expected to eliminate all murderous hatreds and drives from men. But there can be no doubt that such laws do prevent many potential murderers from putting their hatreds and drives into practice.

The opponents of civil-rights legislation also refer to the practical difficulties of administering such laws and warn us that they will prove as unenforceable as were the prohibition laws, or that it will take a standing army to back them up. Admittedly, civil-rights laws—particularly those carrying criminal sanctions—are not always easy to enforce.

But the difficulties can be exaggerated. For example, the record of the Civil Rights Section of the Department of Justice shows that civil-rights laws carrying criminal sanctions can be enforced, at least to the extent that they are responsible for improvement in the condition of our rights. The work of this agency is clearly one of the forces responsible for the drastic decline in lynchings and the increase in Negro voting during the last decade.

The recent experience of New York State under its Fair Employment Practices Act demonstrates that racial and religious discrimination in employment can be ameliorated by a law which, although containing criminal sanctions, has never taken offenders to court. Much has been accomplished by an administrative commission through negotiation and conciliation without using even its cease and desist order provided by the law.

Actually the choice is not between law and no law. Much tolerance and discrimination are today encouraged by law. This is particularly true of the many States in which Negroes are denied the right of first-class citizenship through segregation laws. Thus, it is not true that those who advocate protection of civil rights through legislation are necessarily trying to force people to abandon private voluntary practices—to interfere with "folkways." Those who are opposed to civil-rights laws on the ground you cannot legislate morality should ponder the possibility that we have been legislating immorality.

If it be admitted that laws may be helpful as a means of safeguarding civil rights, there is still the issue whether such laws should be local or national, with the critics of the Truman civil-rights program insisting that only the local community, or at most the

UNIVERSITY OF MICHIGAN-LIBRARIES

State, should so use the legislative power. Here, too, it should be made absolutely clear that the Civil Rights Committee believed the battle for civil rights must always be fought in good part on the local front. Accordingly, it directed many of its specific recommendations for legislative action to the States and local communities.

And yet there are certain compelling reasons why Federal action is necessary. Let us consider three:

First, the record shows that insofar as civil liberty has been encroached upon by public officers, rather than by private persons, the threat from State and local officials has been greater than that from Federal officials. This is a difficult assertion to prove statistically, but there are certain reasons why it is so.

For example, against the threat offered to freedom of the press by a Federal sedition act, the threat resulting from a local ordinance restricting the distribution of handbills is minor indeed. But analysis of Supreme Court decisions shows that in the collective sense State and local statutes have encroached upon freedom of the press far more than have Federal statutes.

Where a State or a community is either unable or unwilling to prevent its officers from encroaching upon fundamental freedoms, the Federal Government has a responsibility to step in and take action. Indeed, the thirteenth, fourteenth, and fifteenth amendments to the Constitution place an express obligation upon Congress to see that the rights protected by these amendments against State action are safeguarded.

Second, logic suggests that the high moral principles of the whole society be used to check the lapses of wayward parts. The many and varied components of the moral fiber of the larger area give it a strength and resiliency that cannot be matched in many of its parts. It is a fact that in our Nation at large we have shown a deeper understanding of the free way of life and a higher regard for civil rights than has been true in certain of our States and communities. Should we not put that greater national sense of moral responsibility to work in protecting our rights?

Third, whether we like it or not, our civil-rights difficulties have become an international issue which the Federal Government must meet. The Civil Rights Committee saw evidence that whenever a lynching has occurred in this country in recent years the word has echoed from one end of the world to the other within a matter of hours. People everywhere, and particularly colored people—who make up two-thirds of the world's population—have looked to the National Government of the United States for an explanation as to how such a shocking event can occur in a democratic country, and for the taking of remedial steps to prevent the recurrence of such outrages.

Recently the Supreme Court has called our attention to the damage which can be done to our interests internationally through irresponsible action by one State. In 1913 California passed an alien land law which made it impossible for Japanese aliens to own or occupy agricultural land in the State. In taking this step California rejected the protests of three Presidents of the United States that such a law would almost certainly cause an adverse reaction inside Japan. In 1948 the Supreme Court declared this statute unconstitutional and in one of the opinions in the case it is stated:

"The passage of the law was an international incident. The Japanese Government made an immediate protest on the ground that the statute was an indication of unfriendliness toward its people. Indeed, the resentment was so strong inside Japan that demands were made that war be declared against the United States. Anti-American agitation grew rapidly."

Who can doubt today that the passage of this State law was one of the things that finally led the Japanese people to feel such hatred toward the United States, or that it made it easier for militarists and extremists to guide Japan down a road that brought ruin to that nation and the ravages of war to this Nation? Or who can be certain that similar action by American States or communities today may not give similar offense to foreign peoples that will one day bring suffering and death to many Americans? Irresponsible action by some of our people can well do grave damage to all of us.

In other words, as a Nation in a troubled world we cannot wait for our slowest State or our most backward community to catch up and see to it that all freedoms are guaranteed to all of its people. The international situation creates a sense of urgency with respect to our civil-rights problem which only the National Government can meet.

Two considerations persuaded the President's Committee that segregation must go. The first was a belief that we must narrow the gap between our principles and practices. Perhaps the most basic principle of the American way of life is a belief that each individual should be judged by his fellowmen strictly on the basis of his own personality, his industry, his achievements.

Recently Gen. C. W. Lawrence reported on the experience of the Air Force which has abandoned segregation at its Lackland Base in Texas, where 26,000 men go through 13 weeks of basic training. He said: "The integration of the base was accomplished with complete harmony. Orders went through to completely end segregation among the trainees on a certain date and when that date arrived the segregation was ended. No unpleasant incidents resulted and the white boys and the Negro boys in the training camp are getting along well together." This and other recent interracial experiments seem to show that where men do live and work together regardless of race and religion, prejudice and intolerance begin to decline and awareness of the importance of the individual as against his membership in a racial group begins to grow.

Secondly, the Committee was convinced that the so-called separate but equal solution to the race problem is a failure. The separate but equal policy is the best rationalization which supporters of segregation have advanced. The argument runs that it is desirable to segregate people solely because of the color of their skin, but they are to be provided absolutely equal facilities to those available to the rest of the population, particularly as to services supplied by the Government.

The evidence shows that, after long years of effort, the facilities supplied the segregated races, while indeed separate, are far from equal and are not likely to become so in the foreseeable future. For example, statistics recently released by the United States Office of Education show that as late as 1946 separate Negro schools, by whatever test employed, were shockingly inferior to white schools. Value of school property per student was $250 for white and $48 for Negroes. School expenditures per student were $104 for whites and $57 for Negroes.

No responsible person can demand the elimination of segregation from American life overnight. The social patterns of segregation have been rigidly set over a long period of years, and it would be folly to attempt to alter them quickly or without careful preparation. Yet here, too, time is a very serious factor. We have made progress in the 80 years the problem has been with us in integrating our racial minorities into the national life. But much remains to be done. And who can doubt that we have far less than 80 years in which to travel the rest of the way to the goal of a truly democratic society?

In his address at Columbia University during his recent visit to this country, India's great statesman, Nehru, warned: "The West has too often despised the Asian and the African and still in many places denies them not only equality of rights but even common humanity and kindliness. This is one of the great danger points of our modern world; and now that Asia and Africa are shaking off their torpor and arousing themselves, out of the evil may come a conflagration of which no man can see the range of consequences."

We must heed the warning before it is too late.

Our Fiscal Crisis—What Can We Do About It?

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1950

Mr. AUCHINCLOSS. Mr. Speaker, under authority granted me I am very glad to insert in the CONGRESSIONAL RECORD the address made by Hon. John W. Hanes, chairman of Tax Foundation, Inc., before the three hundred and tenth regular meeting of the National Industrial Conference Board at the Hotel Astor on January 26, 1950.

His subject Our Fiscal Crisis—What Can We Do About It? is most apropos at this time. The American people are more conscious than ever of the heavy burden of taxation upon their shoulders and there can be no dispute that if our country is to go forward and prosper and if our industries are to expand, the cost of Government must be decreased and the weight of this burden lifted from the people's shoulders.

Mr. Hanes is well qualified to speak on this subject because he is not only a man of affairs and highly considered in the world of business, but he has also served his Government as Assistant Secretary and Under Secretary of the Treasury from July 1, 1938, until December 31, 1939; therefore, he has a wide vision and broad experience in fiscal matters. I hope the Members of Congress may read this clear and factual presentation of the serious fiscal situation which confronts us, and I am sure our country will be benefited by his analysis and recommendations.

The address follows:

The subject assigned to me is The Tax Burden. I should like to divide my remarks into several sections: first, taxes and spending in relation to a sound over-all fiscal policy second, some desirable reforms in tax policy; and third, incentives and socialism.

To some, fiscal policy has a forbidding sound. The very words bring to mind visions of statistics by the pound, complicated formulas, the higher reaches of economics and public finance—in short, a subject to be avoided at all costs and at all times.

Nothing could be further from the truth. Although the techniques for carrying out fiscal policies may be complex, the basic policies themselves are determined—or should be determined—by common-sense principles understandable to any layman.

For instance in drawing up a Federal fiscal policy for the next year beginning June 30, 1950, there are two possible approaches. On the first basic decisions resulting from these approaches, rests the entire fiscal program.

One is the businesslike approach. The fiscal planner looks first at the estimated revenues for fiscal 1951. He finds they have been estimated at $37,300,000,000. And he says, in effect: "We are going to get that much money—a tremendous sum, and what can we afford? How can we fit our many wants to the funds available?"

That is one approach. A second is to draw up a national budget based on what one would like to spend, what is desirable or considered necessary by one voting group or another. This fiscal planner, after finding that the total adds up to $42,000,000,000 for fiscal 1951, goes on to say, in effect: "Let's see what new taxes can be added to reach that total. How much of it can we add to the national debt?"

There is the choice: what we can afford, or what we would like, whether we can afford it or not. A decision in this basic area, understandable to any taxpayer, can determine—has determined—fiscal policy for the most powerful country in the world.

I have begun with this illustration to demonstrate simply that tax policies do not exist in a vacuum; they are dependent on the level of expenditures. And both taxes and spending depend on an over-all fiscal policy developed at the top. It is difficult, if not impossible, for Congress to cut spending without strong leadership from the executive department.

Today the No. 1 fiscal problem of the Federal Government is this: We are living above our income; we are spending more than we are taking in.

There are three ways to meet this problem: First, we can reduce spending; second, we can increase taxes; third, we can increase the national debt through deficit financing.

During the present fiscal year we are spending over $80,000 a minute, 24 hours a day, 7 days a week, for 52 weeks. As a result of this spending pace, nearly $6,000,000,000 will be added to the national debt by next June 30.

Proposals for reducing Government spending are as numerous as they are unsuccessful. You will remember the situation in Congress last year. A strong effort at economy gathered momentum through June, then aborted in the tangle caused by the out-of-date appropriation procedure. It finally ended with failure of even a somewhat plaintive appeal from Congress to the President to cut down expenditures after the money was appropriated. When it finished work, the first session of the Eighty-first Congress had the distinction of appropriating a larger sum than any other peacetime session in our history.

One ray of hope has been the work of the Hoover Commission. About 20 percent of its recommendations are already in effect with potential savings so far listed at about a billion and a quarter dollars.

But this large sum is dwarfed by the anticipated deficit for this year alone.

There is a solution to the problem of reducing Government expenditures. But it doesn't lie in halfway measures. The Director of the Budget, Mr. Frank Pace, hit the nail on the head, and I quote him:

"A realistic appraisal of the budget outlook must begin with the realization that if there is to be any significant reduction in Federal expenditures, it must be obtained through the curtailment or elimination of programs."

Mr. Pace, unfortunately, was not arguing for the elimination of any programs. But one of his predecessors in office did offer recently a concrete proposal for immediate action. Mr. Daniel Bell, formerly Under Secretary of the Treasury and Director of the Budget, now president of the American Security & Trust Co. in Washington, proposes a 2-year moratorium on new legislation creating any new Government function or the expansion of any function already assumed. He adds, and I quote:

"During this 2-year period, the Congress should devote itself almost exclusively to a restudy of all functions taken on during the past quarter of a century to ascertain whether they were soundly conceived and soundly financed, and whether our economy can afford them. After this study has been completed, Congress should devote the next period to a correction of our past mistakes."

This is an ambitious plan. But, in my judgment it indicates one good method of cutting Government spending enough to lick our basic fiscal problem. The road back to sanity in public spending is going to be a long one, in any case. Trimming Federal personnel rolls and sniping at individual items of Federal expenditure, however desirable, are not enough. Some day we will have to come down to the crux of the matter, which is reducing Government functions.

Alternative No. 2 is to increase taxes to meet budget demands.

It will not be necessary to demonstrate that taxes are a burden. But it is a startling fact that in each of the last two fiscal years, the American economy furnished all Government with more revenues than the greatest amount collected in any year of World War II.

Despite the postwar decline in the individual income-tax burden, American taxpayers as a whole have been called on to pay more in taxes to Federal, State, and local government than they did when we were fighting and trying to pay for history's most destructive war.

Total tax receipts for the three levels of government reached a wartime peak in 1945, when $50,148,000,000 was paid in. In fiscal 1948, this figure was up to $51,042,000,000 and in fiscal 1949 it was an estimated $50,271,000,000. And, Mr. Truman has just proposed additional taxes.

I have bunched Federal, State, and local taxes together for this example. But despite a postwar trend showing increases in State and local taxes, our principal tax problem is at the Federal level. Back in 1939, less than 40 percent of total tax receipts went to the Federal Government. Today, almost three-quarters of all taxes go to Washington, and this makes the problem a Federal one.

It has been said, and I believe it, "there is a point in taxation beyond which Government cannot go without draining away the lifeblood of the economy."

Moreover, with total taxes already at about 25 percent of our national income, that point I believe has been reached. In England, where taxes have risen to 40 percent of the national income, industries have reached the point of stagnation. In the United States, about 700,000 new jobs must be created each and every year for the young people just starting their careers. Consequently, constant expansion of private business must be encouraged. More taxation does just the opposite. It destroys all incentive to expand.

Increased taxation, as a solution to our primary fiscal problem has nothing to offer but a direct threat to the continued health of the economy on which our very existence depends.

The third alternative is deficit spending.

I am convinced that prolonged deficit spending, as we have seen it in 18 of the last 20 years, holds more immediate danger for us than any other domestic problem.

A single year's deficit does not make a crisis. Even a business or a family can have a bad year financially. But it was President Roosevelt who said in 1932 that if a government like a spendthrift, throws discretion to the winds, and is willing to make no sacrifice at all in spending; if it extends its taxing to the limit of the people's power to pay and continues to pile up deficits, then it is on the road to bankruptcy."

The tragedy in a six-billion deficit this fiscal year and the anticipated deficit of 4 or 5 billions next year is that deficits are becoming, as Dr. Nourse has said, a way of life."

And part and parcel of the fiction that deficits are not important is the idea that the debt and the deficits somehow will take care of themselves. The President in a recent message to Congress implied that the country will some day grow up to the budget, that the national income will increase enough to raise tax yields and bring receipts into balance with expenditures.

Expansion through a policy based on deficits is not growth; it's monetary inflation. And inflation, as has been demonstrated since the war, blows up the Federal budget as fast as it blows up tax yields. On that basis, there never will be a balanced budget.

Even more ominous, however, is the present admission that inflation has been adopted as a fiscal policy by the Federal Government. The latest group of planners in Washington call it a managed inflation, which is somewhat like speaking of a managed atomic bomb.

The adoption of inflation as a fiscal policy has been accompanied by a complete reversal of the administration position in the past year. At this time a year ago Congress was weighing Mr. Truman's demands for great powers to fight inflation. Although deflation was already pecking at the economy, the signs had not yet been read—especially by Government experts. Instead, the President appealed in his budget message for authoritarian power, unprecedented in peacetime, to combat the demon inflation. He also urged a tremendous tax increase of $4,000,000,000.

Six months later, the situation altered drastically. In the interim, our capitalistic system had been demonstrating its resiliency. The inflation was halted before it reached a disastrous peak—not by the Government but by operation of classic economic laws.

Then, in the face of political pressure and coming elections, the administration did a complete turn-about and asked for more powers to combat deflation, simultaneously calling for an orgy of spending which is still developing.

The Government is, in effect, trying to put a floor under the highest point to which inflation has ever driven the Nation. Because of political commitments and promises, the administration can't afford an adjustment of prices to the point where they could do the wage earner some real good. It can't afford to permit a temporary halt in the upward wage spiral until the economy can support a real wage increase in terms of purchasing power.

I am reminded of what Dr. Vannevar Bush said—and I quote—"a people bent on a soft security, surrendering their birthright of individual self-reliance for favors, voting themselves into Eden from a supposedly inexhaustible public purse, supporting everyone by soaking a fast-disappearing rich, scrambling for subsidy, learning the arts of political logrolling and forgetting the rugged virtues of the pioneer."

Under the circumstances, it is a measure of our national strength that so many Americans today turn with disgust from government by hand-out financed by managed inflation.

It should be evident that neither increased taxes nor deficit financing will solve our fiscal problem. The solution is reduced spending, through reduced Government functions. And it must be accompanied by a changed fiscal outlook at the top—a resumption of the idea that Federal fiscal policies should be designed to permit the American economy

UNIVERSITY OF MICHIGAN LIBRARIES

to grow, to add to the unprecedented standard of living we have already achieved. This definitely does not include replenishing an enervating inflation with what Dr. Nourse has called "monetary and fiscal tricks" that have no power of magic but are a slippery road to misery."

With understanding that the ultimate key to the tax problem also unlocks our entire fiscal problem, we can go on to consider several individual tax policies which impair proper functioning of the enterprise system. I shall discuss only depreciation and the double taxation of dividends, two of the most important of all suggested tax reforms.

Liberalization of the depreciation allowance is a completely desirable reform in tax policy. In the tremendous expansion during and after the war, corporations have had to acquire and pay for new plants and equipment at prices far above prewar costs. At the same time they have had to depreciate old equipment at low rates on a prewar base. To accomplish this they have been forced to retain an ever larger share of current earnings, to dip into their reserves and surpluses, and in many cases to borrow heavily from banks and insurance companies.

There is general agreement that the present method of dealing with depreciation is unsatisfactory. Treasury policies on depreciation are a direct handicap to new risk capital. The tools of industry are wearing out at a greater rate than they are being replaced because corporations must follow archaic and restrictive depreciation schedules. Corporations tend to keep their older facilities in operation instead of modernizing them, since they cannot afford to discard older tools till they are completely depreciated.

I believe there is a simple solution: corporations should be permitted to set their own depreciation rates, with two limitations: First, the rates should be no higher than 20 percent, and second, corporations should stick to their schedules once these are established. If such a farsighted policy is adopted, I will guarantee that the building expansion and renovation of plant in this country will be on a scale never before equaled—and the simple fact of the matter is that it will not cost the Treasury one penny in revenue.

The one drawback to such a policy would be its immediate cost. Every billion dollars of extra depreciation means a temporary loss of $380,000,000 in revenues. This could be overcome by adopting the policy gradually over a period of years. But depreciation reform should be high on the list in any sound program of tax revision.

Even higher on the list should be the elimination of the double tax on corporate dividends. Perhaps because it is so basic, the problem of double dividend taxation is more difficult than most. Three bills designed to mitigate double taxation were introduced in the first session of the Eighty-first Congress. One would allow a credit against income tax of 20 percent of the amount received as dividends from a domestic corporation, subject to certain limitations. Another would exclude dividends from the definition of gross income. The third would allow a credit of 10 percent of dividends received.

No action has been taken thus far on any of these bills.

Obviously it is unfair that corporation earnings distributed in dividends be taxed once to the corporation that earns the money and then to the individual stockholders who receive distributions.

But as in the case of depreciation allowances, the cost of such a reform is held to be a handicap. For instance, one of the proposals to mitigate double taxation of dividends would cost about $1,000,000,000 in fiscal 1950. This is a sizable sum, in view of present budget deficits.

Nevertheless, the first steps toward removal of the double taxation on dividends should be taken without further delay. The initial loss in revenues would be made up many times over because of the great impetus such a change would give to business. More risk capital would become available at once. Many corporations would be freed of the necessity of financing their expansion in the banks. The morale of individual investors would receive a wonderful boost.

In other words, incentive would be returning to the economy, and incentive, so important in the formation of risk capital, must be restored to our economy or we will go the way England has gone.

I have already mentioned the economic stagnation resulting in Britain from a tax burden of 40 percent of the national income. There is no magic in a specific figure of 40 percent, or 25 or 50. I am sure we would have maintained the strength of our economy during World War II even if the tax burden had risen to 70 or even 80 percent, because our incentive was a combination of patriotism and self-preservation.

When it is said that England is stagnating under a tax burden of 40 percent, the background of that tax burden is an all-important consideration. Hand in hand with its huge tax burden, Britain has been subjected to a steady undermining of incentive, which is another way of saying individual freedom to make one's own way.

My major objection to socialism aside from the fact that it has never succeeded in any country that tried it, is its failure to preserve individual liberty which is our most cherished possession. The foundation of socialism in Britain is that government knows best. As the British Labor Party platform puts it: "Government must accept responsibility for economic planning for the nation as a whole." Government, however, is composed of men, and men do not become infallable by joining up with government.

But the planners of Downing Street frequently discount the individual completely. Serious inroads have been made in what Prof. John Jewkes calls, in his book "Ordeal by planning," the three economic freedoms. These are freedom in the choice of occupation, freedom in the disposal of income, and freedom to acquire and to hold property. All three of these relate directly to incentive.

Freedom in the choice of occupation means the right to make the financial sacrifices necessary to order one's working life as one wishes. It means the right to choose between work and leisure, the right to choose what work shall be done, when, where, and for whom.

Unfortunately, for the British people, the plan of the British Government does not have room for individual decisions about occupation. During the war, the British had conscription of labor—we almost had it here. After the war, in the British democratic tradition, labor conscription was abruptly ended. But after the Labor Party won the first postwar elections and took control of the government, here is what happened to the workingman.

In February 1946, Sir Stafford Cripps said: "Our objective is to carry through a planned economy without compulsion of labor."

But he was talking before the plan was in action. A year later he was less sure, and more long-winded; I quote:

"We are attempting to make a success of democratic planning and, save for emergency measures such as are necessitated by war, or may be necessitated by some urgent economic crisis, we have not decided to employ, as a normal matter, methods of direction or compulsion of manpower outside the necessities of defense."

On August 7, 1947, the turnabout was complete, and Sir Stafford told the House of Commons, weakly:

"It has been decided to stop, by negative control, further people from going into the less necessary industries."

It became the law of Britain that, with minor exceptions, no man between the ages of 18 and 50 years and no woman between the ages of 18 and 40 years could change his or her occupation at will. Every such change had to be registered at the Employment Exchange, and the Minister of Labor had the power to direct workers changing their jobs to the employment he considered best in the national interest.

Attempts were made to minimize the significance of what had happened. The power was to be employed "to a limited extent." The control was to be negative and marginal.

But the barriers were down. Although the original understanding was that workers would not be moved from their own districts, it was soon announced that single men and women and married men in special cases could be sent away from home.

That is what socialism in Great Britain is doing to the freedom of the individual—freedom which in itself is the greatest incentive that ever lifted mankind.

As Professor Jewkes points out: "The modern planning movement sets out, with good will and noble intentions, to control things and invariably ends up by controlling men."

The sum total of all these controls—these limitations on the incentive of the individual to live his own life in his own way, far beyond what we here consider the public interest—this is the most important failure of socialism as it is practiced in Britain, and as it would be practiced here if some people had their way.

Is there, then, a direct threat to the American economy which has turned over $75,000,000,000 since the end of the war to help Britain and other foreign nations?

It is my conviction that there is a direct threat. Not in the economic philosophy of communism or socialism as a whole. It needs no Gallup poll to demonstrate that most Americans are against socialism and communism as such; they would never accept it—as so named.

But we do accept—we are accepting—the equally fallacious notion that the Government must spoon-feed every citizen in conformance to a distorted interpretation of our Constitution's general welfare clause. Many Americans accept big government, its handouts, and the planned life that are some of the ingredients of socialism, without realizing what they are getting into.

I believe that a new tide may be rising. Actually, it is scarcely more than a ripple as yet. Recently there was a change in the current in New Zealand. Another in Australia. We shall see next month whether the fears of the Labor Party in Britain are justified.

I would not have said this 6 months ago, but now I am convinced that Americans also are beginning to see that a hand-out state financed by inflation and deficits can lead only to complete regimentation and bankruptcy. We are beginning to realize that we shall not preserve our individual freedom by transferring to Government decisions which we should be making ourselves. We should invite and encourage this happy development with our every resource.

If it is true, as I believe, that the "wave of the future" need not be socialism or some other negation of the individual spirit—

If it is true, as I believe, that the desire to live one's own life and make one's own decisions is still an integral part of the American personality—

If it is true, as I believe, that Americans stand ready to reinvigorate our economy by the application of sound principles—

If these things are true, then it is up to businessmen to carry out the difficult task of public education that they are so ably equipped to do—to demonstrate by so doing their faith in our Republic and their confidence in the essential thrift, integrity, and intelligence of the American people.

On decisions made by Americans in the next few months rests the future of our Nation for generations. And what those decisions are may be determined by the action—or lack of it—in the business community.

I'd like to sum up these remarks with words attributed to that noble, but underprivileged railsplitter, Abraham Lincoln. Whether Lincoln spoke these words or not, I am enough of a believer in him to think that were he here tonight he would say:

"You cannot bring about prosperity by discouraging thrift. You cannot strengthen the weak by weakening the strong. You cannot help the wage earner by pulling down the wage payer. You cannot further the brotherhood of man by encouraging class hatred. You cannot help the poor by destroying the rich. You cannot establish sound security on borrowed money. You cannot keep out of trouble by spending more than you earn. You cannot build character and courage by taking away man's initiative and independence. You cannot help men permanently by doing for them what they could and should do for themselves."

My daily prayer is that I may live to see our America again guided by those simple but honest motives which once came to our rescue in the person of Lincoln.

Should Rent Control Be Decontrolled?

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1950

Mr. JENKINS. Mr. Speaker, in Huntington, W. Va., there lives a lady, Mrs. E. Wyatt Payne, who takes a great interest in public questions. Recently she debated the question of rent control. The following is a copy of her address on that subject:

Mr. Moderator, tragic opponents, and defenders of the Republic, I am surprised that the opponents would mention the founders with the inference that they always felt the Government should help the schools. This statement proves the point we are discussing tonight, namely, the distorted concept of the American way as warped and practiced by Government agencies. The fact is, that the founders never intended that government should pay for and thus exercise control over the schools. You will note they named them free schools. Our opponents lost another point when they proudly said the Government had always managed the post offices. So they have. And that's the reason it costs 2½ cents to mail a penny post card.

Why control? After World War I a survey was made in Huntington which showed a lack of housing units. Contractors were called in and asked to meet this need and it was met without aid of government or controls. After World War II a similar condition existed here—as elsewhere—but Government regulations, priorities, and red tape kept free enterprise from building the necessary units, causing endless trouble for tenants and landlords alike. The Federal Reserve Board figures show that average rents over the country are only 12 percent. The Government and other agencies recognize 25 percent as the normal figure for that budget item. Although the tenant averages 12 percent for rent the landlord must pay excessive prices for the goods and services needed to keep up the property. The whole situation is untenable from every standpoint and forces many people to buy homes they cannot afford who could, and would pay a fair and equitable rent where they are.

Considering problems the opponents did not anticipate I should like to turn to other important factors in this problem. In logic, we learn that if the premise is correct, the conclusion will be. In successful experiments the principle and practice are one, and so it was in this great Republic when the founders established a government by law instead of directives. I am in favor of rent decontrol because it is type and symbol of the plan to destroy this Nation. It violates every concept, right, and principle of the freedom and initiative that carved out of the wilderness the reality of the dignity of man, under God.

There is no point in discussing this one phase of our destruction without naming it as part of the whole scheme of regimentation and socialization, because it is germane to it. Having failed to control and freeze capital and labor at the beginning of the war, thus preventing the chaotic conditions which developed, they set up the machinery to control everybody and everything all along the line. When Americans are free to think and act, we are a going concern, but when Government puts restrictions and penalties on these important functions, we are concerned about where we are going. Most writers and commentators—and certainly the Government—miss the most tragic and dangerous point in the control dilemma, namely, human relations. Although they prime the pump with our money to make a false economy look real, who and what is priming the spirit of the American people? The great middle class of thrifty, hard-working, dependable, patriotic Americans are beginning to crack up; they are beginning to wonder if they can survive, and if there is reason to hope for the opportunity to live and move and have their being as freemen. Under such mental and physical tensions we are prone to lose our sense of values and also the will to do and to be. The much publicized melting pot, which fused varied races, creeds, and colors into the beautiful experiment in human liberty, called the American way, was made possible only because their very survival depended on faith, work, understanding, and kindly human relations. Let's look at the latter—human relations—through controls for a minute. Control over free people changes human relations. The faith and understanding gives way to fear, doubt, and suspicion between all groups. To be specific, have you noticed that unfamiliar look between tenant and landlord?

A personal experience proves the point. My family represents the average American family; being a school teacher nobody would accuse me of being a capitalist, but, I believe in the system and want to keep the bid open. We have owned a few small houses for rent, but most of our lives we were renters ourselves, looking toward the day when we could own our own home. During those years, as renters we were grateful that others had provided homes for our need. We met our landlord with that attitude, looked after his property as if it were our own and, therefore, he could afford to keep up the repairs and make some money on his investment, which was the reward for thrift and wisdom and his right as our benefactor. The human relations involved between tenant and landlord were typically American, and produced no frustrations, bad feelings, or instability, which lead to discontent and disloyalty, both in people and nations. May I repeat—the loss of kindly human relations inherent in controls superimposed on a free people by a so-called benevolent Government, is the greatest tragedy in our life today.

In the case of rent control we must ask ourselves this question: How can anybody in the judicial, executive, or legislative branch of Government, either in high or low places, construe the Constitution on property rights to be property wrongs? Stripped of all the excuses, red-tape, and verbiage of high-sounding words found in the directives and files of the OPA, the Constitution is crying above the confusion to "We, the people" to remind us that the real issue involved in the control of property is that it belongs to us. If I work and save and buy the house it is mine, and, unless I infringe the property rights of others, I can rent it, let it stand idle, or tear it down. When this property right, guaranteed to me by the Constitution and the Bill of Rights, is abrogated or usurped by any source whatsoever, I am not living in a free America. I am existing in a dictatorship, and, I don't like it, and neither do you.

Americans, working—note the word working—on their individual problems and successes, toward the goal of real security, not built on pensions, subsidies, and doles, but rather, on the dual miracle of history, free enterprise, and the American know-how, can build again a fortress for all right ideas for themselves and the world. It is later than we think in this beloved country of ours and unless the human spirit is released from its present bondage of controls—forced on us by the Communist-Socialist planners under the guise of "social progress"—to hitch its wagon to the star of opportunity, we will not have to wait for that new and terrible word genocide to destroy us. The spirit of a free people will have weakened and died and the suicides and a decadent morality will lose for us the last great hope of earth.

Let us, therefore, move quickly to decontrol all Americans, including the tenants and landlords; let us unite to decrease the pressures and tensions on our daily lives that tend to keep us mad instead of glad; let us remind the Government that it derives its just powers from the consent of the governed and that we no longer will acquiesce in this infringement of our rights as free citizens; let us work together to stop the "divide and conquer" campaigns designed to confuse us and weaken our faith in our form of government. Let us reinstate the faith, freedom, and fundamentals that made and kept us "One Nation, indivisible." Only a free America can provide the example, the production, and the incentive for a free world.

Wake up, America, and live.

Antitrust Suit Against A. & P.

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1950

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks I am inserting the following letter and an address referred to in it:

JANUARY 28, 1950.

Hon. RALPH E. CHURCH,
Washington, D. C.

DEAR MR. CHURCH: I wrote you some weeks ago about the antitrust suit against A. & P. and I want to thank you for your very nice reply and promise to investigate. Today I was given the privilege to read the enclosed talk by Dwight B. Austin, president middle western division of A. & P. It cleared up several points for me and I thought you should have it. I know you are a busy man but if possible will you look it over and return to me unless you wish to use it further. It pretty well states their side of the story and I believe it is a true picture.

UNIVERSITY OF MICHIGAN LIBRARIES

Strange things are happening in this country today and it is good to know that we have a true supporter of our American way of life as our Representative in Congress. I do hope that the recent uncoverings have not come too late to save our United States.

With best wishes for your continued good work for us all.

I am,

Sincerely,

RUTH COPE.
(Mrs. Walter.)

TALK BY DWIGHT B. AUSTIN, PRESIDENT, MIDDLE WESTERN DIVISION, THE GREAT ATLANTIC & PACIFIC TEA CO., BEFORE THE NEWSPAPER ADVERTISING EXECUTIVES ASSOCIATION, INC., EDGEWATER BEACH HOTEL, CHICAGO, ILL., JANUARY 23, 1950

Gentlemen, it's good to be with you today.

I really appreciate this opportunity to talk to you men, who, I'm sure, are already quite familiar with the antitrust suit that has been brought against our company. I am sure you have heard all the Government's allegations repeated over and over again on the radio and printed over and over again in the newspapers. You have read our ads, too—I hope.

Even if you have kept abreast of these things, I'm afraid that you—like millions of other Americans—must still be somewhat confused about the whole case. I don't blame you. I'm confused, too.

All this confusion rises out of several things: the vagueness of the antitrust laws; the legal double-talk in which the antitrust lawyers' allegations and statements are couched; the feeling we all have that if an arm of our Government—and particularly the Department of Justice—makes a charge, there should be a sound basis for it.

I hope I shall be able to clarify this whole situation for you a bit. I don't pretend to be a lawyer or a student of economics. But I do know the food industry, and I do know the A. & P.—even better, I think, than the antitrust lawyers say they do.

I need hardly warn you that I am a somewhat prejudiced observer. The antitrust lawyers say that we in A. & P. have adopted a pose of outraged innocence. They are right—all except the pose.

We do have a consciousness of innocence, and we do feel outraged. We don't pretend to be saints or philanthropists; but we do know that we have tried all through the years to run a good, clean, decent business; that our sole objective has been to operate so efficiently and so economically that we could give our customers more good food for their money. We did this not to satisfy any spiritual yearning, but simply because the founder of this business, and his sons who have managed it since his death, felt this to be the best way to attract and hold customers.

If you knew George Hartford and John Hartford, as it has been my privilege to know them for many years, you would realize that they would never dream of running a business the way the antitrust lawyers allege A. & P. has been run. It has often been pointed out that the only real reason that anyone would intentionally violate the antitrust laws is greed—and there just isn't any of that in the make-up of these men. Both men are well along in years; both are widowers, and neither has any children. They have more money than they could ever spend. Their sole interest in life is running this business which their father left in trust with them. They work at their job 5 days a week, all day. When I go to New York every 3 months to meet with these men and the presidents of the other divisions, I never hear them harangue us about getting higher profits. But, if they think we are underpaying our employees, or not keeping our expenses down, or letting our prices to our customers get too high—we do hear about that.

So, when the antitrust lawyers say that these men are criminals, and that they encourage us to crush our suppliers and fool our customers and destroy our competitors, we are outraged because we know it just isn't so.

I admit that I am prejudiced, and you may be inclined to discount something of what I say. I must warn you, however, that you'd better be careful how much discount you take or you'll have the antitrust lawyers after you, too.

First, let's take up the causes of confusion I referred to.

I need hardly dwell at great length on the vagueness of the antitrust laws. The newspapers you gentlemen represent have been talking about that for a long time. During the last session of Congress, four committees held hearings that touched on this whole broad problem. Only recently the President announced the appointment of an executive committee, headed by Secretary of Commerce Sawyer, whose job it will be to educate businessmen as to the meaning of the antitrust laws and how they can comply with them. In announcing the committee, Secretary Sawyer said that most businessmen want to obey the law but just don't know how.

After all, gentlemen, most of the things that constitute offenses in this complicated society of ours are fairly specific. You know that if you drive a car while you're drunk, or exceed the speed limit, or go through a red light, you're violating the law.

But how can you know what constitutes a violation of the antitrust laws? What is undue restraint of trade? Where does competition end and restraint of trade begin?

Every time I step up my sales program and take a customer away from a competitor, I am restraining his trade. Every time a newspaper puts on a circulation drive it does so at the expense of a competitor. At what point do we step over the line and violate the law? The answer is—at any point that a particular judge decides we do.

Now, it will do you no good to act on the advice of legal counsel, because that doesn't mean a thing when you get into court. Nor will it do you any good to base your behavior on the decision of one judge, because another judge might take a different view of the whole matter.

You have noticed in our ads—I hope—that the antitrust lawyers filed suits against us before. When the cases came to trial, the courts said there wasn't any basis for them at all.

You will recall that they obtained an indictment in Dallas, Tex., making the identical charges they are making now. The Dallas judge sustained our demurrer, saying that the Government's charges did not constitute, in his mind, an offense. And yet when they dropped that suit and brought an identical suit in Danville, Ill., that judge decided in their favor.

I would like to point out that he didn't find us guilty of each of the alleged charges; and that he did say that violation of the antitrust laws was not a crime in the ordinary sense of the word; and that he took occasion to congratulate us on the job we had done in distributing a billion and a half dollars worth of food at less than 1½ cents per dollar profit.

But he took exception to the dual role played by our fresh fruit and vegetable buying affiliate, the Atlantic Commission Co., whereby they acted as buying agents for us and selling agents to the trade for farmers. And he said that that dual role pushed us over the legal line.

It pushed us over the legal line as far as the Sherman Act was concerned, although there is no law on the books that prevents any agency from functioning as the Atlantic Commission Co. had functioned.

Now, that is the terrible thing about the vagueness of these antitrust laws. A businessman may engage in various operations, each of which, in itself, is entirely legal. And yet some judge, when he looks at them all tied together, may decide that, somehow, they constitute this vague thing known as restraint of trade.

Let's consider for a moment the ways in which the antitrust lawyers allege we violate the Sherman Act.

First, they say that we force our suppliers to give us special discriminatory price concessions.

Now, if we did that, it would be illegal; and it is the only allegation they make which in and of itself would be illegal. If we knowingly got special price concessions from our suppliers, that would be a violation of the Robinson-Patman Act. But the antitrust lawyers have said we are not being prosecuted for violating the Robinson-Patman Act. And the judge in Danville said we were not being tried for violation of the Robinson-Patman Act. And in the entire 15 years in which the Robinson-Patman Act has been law, we have never been charged with, nor convicted of, any such violation of the Robinson-Patman Act.

Gentlemen, as I said before, I am confused too. If we did violate the Robinson-Patman Act in this manner, why weren't we charged with it and tried for it? And if we didn't violate the Robinson-Patman Act, why is the Government making it the very heart of its case against us now. I just can't understand it.

As a matter of fact, I know that we have never had any such policy. Of course, our buyers are skilled at their trade and they're certainly going to try to get the best deal to which they are legally entitled. But I know that it has been the company's policy to obey the Robinson-Patman Act, and for that matter, every other law governing business. And if there is any doubt about that in your minds, all you have to do is look at the record of the Danville trial and see the great effort we made to comply with the law. Or you might try to remember back to the days of World War II, when we went out of the coffee and meat business, and many other lines, simply because we wouldn't go in the black market, regardless of how many others did.

Well, I guess you would expect me to protest that we didn't engage in any such activity. But I think the more convincing answer is the fact that, down through the years, many, many thousands of suppliers have voluntarily sought our business; and today they're coming to our defense. I don't think they would be doing that if we had been crushing them, or if they hadn't found our business profitable.

But the point I wanted to make is that of all the Government's allegations, that's the only one that carries with it any inference of illegality. Everything else they charge us with is perfectly legal, in itself. And what's more, the antitrust lawyers themselves admit it.

The second major allegation they make is, that we went into certain areas and engaged in price wars designed to drive competitors out of business; and operated at a loss there in order to do that. And they charge that we made up those losses with profits realized from areas in which we had no competition and where we could charge the consuming public any price we wanted to.

That, of course, is nonsense. You know and I know that there are no areas in which we don't have competition. And if there is any town anywhere in which our prices aren't competitive, we'd like to know about it.

We know that we didn't engage in any such price wars. Of course, we try to keep our

prices competitive everywhere and we try to get a fair share of the business everywhere. We admit that we are pretty tough competition for other grocers. We'd be ashamed of ourselves if we weren't. But they're pretty tough competition for us, too.

Everybody knows the grocery business is just about the most competitive business in the country. There are almost a thousand food chains operating more than 25,000 stores. There are almost 400,000 individual merchants, more than 100,000 of whom are banded together in voluntary chains. All these stores are competing vigorously for the consumer's dollar. All you have to do is look at the food ads in your paper each week to realize just how vigorous that competition is.

And, of course, the public has benefited from this. That's why your grocer—I don't care whether he's a chain or independent—is the most efficient merchant with whom you deal. That's why only 15 cents of your food dollar goes to pay distribution costs, as compared with 35 cents or more in other fields.

Monopoly? It just isn't possible here. It's too easy to open a grocery store. Nobody controls, or can control, the source of supply. And nobody controls a single customer. The minute we fail to satisfy her she's going to move right over to one of our many competitors

It's inevitable in such a competitive business that there should be areas in which our business is not as profitable as it is in other areas. I don't think there's any business in the country that isn't making more money on one item or one department or in one place than another. Even in the case of a newspaper, its suburban circulation would be less profitable on an actuarial basis than its city circulation. And any business takes care of its weak areas with the earnings from its stronger areas.

Of course, we have stores that operate at a loss from time to time for any one of a variety of reasons—competition, poor management, poor location. But I'll let you in on a secret. Contrary to what the antitrust lawyers would have you believe, we are not in business for the purpose of operating stores in the red. Just as fast as they get that way, we try to get them out. And if we can't get them out of the red, we close them up.

Now, the third thing about us the antitrust lawyers say they don't like is that we manufacture some foods we sell and that we use profits from these manufacturing operations to subsidize our retail operations.

That's nonsense, too. We admit that we are in the manufacturing business not to make big manufacturing profits, but to enable us to give our customers better food at lower cost. What's wrong with that? Not a thing, legally. And it certainly gives the consumer a break.

This is the thing that the antitrust lawyers call "vertical integration." And it exists all through the food business. Of course, if you said "vertical integration" to the average delicatessen operator he wouldn't know what you were talking about. But when he mixes up a batch of potato salad in the back room and sells it in the front room—that's vertical integration. The same thing applies to the bakery that sells at retail, or the farmer who owns his herd of cows, processes the milk, and runs a wagon route. All those things are customary in our field, as well as many others, and they're entirely legal.

In any such set-up, there is no such thing as a true manufacturing profit. You can't make a profit from selling something to yourself. That's just like saying that our warehouses operate at a loss. All of the operations in A. & P. are geared to the retail end. We are food merchants. There is only one profit in our business, and that is when we sell food to our customers.

It's just as if the antitrust lawyers came up to a newspaper and said, "Look, you fellows are violating the antitrust law because you lose money on the papers you sell, and you are subsidizing the sale of your papers with your advertising revenues." Maybe they'll get around to that idea yet.

But the point I'm making is that here are all these activities, admittedly legal in themselves, and yet the antitrust lawyers put them together, throw in a few nasty-sounding adjectives and nouns like "predatory," "vicious," "blacklist," "boycott," and "price war," stir the mixture well and come up with a crime.

You gentlemen are experts in words. You know what "boycott" means, as applied to this case? It means that we refused to buy from a manufacturer who was charging us with what we knew to be too high a price. It means that we allegedly said to him, "If you can't get your price down to a reasonable figure, we'll make this food ourselves, because we know we can."

So if your wife goes into a delicatessen store and says, "Mr. Schultz, $1.50 a pound is too much for baked ham. Unless you lower your price, I'm going to start baking ham at home." If your wife does that, it's boycott.

Now, gentlemen, I tell you this is actually the way in which normal trade practices and innocent business transactions are distorted to make them sound illegal.

It can happen to anybody. I'll admit that it's much more likely, today, to happen to you if you're big and successful. But under the present vagueness of the antitrust laws, and the present policy of the antitrust division, it can happen to anybody.

As a matter of fact, it is this use, or perhaps I should say "abuse," of the meaning of words that causes much of the confusion in antitrust suits.

Just look at the legal doubletalk employed by the antitrust lawyers in our own case, for instance.

They say that A. & P. is not being attacked because it is big.

They have to say this because there is no law on the books that makes bigness illegal. Actually, do you think we would be under this attack if we were not big? The whole purpose of this suit is to break up A. & P. into small pieces and destroy its size.

They say they are not opposed to A. & P.'s low prices.

They have to say this because there is no Federal law that says low prices are illegal. But, do you think we would be under attack if our prices were not low? Yet, the effect of the suit would be to destroy many of the efficiencies which make these low prices possible.

They say they are not opposed to the fact that we manufacture many of the foods we sell.

They have to say this because there is no law on the books that says it is illegal for a food retailer to manufacture food, too. And yet, they ask the court to order us to get rid of all our manufacturing operations.

They say that this suit is not punitive.

They have to say this, for this is a civil suit, and if they admitted it was punitive, it would be thrown out of court. Actually, what could be more punitive than breaking up this company into small pieces and forcing the present owners to sell off the pieces to someone else?

They say the sole purpose of this suit is to keep A. & P. from violating the antitrust laws.

They have to say this because it is the only legal basis on which such a suit could be brought. Actually, they are not simply trying to enjoin us from violating the law. They ask the court to put us out of business.

They say this suit will not close a single A. & P. store.

Actually, if they win this suit there will be no such thing as an A. & P. store, as you know it, left.

They say that this suit will lower food prices instead of raising them, when any high-school economic student, or any housewife could tell them differently.

Now, the third element that contributes to the confusion about this whole case is the respect that you and I and every other good American has for the courts of this country, for our Government, and particularly the Department of Justice.

Many people feel that if the Department of Justice makes a charge against you, that charge must be true. Believe me, gentlemen, that is a very powerful weapon the antitrust lawyers have. And believe me, they are using it.

You've heard their speeches and you've read their releases. There are undoubtedly people who have done business with us, either as customers or suppliers, and who like us and believe in us, but who are honestly troubled and confused when they hear or read these charges.

That is why we have had to take our story to the people. We had to do it to protect our business. If everybody believed what the antitrust lawyers are saying, our suppliers wouldn't want to sell to us, our customers wouldn't want to buy from us, our employees wouldn't want to work for us, and we wouldn't blame them.

The antitrust lawyers, as you know, have taken violent exception to our advertisements. They say we have no right to buy space to give the public our side of the case. They imply that somehow we are trying to influence the court's decision.

Of course, that's silly. We don't believe for a minute that anything we are saying in our ads, or anything that the antitrust lawyers are saying in their speeches, is going to have any effect on the judge who eventually hears this case. If that were our plan, we would never have to run these ads in any papers outside of New York City, where the case is going to be tried. Certainly, no judge in New York is going to even know about an ad we run in the Hoopeston (Ill.) Chronicle-Herald.

The real reason we're running these ads in 2,500 newspapers is because when you get in a fight like this, actually you are being tried in two courts—the court of law and the court of public opinion. Eventually, after long and expensive litigation, you may win free in the court of law, but in the meantime, your reputation is damaged and your business jeopardized in the court of public opinion. We say that we have not only the right, but the responsibility to defend ourselves through advertising or any other legitimate means in the court of public opinion, just as we propose to defend ourselves in the law courts.

You and I know that no business such as ours could earn and hold public patronage over a period of 90 years except on a policy of fair dealing.

I tell you that every executive in the A. & P. Tea Co. knows that this is, and always has been, our company's policy. We want the millions of American citizens who have a stake in our operations to know it, too. And we are using the best medium we know of to tell it to them.

We've been heartened by the fact that this suit against us has brought a great wave of public support. We undoubtedly have made some enemies. But obviously we have made many millions of friends. We are hopeful that we will be permitted to continue to serve these friends for many years to come.

UNIVERSITY OF MICHIGAN LIBRARIES

Amendment of Federal Home Loan Bank Act

EXTENSION OF REMARKS
OF
HON. HENDERSON LANHAM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1950

Mr. LANHAM. Mr. Speaker, I am glad to go on record in support of H. R. 6743, because it is intended to strengthen and make more effective the work of the building and loan associations of the Nation.

It is impossible to estimate the good that has been done in furthering the purchase and building of homes by the people, by these associations.

There can be no question but that a nation of home owners is a stable and freedom-loving nation. Home ownership stimulates the self-respect and pride of every family so fortunate as to own its own home. The home owner is not an easy prey of the proponents of the many strange isms that appeal to some portions of our population.

Of course, it is true that in the large cities, and to some extent even in the smaller cities, it is not possible for every person or every family to own a home. In the large cities the high cost of real estate makes individual home ownership impossible. So I do not mean to say that the great number of our people in the large cities, who are forced by circumstances to forego the benefits and the pleasure of home ownership are unstable and unpatriotic. It is true that where home ownership is possible it strengthens social and patriotic ties and makes a real contribution to the stability and welfare of this great country of ours.

In the Seventh District of Georgia, which I have the honor to represent, there are several of these building and loan associations, and all of them have made a distinct contribution to the welfare of the community in which they exist. So firm a believer am I in these organizations that I have made from time to time small deposits and investments in several of them. All of these institutions in my district are thriving and are rendering a distinct service to persons and families, who are anxious to own their own homes. Many of them have made loans to veterans when the veterans could not obtain a loan from other lending institutions. All of this has resulted in a great increase in the number of individually owned homes in the district.

For all of these reasons, it is truly a pleasure for me to support and vote for H. R. 6743, which will make investment in these associations more attractive and secure. This in turn will enable these associations to extend their benefits to countless more individuals and families.

In passing I would like to say that the building and loan associations in many of the cities in my district have made most remarkable records during the past year. Never before in history have they been so prosperous and of such service to home owners and the private building industries. The private building industry is to be congratulated also on the remarkable record it has made in the past few years in supplying our people with homes, which have been so badly needed since the war.

I am a great believer in private industry and our free-enterprise system. At the same time I realize that, especially in the large cities, there are housing problems which private industry has not to date been able to solve. It was for this reason that I voted at the last session of Congress for the bill providing for public housing in slum areas. The prosperity of the private building industry and of the building and loan associations and other members of the Federal home loan banks seems proof to me that the undertaking by the Federal Government to eliminate slums and provide decent housing accommodations for those areas where private industry has not succeeded in solving the problem, has not in any way affected free enterprise as represented by these associations and those engaged in the private building industry.

Again let me say I am happy that I have the opportunity of voting for and speaking on behalf of H. R. 6743. I congratulate the great Committee on Banking and Currency for its wisdom in bringing this bill before the House, and guiding it to what I am sure will be its prompt adoption in the House.

The Example of the Patriots

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Lowell (Mass.) Sun:

THE EXAMPLE OF THE PATRIOTS

Today is one of the most important anniversaries in the long and proud history of the United States, for it was 172 years ago that the embattled farmers of Middlesex County, with little other than their dogged determination to shake off the yoke of the oppressor, fired the shot heard round the world.

They gave notice to the world that a new nation, dedicated to the principle of freedom, was in the making. They carried on under the most grueling conditions to achieve their goal.

They were united in their purpose; had there been bickering and dissension with factions working at cross-purposes, the outcome might have been different and this great country might never have succeeded in asserting its independence.

The lesson of Patriots' Day should be studied with greater zeal than ever before by all who call themselves true Americans. There were no Communists among the patriots who stood their ground against the redcoats at Concord and Lexington—they were all loyal and steadfast, working together in a common cause.

There was no fifth column operating among the pioneers, and there were no quislings working furtively to give aid to the enemy.

The sentiments of the Massachusetts patriots, their ideas and ideals have been expressed many times since the country was founded, particularly in the Bill of Rights, and, more recently, in the Atlantic Charter.

These are the men who established the American way of life. Are the principles for which they fought and which are now held up to ridicule by some of the subversive elements that are now working in all parts of the country going to be sacrificed?

The Revolutionary War brought about the creation of a new land, governed in a way that recognized individual freedoms. The pattern was made by the patriots of 1775—are we now going to stand by and see them renounced in favor of radical poppycock?

The Nation, from coast to coast, should rededicate itself to the democratic principles that were first expounded during and immediately after the Revolution; it should make short work of any and all elements that are yammering for a change in the American way of life.

Our Asiatic Foreign Policy With Especial Reference to the Philippines

EXTENSION OF REMARKS
OF
HON. JAMES P. RICHARDS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1950

Mr. RICHARDS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech made recently by Emmet O'Neal, a former Member of the House of Representatives, who recently retired from the Ambassadorship to the Philippines:

Gentlemen, the population of the world is 2,278,000,000.

Over one-half—1,194,300,000—live in Asia, not including Asiatic Russia.

Passenger planes fly to Asia on regular schedule in less than 48 hours. The flying time is being reduced each year. Rocket planes are even now able to fly that distance between daylight and dark.

Yet most of our thinking, planning, and assistance has been given to Europe. No doubt it was necessary, because of the dangerous emergencies existing there. It is a short-range program and it is hoped that Europe can be put on its feet in a comparatively short time.

America, apparently, has never been engaged in long-range planning in its foreign affairs. Years fly quickly, and it is wise to think in terms of 5, 10, and 20 years, as well as to plan only for 2 or 3.

Our peace has not been greatly affected by Asia, except when an Asiatic nation attacked us at Pearl Harbor. Our foreign wars were nearly entirely of European origin. In the future, and particularly in the more distant future, Asia may be the chief breeding place of threats to our peace and to world peace. Now is the time for a well thought out American foreign policy as to the half of the world population in Asia. It must project its thinking further than 1, 2, and 3 years and try to plan intelligently for a much longer time.

We need now a far-reaching, long-range program to enlighten that part of the world as to the democratic way of life. It should not be a part-time job of a department of our Government. It should be a major activity, planned and executed by the best brains America has at its command. We know that a police state, totalitarianism in

communistic form or otherwise, encourages wars and human hate and destruction. We believe devoutly that our democratic way of life, if adopted sincerely by all nations, would almost be a guarantee of world peace. Nations which have a democratic form of government are far less likely to plan or initiate wars of aggression.

Europe is set in its ideologies as far as the individual nations are concerned. It is very difficult to affect the thinking of their leaders. The vast Orient where live one-half of the world population, is now awakening. The countries in that area are seeking freedom and a better way of life. Their minds are more open. They are impressed by what they see.

Is there anything more important to America and to the world's future peace than to make a major effort to show those nations that a democratic form of government is the best way to bring the greatest good to the greatest number. The stake is so great we should attack the problem as one of our greatest objectives. We should start a program now and any plan should immediately recognize the importance of the Philippines in such an effort. There is no spot on earth more potentially important to the cause of future world peace and human freedom than the Philippines.

A successful Philippines can affect the thinking of the Eastern World more than propaganda from any source. The Philippines are a part of Asia, and a world cross roads. Ships from everywhere, going to all places on the globe anchor there in one of the finest of all harbors, Manila Bay. What is seen there is talked about by the thousands of travelers when they return home. The Philippines are on the doorstep of China, Malaya, Indonesia, Japan, Siam, and other populous countries. The Asiatic mainland is closer than Chicago is to Washington. It is a matter of a very few hours by plane from the Philippines to all parts of Asia and Australia. Passenger planes daily carry large numbers of people to and from the Philippines to other countries.

The leadership of all those awakening nearby countries are watching with extreme interest the progress of democracy in the Philippines. To them it is a demonstration of the democratic way of life in the Orient, and it carries with it implications as to the value of American friendship and cooperation. They are watching to see if a democracy can succeed in Asia. Its influence now on the future of the governments of Asia cannot be overestimated. If the Philippines succeed in demonstrating that its democracy is bringing all the freedoms to all its people, and a better life to its citizens than any Asiatic country ever saw, it could lead countless millions to demand a true democratic form of government. In this way the chances of peace in the decades to come would be enhanced greatly.

If there were no iron curtain in Russia and Russians could see a democracy in action, they, themselves, would soon end communism for communism in action is totalitarian and tyrannical.

There is no iron curtain in China or in Asia. The Philippines experiment will be seen and studied. Nations may work out their own destinies according to convictions based upon observation and investigation of the Philippines. It could bring results more satisfactory than those obtained by the expenditure of millions by this country in other ways.

The Philippines have done a remarkable job since becoming an independent nation in 1946. Our assistance has been helpful and kindly given.

America should give the greatest consideration to the Philippines as a matter of duty and enlightened self-interest.

The Philippines are the only Christian nation in that part of the world.

It is the only democracy there.

It is the only country in the Orient which is openly and avowedly our friend, and unequivocally on our side.

It has a higher percent of literacy than any far-eastern country with the possible exception of Japan.

It has lived under a democratic form of government for over 50 years.

Perhaps at least 85 percent of its people were born under the American flag.

It has a public-school system something unique in Asia, and it is a counterpart of the American public-school system. American educators planned it and directed it.

The Philippines are as free as we are, and they will protect with their lives their heritage, from America, their liberty. In the Philippines, you feel as though you are in one of the States of our Union. The people still feel that they are part of the United States and there remains an almost unbreakable tie between us.

They respect and love the flag under which they were born, and they appreciate what was done for them by the benevolent rule of the United States.

The governing of the United States was not perfect; there were mistakes of omission and commission; there was even some selfishness, but the Filipino knows that no other country in the history of the world, ruled a dependent nation, with so much kindness, unselfishness, and benevolence. They are grateful, and their loyalty to America during World War II was proof of their feelings toward us. Large numbers of Filipinos were in the American Army, attached to it or fighting independently on the side of America. This was the case with most of the men of fighting age, and their families at home were loyal and true to the United States.

The aftermath of war is there in like proportions of families which lost their fathers and brothers, and every city and village has its maimed and sick. There can be no question but what America has a friend in the Orient, the Philippines.

The two Presidents of the Philippines have each said, in effect, that should America again be forced into war, the Philippines would take up arms on America's side without delay or question.

To the thinking people of Asia, the Philippines are the product of America, and an example of American democracy.

It must succeed, to be a beacon that will lead the oriental countries to adopt for themselves a democratic form of government. If that is accomplished, the cause of world peace has been greatly advanced.

We should and must adopt a plan extending over a period of years to see that the Philippines pass successfully this, the most critical period in its history. The most critical period in American history followed for 10 or 15 years after independence. The Philippines have some of the same problems and others which our forefathers did not have.

In July 1946 they received their independence. It came immediately after World War II, during which a brutal and vandalistic enemy occupied and denuded their country. In the closing months of Japanese occupation, the Japanese destroyed in vicious resentment hundreds of millions of dollars of property. In order to dislodge the fanatical soldiery of the enemy, the Americans had to do equal or more damage to Philippine property. It is difficult to believe, but Manila's destruction was exceeded only by Warsaw and Stalingrad. The Philippines, it is said, was the most devastated country in the war. The estimates of the damage have ranged from 2 to 4 billion dollars, and even higher. It is regretted that much of it was done by American military might. It is not possible to estimate in dollars and cents the loss to the Philippines caused by the slaughter of its civilians and soldiers in large numbers. Those who died were representative of the best-trained citizenship.

With these impossible handicaps, Philippine independence was launched, and it is remarkable that such an unseaworthy and battered vessel could survive. It has survived, prospered, and made a remarkable record. The Philippines have had the support of the United States, and that has been a material factor in their success. But it is not the sole reason, for the Filipinos have shown intelligence and wisdom in the solution of their problems. The main cause of their success so far is that they believe in and have established a government which guarantees to their citizens the exercise of all the freedom we enjoy. No doubt many mistakes have been made, many things have happened which should not have occurred, but the Philippine citizen today is as free as an American citizen, and the Filipino is living on a higher and better plane than in most parts of the world. These things are observed and known throughout the Far East.

In spite of the successes since independence day, the war damage was so great that industry, agriculture, and other fundamentals have not come back to a point which will insure survival. We have been generous since the war in providing appropriations and other aid for the Philippines, but what values we have provided are far less than the values our valiant armies destroyed. It is not argued that these amounts should be equalized. The purport of this article is to urge in our own self-interest, that we recognize the burdens of this small country, and through all types of intelligent cooperation, stand by the Philippines until they have passed through this critical period of their history.

The Philippines can be one of the two or three most important nations in the Orient.

They are far ahead of most countries in that area in their knowledge and understanding of government.

Their educational system is years ahead of any neighbor, except Japan.

They have a population of 18,000,000 people, which is larger than that of any European country, with the exception of three or four. Its population is greater than most of the countries in North and South America.

The Philippines are very rich in known natural resources, and much of it has not been fully studied and explored.

The Filipinos generally have adequate housing, food, and clothing.

It has every chance for success, if it can be wisely assisted over this its most critical period.

What will it mean to America in the future and to world peace, to have the Philippines a powerful, successful, happy, and free democracy showing the way in Asia to a better life through a democratic process?

If our foreign policy is to bring results, we must think in terms of decades rather than years. In our Asiatic foreign policy if we recognize the importance of the Philippines and think in terms of 5 and 10 years, we will advance the cause of democracy beyond our present power to evaluate.

Bouquet for State Department

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1950

Mr. MADDEN. Mr. Speaker, there have been so many speeches made on the floor of the House criticizing the

UNIVERSITY OF MICHIGAN LIBRARIES

State Department, I think it would be well for the Members to read the following letter from Saul Cohen, of Gary, Ind., who throws a verbal bouquet to the State Department.

He extends special commendation to Elvin Seibert, the American Consul at Mexico.

The letter follows:

GARY, IND., *January 30, 1950.*

SECRETARY OF STATE,
Department of Foreign Service,
Washington, D. C.

DEAR MR. SECRETARY: On January 7, 1950, my family and I were driving home from a vacation in Mexico when we were unfortunately involved in a rather serious automobile accident in Cuidad Mante, Tamps, Mexico. My wife was seriously injured as well as my son and myself.

Needless to say, being in a foreign country with only a slight command of the language, I was immediately confronted with many problems.

My first and foremost obstacle was to get my wife and son to the States as quickly as possible where proper medical care could be given her. The American Consulate at Tampico, under the direction of Mr. Elvin Seibert, American Consul, was in truth a lifesaver.

I am entirely satisfied in my own mind that had it not been for their prompt and intelligent efforts, in spite of the fact that the accident took place on a week end when Mexican officials were difficult to reach, we would have been in a much more serious condition when we finally reached the States.

I have been an American taxpayer for many years as well as a native-born citizen, but I never knew until that week end of the accident, what it meant to be able to call for help on one of our consular offices and how truly invaluable such an office could be in a time of stress.

I want to go on record that we who remain at home in the United States and those who grumble at taxation would do well to bear in mind that the type of service that was rendered to me and my family by the Foreign Service cannot be measured in dollars, and furthermore, every attempt should be made at all times to properly support this Department as well as many others who render service to the citizens of the United States, so that they can continue to safeguard their interests, both personal and financial, outside the borders of our country.

I wish to commend this particular office of the Foreign Service, Mr. Secretary, and whatever I can do as a citizen of this country to further support its efforts, I most certainly will make every effort to do so.

Very truly yours,

SAUL COHEN.

Truth and Other Things

EXTENSION OF REMARKS
OF
HON. KARL STEFAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. STEFAN. Mr. Speaker, there are numbers of Members of this House who remember with affection the Honorable Edgar Howard, who served so ably in this body for 12 years. Mr. Howard is an outstanding Nebraskan and an outstanding member of the Democratic Party. He is editor of the Columbus Daily Telegram, and although he has passed the age of 90, he continues active and his editorials are quoted in many newspapers and magazines of our land. In spite of his age, Mr. Howard keeps in close touch with the activities of his former colleagues in the United States Congress. One of his recent editorials entitled "Truth and Other Things" should be of special interest to the Members of this body at this time when the memberships of the various subcommittees on appropriations are holding hearings and listening to the officials of various departments justifying gigantic appropriations for the next fiscal year. By leave previously granted me by the Speaker, I include this editorial with my remarks:

TRUTH AND OTHER THINGS

How much Federal tax did the people of Nebraska pay for 1949? The usually excellent authority—the Scottsbluff Star-Herald—says the Federal levy upon the modest commonwealth of Nebraska was $523,000,000. That's awful. But let's forget what has happened, and try to avoid something worse. Let's forgive every one of our representatives in either branch of the Congress—7 Republicans and 1 Democrat—for their bad voting records which aided the great spender's administration to carry the country to the very brink of insolvency. But let's keep wide-open eyes on the voting record of our Senators and House Members during the present session of the Congress. Let's tell our Nebraska boys in the Congress that we want the enormous burden of Federal taxation lifted—not increased—and it will be increased if the Congress shall meekly comply with the demands of the great spender. Watch out, all you Nebraska boys in the Congress. Your personalities are good. Some of your voting records have not been the best. A government with an empty treasury is no more competent to work the welfare of the country than a farm horse tied to an empty manger is competent to work the welfare of the farmer who owns him. The picture is not overdrawn. Nebraska farmers will vote this year for congressional candidates who during the present session have voted to lift this greatest republic of all the world out of the shameful ditch of financial depression.

The Plight of the Conservative in Public Discussion

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1950

Mr. CHURCH. Mr. Speaker, it was my honor and privilege to deliver the address of welcome to the thirty-fourth annual convention of the Speech Association of America which met in Chicago, Ill., last December.

At the opening session on December 28, James H. McBurney, dean of the school of speech, at Northwestern University, delivered an excellent speech, The Plight of the Conservative in Public Discussion.

Under leave to extend my remarks, I am inserting it in the RECORD:

THE PLIGHT OF THE CONSERVATIVE IN PUBLIC DISCUSSION

(Address by James H. McBurney, dean of the school of speech, Northwestern University, and president of the Speech Association of America, presented on December 28, 1949, at the opening general session of the Thirty-fourth annual convention of the Speech Association of America, Stevens Hotel, Chicago)

The plight of the conservative in American public life is a fact which hardly needs documentation. An analysis of this plight was presented in a recent issue of the Chicago Daily News in which opinions from grassroot voters to political and educational leaders were reported. Says the News: "Whether it was called a 'welfare state,' 'creeping socialism,' 'fascism,' 'a regimented state,' or something else, it boiled down to a belief that individual freedom and initiative are being threatened by the Government." When queried by the News, Franklyn B. Snyder, president-emeritus of Northwestern University, added this: "Complacency today is the greatest foe of the conservative."

I think this hits the nail on the head. Complacency it is! And this complacency affects public discussion in America in ways which are good for no one, least of all the conservatives.

I have the temerity to argue that the conservatives in America have become inarticulate to a point where their voice does not do credit to their ideas and often does their cause a positive disservice. I think my analysis is not a partisan one. I confess to a conservative bias, but my concern here is a professional interest in public discussion and debate. In a very real sense, discussion is the essence of the democratic process. Whatever weakens discussion in America, weakens America. A monolithic society is not conducive to vigorous discussion of public questions. We need differing points of view, and we need articulate spokesmen for these points of view.

For the past 8 years, I have had charge of the Northwestern University Reviewing Stand, a national radio forum originating in radio station WGN, Chicago, and carried by the Mutual network. We are on the air each week with discussions of contemporary problems, mainly social, economic, and political questions. Our speakers are members of the university faculty and distinguished guests from business, industry, labor, government, and the press. As moderator of these discussions, I am the recipient of an amazing volume of letters and comments from all over America. One of the most persistent criticisms is the charge that we are radicals, Reds, and even Communists. To be sure, we are often labeled radicals and reactionaries on the same program, but the charge of radicalism far outruns any other single criticism.

Why this persistent charge of radicalism? I am sure the answer does not lie in the sponsorship and management of our radio forum. Even our critics express surprise that we should be the ones to commit this indiscretion. What is more, precisely the same charge is directed against the other leading radio forums. The answer must be sought in the discussions themselves.

In the first place, we usually discuss changes in the status quo—questions of public policy. That is an important function of discussion. All kinds of social, economic, and political changes are analyzed in the interest of better understanding. The conservative, by definition, opposes change; he supports the status quo; he usually takes the traditional position. The very fact that discussion concerns itself with change may suggest that discussion supports such

change. Actually, of course, it does not. Properly conceived, discussion is a method for analyzing problems and considering solutions to those problems. It is not even a good vehicle for propaganda.

More important are the persons who take part in these programs. In organizing discussions of controversial questions, we naturally try to secure the most competent spokesmen available for all points of view. We have little trouble getting the advocates of change, the liberals, the radicals. These people invariably accept our invitations with pleasure and alacrity; but not so with the gentlemen on the right, the representatives of business and industry, the conservatives. More often than not, they are too busy, have other commitments, or refuse to appear on the same platform with other speakers we have invited. Sometimes they say quite frankly that they are afraid of give-and-take discussion.

As moderator of these discussions, I frequently find myself wanting to come to the aid of the conservative spokesmen. Often they are nervous and inarticulate. Especially is this true when their basic assumptions are challenged. They lack facility in verbal analysis and synthesis, in give-and-take argument, in rebuttal and refutation. More often than not they are no match for rhetorically seasoned liberals, with long experience on every kind of platform from a cracker barrel to a radio microphone. There are notable exceptions, but my description is faithful to the rule.

I think this is the reason why our radio forum is charged with radicalism—the conservative spokesmen do not come through. It is either this or the less charitable explanation that the conservative position in America today is not tenable in public discussion. Whether or not the conservative position, or any other position, is tenable is precisely what public discussion is designed to test. Given spokesmen of high competence and reasonably equal competence, it provides one of the best tests democracy has been able to devise. Unless these conditions are met, we run the risk of serious distortions in public policy.

If this problem were confined to radio forums, I would not take your time with it. It most emphatically is not so confined. These forums are just a small sample of the kind of discussion that goes on all over America—in homes, schools, churches, places of business, legislative assemblies, and deliberative bodies of all kinds. In this larger arena, we can witness the full measure of the rhetorical bankruptcy of the conservative.

For many years past in America, the conservative has been in the saddle. The industrialist, the banker, the businessman have been the backbone of America—respected, accepted, and looked to for leadership. Whether this reputation was deserved is neither here nor there. It is a fact. But this long, unchallenged tenure has not been an unmixed blessing. The conservative grew soft under it. He came to take his position for granted. He became complacent. And he lost his voice, except for occasional ceremonial chants and cries of distress. In the meantime, the little fellow on the outside grew in strength and lung power, until one day there appeared on the scene a great spokesman for the ill-fed, the ill-housed, and the ill-clothed. Since that time we have lived under New Deals and Fair Deals.

How have the conservatives responded to this rude unseating? Not too well, I fear. The National Association of Manufacturers invited a number of students to attend their annual convention in New York this month. Time magazine reports some of the reactions of these young observers:

"Too many of the NAMsters, the students felt, talked in such platitudes and generalities about the drift toward socialism, the welfare state, taxes, that what they had to say lost its effect. What was needed, said one student, was a clear, fresh exposition to the man in the street in terms of the simple why and wherefore of the price of his bread."

"A further student criticism was that, in panel discussions, the NAMsters were often unqualified to answer our questions."

"One student, put his finger on NAM's biggest trouble: its failure to capitalize on opportunities to catch the public's ear."

Quite obviously the answer to this problem is not a simple one. Indeed, there may be no answer which the conservatives will like. Whether or not an intransigent liberalism is good for America must be ground out in countless discussions and debates all over America. My hope is that the conservatives will find the means of developing an effective voice in these discussions and debates. I think they are lost unless they do. And I think America stands to lose without their best counsel. I would say exactly the same of the liberals were the situation reversed.

I realize that this thesis comes easily from a teacher of discussion and debate and a moderator of public forums. Some will say the plight of the conservative is dictated by economic, social, and cultural realities in the American scene which have little or nothing to do with talk about these realities. I do not propose to assess these realities in this paper, but I do profess to know something about the influence of talk in building attitudes and shaping events. Talk influences men, and men influence events. The case for making good sense and good taste articulate is a familiar one to most teachers of speech. We have substantial experimental data to support this thesis.

In the first place, we know that attitudes toward social problems do change significantly as a result of discussion. In other words, something is accomplished in discussion; people do change their positions on public questions as a result of listening to discussions and participating in them. Secondly, we know that the initial or prediscussion dispersion of attitudes is significantly reduced as a result of discussion. People get closer together. There is a significant tendency toward concensus. Thirdly, we know that people develop superior attitudes toward public questions through discussion, as measured by the opinions of experts. In other words, discussion has the effect of developing sound positions on social questions. Finally, we know the greatest influence in discussion is exerted by the more competent people, as measured by standard tests of personal competence, such as personality inventories, intelligence tests, social-maturity scales, and the like.

I cite these data to make the point that public discussion is a democratic tool which no segment of American society interested in social attitudes can afford to neglect; and by the same token, it is a matter of great importance to American society that all social groups be competently represented in public discussion.

Several suggestions for developing effective spokesmen in deliberative councils are implicit in what I have already said. I should like to spell these out in greater detail.

In the first place, men in executive positions in business and industry must be willing to participate in public discussion. As the president of the United States Rubber Co. put it last June:

"The eleventh hour is here for business to speak for itself. Now, and from now on, the men who run American business must devote as much—if not more—time and effort to the public relations of their business as they spend on finance, production, and distribution. Unless they do, they will not need to worry about the latter problems. Government will be glad to handle them all."

In the second place, the paid spokesmen of the conservatives, the public-relations officers of business and industry, must be selected with careful attention to their qualifications for serious intellectual discussion and vigorous public debate. The main job of such officers is developing relations with the public rather than with their brothers in the bond. This requires social, political, and economic literacy of a high order and top-notch dialectical ability.

Thirdly, the conservatives urgently need to develop greater sensitivity to the changing pattern of communication in America. This pattern is characterized by a growing emphasis on logical values in place of high pressure mumbo-jumbo; by simple, direct statement rather than verbal obfuscation; and by a sense of relativity in language usage in place of arbitrary, dogmatic assertion. These changes are inevitable in a democratic society which is becoming more conscious of the processes of communication and more sophisticated in their use. Any speaker ignores them at his own peril.

Fourthly, the conservatives must rid themselves of some unfortunate stereotypes. In this so-called era of the common man, the conservative is depicted as the foe of the common man. Unfortunately, this role can easily be given specious plausibility because the conservative does have vested interests in the status quo. In a society in which men are living longer and specialized economic functions tend to draw class lines, it is easy to think of the conservative as an old man who has lost the common touch. Actually, the interests of the common man on any given issue at any given time and place may be just as completely identified with the conservatives as with the liberals. Most certainly it begs the question to assume otherwise. The lines between conservatives and liberals in America need not, and should not, be drawn on the basis of age or class. They should be determined in free and widespread discussion, and the conservatives must learn how to conduct themselves in such discussions in ways which will enlist the sympathy and understanding of common men.

The conservatives have also succeeded in alienating many of the intellectuals in America. Witch hunts in the colleges and universities, journalistic caricatures of the mortar board, and frantic name calling are hardly designed to win the understanding of men who place a high premium on objectivity in discourse. Moreover, there are echelons in the intellectual hierarchy in which there are fashions in ideas just as there are in goods. In some of these quarters, I fear, the conservative position has lost caste for reasons which have very little or nothing to do with its merit.

A minimum program of education and training for the kind of public discussion I am talking about should include: (1) a broad understanding of social, political, and economic issues in American life and culture; (2) clear insight into personal and social values as they affect these issues; and (3) specific training in the philosophy and method of democratic participation.

On this last point may I add with some feeling that such training is not to be secured in classes in after-dinner speaking and polite elocution. What is needed is sound education in discussion, debate, persuasion, and semantics under conditions which provide opportunities for realistic experiences in participation and leadership under the direction of competent teachers.

In conclusion, I wish again to make it clear that I do not present this analysis to plead the cause of the conservative, nor do I mean to question the ability and integrity of the conservative. It is my purpose rather to point out that conservatives generally are not doing their cause justice in public discussion and debate, explain

UNIVERSITY OF MICHIGAN LIBRARIES

why this is the case, and suggest some of the ways in which this weakness can be corrected. I believe this to be a problem of more than ordinary importance in American public life, and certainly one of great significance to students and teachers of speech.

As Aristotle put it, over 2,000 years ago, "Truth and justice are by nature more powerful than their opposites; when decisions are not made as they should be, the speakers with the right on their side have only themselves to thank for the outcome."

Ground Hog Day

EXTENSION OF REMARKS

OF

HON. HARRY J. DAVENPORT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1950

Mr. DAVENPORT. Mr. Speaker, it was not my intention to enter into this controversy but I received a telegram from the renowned lawyer, Mr. Charles Margiotti, which very emphatically backs up the assertions made by the gentleman from Pennsylvania [Mr. GAVIN]. I will now read the telegram:

PITTSBURGH, PA., *February 1, 1950.*

Hon. HARRY J. DAVENPORT,

House Office Building:

Each February second the land is deluged with pretenders to the throne of the Punxsutawney groundhog who for nearly a century has ruled supreme as the lord high prognosticator of Gobbler's Knob and points east, north, west, and south. Disregard particularly the pretentions of striped kitties whose promoters wear long gowns to protect their clothes, high hats to cover their low brows, gas masks to enable them to breath while pretending polecats prate about the weather, shadows, and the like.

CHARLES J. MARGIOTTI.

Thoughts at Income-Tax Time

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1950

Mrs. BOLTON of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written by one of my constituents to the Cleveland Press:

LETTERS TO THE EDITOR

THOUGHTS AT INCOME-TAX TIME

Today I sent in my income-tax papers and I hope I am straight with the collector. I find I worked for Uncle Sam from Thanksgiving to the end of the year.

Years ago, when I began paying income tax, I always felt proud to think that I was carrying my share of a reasonable expense to run the best Government on the earth. Today I feel that perhaps somebody is taking advantage of me.

It seems to me if a fellow has to kick into the kitty the least he should be able to do is send along a statement on how he does or does not want his money spent. I think my statement would be predominantly negative.

None of my money should go for tax-free entertainment funds. Nothing for Government buying of eggs, butter, peanuts, potatoes, etc., ad nauseam, so that when I go to buy such articles at the store, I won't find my own money competing with me and creating an artificially high price.

Nothing for bureau employees who spend their time and my money planning my future. Nothing for bureau employees who think $600 exemption is enough today but want to give me a $100 pension when I am 65.

I'd settle for firing the planners and take the $100-a-month exemption now and worry about my sixty-fifth birthday when it comes.

None of my money for dreamers on a world-wide scale who think 150,000,000 people can make millionaires of themselves and the other several billion people throughout the world. None of my money to support the people who have the laws and refuse to use them to curb selfish individuals who put their own interests above those of the majority of our people.

Last, but most important of all I want none of my money used to support anyone in Washington or elsewhere who feels that a government's chief purpose is to do my thinking for me; who feels they have to save me from myself; who has to keep me from being exploited; who feels they have to take care of me in my old age; who thinks they can persuade me they are going to give me something for nothing; who thinks they can slowly and insidiously, by diverse means, take from me my birthright of free, independent thought and the right to take care of myself and my family and substitute, therefore, dependence on a benevolent, paternal Great White Father whose interest in me is so all-consuming that before long I lose my identity and end up a mere social-security number.

I paid my taxes because I had to. Under the present system of profligate spending and even more profligate promises, I wonder if my money is not helping subsidize a system whose subtle purpose is my dissolution as an independent individual.

GEORGE F. HOUCK.

Bureaucratic Nonsense

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include excerpts from a letter from a man from Montana and two of his poems:

After reading your remarks of October 10, 1949—Financial situation of the Government—I believe you are thinking along the same lines that I have been for several years past. If any of these New Deal spenders should ever try to stump you with their stock question of just which of their pet projects you would cut down on, please show them my enclosed Bureaucratic Nonsense, and ask them to explain the sense of spending millions of the taxpayers' dollars on the irrigation of more land at a time when there is such a surplus of land under cultivation in America that we have to subsidize the farmers on that land.

BUREAUCRATIC NONSENSE

Our bureaucrats in Washington;
Now, aren't they wondrous wise;
They're forcing prices up, until
They almost reach the skies!

They killed off lots of little pigs,
Not many years ago;
The price of pork went up and up;
It had been nice and low.

And now, they're buying 'taters, too;
The price was low, they found;
They're dumping them around, to spoil
And rot upon the ground.

And still they are not satisfied
With what we now can grow;
They want more 'taters, and more pigs,
To be destroyed, and so

They're building irrigation works,
To irrigate more land,
And raise more spuds and little pigs
Upon the desert sand.

And you and I, who taxes pay,
Can watch those taxes rise;
And bless the men in Washington
Who are so wondrous wise!

—*G. H. E.*

AUGUST 6, 1947.

My New Deal Blues is a statement of my own personal predicament at the present time. I did not ask to be retired; I would a great deal rather have continued working at my old job and my old salary than to be loafing on $53.67 pension and $45.20 social security. It seems to be a crime to reach one's sixty-fifth birthday; that's why I was fired. I have found a part-time job, but if I earn more than $14.99 in any one month, I lose my social security for that month.

MY NEW DEAL BLUES

We skimped and saved for many years
Out of my wages, slim,
So we could have an income, when
My eyes were old and dim.

And then the New Deal came along,
With spending, big and grand,
Which forced both tax and prices up
All over this fair land.

And then, when I was sixty-five,
They took my job away;
And left me with a pension, small,
To use from day to day.

And now, our lifetime savings,
Which now we have to use,
Have only half their former worth;
So, hence My New Deal Blues!

Now it seems to me we are trying to regulate the people of this country, especially those who have the will to work, and I say it is about time to put a stop to it.

Listen to what William R. Williamson, former actuary for the Social Security Administration, told the Senate Finance Committee. He said the social-security program is a flop. He urged the rejection of the social-security revision bill (H. R. 6000) saying, "Let's have no more tampering with an intrinsically bad law, until a thorough study outlines the logic of a sound program." Furthermore, he recommended that social security be replaced by a program giving everyone $30 a month, a sum lower than the subsistence level. He said the present program involves muddy bookkeeping and insults American citizens by assuming incapacity and a lack of will power.

Observance of One Hundred and Seventy-fifth Anniversary of Patriots' Day

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following bill I have introduced:

Joint resolution to provide for the observance and celebration of the one hundred and seventy-fifth anniversary of Patriots' Day for the commemoration of the events that took place on April 19, 1775

Whereas the 19th day of April 1775 witnessed the first military engagement between the American colonists and British troops, and the fighting that then occurred at Concord and Lexington, in Massachusetts, formed the prologue to the mighty drama of the Revolution and determined the character of its first campaign; and

Whereas the significance of April 19 in the history of our country is not to be measured by the extent of the military forces that engaged in local battle in 1775, but by the direction and strength of the intangible forces then set in motion which in due course established the United States of America; and

Whereas a frequent recurrence to the events out of which this Nation rose, and a better understanding of the principles upon which our forefathers grounded their independence cannot fail to stimulate and renew that high sense of patriotism which has ever been the glory of our country;

Whereas each such dramatic struggle onward in the process of world civilization has been marked by a ceremonial indicating the formal and official conclusion thereof, the first Commander in Chief and General of the Continental Army purposely selected the 19th of April as the date for a peace proclamation which he read to assembled troops on April 19, 1783.

Be it enacted, etc., That there is hereby established a commission to be known as the Patriots' Day Celebration Commission (hereinafter referred to as the "Commission") and to be composed of eight commissioners, as follows: The President of the United States; two Members of the Senate, one from each of the two major parties, to be appointed by the Vice President; two Members of the House of Representatives, one from each of the two major parties, to be appointed by the Speaker of the House of Representatives; and three individuals from private life, to be appointed by the President of the United States. The commissioners shall serve without compensation and shall select a chairman from among their number.

SEC. 2. It shall be the duty of the Commission to prepare and carry out a comprehensive plan for the observance and celebration of the one hundred and seventy-fifth anniversary of Patriots' Day for the commemoration of the events that took place on April 19, 1775. In the preparation of such plan, the Commission shall cooperate with the Commonwealth of Massachusetts and its cities and towns in order that there may be proper coordination and correlation of plans for such observance and celebration.

SEC. 3. (a) Without regard to the civil-service laws or the Classification Act of 1923, as amended, the Commission is authorized to appoint and prescribe the duties and fix the compensation of a director and such other employees as are necessary in the execution of its functions.

(b) The Commission may make such expenditures as are necessary to carry out the purposes of this point resolution, including all necessary traveling expenses and subsistence expenses incurred by the commissioners. All expenditures of the Commission shall be allowed and paid upon presentation of itemized vouchers therefor, approved by the chairman of the commission.

(c) The Commission shall cease to exist within 6 months after the date of the expiration of the celebration.

Percentage Depletion

EXTENSION OF REMARKS
OF
HON. WALTER A. LYNCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1950

Mr. LYNCH. Mr. Speaker, in his tax message to the Congress, President Truman recommended an ending of certain abuses that have developed in connection with percentage depletion.

The special benefits of percentage depletion and the option to expense intangible developments costs should be limited to the oil industry and not remain available as a means of tax avoidance to movie actors, manufacturers engaged in businesses unrelated to the oil industry and private investing interests.

It is a notorious fact that during the war years, ordnance companies, paint companies, and almost every other kind of manufacturing company recklessly speculated in the oil industry with excess profits dollars. Their operations were notoriously unsuccessful and they were risking and largely wasting tax dollars which would otherwise have come into Uncle Sam's coffers. The new oil reserves which they developed were inconsequential.

It is an equally notorious fact that private investing interests and wealthy individuals are using these special benefits, designed to encourage the oil industry itself to the maximum development of oil reserves, to offset their large incomes from other sources and thus avoid the payment of income taxes which would otherwise be payable by them on such unrelated incomes.

This was not the intended purpose of these special tax benefits and represents an illegitimate use of them. I favor appropriate legislation continuing but limiting the availability of these benefits to the oil industry for which they were originally designed.

As to percentage depletion, I favor limiting the availability of that deduction to those owners of oil wells who originally took the drilling risks or who are generally engaged in the risk part of the oil business. The deduction should not be available to those outside of the oil industry who buy developed oil properties as investments free from drilling risks.

Issuance of Paper Money of Different Hues

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Lowell (Mass.) Sun of February 1, 1950:

NO SERIOUS OBJECTIONS

Congresswoman EDITH NOURSE ROGERS has revived her campaign to have the Treasury Department issue paper money of different hues. Last year the Department adopted a sleepy view of the proposal and it was finally pigeonholed.

But there are new and more pressing reasons for the change now. In the first place, it could conceivably have a powerful effect upon bringing some of the stolen Brink money to light, or else cause the loot to be practically worthless.

It would also cause many billions that have been hoarded by big-time professional gamblers into the open, so as to be exposed in part to the Department of Internal Revenue.

And again, as was argued last year, it would speed up all business transactions if bills of varying denominations were printed in uniform colors.

The arguments in favor of the measure far outweigh the objections and it is time that the Treasury Department should stifle its yawn and accept this constructive idea.

Mercy Killing Is First-Degree Murder

EXTENSION OF REMARKS
OF
HON. HARRY J. DAVENPORT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1950

Mr. DAVENPORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following from a sermon delivered by Rev. Thomas F. Coakley, Sacred Heart Church, Pittsburgh, Pa., entitled "Mercy Killing Is First-Degree Murder":

Those favoring mercy killing are not the forward, progressive thinkers of the day. They are the reactionaries, the group that would push us back again into the law of the jungle, proclaiming the survival of the fittest, and setting up the barnyard ethics of dog eat dog. It was the savage and the barbarian who killed the old and the sick lest they become a burden to him. It was Christianity that took the power of life and death out of the hands of despots and arbitrary tribal lords and taught the world the beauty of compassion for the sick and suffering. The hospital is an invention of Christian charity.

Euthanasia, mercy killing, sterilization, contraception, planned parenthood, birth control, abortion, all hang together. These foul practices should not be given fancy names to cloak over their monstrousness. They touch the very wellsprings of our civilization for they deal with the gravest fundamental problems of life and death. You can

UNIVERSITY OF MICHIGAN LIBRARIES

no more have mercy killing than you can have mercy robbery or mercy extortion. It is a vile attempt to couple the Christian virtues of mercy and compassion with the ugly concept of homicide. It is another effort to legalize the doctrine that the end justifies the means, however immoral the means may be.

There is absolutely no convincing argument against mercy killing unless one believes in God, in the divinity of Christ, in the immortality of the soul, in the reality of heaven and hell, and a final judgment in the next life to render an account of our doings on this planet. For those who believe in God's moral law, the commandment "Thou shalt not kill," binds their consciences. No exception was made for physicians, who have a special responsibility for preserving human life. But euthanasia will make executioners of physicians. Are we going to classify the medical profession as a gang of salaried murderers? Are doctors willing to be thus cataloged? Mercy killing defiles a noble profession that mankind has reverenced through all ages. The doctor has always been looked upon as a friend, a helper in our trouble. It has been difficult always to find a hangman because their trade was revolting. If euthanasia prevails every physician will be despised and labeled as a first-degree murderer, and we will replace our hospitals by death cells for condemned patients.

Who will be the judge as to when and how a patient is to be murdered? Are we now starting to copy the horrors of Hitler and his Nazi gas chambers at Buchenwald, and those other hucksters of death, the German doctors and scientists, who were tried at Nuremberg and held up to the execration of the world? Is it not significant that Dr. Sander who is about to go on trial for mercy killing studied medicine in Nazi Germany, where the German doctors practiced mass killing? Does this not make us stand aghast at the shamelessness with which presumably reputable doctors and even ministers of religion give impetus to the gathering movement of revived nazism and its mass killings?

The ministers who defend and even applaud Dr. Sander cannot avoid the accusation that they share with Lenin the doctrine that religion is the opiate of the people; that mass murder is justified in the interests of the state, and that a human being and a block of stone are on the same level. Such are the prophets of defeat and despair, led either by their moral illiteracy or their diabolical cynicism to espouse voluntary murder and suicide, practices as loathsome as any in the history of degeneracy.

For a Christian one would suppose that the agonizing death of Christ on the cross gave suffering a supernatural value; that pain patiently endured in imitation of Christ had a high spiritual quality. Surely Christian ministers should boldly proclaim these truths instead of denying them, or advocating their surrender or repeal, or proposing instead an atheistic doctrine that man is ultimately destined for this world only, not for the next.

A Harvard professor and the officials of the Euthanasia Society tell us that mercy killing is going on all the time secretly. If this is true, what effect will it have on the patients in our public or private hospitals? What guaranty will they have that they will not be murdered in their sleep? Will not the vast majority of the sick avoid hospitals as they would the plague?

What about the rich uncles and aunts and relatives, whose wealth is desired by their greedy heirs? Would any of them ever enter a hospital if murder was the prospect? What about life-insurance companies who would face bankruptcy if they were confronted with the mass murder of their policyholders who were insured for large sums? What about the small minorities, racial and religious, if the Government sanctions the extermination of any individual or group who displease the momentary majority in the country? All will remember how Jews, Catholics, and Protestants were put to death by the millions in Soviet Russia and Nazi Germany because the law of force which they instituted authorized mass killing.

Euthanasia will spell the death of all progress in medical science. A disease will remain incurable as long as doctors do not try to cure it. The problems of disease and pain will never be solved by killing the patients. Such an evil law would put a premium on lazy, incompetent, unscrupulous physicians who would solve a difficulty by denying that it exists. The medical profession has made marvelous and spectacular advances by laboring with unwearied patience and skill to cure sick people, not by killing them. Mercy killing is marching to the rear; it is progress backwards.

Euthanasia would not long be restricted to the sick and incurable. It would shortly be extended to the culturally unfit, the crippled, the mentally sick, the socially undesirable, to those who are not in agreement with the dominant political power, to the unpleasant elements in the community, to those who annoy their fellow men by their way of life, however saintly. Who knows but what, if mercy killing is condoned that Pope Pius XII or President Truman may be murdered by their enemies, who may think them a nuisance to society.

Against all this stands the law of God: "Thou shalt not kill," and this applies to physicians and to all others.

Brooklyn Honors Brig. Gen. Paul F. Yount, Commanding General, New York Port of Embarkation, as Man of the Week

EXTENSION OF REMARKS

OF

HON. LOUIS B. HELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1950

Mr. HELLER. Mr. Speaker, I am extending my remarks at this time to include an article from the Brooklyn Eagle of Sunday, December 18, 1949, honoring Brig. Gen. Paul F. Yount, commanding general, New York Port of Embarkation, as Brooklyn's "man of the week." It is a deserving tribute to the general who is doing such a splendid job as head of the Army base in Brooklyn—the Army's largest single transportation installation:

BROOKLYN'S MAN OF THE WEEK—ARMY BASE CHIEF ENJOYS KEEPING THINGS MOVING

(By Richard J. Roth)

The Brooklyn Army Base, prawling hub of the Army Transportation Corps on the Bay Ridge waterfront, is bustling. And, as far as Brig. Gen. Paul F. Yount is concerned, that's exactly the way it should be.

"I like anything that's moving—either people or things," explained the youthful commanding general of the New York port of embarkation, which, with the Brooklyn base and four giant piers across the Narrows on Staten Island, is the Army's largest single transportation installation. "It doesn't make any difference whether it has wheels or wings or if it floats."

With such leanings, it's hardly surprising that the 41-year-old general is enjoying his present assignment. Tons of cargo and hundreds of passengers move in and out of New York through the NYPE every day as the United States discharges its occupation and foreign-aid obligations overseas.

Glancing out of his office window the other day at a loading operation being performed three floors below by a few of the 10,000 civilian employees at the 100-acre base, through which half of the passengers and cargo entering New York City pass, he said.

PLACE TO SEE PROGRESS

"This is a place where you can always see progress, in terms of people and tonnage. That's why I like it here in Brooklyn. I inherited a fine operating installation, and my only hope is that I may leave one just as good."

General Yount received his "inheritance" from Maj. Gen. Ewart G. Plank, when the latter retired 6 months ago, and since then he's been busy learning his way about the NYPE. Not that he had a great deal to learn about the transportation business; in his 20 years of military activity, he has packed in a lifetime full of experience in moving people and things.

Born in Alliance, Ohio, near the Pennsylvania border, September 9, 1908, the blond officer was one of four children of William C. Yount, "the only maverick of the Yount family that went west" from the Yount farm in western Pennsylvania. The elder Yount was connected with the Ohio Telephone Co.

ACHIEVES TWO AMBITIONS

"I had two ideas when I was a boy," General Yount confessed. "One was to become an engineer and the other was to become an Army officer."

Unlike many youngsters, he achieved both ambitions. Following his graduation from West Point in 1930 as a second lieutenant and an initial assignment to river and harbor work in Buffalo, he was sent to Cornell University for a postgraduate course in engineering.

While at Buffalo he met and married Elizabeth Reybold, the daughter of Lt. Gen. Eugene Reybold, now retired, who was chief of the Army engineers in World War II. Elizabeth, as an "Army brat," had no problems of becoming adjusted to the frequent moving of military families. They have one daughter, Margaret, 16, who is attending Packer Collegiate Institute on Brooklyn Heights.

"Moving around is no problem for us," General Yount smiled. "As a matter of fact, when my 'infant' is in a place for about 2 years she gets restless. She sees other 'pappies' moving around and begins to wonder what's wrong with us. During the year we've become pretty expert at picking up our gear and moving on."

TAUGHT AT WEST POINT

The Younts picked up their gear in 1934 and returned to West Point, where the general served as an instructor for 4 years. Following several assignments in various Corps of Engineers posts, he was serving on the United States-Iranian Mission when the war broke out. His first war mission was the command of a supply base in the China-Burma-India theater, center of the early battle against the onrushing Japs, and he won the Legion of Merit for this duty.

Moving on again back to Persia, he became general manager of the military railway service in the Persian Gulf command, supervising the supply line to Russia. "Strictly a transportation operation" is the way he describes it, and it was a vital one. For his outstanding achievements here, he was awarded the Distinguished Service Medal.

In 1944 he returned to India to head a similar operation on the Stilwell Road, gaining an oak-leaf cluster on his original Legion of Merit. Following the war he was assigned to the Office of the Chief of Transportation in the Pentagon Building, and before he came to Brooklyn he was assistant to the chief.

BROOKLYN IMPRESSES HIM

Brooklyn has impressed General Yount. "I don't know of any city in the country that's more proud of its heritage than Brooklyn," he said seriously. Then he grinned as he added: "Between Brooklynites and Texans we have quite a time. They're certainly two proud areas. I've learned one thing—you call them Brooklynites, not New Yorkers."

Particularly impressive for the general was the way Brooklyn mobilized to bring the State freedom train to the borough. He played an important part in this undertaking, too, by providing an Army base siding free of charge for the train, which concludes its 3-week Brooklyn visit today. General Yount was honorary cochairman of the Brooklyn Heritage Fund Committee, which sponsored the stop here.

There are 13 miles of rails extending around the Army base, and freight cars moved ceaselessly about the installation, picking up and depositing cargo. After a busy day at the base, it would be understandable if the general were completely happy about getting away from the railroad business which has occupied much of his time for two decades. But, as General Yount points out, "it's a hard business to get away from."

He ought to know: In the attic of his Fort Hamilton home, Paul Yount spends much of his spare time fixing up his authentic model railroad system. He has 2 scale miles of track set up already, as he pursues this self-styled busmen's holiday.

In Honor of an "Old-Timer," Roger S. Erdman, Panama Canal

EXTENSION OF REMARKS
OF
HON. F. H. LICHTENWALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1950

Mr. LICHTENWALTER. Mr. Speaker, in this city, on the evening of the 21st of January 1950, the Panama Canal Society of Washington, at its midwinter dinner paid special tribute to a constituent of mine, a fellow Pennsylvanian, Mr. Roger S. Erdman, who was employed for 40 years in consecutive service in the construction and maintenance of the Panama Canal. The principal speaker on this occasion was Hon. Maurice H. Thatcher, formerly a member of this body from Kentucky, and who, during the construction of the great Isthmian enterprise, served as a member of the Isthmian Canal Commission, in charge of the work; and as Governor of the Canal Zone. He paid high tribute to Mr. Erdman, and under leave granted, I am extending my remarks in the RECORD, with inclusion of Governor Thatcher's address:

ADDRESS OF HON. MAURICE H. THATCHER

Mr. President, members of the society, ladies, and gentlemen: This evening it is our purpose to do honor to one of the most faithful and loyal members of the society, and one who has served his country and the Panama Canal for a great many years with the utmost efficiency and fidelity. The man to whom we strive to pay our tribute is a native of Macungie, Pa., a town located in the eastern part of the State. After leaving the public schools of Macungie, he attended Keystone Normal School at Kutztown, Pa., completing his junior year there, after which he took the commercial and stenographic courses in the American Business College at Allentown, Pa., graduating in 1895. Thereupon he left Macungie to make his home in Allentown; and his first employment was with the Lehigh Portland Cement Co., at its manufacturing plant at Ormrod, near Egypt, Pa., serving as one of its first employees, as clerk and timekeeper.

About the year 1899 he entered the employ of the Lehigh Valley Railroad Co. at Bethlehem, Pa., as stenographer and clerk; and later was transferred to its offices in New York City as a rate clerk. After that he went with the Pennsylvania Railroad Co. in Philadelphia as stenographer in its passenger department, which at that time was in charge of George W. Boyd, as passenger agent.

While in New York City, in an effort to become an expert stenographer, he practiced his art on various speeches made by Bourke Cochran and William Jennings Bryan to such an excess that he sustained what is known as writer's cramp. This compelled him to terminate in 1904 his service with the Pennsylvania Railroad Co.; and after great efforts to overcome the indicated handicap, he decided to seek employment in the construction of the Panama Canal; and accordingly, sailed for the Isthmus in October 1906, hoping that with an entire change of climate and conditions he might obtain relief. On arrival on the Isthmus he was rated as a rodman in the Canal work and he was therefore given outside employment rather than indoors.

It turned out that climatic and other conditions of the Isthmus did effect the cure he sought; and thereupon he went back to clerical work, and was transferred from the field to the office of the Chief Engineer, in charge of Colonel Goethals, in 1910: this in connection with personnel activities. He was made Chief of the Personnel Bureau in July, 1916, and remained as its chief until May, 1921, when he was transferred to the Washington office of the Panama Canal, for duties in connection with personnel activities and the gathering of wage statistics for use in computing wages and salaries of employees on the Isthmus. In May, 1927, he was promoted to the post of Chief of the Appointment Division of the Washington Office; and in November, 1941, was made Appointment and Transportation Officer.

During his life on the Isthmus he entered upon the most important adventure of his life. In January, 1915, a very charming young lady, Miss Ann R. Young, a graduate nurse of Mercy Hospital, in Baltimore, came to the Canal Zone, and served as nurse in Ancon Hospital; and, according to the judgment of those then and there in charge of the hospital, proved herself to be one of the most capable nurses ever to serve in that great institution. In Isthmia's romantic setting they met, and met again, with the result that they were married, on the Isthmus, on July 5, 1917; and ever since have lived most happily in marital companionship.

He whom we honor has always taken pride in the fact that he served a single branch of the Government throughout, and for such a long and continuous period; although, as he believes, he might have bettered his financial situation by transferring to some other Government activity, or else gone into private business. His loyalty to the Canal work was such, however, that he remained with it, and finally retired, on October 31, 1946, upon completion of 40 years of service. At the time of his retirement he could have served another year before the compulsory age limit of 70 years would have affected him. I can bear special testimony touching his faithful and efficient work for the Panama Canal after I left Congress in 1933. My law office in Washington was near his official quarters, and I saw much of him, and was impressed with his untiring and effective labors for the Canal, and by his unfailing loyalty to the cause he had served so long and so well. During this period, until his retirement, his work was very burdensome, but he was on the job for as many hours of the day, and for as many days in the week, as the exactions required.

Also, I know something of his tireless and effective efforts in behalf of the legislation which broadened the scope of the act of May 29, 1944, enacted for the benefit of old-timers—those who had been engaged, on the Isthmus, in the actual building of the Canal. During the pendency of the legislation he often conferred with me about it, and I am sure that he did much to bring about the enactment.

Hence, practically all of his active working career has been bound up in the service of the Panama Canal, in one or another form; and there are few officials or employees of the great Isthmian enterprise who may have a comparable period of service.

Such has been the life work of Roger S. Erdman. Not only are we glad to pay him our tribute on this occasion for what he has done through the years; but, as well, because he stands as a symbol for thousands of other American citizens who participated in the work of construction of the Panama Canal, and in its maintenance and operation after construction. Not many can claim the long tenure of service that has been his, nor the lengthened period of his connection with the Canal. However, others in varying periods of service and in like positions of responsibility have discharged their duties well and faithfully, and what we now say of Roger Erdman in these connections may be applied also to these others. All of them deserve the highest credit for what they have done. As American citizens, most of them civilians, in a strange land, under the fierce glare and torrential rains of the tropics, those whom we call old timers wrote an imperishable record of efficient and patriotic service, not only in behalf of their own country and flag, but as well, for the the good of the entire world; and the United States and all lands and peoples owe them an everlasting debt of gratitude. In like manner should that gratitude extend to those who, since the last lone yard of the link was done, have operated and maintained the Canal. Most of these never crept into the headlines of the daily press, but they did the jobs to which they were assigned, and without their effective services there would have been no headlines for anybody or for the Canal. Surely the recording angel has made note of all of this; and, thus, we are pleased to believe that all these have wrought far better than they have ever known.

And to Roger and his faithful spouse—who also lived and worked on the Isthmus, and who shared with him the Isthmian life—let us all join in wishing them many more years together: years of health, happiness, and prosperity.

Defeat for 5 Years

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1950

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article which I believe to be highly important to the American people and which appeared in

UNIVERSITY OF MICHIGAN LIBRARIES

the February 1950 issue of the magazine The Sign. This article was written by Richard L. Stokes, reporter and war correspondent for many years, who covered the State Department for the St. Louis Post-Dispatch. This item deals with incidents vitally affecting our foreign policy and the men entrusted with the safety and well-being of our country.

The article follows:

DEFEAT FOR 5 YEARS

(By Richard L. Stokes)

Three anecdotes, never before published, rear like milestones along the pathway of American diplomacy since 1941—a thoroughfare of disaster and enormity which has led Catholics to wonder whether Satan has not fixed his lodging in the State Department, having chosen that heart of the democratic and Christian world as his throne room and capital seat.

The date of the first incident was September 4, 1939. According to habit, President Roosevelt was breakfasting in bed at the White House. Morning papers were scattered about the coverlet. Their banner lines almost cracked the forms with epic news. On the day before, England and France had declared war against Germany. Nazi tanks were 3 days beyond the Polish frontier. Less than 2 weeks had passed since Joseph Stalin rang up the curtain on World War II by signing a nonaggression treaty with Adolf Hitler.

Visiting the President and wearing an anxious look was Adolf A. Berle, Jr., an intellectual prodigy of renown, an arch New Dealer, and Assistant Secretary of State. He stammered that Hitler's accomplice and America's foe, Joseph Stalin, had set up an espionage apparatus in this country with pipe lines into its most treasured secrets.

His informant, said Berle, was Whittaker Chambers, Communist go-between, whose "contact," a protégé of Associate Justice Felix Frankfurter, was assistant to the State Department's adviser on political relations. The name was Alger Hiss.

President Roosevelt was far from diverted. As soon as he caught the drift of the warning, he broke in upon it with his iciest accents of dismissal.

"Adolf," he grated, "it's a beautiful, sunshiny morning. Take a walk around the block, and you'll feel better."

The White House was also the scene of the next episode, but the time was January, 1945. Roosevelt was on the eve of his black-omened flight to Yalta. There, among other iniquities, Catholic Poland was to be surrendered to armed atheism, and dikes were to be opened for sabotage of the United Nations through the Russian veto and for Communist domination of eastern Europe and the Orient.

A chief of mission from one of the continental states sought an interview with Mr. Roosevelt for the purpose of imploring him to be on guard against Stalin's cunning and malice. The President's smile was one of Olympian amusement.

"Mr. Ambassador," he drawled, "I see you haven't much confidence in my famous charm."

The diplomat was appalled. "Mr. President," he gasped, "I hope you won't have too much confidence in it yourself."

For the third anecdote the locale shifts to China and the hour to the spring of 1946. Gen. George C. Marshall was absorbed in a mission to implement policies drafted by the State Department's left-wing cell. His fated victim, Chiang Kai-shek, had submitted to injury after injury.

At Marshall's command he accepted an armistice on the brink of triumph over the Communist enemy. He laid down his most potent weapon, the Nationalist Air Force. He unlocked the Kalgan Pass for Red Star troops, who thronged into Manchuria and were armed by Russia with material from Japanese arsenals.

But the generalissimo, for 20 years the Orient's pillar of flame against communism, mutinied when he was ordered to invite Chinese Marxists into his cabinet. For the one-time chief of staff, such disobedience was an outrage of military insubordination. It was punished with an embargo, which lasted 18 months, upon shipments of munitions from the United States to Nationalist China. With that mandate it became positive that sooner or later China would be engulfed by the Soviet police empire. But President Truman's ambassador, at the moment, was proud of his ukase.

"During the war," General Marshall said to a friend, "I armed more than 30 Chinese divisions." He added with satisfaction: "Today I disarmed them."

Incidents like these are telltale flashes upon the landscape of foreign affairs under the Roosevelt and Truman administrations. The general survey which follows will impugn no motives and assess no judgments—though it appears manifest that the statesmen concerned have wrought harm to their country, wittingly or unwittingly, beyond the most traitorous dreams of Benedict Arnold.

West Point's renegade could not have imagined an overturn comparable to that suffered by the United States during the last 5 years. In 1945 it enjoyed throughout the world a supremacy in arms, a moral prestige, and a repute for statecraft probably unique in history. That hegemony, spiritual as well as military, lies at the outset of 1950 in ruins equivalent to those of shattered Berlin. The American people have been maneuvered into a degree of isolation which bids fair to condemn them to fight world war III, if or when it comes, without one strong and trustworthy ally.

In an effort to prove its innocence, the State Department has flooded the land with a vast confusion of remonstrances and denials, explanations, white papers, and pronunciamentos. But, when the eye turns from special pleadings to assured, notorious facts, there starts into view a line of conduct as distinct and unswerving as a traffic band on a motor highway. It is as if Vyacheslav M. Molotov or Andrei Vishinski had been Secretary of State since June 1941 and had ordained this directive, to be pursued at all costs:

"The settled policy of the United States shall be to aid and abet the Soviet Union in creating vacuums of power for occupation by communism."

With American help, acquiescence, or feeble opposition, such voids have been dredged on a fantastic scale in Europe and Asia, to be overflowed by Stalinist seas. Bodily annexed by Russia since the war have been 122,000 square miles, with a population of more than 22,000,000, in Poland, Rumania, northeast Prussia, the Kuriles, Sakhalin, and Tanu Tuva in China. The Union of Soviet Socialist Republics, proper, today boasts an area of 8,473,444 square miles and a census of 221,384,985.

Above and beyond these figures, the Soviet system, as a result of the war, has swept into its orbit regions of Europe and Asia which total 4,861,860 square miles, with a population of 570,000,000. Thus, 14 men in the Politburo exercise more or less absolute sway over a grand aggregate of 13,335,304 square miles and about 791,384,000 human beings—that is to say, one-fifth of the globe's land surface and one-third of all mankind.

Not yet occupied, but at various stages of readiness for the process, are further tracts and multitudes in southeast Asia, India, Japan, the Philippines, Korea, the Levant, and western Europe.

Gulfs scooped away and then filled by communism had their genesis in the Roosevelt doctrine of unconditional surrender. It overthrew German and Japanese militarism, but also blasted the dams of armed strength which theretofore had held back Muscovite imperialism in Occident and Orient.

The headlong dismantling of America's fighting machine after the war and the homeward stampede of its troops, ships, and planes, by Atlantic and Pacific, left the Red army as the only surviving military power in the Eastern Hemisphere. The giant Eurasian land mass was prostrate at the Kremlin's feet.

A backstage glimpse of the mechanism at work was afforded in testimony given by Adolf Berle on August 30, 1948, before the House Un-American Activities Committee.

It was common knowledge in the State Department, he said, that by the fall of 1944 there had arisen a contest between two cliques regarding policy. A pro-Russian group was captained by Dean G. Acheson, then Assistant Secretary of State, with Alger Hiss, Deputy Director of the Office of Special Political Affairs, as his chief lieutenant.

The opposing faction, led by Berle, was not at all hostile to the Soviet Union but ventured to hint at doubts as to whether its spirit of cooperation was not a trifle below all-out friendliness.

The opposition was strong enough, Berle continued in effect, and sufficiently ardent in the Soviet cause, to brush him out of diplomatic life by way of demotion to the ambassadorship in Brazil. That was his penalty for having dared even to question the attitude of Moscow.

Light on attacks against Berle's veracity is thrown by published records of the State Department. They present evidence of something like a clean sweep of his adherents and a singular upsurge of fortune in the case of Acheson's disciples.

In August 1945 Acheson himself found reward in his advancement to the office of Under Secretary of State, which he held until July 1947. Because of frequent overseas journeys by Secretaries James F. Byrnes and Marshall, Acheson during much of this period served as Acting Secretary, administering policy, attending Cabinet meetings, and representing the Department in other top-level functions. After 18 months of private law practice, he became Secretary of State on January 21, 1949.

Compensation for Alger Hiss was rapid. In January 1945 he was promoted to full Director of the Office of Special Political Affairs. General Marshall's top adviser during the Chinese mission was W. Walton Butterworth, Minister-Counsellor at Nanking. By way of recognition of his services in helping deliver China to communism, he was appointed Director and then Assistant Secretary for Far Eastern Affairs.

Among Foreign Service officers sent home by Ambassador Patrick J. Hurley, who accused them of leaking information to the Chinese Communists, were John S. Service, second secretary in Chunking; and John P. Davies, Jr., political adviser to Gen. Joseph W. "Vinegar Joe" Stilwell, the evil genius of China.

Service is now Director of Far East Placements in the Division of Foreign Service Personnel. If a candidate fails to hew closely to the orthodox line, Service is in a position to shunt him away to Zanzibar or Patagonia. Davies is Far Eastern expert of the Department's Policy Planning Staff, where his views must have clashed bitterly with those of its Director, George F. Kennan.

In that case Service had power enough to defeat his boss, though Kennan is recognized as the most brilliant star of the Foreign Service. On January 1 he was relieved of two key jobs—Director of the Policy Planning Staff and counselor of the Department. With elaborate and dubious explanations he was sent on a tour of South America and Africa and announced that he would retire in June. He is known to have been shocked

by the Department's abject failure in China and had no reticence about saying so.

Another Foreign Service man of whom Hurley disapproved was Raymond P. Ludden, a staff officer of the rival embassy which State Department career men set up on behalf of General Stilwell. When John Leighton Stuart was made Ambassador to China in 1946, Ludden emerged as counselor and first secretary. He came to be rated as actual chief of Mission, with Stuart, now in his seventy-fourth year, as a figurehead. Today, Ludden is Counselor of Legation in Dublin.

Alleged to have been the Department's spy on Lt. Gen. Albert C. Wedemeyer was another Foreign Service officer, Philip D. Sprouse. Wedemeyer, who replaced Stilwell, was suspected of being less than fiery in his admiration for the Communist leader, Mao Tse-tung. Sprouse's job was to sit in and report on all the general's conversations. He was summoned to Washington in 1947 and recently became Director of the Office of Chinese Affairs.

As Under Secretary, Acheson was responsible for instructions which guided Marshall's Chinese errand, but which undoubtedly had the general's personal approval. Drafting of the actual papers is attributed to John Carter Vincent, then Director of the Office of Far Eastern Affairs. His recompense was advancement to the class of career minister. He was slated to be Ambassador to China. But it proved impossible to obtain Senate confirmation without a solemn pledge that Vincent would not be assigned to any post in the Far East. He was sent as Minister to Switzerland.

Casualties on the other side, in addition to Berle himself, are listed as including Ambassador Hurley, a former Secretary of War; Joseph C. Grew, wartime Ambassador to Japan and later Under Secretary of State; Dr. Stanley K. Hornbeck, special assistant to the Secretary, who was disposed of with an appointment as Ambassador to the Netherlands; Joseph W. Ballantine, Director of the Office of Far Eastern Affairs, who was eased into another unit of the Department and escaped to the Brookings Institution; Everett F. Drumright, consul at Nanking; and Grew's first assistant, Eugene H. Dooman.

To Loy W. Henderson belongs the distinction of having twice been exiled for independence of character. As assistant chief of the Europe Affairs Division, he was found lacking in reverence for the Roosevelt-Stalin idyl and was packed off to be Minister in Iraq. Brought home to direct the Office of Near Eastern and African Affairs, he took the unpopular side of the Palestine issue and was banished to Pakistan.

Three men outside the Department are credited with having given notable succor to the Acheson thesis. The most conspicuous is Owen Lattimore, former political adviser to Chiang Kai-shek and deputy director of Pacific operations for the Office of War Information. An early champion of Red China, he has consistently supported its interests and is charged with front-rank liability for the Chinese debacle. He is director of the Page School of International Relations at Johns Hopkins and one of the Department's most valued consultants.

Dimmer to the public eye are Edward C. Carter, secretary-general of the left-wing Institute of Pacific Relations; and Mortimer Graves, administrative secretary of the Council of Learned Societies. The Institute of Pacific Relations is Acheson's recruiting ground for ace personnel. A directory of individuals with far-eastern experience has been kept for years by the Council of Learned Societies, which has become the Department's principal recourse in screening applicants for jobs in that region. This service is maintained with Rockefeller funds.

In 1940 Graves promoted a concert at the stadium in Washington, nominally for Chinese relief, with Paul Robeson as soloist. Among the patrons, until they withdrew, were Mrs. Eleanor Roosevelt, the Chinese Ambassador, and Mrs. Gifford Pinchot. There was a scandal when Mrs. Pinchot charged publicly that half the proceeds were earmarked for a Communist organization, the National Negro Congress.

A Red Cross worker by profession, Carter was president of Russian Relief in 1941–45 and was decorated by the USSR with the Order of the Red Banner. From the Institute of Pacific Relations, Acheson mustered two of his committee of three for drafting a new Chinese policy—its former chairman, Prof. Philip C. Jessup, and its quondam treasurer, Everett N. Case, president of Colgate University.

Besides acting until recently as ambassador-at-large to the United Nations, Dr. Jessup compiled the white paper with which dying China was stabbed in the back. His committee, as it was selected to do, reported that the betrayal of China was actually a high-minded extension of the open door and that choice of their form of government should be left to the Chinese people—signifying, under present circumstances, the Chinese Communists.

Over a period of years the Rockefeller Foundation has contributed more than a million dollars to the Institute of Pacific Relations and has given important backing to the Council of Learned Societies. Raymond D. Fosdick, president of the Foundation, was the third member of Acheson's China policy committee.

History, of course, will seek to adjudge responsibility for measures which have brought not only the United States, but democratic and Christian civilization, thus far on the road to disaster.

Absent from the roster of defendants can scarcely be Franklin D. Roosevelt, who for more than 12 years was his own Secretary of State; and Dean Acheson, who for 9 years—except for 18 months—has been a continuing and ascendant luminary in the firmament of state.

Russia's immense gains could not have been achieved without Roosevelt's great gamble—as he himself termed it—that trust could be reposed in Joseph Stalin's good faith, though the past record was scarlet with his crimes of duplicity and malevolence.

With Acheson in charge, Spain was outlawed from the household of peoples and is being forced deliberately into bankruptcy and collapse. The Nationalist regime is the only power to have met communism face to face, in arms, and to have defeated it. That, possibly, is Franco's unpardonable offense.

Under the leadership of Roosevelt and Acheson, the American people have been persuaded to put all the eggs of their destiny in a pair of highly fragile baskets—western Europe and the United Nations. Disarmed, demoralized, impoverished, and honeycombed by Marxism, western Europe cannot be relied upon, either now or in the calculable future, to stand up in war against the Soviet Union.

Like the Maginot line of France, the United Nations may serve to lull the United States into a passive psychology and false sense of security. Already this proposed rampart of defense has been riddled again and again by the Soviet veto. It is so wanting in realistic strength that it has been defied with impunity by the small Union of South Africa and was challenged lately to a show-down of force by the Israeli Republic, a nonviable colony of American Jewry which would perish without subsidies wrung from earnings in the United States.

There are signs that Stalin has construed the surrender of the Western Powers in China as another Munch, flashing the green light for his long-revolving plan to hurl a communist German Army from the east upon west Germany in a campaign of national liberation. With Marxism on the Rhine, France would be expected to collapse and with it all that remains of free Europe.

Then, like mists before a hurricane, would vanish those gossamer walls of security which the United States has constructed at such expense and which are particularly associated with Acheson's name—the Marshall plan, the Atlantic Treaty, the arms assistance program, the western European union.

Since Roosevelt's death, Acheson, for good or evil, has had things largely his own way, though serving under three Secretaries of State and a new President. Edward R. Stettinius, Jr., was only a stop-gap. Byrnes, a small-town politician, knew nothing about foreign affairs and troubled himself still less. Believing in his heart, as a West Pointer, that war alone can settle anything, Marshall despised diplomacy.

Foreign policy is several stratospheres over Harry S. Truman's head. Commonly he does as he is told, unless, as in Palestine, matters chance to touch upon the single trade he knows—winning elections and influencing ballots.

Before what he fancied to be Marshall's soldierly grandeur, Truman groveled in awe. He is impressed to the point of terror by Acheson's Harvard intonation, his air of patrician insolence, and a fluency of rhetoric which must seem, for an artless boy of Independence, Mo., to partake of the supernatural.

It is possible that Alger Hiss has the makings of a Robespierre. Like him, at the Harvard Law School, Acheson enjoyed the privilege of being indoctrinated by Professor Frankfurter. But Acheson strikes one as an astute careerist, with the ethics of a lawyer and the morals of a sophist. As Assistant Secretary of State, with Roosevelt for client, he cheerfully followed the Moscow line. On his own, under Truman, he is anti-Communist in Europe and Russophile in Asia. Like a sophist, he is prepared at a moment's notice to improvise an ingenious discourse on either side of the same question or on both sides at once.

There is temptation now and then to wonder whether he is ever haunted by ghosts—for example, the specters of James V. Forrestal, Secretary of Defense; John G. Winant, Ambassador to England; Lawrence Duggan, for 9 years Chief of the Division of American Republics; and Sumner Welles, for 6 years markworthy and puissant as Under Secretary of State.

At least Acheson is suspected, on one occasion, of having known a twitch of remorse. Perhaps that also has never been published. Shortly after becoming Secretary of State, he made a confession to an American who is prophetic in his zeal against communism.

"You know," the Secretary murmured ruefully from the depths of a chair, as he stretched his legs toward the fireplace, "I was 100 percent wrong about Russia."

But a lone swallow of repentance does not make a summer of conversion. And there is a popular pleasantry which is attaching itself more and more to Dean G. Acheson. Justly or unjustly, it labels him as the Red Dean of the State Department.

Nebraska Farm Bureau Resolutions

EXTENSION OF REMARKS
OF
HON. KARL STEFAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. STEFAN. Mr. Speaker, under leave previously granted me, I include with my remarks part of the resolutions

UNIVERSITY OF WISCONSIN LIBRARIES

adopted at the thirty-first annual convention of the Nebraska Farm Bureau Federation, November 30, 1949:

AGRICULTURE

7. We urge continuance of the Nebraska Farm Bureau Federation policy of flexible price supports of 75 to 90 percent of parity in the six basic farm commodities. We oppose the price-support policy of the so-called Brannan plan or any other plan whereby we depend upon congressional appropriation for a substantial part of our farm income. We would also oppose the principles of the Brannan plan if they were applied to labor or industry.

8. Resolved that the Nebraska Farm Bureau Federation go on record favoring the use of surplus crops industrially and favoring further chemurgic research.

9. Resolved that the Nebraska Farm Bureau Federation go on record opposing livestock-production controls.

10. We commend the hatcheries of Nebraska for the progress made in their voluntary program of pullorum control and urge them to continue their efforts toward pullorum-clean ratings.

11. The Nebraska Farm Bureau is cognizant of the overlapping functions in the Department of Agriculture. We believe that it is for the best interests of the public and the farmers that the dual administration of soil conservation in the United States be modified. We feel that the existing administration of soil conservation which permits the Production and Marketing Administration and the Soil Conservation Service equal rights as to performance of technical services but with only the Production and Marketing Administration having authority to approve or disapprove soil-conservation payments, increases the cost of administration, creates friction between the agencies, obstructs conservation, and, in the final analysis, the individual farmer suffers the loss.

We recommend that the Secretary of Agriculture delegate to the soil-conservation district boards of supervisors the authority to approve or disapprove soil-conservation payments in those areas where a soil-conservation district has been organized. In the event the Secretary of Agriculture does not now have such authority by law, we recommend that legislation be enacted to give him such authority.

12. The Nebraska Farm Bureau Federation recognizes and heartily commends the great contribution the Farm Credit Administration has made through the years in providing a dependable source of credit for agriculture, in establishing favorable terms for agricultural credit.

Especially to be commended is the ideal of complete farmer-ownership which the Farm Credit Administration has always encouraged the cooperative lending institutions in the Farm Credit System to achieve. The Federal land banks and the national farm loan associations are now entirely owned by the farmers and stockmen who borrow from them. Many of the production credit associations have also reached this goal, and many others are nearing it.

The Nebraska Farm Bureau Federation believes that the cause of agricultural credit will be served best when all the cooperative lending institutions sponsored by the Farm Credit Administration are fully owned by the farmers and stockmen and farm cooperatives that do business with them.

13. We firmly believe that a substantial appropriation is necessary to encourage agricultural producers to carry out necessary erosion, flood-control, and water-conservation practices. We feel, however, that the appropriation should be used solely for the carrying out of the soil-conservation practices. When counties have unexpended funds, we believe a reallocation of such funds should be made to other deficit counties.

14. We recommend a continuation of the present legislation which permits the Commodity Credit Corporation to provide for supplemental storage of farm commodities which are in surplus supply to the extent for which terminal storage is not available. Any program for the extension of storage facilities should first emphasize increased storage on the individual farm for the commodities which store successfully.

15. In order to increase consumption of surpluses, we urge the American Farm Bureau Federation to expand the present research programs in the use and distribution of agricultural commodities.

16. We recommend a continuance of the present legislation authorizing use of the International Wheat Agreement. This agreement serves as a protective measure to the current price support program in years when we experience production over and above the amount required for domestic use.

17. We recommend a continuance of the present policy of administering agricultural programs at the local level by elected community and county farmer committeemen; and further, we insist that the policy of elected personnel be expanded to include the administration of the program at the State and National levels.

18. We feel that present Government crop forecasts are unrealistic and generally in error by overestimation. We urge that efforts be made to devise a more accurate method of crop forecasting.

19. The Nebraska Farm Bureau Federation highly resents the abuse of the franking privilege and the use of public-tax moneys by the United States Department of Agriculture to promulgate and propagandize any program which has its conception entirely within its framework, but which is not law.

We feel that the primary purpose of the United States Department of Agriculture is to administer agricultural legislation enacted by Congress and is completely outside its jurisdiction when it seeks to influence public opinion or establish policies regarding any so-called farm program.

20. We recommend that legislation be enacted enabling a tax not to exceed one-half cent a bushel on wheat and one-quarter cent a bushel on corn at the producers' market; the moneys raised to be used to develop new markets and uses for these commodities. We recommend that such fund be administered by a committee appointed by the Governor of the State from a list furnished by the general farm organizations and the dean of the College of Agriculture; a majority of whom must be producers of the commodities. We further recommend that this program be coordinated with States having similar programs.

21. We believe in a more rigid control of infectious and contagious diseases in livestock sold through community sale barns.

22. It is evident that there is a great deal of sentiment for some regulation in the farm program which will give credit for the summer fallow practice in those areas of Nebraska where it is a good farm practice. We hesitate to recommend that the amendment to the cotton bill in regard to the establishment of 1950 wheat allotments be reenacted because of inequities which resulted from its application between farms and between areas. As a substitute, we recommend very strongly that production controls for wheat be changed from an acreage to a bushel basis. We believe this change will have two principal advantages over the present program:

A. It would place upon the farmer who produces the surplus the responsibility of financing its carry-over.

B. It would result in a more equitable adjustment of production between farms and between areas.

Under this plan, county marketing allotments would be established by giving equal weight to the average production of the most recent 10 years and the most recent 3 years.

23. The farm program has become a major factor in our agricultural economy. Therefore, we recommend that a Nebraska Farm Bureau Federation farm-program committee be inaugurated. This committee shall be a 12-man committee appointed by the President, with the approval of the board of directors. A chairman shall be elected by the committee. The personnel of this committee shall be three farm-bureau members from each farm-bureau district. They shall hold a minimum of four meetings annually. Membership of this committee, being representatives of all areas of the State, will represent all major farm commodities produced in the State. The duties of this committee shall be to discuss all phases of agricultural farm programs and make recommendations to the board of directors for legislative action. This committee should return to farmers in their own areas a better understanding of the problems of other areas with different crop practices as well as legislative needs.

ROADS

24. We recommend to the 1951 session of the Nebraska Legislature a bill which will provide for the appointment of a proven efficient business manager, other than the State engineer, to head the State highway department; said man to be appointed by the Governor and subject to the approval of the unicameral legislature.

We recommend that all records of the department of roads and irrigation be kept in a simple and comprehensive manner and subject to a detailed audit by the State auditor's office and available for inspection and publication.

SCHOOLS

27. We wish to reaffirm resolution XV of the 1948 Nebraska Farm Bureau Federation resolution which reads: "We do not favor the principle of Federal aid for schools." In the event that such legislation should be enacted, we strongly believe that such disbursements should be made on grant-in-aid basis through State and county governments to insure a maximum retention of local control.

TAXES

28. We favor a reallocation of the gas-tax funds so that they will be more equitably distributed to meet rural needs.

29. We urge the Nebraska Farm Bureau Federation support the campaign to repeal by referendum vote the gas-tax increase and the license-fee increase laws. We urge that steps be taken to insure more efficient operation of the highway department. We do not favor an increase of these taxes until a sufficient need has been demonstrated, following more efficient use of highway funds.

30. We recommend that the Nebraska Farm Bureau Federation go on record in favor of a sales and/or income tax; this tax to be a replacement tax for personal-property tax and real-estate tax.

31. Since under the present Nebraska constitution, farmers who reseal 1948 commodities are suffering a double taxation, we request a revision of Nebraska's constitution, and we further request a comprehensive study of Nebraska's tax system, toward a more fair tax for all citizens of our State. If a legislative committee of the Nebraska unicameral does not make this study, we authorize the Nebraska Farm Bureau Federation to do so, since we believe this is the first step essential to the relief of an intolerable tax situation.

32. We urge that the taxes on farm buildings, except the dwelling, be removed so as to encourage land owners to leave buildings stand; to encourage and not discourage farm owners to improve and maintain their farmsteads. The tax income lost to the county, exempting farm-building taxation, would be added to the over-all land valuation because it would still be to the farm community's advantage by requiring the outside investor and farmer to pay his fair share of county taxes.

33. We request the repeal of the transportation tax, communication tax, and all excise taxes, except so-called luxury goods including alcoholic liquors and tobacco.

Nebraska paid well over $10,000,000 in excise taxes to the Federal Government last year; much of which was levied on necessary equipment and supplies used in regular farm operations.

We strongly urge the American Farm Bureau Federation to take steps to follow this through in the next session of Congress; as the retaining of this amount within the State (and comparable amounts in other States) would relieve the necessity of a large amount of Federal and State matching.

34. We go on record in favor of the present refund law on agriculture gasoline.

35. We recommend that the American Farm Bureau Federation through its Washington office do everything in its power to get Congress to control deficit spending and start reducing the national debt.

HEALTH

36. We do not favor socialized medicine and we urge the American Farm Bureau Federation to continue opposing any bill introduced in Congress that favors socialized medicine.

37. We are opposed to the extension of social security to farm people.

38. We commend the fine work being done by the tuberculosis and blood bank mobile units and suggest that more units be made available to the public. We urge more universal use of units when available.

39. We urge more intensified research on cancer, polio, diabetes, and undulant fever, and all diseases with a high degree of morbidity.

40. We recommend adequate funds be appropriated for a continuation of the Nebraska brucellosis control program. The Nebraska Farm Bureau Federation feels that present legislation is adequate but that the department of animal industry has been handicapped by insufficient funds.

MISCELLANEOUS

41. We commend the Nebraska Legislature for retaining the use of dairy products in our State institutions.

42. We feel that present noxious weed laws are adequate but should be more rigidly enforced.

43. We oppose any increase in postage rates until the abuse of the franking privilege is rectified.

44. We request the Nebraska Farm Bureau Federation be authorized to represent its members and oppose any unjustified rates or curtailment of services of public utilities.

45. We urge the Nebraska Farm Bureau Federation to investigate and use their influence in obtaining extension and improvement in rural telephone service.

46. There is need for additional facilities to assist farm people of Nebraska and their organizations in presenting agriculture's point of view to the general public; and there is need to bring to the farm population of Nebraska additional facts and information on agricultural markets, taxes, schools, roads, and many other problems; therefore, we recommend that the Nebraska Farm Bureau Federation make the farmer-owned radio plan one of its major projects of 1950.

Two Congressmen With a Mission

EXTENSION OF REMARKS
OF
HON. JAMES P. RICHARDS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1950

Mr. RICHARDS. Mr. Speaker, much has been said pro and con about American Congressmen making investigation trips overseas. It is my personal opinion that, without these studies, Congress would not have the benefit of a first-hand picture of what we have to contend with in our battle against communism. How can a Member of Congress intelligently evaluate the Marshall plan, ECA, the United Nations, reciprocal trade treaties, our military aid program, and a dozen other subjects involving the welfare of this country without seeing first-hand conditions in foreign countries and the results of our economic and military efforts to insure a just and lasting peace.

In this connection I wish to insert in the RECORD an article by Mr. John Reynolds, in the Houston Post, concerning a joint trip and study made overseas by the gentleman from North Carolina [Mr. CHATHAM] and the gentleman from Connecticut [Mr. RIBICOFF]. Our colleagues, Mr. CHATHAM and Mr. RIBICOFF, are two of the most able and hard working members of the Foreign Affairs Committee and the information that they brought back to us has been invaluable. The article mentioned follows:

LETTER FROM LONDON—EUROPE IMPRESSED BY UNTIRING MOBILITY AND GENEROSITY OF CONGRESSMEN ON ECA CHECK

(By John Reynolds)

LONDON, November 12.—Just what does an American Congressman do when he trips through Europe on one of those ever-more-frequent investigating junkets? Does he take his work seriously, or is he more interested in looking into Paris night clubs than into the effects of Marshall plan aid or the possibility of a western European union? What impressions of Europe does he take back with him, and what effect does he himself have on Europeans?

We cannot answer for all of them. But we have just spent a good deal of time with two, and are happy to report that, if they are at all typical, America is well served by the Congressmen she sends abroad.

They are ABRAHAM RIBICOFF, Democratic representative of Hartford, Conn., and THURMOND CHATHAM, from Winston-Salem, N. C., also a Democrat; both sent over here by the Foreign Affairs Committee to make a study of the workings of ECA; both keen, intelligent and workmanlike.

We met them first on their way to Europe, on the Nieuw Amsterdam, and it was obvious from the beginning that their trip was to be no joyride. Several hours a day were spent going through economic pamphlets and reading European history books for background. The rest of the time they "investigated" the passengers, most of whom were Dutch and French.

They were indegatigable in their questions. Why was not more being done to further Western Union? What did the Dutch and Belgians think of Benelux? What industrialists, what labor leaders, what politicians might help them most in their European education? Wherever one went on the ship one was sure to see either CHATHAM or RIBICOFF or both surrounded by a little group of well-chosen people, intently discussing everything from the price of food in London to the threat of communism in France.

After we left the ship at Southampton, we did not see them again till they turned up in London after a hectic 3-week trip that took in Belgium, France, Germany, Italy and Switzerland, and included long sessions with Count Sforza, Ambassador Bruce and the pope ("one of the best brains in Europe").

In London they showed the same extraordinary mobility. In their 2 days here they saw high embassy and ECA officials, they interviewed Ernest Bevin and many other cabinet and civil service members, they sat in on a House of Commons debate, they talked to taxi drivers, shopkeepers, and chambermaids, and in between times "ABE" RIBICOFF managed to broadcast a report to constituents back in Hartford.

With it all, they managed to get a pretty sensible view of English life and English problems.

Though they saw most of the same people and the same scenes—RIBICOFF, however, concentrated more on politicians, CHATHAM on businessmen—they will take back with them by no means the same impressions.

RIBICOFF, a young New England lawyer, has taken great pains to understand rather than judge the European situation. He has been particularly impressed by England. He likes the British people's cheerful ability to do without a lot of the comforts of life in order to pay their way honestly in the future. He admires their integrity and their courage; and when he returns to Hartford he hopes to be able to explain to his constituents that England's present troubles are not all caused by its Socialist Government, but by two wars, an adverse trade position, and other forces in large measure outside its control.

CHATHAM, a southern industrialist, mildly unreconstructed, has on the contrary seen nothing in England to modify his strong distrust of socialism, in any form, though he joins forces with RIBICOFF in his friendly feeling toward the individual Briton.

He found himself much more attracted toward France and would like America to bend all its reconstruction efforts to strengthening France, preferably under the leadership of de Gaulle, and making it the economic and political leader of Europe. As for England, he considers its economic situation so bad that trying to save it is simply a waste of American money.

CHATHAM is not to be budged from this position even by the argument that in a crisis America is likely to find Britain a far more reliable ally than France.

Both men had as their trip's main purpose the investigation of the all-too-slow progress toward western union. They will return as convinced of its necessity as ever but far more aware of the enormous difficulties to be overcome. They know now it cannot be accomplished by simple fiat. They are also sure that ECA aid must continue, in some form or other.

Our two Congressmen learned about Europe not only through interviews with the higher diplomatic brass. They managed, too, to get around on sightseeing and shopping trips much like the average tourist. We took RIBICOFF on a shopping tour one day and realized ourselves for the first time just what a wealth of goods London still has to offer the customer. And, for the foreigner, all at a remarkably low price, what with the devalued pound and the avoidance of the purchase tax (66 to 100 percent on luxury items).

Europeans were pretty taken with RIBICOFF and CHATHAM, too. For one thing they

UNIVERSITY OF WILLIAM LIBRARIES

were in themselves almost perfect examples of that American generosity that has made ECA possible; they brought with them dozens of nylons, cartons of cigarettes, crates of bacon and eggs, which they distributed with a lavish (but not patronizing) hand to their most casual acquaintances.

But more than that they were intelligent and friendly, obviously men of good will who could meet on common ground with men of good will of any country. They could not have been more different from the noisy, conspicuous American abroad, which European caricaturists have so long delighted to draw—often from life. America could do with more ambassadors like these two Congressmen of ours.

Pensions

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1950

Mrs. DOUGLAS. Mr. Speaker, all of us here on the House side are following with eager interest the hearings now proceeding before the Senate Finance Committee on H. R. 6000, the bill we passed last year by the overwhelming vote of 333 to 14 to strengthen the social-security system and especially to strengthen the contributory social-insurance program on which organized labor and all working people pin their hopes for a retirement consistent with American concepts of dignity and decency. Many of us sincerely hope that the Senate will, after studying the problem, go further in the direction of a comprehensive program paying adequate benefits, as a matter of earned right, in their years of retirement to all workers not now covered by satisfactory public retirement systems, including farmers and farm workers.

I was, therefore, much amazed and dismayed to learn that a witness from my own State of California, Mr. George McLain, appeared before the Senate Finance Committee on January 28 to denounce retirement benefits paid as a matter of right and to advocate their replacement by a universal means test program making benefits contingent on poverty. He stated that, to use his own words:

> I have never held to the philosophy of granting a pension as a matter of right.

He then proceeded to castigate as "a special privileged group of pensioners reminiscent of class legislation of the most inequitable kind" all those who, by years of patient struggle, and by their own contributions have won for themselves retirement systems. Who are these privileged groups to whom he would deny the very benefits for which they have paid week after week, month after month, with their own pay-roll deductions? His list includes and I quote:

> Federal, State, county, and city civil-service employees—judges, school teachers, policemen, firemen, etc., employees of quasi governmental institutions, public utility and railroad employees, semiprivate and private corporate personnel—members of our State and National legislative bodies—and those now covered by the Federal Social Security Act.

To these people already protected by retirement systems and all others who have petitioned this Congress for recognition of their desire for a dignified retirement system Mr. McLain proposes the indignity of a means test investigation, "a single standard uniform pension system that will embrace all our citizens and that will recognize but one requirement. That requirement to be—need." Are people after a useful life and after paying from their own wages for retirement benefits to be harried by an army of investigators? Are they to be denied benefits for which they have paid unless they take a pauper's oath?

To these people, now enjoying or seeking the dignity of a contributory program of old-age and survivors insurance, Mr. McLain offers the cold comfort, if they can pass a means test investigation, of California's present payments under its old-age assistance program. This they are already entitled to if they can show need, so what do they gain for the rights they have lost? Mr. McLain states in his testimony:

> It is my considered opinion that the Federal Government should today be paying a pension of $75 per month to those who can prove they need it. Such recipients should be allowed an outside income, in addition, of a value of $30 a month.

Thus, one must assume, a worker who, through his industry, thrift, and foresight has managed to provide for himself more than $30 a month in retirement income or has income from other sources such as veterans' benefits must forfeit his social security benefit or have it reduced proportionately.

Most amazing of all in the fact of this poor-law approach to social security is Mr. McLain's proposal that the employer be relieved of his present responsibility to share equally with his employees, through a pay-roll tax, the cost of financing social-insurance benefits. Instead the worker is to continue to pay a pay-roll tax for benefits which he has no assurance of receiving, and the Government is to take over the employer's share. This ill-begotten concept of financing has neither the advantages of assuring the equity rights implicit in individual pay-roll deductions or of universal payments based on a progressive ability-to-pay tax system. The worker is first deprived of the very rights his pay-roll taxes are assumed to assure and then asked to pay the bill all over again through his income and excise taxes.

I wish to assure the Congress that these are not the views of Californians who value human dignity and the rights of labor. I wish to assure the organized workers of California that their hard-won battles for retirement benefits based on right rather than the whim of a means test investigator will be respected whether under the Social Security Act, the Railroad Retirement Act, State or local retirement plans, or private agreement. I wish to assure all workers that our efforts will be for more adequate, more dignified, more universal insurance programs in which a means test has no place.

I wish also to assure those who have already retired and therefore cannot hope to benefit from insurance programs based solely on years of employment in covered occupations that their interests are not forgotten. I personally have long advocated that the Government purchase social insurance coverage for all those who have passed retirement age without acquiring insured status at a benefit level consistent with present living costs. This would then become the minimum benefit level for everyone under the social-insurance system with proportionate increases above this amount related to the previous earnings of insured workers.

I expect shortly to introduce a bill which would assure every man over 65 and every woman over 60 a minimum social-security benefit of $75 a month with an additional 15 percent of their previous average earnings plus dependents' benefits. I do not quarrel either with the State of California or Mr. McLain on the necessity of a $75 floor under old-age retirement.

I would, however, like to see this paid to all as a matter of right and not to a few as charity.

I would like to see the Government bear the whole cost for those who, through the historical accident of their birth date rather than any choice or fault of their own, reached retirement age before a universal social-security system could become effective. The cost to the Government would be temporary, would be offset by reduced assistance costs, and would be a good investment if it brought to an end these unscrupulous demagogic appeals to those already retired to join with reactionary efforts to destroy the retirement systems so painfully sought and won by working people. I am for old-age security for everyone and I am opposed to all efforts to turn social security into a political football for the private purposes of Mr. McLain or his associates.

Jefferson-Jackson Day Dinner Address by the Vice President

EXTENSION OF REMARKS
OF
HON. SCOTT W. LUCAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Friday, February 3 (legislative day of Wednesday, January 4), 1950

Mr. LUCAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the Jefferson-Jackson Day dinner address delivered by our distinguished Vice President at Raleigh, N. C., January 28, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Toastmaster and friends, I was greatly complimented by the invitation to address

this great gathering in the capital of North Carolina, and am happy over my ability to accept it.

I am not in strange territory nor on strange ground in North Carolina. In this great State my grandfather and my ancestors, running back beyond the American Revolution, were born, reared, and fought for the liberties of their country, and there are many descendants of the Barkleys, the Stevensons, and the McKenzies still in North Carolina, all of whom contributed to the blood that flows through my veins.

During my service in the two Houses of Congress, extending for a generation back to the beginnings of Woodrow Wilson's administration, I have enjoyed the friendship and the fellowship of many great North Carolinians, whose names are too numerous for me to catalog here, and I still enjoy the great privilege of serving and cooperating with North Carolinians who are members of both Houses of Congress and of the executive branches of our Government.

North Carolina has been for more than a generation a leader among all the States of the Union, and, particularly, the States of the South, in adopting progressive measures of government looking to the greater enjoyment of the benefits conferred by government, when that government is kept close to the people and serves them with single-minded devotion.

I am proud of my North Carolina antecedents, and of my North Carolina friends, and I am happy to be here in the company of my two colleagues now in the Senate, and many others in the House of Representatives, and many others who have served in one capacity and another in maintaining the high traditions of this great Tar Heel State.

I express the hope that the organization of Democratic forces in the Nation will not fall apart merely because a victory has been won in a single election. The battle for democracy is like the battle for liberty. It requires eternal vigilance. The Democratic Party, through its long and glorious history, has represented and achieved enough for the welfare of the American people to justify continuous and coordinated labor on behalf of all Democrats, in and out of office, to keep the light forever burning which points the way to progress and to solid achievement in behalf of America and everything for which she stands.

In all of its history, the Democratic Party has been the liberal party of America. Practically every legislative act for the protection of the people and the advancement of their welfare has been brought about through the advocacy and the insistence and the intelligent foresight of the Democratic Party.

The first act to regulate commerce, passed in 1887, 100 years after Congress was given the power to regulate commerce by the Constitution, was passed in the Democratic administration of Grover Cleveland.

The initiation of rural delivery of mail to the four corners of this land came about under a Democratic President.

It was Grover Cleveland, the first Democrat to occupy the White House after the War Between the States, who said that "Public office is a public trust."

It was the far-sighted advocacy of many reforms on the part of William Jennings Bryan that gave us the income tax, the election of Senators by direct vote of the people, and many other legislative achievements, for which the Democratic Party stood, even in the days of its defeat.

It was under the great liberal administration of Woodrow Wilson, one of the South's great sons, that the Federal Trade Commission was established, the Clayton antitrust law enacted, the Federal Reserve System inaugurated, Federal aid in the construction of highways was initiated, and both farmers and laboringmen given a charter of liberty by an enactment that relieved them of prosecution as violators of the antitrust law, merely because they belonged to a farmers' or laborers' organization.

It was under the Democratic Party that the Department of Labor was established, in all of its power, to seek the advancement of the welfare of laboring men, and that the Department of Agriculture became the greatest agency in history of America for the advancement of the welfare of farmers and their families throughout the Nation.

It was under the Democratic administration of Franklin D. Roosevelt that the Communications Commission, the Civil Aeronautics Board, and the Securities Exchange Commission, were established to protect the people in the enjoyment of their rights in modern and complex age of transportation and communication, and the sale of securities in interstate commerce, in which the people needed the agency of the Government for their protection.

It was under the Democratic Party that flood-control legislation was enacted, protecting the inhabitants of our great river valleys from the wholesale destruction of life and property.

It was under the Democratic Party that the soil-conservation program was inaugurated, seeking not only to protect the fertility of what soil there is left, but seeking to reclaim that which has been wasted by improvidence and wasteful negligence.

It was under the Democratic Party that our Nation recognized its obligation to the aged, the infirm and the unemployed, by providing a system of social security, the extension of which President Truman has repeatedly recommended, which recommendation was carried out in the last session of the Congress in the House of Representatives by the passage of a bill extending social security and increasing its benefits.

It was under the Democratic administration that rural electrification was inaugurated, not by gifts to the people, but by financial aid to cooperative organizations seeking to install electric lights and equipment upon the farms of the Nation, by reason of which 5,000,000 farm homes today enjoy the benefits of electricity. The loans which have been made by the Government, without which this great advancement could not have been made, are being repaid on schedule.

There are many other enactments which might be cited as evidence that the Democratic Party is and has been the forward-looking, progressive, liberal party of the Nation, seeking always to make the Government the agent of the people in their protection and in their advancement.

There have been unavoidable controversies among our people, and among some members of the Democratic Party, with reference to the speed and degree of these advancements on the part of our Government. But, regardless of any technical differences of opinion as to speed or degree, I think we are all prepared to admit that in this modern, complex age in which we live, government must assume its responsibility in the field of economics, of industry, of labor, of agriculture, of health, of education, and of social advancement, because in many such fields there is no other agency upon which the people may depend, that has both the power and the authority to administer to their needs.

We are celebrating tonight the lives and the achievements of two great Americans—Thomas Jefferson and Andrew Jackson.

If there are controversies now among honest men and women concerning the questions of government, there were likewise controversies in the day of Jefferson and in the day of Jackson.

Thomas Jefferson was the most advanced statesman of his day. He was the most accomplished statesman of his day. He was not only a great political philosopher, a great administrator, a great preacher of democracy, but he was a great musician, a great agriculturist, a great botanist, a great historian, a great founder of institutions in America. He was one of the greatest political organizers in the history of America. He did not organize the forces of democracy by speeches. He organized them through the power of his logic, through letters and pamphlets so numerous that even yet they are being discovered and collected in various parts of the country.

Thomas Jefferson believed in the people. He believed in their education. All through his writings can be found his constant belief in, and his constant effort in behalf of, the education of the masses of the people.

He believed in the right of the people to change their government if they saw fit, and in his Declaration of Independence, that eternal doctrine is announced as part of the fundamental doctrine upon which our independence was founded. Thomas Jefferson believed that when constitutions or laws became out of date, the people had a right to change them, and he went so far as to advocate that every 20 years the Constitution ought to be revised, because, he said, "No dead generation had a right to bind a live generation."

Thomas Jefferson was such an advanced advocate of liberty, freedom, and the rights of the people, that he was denounced as a demagog, but each recurring year brings fresh evidence of his political soundness and his true devotion to the principles of democratic government.

When he wrote his epitaph, he forgot he had ever been a member of the Virginia House of Burgesses, Governor of Virginia, Member of the Continental Congress, Minister to France, Secretary of State, Vice President or President of the United States. He did not want to be remembered by the things the people had done for him, but only by what he had done for them. So he gave himself credit for three things—the Declaration of Independence, the Virginia statutes for religious liberty, and the University of Virginia.

What man in our history could claim authorship for that trinity of achievements—political liberty, religious liberty, and intellectual liberty?

There may be speculation over what Jefferson would do today if alive and confronted with the complex problems of our civilization. He has been many times quoted as having said that "That government is best that governs least." I have never been able to find where he said that, but undoubtedly, in an uncomplicated age where every man desired to do justice by his neighbor and not encroach upon his rights anywhere, it would be a beautiful theory, if it could be truthfully said that that government governs best that governs least. But, if that aphorism should be true, it would be only another step to say that that government is best that governs not at all, and surely Jefferson did not mean to create any such impression. Out of our experience as a great democracy, not absolute but relative, we have learned that each year each one of us grows more dependent upon others; each community more dependent on other communities; each State more dependent on other States; and each nation more dependent upon other nations in the world, for the advancement of civilization and the protection of human rights.

The liberalism and progressive outlook of the Democratic Party stems directly from Thomas Jefferson. It comes almost in an unbroken line of descent from Jefferson to Jackson, who on the battlefield and in legislative halls and in the executive chambers, stood for and fought for the rights of the

UNIVERSITY OF MICHIGAN LIBRARIES

people against all and sundry who would encroach upon them or seek to destroy them. Thomas Jefferson became the moral and philosophical founder of democracy. Andrew Jackson became its fighting advocate and preserver. Down through the years, whether under the leadership of Samuel J. Tilden, Grover Cleveland, William Jennings Bryan, Woodrow Wilson, Franklin D. Roosevelt, or Harry S. Truman, the golden thread of loyalty to the people, to the rights and privileges of the common man in America, has indicated the continuity of our service to the people of the Nation.

In the advocacy of these immortal principles, we are not afraid of controversy, we are not even afraid of friction. We do not shun discussion or disagreement. We welcome it. Because, out of the friction of intellectual processes, there finally comes a consensus of public opinion which has a right to control the deliberations of those who represent, or claim to represent, the people of our country.

No political party in the history of the Nation ever consummated so comprehensive a program as the Democratic Party has consummated, and as evidence of its soundness, no organized political opposition, by whatever name it went, has dared to threaten to destroy it.

We are now faced with tremendous problems at home and throughout the world. The enemies of democracy are seeking to batter down the ramparts of true liberalism and of popular government throughout the world. Not only are they seeking to batter down ramparts of political liberty, but they are seeking to destroy the foundations of religious faith and belief in the religion which has helped to make America the great stronghold of democracy and of righteousness.

During the past generation we have fought two world wars. We have expended in them more than $350,000,000,000 and we have accumulated a national debt of more than $250,000,000,000. We have been compelled to maintain a military establishment far beyond our desires because of our inability to induce another nation to engage, in good faith, in the effort to make and preserve the peace.

As a result of these expenditures of treasure and precious human lives we have asked nothing in territory, nothing in reparations, nothing in selfish advantage, except the advantage of living in peace with the nations of the world. In spite of discouragements, in spite of draw-backs, in spite of handicaps, in spite of the intransigent attitude of the enemies of democracy, I believe it is but the truth to say that the prospects of success are brighter today than they were a year ago, and it may be they are brighter than they have been since the end of actual fighting in 1945.

In order that we may be able to accomplish what seems to be our mission as the leader of the nations of the world, it is necessary for us to maintain not only a strong military defense but to maintain a strong and sound economic structure which will give force and validity to all our proclamations and all our efforts.

If, out of the travail through which the world is going today; if, out of the expenditure of treasure and out of the loss of life which is involved in every conflict, there can come peace—not only in our generation but in all generations—not only for our Nation but for all nations—it will be worth the price we have to pay. And the democracy which Jefferson proclaimed, which Jackson fortified, and which millions of Americans have given their lives to preserve, shall be established throughout the earth, as Jefferson himself would have established it, and as Jackson would have defended it. We shall be able to rejoice beyond the limits of any political party. America's rendezvous with destiny has been fulfilled.

Moderate-Priced Housing

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Friday, February 3 (legislative day of Wednesday, January 4), 1950

Mr. LEHMAN. Mr. President, the housing commissioner of the State of New York, Mr. Herman T. Stichman, recently made a public statement in which he criticized certain provisions of S. 2246, the middle-income housing bill now pending before the Senate Committee on Banking and Currency. Commissioner Stichman took exception to the low interest and long-term amortization features of this legislation which, in my opinion, are essential to the success of the whole program. I, therefore, wrote a letter to my colleague the Senator from South Carolina [Mr. MAYBANK], in his capacity as chairman of the Banking and Currency Committee, advising him of my views on this legislation and urging most strongly that his committee approve the provisions of S. 2246, providing for 3-percent interest rate on loans to housing cooperatives and a 50-year-amortization period.

Mr. President, I ask unanimous consent to have the text of my letter to the distinguished chairman of the Banking and Currency Committee printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JANUARY 30, 1950.

Hon. BURNET R. MAYBANK,
United States Senate,
Washington, D. C.

DEAR SENATOR MAYBANK: I have followed with great interest the work of the Banking and Currency Committee on S. 2246, the housing bill, and have taken special interest in the amendments which you introduced on January 6 of this year. I should like to say that I am in full accord with the objectives of these amendments. They seem to me to initiate a vigorous program which will help cooperatives and other nonprofit corporations provide housing at monthly costs which families of middle income can afford. I feel that such a program is urgently needed now in order to fill the major gap in our present housing plans.

You may have noted in the press that on January 26 the housing commissioner of my own State, in an address to the building and construction department of the American Federation of Labor, made some criticisms of your amendments. I thought you would be interested to know that in my judgment these criticisms do not reflect the feeling of the people of New York State. They surely do not accord with the facts as presented in the course of the hearings. Certainly the two features which Mr. Stichman criticized—a low rate of interest and the long amortization period—are essential to the success of the entire program which S. 2246 seeks to carry forward.

There is certainly no other feasible way in which sound and suitable housing can be made available to middle-income families at monthly costs which such families can afford. To deny these two essential parts of the program would be to make a wagon without wheels. I was very glad to learn, therefore, that the American Federation of Labor, the Congress of Industrial Organizations, the major veterans' organizations, and many other public-interest groups have declared themselves in strong support of your amendments, particularly those provisions relating to the low rate of interest and the 50-year amortization period.

The New York housing commissioner stated in his speech that the interest rate on loans to cooperatives, as proposed in your amendments, was unsound and undesirable because it was too low. He said that this interest rate, which is expected to be about 3 percent, was too far below what savings banks need to get on their deposits and below the return life-insurance companies calculate on their investments in determining premiums. This argument, it seems to me entirely overlooks the fact that under your amendments, the National Mortgage Corporation for Housing Cooperatives would obtain the funds to make its loans by selling its debentures in the private investment market. As I understand it, these debentures would be fully guaranteed by the United States Government, both as to principal and interest. Securities of this type, of course, involve no servicing costs to the purchaser. The rate of interest on such securities is therefore a net rate. The rate on mortgage loans is a gross rate. As I recall, figures were presented at the American Life Insurance Convention in Chicago in the fall of 1945 which indicated that mortgage loans bearing interest at 4½ percent represent a net rate of about 3 percent, after deducting the costs of procuring and servicing the loans, together with a pro rata share of administrative expenses. Since these figures were those of the large life-insurance companies, who have the advantage of geographical diversification and a better balanced loan portfolio than most banks, the net return for these insurance companies would certainly be more favorable than the return for many lenders for whom a 4½-percent gross rate on the mortgage loan represents a net return of less than 3 percent. Hence I would consider the provision in your amendments of an interest rate of approximately 3 percent a fair one.

The securities issued under your amendments would certainly represent a sound and profitable investment for life-insurance companies, trust accounts in banks, investment portfolios, and similar types of investors. Far from decreasing the amount of interest for saving banks' depositors, or decreasing premiums which life-insurance policyholders might receive, these securities would actually be one of the soundest sources of a steady rate of return for savings banks or for life-insurance policyholders.

The New York State housing commissioner was also critical of these provisions of your amendments which would provide a long-term amortization period of 50 years. He said that, with such a long period of amortization, 99 out of 100 members of the cooperative would never pay off their mortgages in their lifetime but would die in debt. The theory that a dwelling unit must be paid for in 25 or 30 years has no real basis except in a traditional practice. This practice was based not on the life expectancy of the building, but on the life expectancy of the owner of the building. It was designed not for the benefit of the purchaser, but for the benefit of the seller, and has worked, over the years, to prevent families with modest incomes from being adequately housed.

I feel that the longer period of amortization, in combination with the lower rate of interest, will be very beneficial to the cooperatives, without being at all detrimental to the lenders of the money.

It seems to me that under your amendments, the individual cooperators do not contract a fixed debt. They contract to pay monthly charges for their houses, as long as

they are members of the cooperative and live in the housing. Unlike the ordinary renter, however, they accumulate an equity or ownership of interest in their housing by paying the monthly charges. If a cooperator should find it necessary to move, his equity or interest would be repurchased by the cooperative. If he dies, his equity would be an asset in his estate. It has a cash value. It is not a liability. This is certainly not true in the case of rents.

I understand that it was thoroughly brought out, in the course of the hearings on S. 2246 and on your amendments, that the middle-income families, whom this measure proposes to assist, would be able to save 10 to 12 dollars a month because of the longer period of amortization. The cooperative provisions eliminating profit and the savings made possible by cooperative management would cut the cost to the middle-income families by another $13 monthly, making an average saving to these families of $25 a month. I would therefore judge the low rate of interest and the long amortization period to be essential provisions of the entire proposal.

The third and final point made by the New York housing commissioner was that your amendment would prove to be a boon to speculators rather than a benefit to labor and to middle-income families, unless the profits of the contractors are specifically limited by law. Naturally, I would be deeply concerned and disturbed if there were such a possibility. It was for this reason that I made direct inquiry of you regarding this matter. I was pleased to be assured, as I expected, that there is a specific provision in your amendments that the benefits of this program will not be dissipated through speculative devices. I would assume that the officials administering this program must, among other things, insure that no contractor is allowed to make a speculative profit. I agree that speculation may sometimes develop in unforeseen manners. Only vigilant administration can prevent this. I assume that vigilant administration will be forthcoming. I certainly expect that the legislative history of the consideration of this measure will give full assurance that it is the intent of Congress that speculative profits be prevented. In general it has always seemed to me extremely undesirable to inject into legislation the minutiae of regulations which would, in the long run, only result in hampering sensible and efficient administration.

In closing, I want to take this opportunity to express my high admiration for your able and energetic leadership in developing this housing legislation. This country will derive years of life and benefit from the Housing Act of 1949. I hope your committee will approve your pending amendments and that they will be brought to the Senate floor where, I am confident, they will receive overwhelming support.

Very sincerely yours,

HERBERT H. LEHMAN.

Senator Capehart's Record

EXTENSION OF REMARKS

OF

HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

Friday, February 3 (legislative day of Wednesday, January 4), 1950

Mr. TAFT. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial entitled "Businessman Senator," from the Chicago Daily Tribune of January 28, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BUSINESSMAN SENATOR

The political arm of the American Federation of Labor, which calls itself Labor's League for Political Education, has put out what it calls a scorecard to direct people with no minds of their own how to vote in this year's congressional election. The AFL hatchet enterprise, which is dedicated to the purge of 8 Senators and more than 100 Members of the House, marks its intended victims on right votes and wrong votes.

It is hardly accidental that almost all of the alleged wrong votes are chalked up against Republicans who have resisted the New Deal rush toward state socialism and the demands of the labor bosses that they be freed of all restraints and given their way in everything.

As a good example, the voting record of Senator CAPEHART, of Indiana, Republican, may be cited. On nine issues, the AFL marks him wrong eight times. He voted to defeat the anti-injunction amendment to the Taft-Hartley Act, introduced by Senator LUCAS. He voted to support Senator TAFT'S amendments to the same act—a measure which passed the Senate but was sidetracked in the House.

Senator CAPEHART, among other issues, voted against installation of a steam plant by the TVA and thus against the further socialization of power; against the extension of public loans for housing on farms, and against confirmation of the left-winger, John Carson, as a member of the Federal Trade Commission.

Mr. CAPEHART was able to approach these questions with a particular qualification, in that, unlike most of his colleagues, who are lawyers and professional politicians, he is a businessman who never ran for office before he attained the senatorship. The business judgment he brings to debate and roll call provide valuable balance to the judgment of the Senate as a whole.

Mr. CAPEHART has refused to fall for socialist mirages and has consistently striven to keep enterprise free, as the best means of assuring prosperity for everybody, which means, primarily, for wage earners and farmers. In his proposal last year to trim $3,000,000,000 from the Marshall plan, he showed a commendable interest in preserving the Nation's fiscal solvency.

It is to be doubted that such attacks as that made by the AFL are going to damage Mr. CAPEHART'S standing in Indiana. Hoosiers in general being marked by the same sort of good sense as their Senator. The AFL's campaign to buy a Congress of yes men can only be considered presumptuous.

Control of Floodwaters in the Tennessee, Cumberland, and Ohio River Basins

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Friday, February 3 (legislative day of Wednesday, January 4), 1950

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement issued by the United States Army engineers and the Tennessee Valley Authority regarding the operation of flood-storage reservoirs in the Tennessee, Cumberland, and Ohio River Basins.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

United States Army engineers and the Tennessee Valley Authority issued a joint statement today revealing that operation of flood storage reservoirs in the Tennessee, Cumberland, and Ohio River Basins, including Kentucky Reservoir, master-valve control of the vast TVA system, had lowered the Mississippi River crest at Cairo, Ill., by about 2½ feet during the still-continuing flood crisis.

This operation, effected through close coordination among all agencies and offices involved, prevented the flood crest at Cairo from rising above a stage of 55.3 feet, making it unnecessary to legally blast open the fuse-plug levee of the Birds Point-New Madrid floodway in southern Missouri—as contemplated under the so-called Jadwin plan of Mississippi River flood control. Many people had been evacuated as a precautionary measure, but even so, millions of dollars in flood damages in that area were prevented.

"It should be pointed out however, that high water still exists for many miles along the Ohio and Mississippi. Until stages are perceptibly lower and until flood storage within some of the reservoirs can be released, the situation will still be critical.

"Efficacy of the flood-control reservoirs has been proved. Had it not been for the vast storage provided by these structures, a crest at Cairo of 58 feet or more would have resulted instead of 55.3 feet."

The record crest at Cairo is 59.51 feet, recorded at the height of the 1937 Ohio River flood.

So far as the Mississippi River is concerned, the greatest and most widespread damage was wrought by the 1927 flood—before authorization of the so-called Jadwin plan and construction of the present vast system of levees and floodways. During that flood, the gage at Cairo went to 56.4 feet.

"Since early in January, Army and TVA engineers have been carefully watching the increasing flood in the Ohio and Mississippi Rivers. As the flood rose to near the flood stage of 40 feet at Cairo, these engineers, in cooperation with the United States Weather Bureau, began exchanging flood data on the Tennessee, Mississippi, and Ohio Rivers by phone and wire daily as has been the custom for 10 years or more so as to be informed at all times as to flood conditions and to be ready to operate the reservoirs in case of necessity. At the same time TVA began to discharge water from Kentucky Reservoir at relatively high rates in order to pass the excess water down the Ohio and Mississippi Rivers ahead of the flood crest at Cairo, and this was continued until it became desirable to reduce the discharge and lower the crest at Cairo. When this time arrived on January 14, the release from the Tennessee River at Kentucky Dam was reduced from 325,000 cubic feet per second to 150,000 cubic feet per second and again on January 16 it was further reduced to 100,000 cubic feet per second and held at this rate until the crest had passed and the flood began to recede. This discharge was about 170,000 cubic feet per second less than that which would have been flowing in the river if there had been no dams there to regulate the flow."

Meanwhile, discharge from all Corps of Engineers reservoirs had been shut off except for a small amount necessary to produce power at Dale Hollow Dam in Tennessee in order that they might produce the maximum effect possible on the flood.

UNIVERSITY OF MICHIGAN LIBRARIES

Private Capital for Small Business

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Friday, February 3 (legislative day of Wednesday, January 4), 1950

Mr. O'MAHONEY. Mr. President, widespread interest was exhibited in the press yesterday and today in the bill which I introduced yesterday to authorize the establishment of a private system of capital banks to provide both debt and equity capital for independent business. I ask unanimous consent that there may be printed in the Appendix of the RECORD the Associated Press story from the New York World-Telegram of February 2, the New York Times story of February 3, and the Wall Street Journal story of the same date.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York World-Telegram of February 2, 1950]

NEW 36-BANK SYSTEM URGED TO FINANCE SMALL FIRMS—SENATOR O'MAHONEY WOULD PUT THEM UNDER RESERVE

WASHINGTON, February 2.—A plan to set up 36 banks under Federal Reserve supervision to provide loans and capital funds for small business was proposed today by Senator O'MAHONEY, Democrat, Wyoming.

"This is machinery by which our free-enterprise system may work," Senator O'MAHONEY told a news conference in announcing he will introduce the necessary legislation.

Although the plan appeared to be similar to those previously advanced by some Federal Reserve spokesmen, Senator O'MAHONEY said he is introducing the bill without consulting or committing other Government agencies or officials.

PROPOSES THREE FUNCTIONS

He said the proposed 36 new banks, each with a minimum initial capital of $1,000,000 would have three functions:

1. To make loans to small business for terms up to 12 years at interest rates determined by the banks under supervision of the Federal Reserve.

2. To buy shares or stock in small business, up to 20 percent of the bank's assets or lending authority.

3. To insure loans made by commercial banks up to $10,000 for any small business for periods up to 5 years.

Senator O'MAHONEY said his plan grew out of hearings by the Joint Congressional Economic Committee on the problems of small business in attracting investments. He is chairman of that group.

WOULD AFFECT RFC

If the new bank plan works, Senator O'MAHONEY said it should eliminate lending functions of the Government's Reconstruction Finance Corporation. It has lent billions of dollars, especially during the war, to what Senator O'MAHONEY termed chiefly big business.

The Senator said the 36 regional banks could be set up by use of up to 1 percent of the capital and reserves of Federal Reserve banks. He said this would be about $72,000,000.

The bank's stocks then could be bought by other banks, including members and nonmembers of the Federal Reserve System, other financial institutions, corporations, or individuals.

Chief incentive for investments in these banks, the Senator explained, would be exempting the earnings of the banks from taxation for 15 years.

[From the New York Times of February 3, 1950]

SENATE BILL PLANS SMALL LINE BANKS—O'MAHONEY MEASURE PROVIDES FOR SYSTEM OF 36 SET UP WITHIN FEDERAL RESERVE—HEARING DUE AFTER FEBRUARY 15—MAYBANK COMMITTEE TO HOLD INQUIRY—WOULD BE STRICTLY PRIVATELY OWNED

WASHINGTON, February 2.—Creation of a country-wide system of private banking corporations devoted exclusively to meeting the financial needs of small or independent businesses was proposed in a bill introduced today by Senator JOSEPH C. O'MAHONEY, Democrat, of Wyoming.

Mr. O'MAHONEY, chairman of the Joint Congressional Committee on the Economic Report, presented the measure to the Senate as possible solution to the growing problem of providing sufficient venture capital to fill the demands of an expanding national economy.

With some existing financial institutions unable and others unwilling to provide needed capital to small business, he noted, the private enterprise system "is starving for a lack of debt and equity capital" despite record private savings throughout the country.

PURPOSES ARE OUTLINED

The bill is designed to provide the machinery for channeling private savings "to the place where capital is most needed," the Senator said.

It would authorize establishment within the Federal Reserve System of 36 regional banking corporations with power to aid small or independent businesses by stock purchases, loans, and loan insurance.

As incentives to the formation of such corporations, the bill would exempt them from corporate income taxes for 15 years and permit Federal Reserve banks and members of the Federal Reserve System to invest in them, up to specified limits. Stock of the corporations would also be available to any other private financial institution or individual.

The new corporations would be required to have minimum initial capital of $1,000,000 each.

The bill was the outgrowth of recent hearings on investment problems by a joint economic subcommittee which Senator O'MAHONEY conducted. It stemmed directly from a proposal by A. D. H. Kaplan of the Brookings Institution, who testified at the hearings.

Senator BURNET R. MAYBANK, Democrat, of South Carolina, chairman of the Senate Banking and Currency Committee, which will have jurisdiction, said his committee was prepared to start hearings on the measure any time after February 15.

While declining to commit himself to the bill pending further study of its terms, Mr. MAYBANK told a reporter that it was "about time we did something to help the little business man."

Senator O'MAHONEY emphasized that the proposed banking corporations would be "strictly privately owned." Although they would be subject to supervision of the Federal Reserve Board, they would receive no grants in aid or other Government support.

SEEN BANK SYSTEM AID

"Through the authority to insure small loans they would provide cooperation and support for the existing banking system," he said. "Through the authority to make term loans they would be able to finance sound little and local enterprises which cannot now obtain working capital because so many local banks do not have sufficient capital to meet the demand.

"Through the authority to purchase equity stocks they would be enabled to provide the venture capital now so necessary to bring about development of existing business opportunities."

While he acted independently in introducing the bill, Senator O'MAHONEY told questioners that he believed its enactment would help to answer President Truman's call for congressional action to stimulate investment.

One effect, he said, would be to relieve the pressure for use of Government funds to aid business including demands on the RFC for loans.

Business eligible for aid by the 36 proposed corporations would be defined by the Federal Reserve Board in cooperation with the Secretary of Commerce. But none would be eligible that "is affiliated through stock ownership or otherwise with any other enterprise in the same trade or industry which is determined to be dominant in the trade or business in which it is engaged," the bill stipulates.

Each of the new corporations would have nine directors, three appointed from the public by the Federal Reserve bank in the district and six elected by the stockholders.

[From the Wall Street Journal of February 3, 1950]

PRIVATE SYSTEM OF CAPITAL BANKS TO HELP SMALL BUSINESS PROPOSED BY O'MAHONEY—UNITED STATES AID EXCLUDED

WASHINGTON.—A new system of privately owned capital banks to help finance small and independent business without Government loans or insurance was proposed yesterday by Senator O'MAHONEY (Democrat, Wyoming), chairman of the House-Senate Economic Committee.

Senator O'MAHONEY told newsmen that if his scheme is enacted and if it works, there will be no further need for the Reconstruction Finance Corporation in the business loan field. He declared that unless the owners of private capital devise some method of channeling funds into small business, the reliance on Government will continue to grow.

To stimulate investment in the capital banks they would be exempt for a period of 15 years from all Federal, State, or local taxation, except that any real property held by the corporations would be subject to local levies. Individuals or institutions investing in the corporation, however, would pay taxes on any dividends they received.

The O'Mahoney proposal was developed at recent hearings by the Investment Subcommittee of the Economic Committee. The subcommittee is expected to issue a report within the next few days endorsing the capital bank idea. The proposal was first laid before lawmakers by Dr. A. D. H. Kaplan, Brookings Institution economist.

WOULD SET UP 36 CORPORATIONS

The O'Mahoney measure would authorize a capital banking corporation for each Federal Reserve bank and each Federal Reserve branch district. Thus 36 such banking corporations could be organized.

The banks would be empowered to make loans to small and independent firms, by their equity securities, or insure or buy loans made to eligible borrowers by existing commercial banks. The Federal Reserve Board, advised by the Secretary of Commerce, would define small and independent business firms eligible for financial aid under the O'Mahoney measure.

The O'Mahoney bill was proposed as an amendment to the Federal Reserve Act. It would repeal the present section 13 (B) under which Federal Reserve banks are authorized to make 5-year industrial loans.

The new capital banks would get their funds from a variety of sources. First, each Federal Reserve bank would be permitted to invest in the corporation for its district

up to 1 percent of the aggregate of the capital and surplus of all its member banks. Each member bank could invest 1 percent of its capital and surplus in the new corporation.

SHARE OWNERSHIP LIMITED

Stock in each corporation could also be purchased by any nonmember bank, any financial institution or by individuals. However, no one individual or institution could own shares in more than one of the capital banks, nor more than 10 percent of the total outstanding shares of any one of the banks.

Each corporation could borrow money and sell debentures or bonds under general conditions laid down by the Federal Reserve Board. At no time, however, could one of the corporations have liabilities outstanding in excess of the sum of its paid-in capital stock and surplus.

The Federal Reserve Board could not permit one of the proposed capital banks to begin business until its paid-in capital and surplus had reached $1,000,000.

Under the O'Mahoney measure, the banking corporations could not insure more than 10 percent of the amount of loans made by any one insured bank, nor more than 95 percent of any individual loan. An insured loan could not be for more than $10,000, nor have a maturity of more than 5 years. The rate of insurance premium and the interest rate on insured loans would be fixed by the Federal Reserve Board.

COULD JOIN OTHER BANKS IN LOANS

In making loans the banking corporations could make advances either directly or in cooperation with banks or other lending institutions. However, obligations acquired by the corporation under this provision could not run for more than 12 years.

The corporation also would have power to buy common or preferred stocks, income bonds or other capital shares of small and independent firms. The amount invested by any one of the corporations in such securities could not exceed 20 percent of the combined capital and surplus and authorized indebtedness of the corporation.

While there would be no limit on the size of a loan the corporations could make, no corporation could invest more than 25 percent of its funds in loans or security purchases in the sum of $250,000 for any single enterprise.

Each corporation would be run by a board of nine directors. Three of them would be appointed by the Federal Reserve bank of the district in which the corporation is located. These three would be subject to Federal Reserve Board approval. The other six directors would be elected by holders of the capital shares of the corporation and would not be subject to Federal Reserve approval.

Roosevelt Day Dinner Address by Benjamin V. Cohen

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Friday, February 3 (legislative day of Wednesday, January 4), 1950

Mr. LEHMAN. Mr. President, Hon. Benjamin V. Cohen, one of the most distinguished Americans, who has been in recent years delegate to the General Assembly of the United Nations and counselor of the State Department, made a speech at Chicago before the Americans for Democratic Action which I believe to be deserving of study and attention by all of us. Mr. Cohen is a man of great intellect and great insight. In this speech he sets forth his understanding of the principles and meaning of the life of Franklin D. Roosevelt. No man has a greater right to speak of these matters than Mr. Cohen. He also discusses the legal and ethical implications of the Federal loyalty program. I ask unanimous consent that this fine and thoughtful speech be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We are assembled here to express our respect and homage to the man who had the greatest influence for good on American life in the first half of the twentieth century—Franklin Delano Roosevelt.

It is particularly fitting that this and other dinners in his memory throughout the country should be held under the auspices of Americans for Democratic Action and affiliated organizations like the Independent Voters of Illinois. For the ADA groups, by their courageous sponsorship of progressive measures, are helping mightily to maintain the Roosevelt tradition as a vital factor in American political thought and action.

I am particularly happy to speak in Chicago tonight. Chicago was once my home and it was here that I received my first schooling in political thought and action.

The people of Chicago and the people of the State of Illinois have already demonstrated to the Nation their devotion to the Roosevelt tradition. Those who would belittle the Roosevelt tradition would like to think that it sprang only from the charm of a magnetic personality and that it could not long survive the mortal life that inspired it. But United States Senator PAUL DOUGLAS and Gov. Adlai Stevenson of this State are living proof that the seeds which Roosevelt planted have struck roots deep into the American soil and that properly nurtured, they can and will bring forth rich and perennial crops.

It would be a mistake, I think, to consider that the greatest contribution of the late President Roosevelt to our political life and thought lay in any one or more of the great programs which he encouraged, supported, or carried through. It seems to me that his greatest contribution lay in the understanding he gave us of the nature of the twentieth-century world and the realistic approach he taught us to the problems of our times.

He sensed intuitively as well as intelligently the growing interdependence of men and nations in an age which has witnessed and is witnessing marvelous but frightening advances in science and technology. These advances have not only enormously increased man's control over nature and his capacity to produce but have almost obliterated barriers of time and distance. These advances have brought in the last century greater changes in the economic habits and living of men than occurred in the preceding 19 centuries. The paradox is that so many of Roosevelt's opponents regarded him as an advocate of dangerous change. In fact he was primarily concerned to find the means by which men could adjust themselves to the truly revolutionary changes which had already occurred in industry and agriculture, in finance, commerce and communications. His concern was how men could adjust to these changes in time without losing the great ideals of freedom and tolerance which he considered the most precious heritage of western civilization.

He was suspicious of all theories or magic formulae. Certainly he had no liking for totalitarianism. Nor did he believe that in a highly developed industrial state things would run smoothly if nature were allowed to take its course and the devil take the hindmost. Like Lincoln, Roosevelt believed that there are things that the state can and should do which individuals cannot do as well if at all. But he saw no virtue in the state doing what free enterprise can and should be able to do as effectively or more effectively than the state. With Brandeis, Roosevelt believed that if we would guide by the light of reason we must let our minds be bold. And with Brandeis he thought it more important to understand the facts of life than the theories of life.

Roosevelt felt deeply that individual freedom was threatened by the insecurity of man in an increasingly interdependent and potentially richer world. As a realist he could not believe in the inevitability of poverty amid plenty. Nor could he understand why the unavoidable—and I emphasize unavoidable—hazards of old age, sickness, and unemployment, of the loss of crops and of markets, should fall most heavily upon those least able to bear them or to protect themselves from them. Roosevelt believed as an English judge said some centuries ago that "necessitous men are not free men." He fought to make life in America and throughout the world more secure not because he loved freedom less but because he loved freedom more—freedom to live and to venture, not only for the strong and powerful, but for all mankind.

To Roosevelt freedom and security were simply two sides of one coin. Men could not long enjoy one without the other. To deny men the security necessary to their freedom in this interdependent world would, Roosevelt believed, discredit not only the principle of security but the principle of freedom itself. But security without freedom was, he thought, wholly illusory. He could not conceive of man really being secure in a totalitarian society in which no one could be free of fear in his own home or even in his own mind.

He was the master and not the slave of words. He looked behind words to realities. He thought in terms of people and resources. When he saw idle men and idle factories, and unused materials and unused crops, he inquired how they could be put to work and how they could be used to enrich the lives of individual men and women and to husband their farms and factories, their forests and their waterways.

He encouraged his advisers and coworkers to develop their own ideas, at times encouraging them to develop competing or even conflicting proposals. When it became necessary for him to approve or disapprove a proposal, he did not ask is this statism or even is this the welfare state. In fact, Roosevelt was very little concerned about the labels which either his friends or his enemies attached to a proposal he had to consider. But he was very much concerned to ascertain whether and how the proposal would work and what effect it would have on the lives of people, their jobs, their homes, their future.

When men were unemployed and factories idle and materials and crops were unused he was impatient with those who said nothing could be done about it, that the Nation must wait until deflation runs its course and confidence somehow or other returns. But when the war came and our factories and manpower were fully employed and new proposals were put before him requiring the use of more men and more materials, he was the very opposite of the character of Santa Claus or Lady Bountiful which some have ascribed to him. Then he would ask where are the men and where are the materials to come from and why are the new proposals entitled to priority over the work that is already absorbing the full energy of our people and the full use of our resources?

Some detractors of the New Deal like to say that Roosevelt changed during the war years and forgot the New Deal. But there was no

UNIVERSITY OF MILITARY LIBRARIES

change in Roosevelt's realistic approach to the problems which confronted him, no change in his practice of judging in terms of men and resources, free from any ideological bias, what could and should be done to safeguard the freedom and welfare of the people. And that to my mind is the essence of the Roosevelt tradition and the basis of the New Deal.

When my friend and former chief, Mr. James F. Byrnes, then Secretary of State, returned from the Paris Peace Conference in October 1946, he stated:

"America stands for social and economic democracy at home and abroad. The principles embodied in the social and economic reforms of recent years are a part of the American heritage.

"It would be strange indeed if in this imperfect world our social and economic democracy were perfect, but it might help our Soviet friends to understand us better if they realized that today our social and economic democracy is further away from the devil-take-the-hindmost philosophy of bygone days than Soviet Russia is from Czarist Russia.

"Whatever political differences there may be among us, we are firmly and irrevocably committed to the principle that it is our right and the right of every people to organize their economic and political destiny through the freest possible expression of their collective will. We oppose privilege at home and abroad. We defend freedom everywhere, and in our view human freedom and human progress are inseparable."

If, as I think nearly all Americans believe, human freedom and human progress are inseparable, we need full, fair, and free discussion of our vitally important problems. The Roosevelt tradition demands inquiring minds, not minds that blindly accept or blindly oppose every new proposal. We believe in a two-party system and if that system is to function properly the opposition party ought not to be either a me-too or a view-with-alarm party. It should seek out the vulnerable points in the position of the majority party. Its concrete and intelligent criticisms should keep the majority party alive and alert and on its toes.

But unfortunately we do not get that sort of constructive opposition from a party that couches its criticisms in fatuous words breathing sound and fury and signifying nothing.

The absence of an opposition party willing to face up to the facts of American life and destiny in the twentieth century world threatens the effective functioning of the two-party system. It is bad for the country because it deprives the party in power of the intelligent criticism and effective competition that it needs. It is bad for the country because if the country should tire of the party in power, it brings into power another party which is ill prepared to assume the responsibilities of government or to give the people the sort of government that they really want. Until we do have an opposition party that can keep step with the times, ADA will have to serve as the independent conscience of American liberalism.

The truth is that America has been a welfare state for many years. The truth is that in this mass-production society of ours practically no one produces, with his own labor, the food, clothing, shelter, and transportation he consumes or uses. In this interdependent society we are all dependent upon the state doing the things necessary to keep our economic machine from being stalled at dead center. The modern community may be compared, as Roosevelt compared it, to a modern factory where none of us can work or be free or secure at our chosen tasks when the conveyor belts stop moving.

The real issues are in deciding just what tasks the modern state should undertake and how the tasks should be executed to make certain that the conveyor belts keep moving. The real issues center and should center about problems of effective administration and democratic control and most importantly upon the practical effects of particular state actions on the lives of our people.

Take, for example, the Federal labor-management legislation. The opponents of the Wagner Act used to attack it as socialism. But today not even the NAM attacks the Taft-Hartley Act as socialism. But that does not make the Taft-Hartley Act a good law. Few today, however, would seriously propose that the Federal Government remove itself entirely from the labor-management field. But we do recognize that the issue is not a simple choice between socialism or laissez faire. And so it is with most of the great current issues like medical care, pensions, housing, aid to education, aid to agriculture, and even our relations with the Soviet Union, China, and Britain.

To all these problems we should apply the Roosevelt approach. This will give us no simple, automatic answer. This will require us to think through our problems fearlessly and boldly and avoid rubber-stamping our prejudices. The Roosevelt approach obliges us to inquire just how state action and private action affect the freedom and welfare not of the few but of the many. It requires us to think through just how necessary governmental functions can be administered, financed, and controlled so as not to discredit the great objectives they are intended to serve. But the Roosevelt approach requires confidence in ourselves and in our futures, and the potentialities of a nation of 150,000,000 people, free, enterprising, healthy in body, mind, and soul.

But in recognizing the great increase in the necessary functions of government in our interdependent society we must take heed that government remains the servant and does not become the master of the people. All power is subject to abuse. Public power no less than private power may be misused. Public power no less than private power may be influenced by the pressure of selfish groups. Public power no less than private power may bog down in the quagmire of administrative confusion and inertia. The wielders of public power no less than the wielders of private power may be more intent on holding their power than on doing their duty.

Safeguards against the arbitrary exercise of public power affecting the lives and liberties of millions is certainly no less essential than safeguards against the arbitrary exercise of private power affecting the lives and liberties of thousands. It used to be said that no person had a right to a particular job and that a private employer could hire and fire at will. As industry grew and one employer came to control tens of thousands of workers, it soon became evident that the right to hire and fire had to be subject to some safeguards. Thus also when government was small it used to be said that no man had a right to a Government job and he could be discharged at any time for any or no reason. But today Government is not small. Millions of people work for the Government. Some are specially trained for Government service and opportunities for the use of their special training outside Government are limited.

Roosevelt saw clearly the dangers of expanding the functions of the modern state without a Government service qualified to administer them. Roosevelt believed that the public was entitled to quality in the Government service. But he also believed that quality in the Government service could not be had unless the public respected and protected quality in that service.

It shocks me to hear it said today that such safeguards as protect the public servant in his job are only a matter of grace and not of right. And this is particularly true when the good name and repute of a public servant is involved. While the Government has a responsibility to protect the security of the United States, it also has a duty to protect its employees from being branded as disloyal or unworthy of public trust by star-chamber proceedings.

Of course, the situation confronting the Government is not simple. It is not a situation where we can say that in order to avoid any danger of individual injustice the Government must ignore any danger to the state.

The use by the Soviet Union in this and other countries of the Communist Party as an instrument of Soviet foreign policy does create dangers which no independent state can ignore. The dangers may be exaggerated at times but they are real and must be guarded against. Yet it is one thing to take reasonable measures to protect the national security and quite another thing publicly to accuse or to adjudge citizens as guilty of disloyalty without observing traditional judicial safeguards. The branding of an individual as disloyal or even as a poor security risk may affect his life and livelihood no less seriously than his conviction for an infamous crime. Persons known to have been dismissed or refused Government employment on loyalty or security grounds are not likely to find it easy to secure private employment.

The loyalty procedures of the Government may be an improvement over the ill-defined and indefinite procedures which they supplanted. But in my judgment the current loyalty procedures still have grave shortcomings and present grave dangers to individual rights.

Generally speaking acts of disloyalty should be defined by the Congress and punished by the courts in accordance with our century-old traditions. It is extremely difficult to see the need for individual loyalty investigations for the myriads of Government employees who are not in strategic positions in which they may acquire knowledge, the divulgence of which would really threaten the security of the United States. The blanket annulment of civil service rule I adopted in 1884 forbidding inquiry into the political opinions or affiliations of the applicant is entirely unwarranted. Every Government employee is now required by law to take an oath of loyalty. If he swears falsely he can and should be subject to prosecution for perjury. But dragnet efforts to determine by administrative process the individual loyalty of all Government employees offends the spirit and the letter of the Bill of Rights.

On the other hand individual investigations of the background, judgment, and trustworthiness of Government employees in security-sensitive positions is not only warranted but necessary. But the question should be considered as a question of the fitness and qualification of the individual for a particular position rather than a question of eligibility for the Government service generally. The duty of responsible administrative officials is to protect the security of the United States not to punish guilt or to proclaim suspicion.

Reasonable doubt as to the qualifications of an applicant for a security-sensitive position must be resolved against the applicant. But no person should be branded as disloyal and disqualified for service in nonsecurity-sensitive positions unless, in accordance with our common-law traditions, he has been given the benefit of a jury trial and of every reasonable doubt.

The present loyalty procedures are not restricted to security-sensitive positions. Charges for which no one is obliged to vouch are now made against individuals who are obliged to prove the charges false beyond a reasonable doubt without even seeing the reports on which the charges are based. The FBI makes the initial investigations but the FBI denies any responsibility for making any evaluation or appraisal of the results of its investigations. Most loy-

alty boards, fearful of making their own evaluations and without staff assistance to aid them, file charges on the basis of a few unchecked derogatory statements which may crop into an FBI report and leave it to the accused to prove his innocence.

It is not necessary for me to labor the anxiety, bewilderment and heartbreak caused to an innocent persan and his family by charges reflecting upon his integrity and loyalty. Of course the proceedings are supposed to be secret. But the accused cannot keep the secret from his wife and his friend or even from relative strangers from whom he must seek affidavits or supporting testimony. He usually is so worried and troubled that he feels that he must take a leave of absence to prepare his case even if he is not involuntarily suspended from his job. He must get a lawyer and sometimes that costs money. Of course, after months of anxiety he is usually cleared—but that rarely stops the rumors that he is under suspicion.

On January 4, 1939, President Roosevelt listed among the costs of dictatorship "the cost of being afraid to walk down the street with the wrong neighbor." We have no dictatorship in America. But today a Government employee may well be afraid to walk down the street with someone whom some undisclosed and unknown observer may consider the wrong neighbor.

The statistics published on the loyalty program as of November 1949 seem in a sense reassuring. Of the millions of employees affected less than 10,000 have had to go to the loyalty boards for adjudication. So far the loyalty boards have adjudicated 6,694 cases. In only 413 of these cases has the accused been found ineligible for employment. Of these adjudications, however, 107 or one-fourth have been reversed on appeal. One hundred sixty-one or more than a third are pending appeal or further consideration. Only 152 persons have in fact been dismissed as a result of the loyalty program. But 939 persons resigned while charges against them were pending adjudication by the loyalty boards. And I should hesitate to assume that all of these were in fact disloyal or questionable security risks. Some of them may have preferred to give up Government service rather than to submit to trial because they have been denounced by undisclosed informers.

If we assume that all the adjudications so far made and not reversed will stand and that all resignations pending adjudication were cases of ineligibility, we would have only 1,245 cases (306 adjudications and 939 resignations) of ineligibility determined by adjudication or resignation out of 7,633 cases (6,694 adjudications and 939 resignations).

It is reassuring to know that so few of our Government employees are found to be ineligible for employment on loyalty or security grounds. But it is difficult to understand why it is necessary for the loyalty boards to file charges requiring formal adjudication in so many cases where the charges cannot be sustained. In less than 1 out of every 6 cases in which persons are requested to answer formal charges before the loyalty boards is there found by adjudication or resignation to be a reasonable doubt as to the accused loyalty or security risk. Indeed excluding the cases of resignation and considering only the cases actually adjudicated the charges are sustained in less than 1 out of 20 cases.

It is interesting to contrast these figures with the figures of the criminal cases adjudicated in the Federal courts. Of the persons formally accused of offenses in the Federal courts, more than 80 percent are usually convicted or plead guilty before trial. In other words, in more than four cases out of five in which persons are required by the Federal Government to answer formal charges of law violation, the persons accused plead guilty or are found to be guilty beyond a reasonable doubt. Most of these plead guilty before trial, but if we eliminate convictions obtained before trial and cases dismissed by the Government before trial we find that of those actually tried in the Federal courts more than 3 out of 5 are convicted.

Various reasons may undoubtedly be offered to explain these figures, and the situations are not exactly comparable. Yet I am convinced that a principal explanation is that a Federal prosecutor would not think of going before a grand jury or court without making some effort to evaluate the available evidence and to assure himself that he had some sort of a case, while as a general rule no comparable effort is made by any responsible official before formal charges are made in loyalty or security cases.

Let me give you just one example of the harassment to which an innocent Government employee was inexcusably subjected. Miss A, a woman secretary, was requested to answer formal charges because of her alleged association with Mr. X. Witnesses before the Un-American Activities Committee had charged Mr. X with being a part of the Communist apparatus while he was in the Government. Miss A is said to have served as Mr. X's secretary. The facts at the hearing revealed that Miss A had worked in a Government office some time before Mr. X, whom she had not previously known, was assigned to the office as her acting chief. She continued at her usual work under the chief her Government had assigned to her. She remained at the same job after Mr. X was assigned elsewhere, and she had no further contact with Mr. X. Of course she was cleared by the loyalty board, but only after she had been obliged to employ counsel and had for months wondered what she could have possibly been thought to have done to be under such grave suspicion. Certainly in cases like this a little checking and evaluation of the evidence before the filing of charges could avoid needless anxiety and heartbreak.

I know one small law firm in Washington which has felt obliged to handle, with little or no compensation, 20 cases involving formal loyalty or security charges. In all 20 cases the accused was exonerated but not until after months of tension and hardship, and in some cases nervous break-down, and in one case a wife's miscarriage. The two members of this firm are very able lawyers, having held responsible positions in Government, but it is their view that every one of these cases could have been disposed of without formal charges, and with full protection to the Government's interest, by a reasonable effort to evaluate the evidence before the filing of formal charges.

Big government brings its problems, no less than big business, and we must not flinch in meeting the problems that both present. These are days fraught with great events. Dangers must be faced and met; opportunities must be seized and realized. But those of us who do not believe that dangers can be avoided and opportunities gained by seeking refuge in isolation and laissez faire must prove to those of little faith that we do not seek security at the expense of freedom.

We must stand firm against those who, in the name of security, would walk roughshod over our Bill of Rights. Only at our own peril can we allow Government service to become unattractive to those with inquiring nonconforming minds. In these critical days we need in Government men and women who are not only loyal and trustworthy but who are also alert and resourceful.

Roosevelt was always fearful of a regimented Government service. Some even called him a poor administrator because he would not always logically delegate responsibility or rigidly impose a line of command to eliminate conflict within his administration. He usually liked to test his own ideas with many and varied minds and to feel that the ideas he accepted from others had also been subject to similar testing. He was always wary of his administration falling too completely into the hands of one school of thought. It was no accident that he wanted the counsel of James F. Byrnes, Bernard Baruch, Cordell Hull, Henry Stimson, and Will Clayton, as well as of Harry Hopkins, Harold Ickes, Robert Jackson, William Douglas, and Thomas Corcoran. He knew how to get the best out of all of these. And don't forget that he was among the first to discover and appreciate the very unusual qualities of Harry S. Truman. But what was even more important he had the knack of making those in the Government service who seldom had direct contact with him feel that he valued initiative and imagination and was not afraid of new ideas. He inspired into all echelons of Government a new spirit of intelligence and devotion.

We must see to it that new spirit is not transformed into a dull conformity that forbids the mind to inquire or to venture. We must never forget that "where there is no vision, the people perish."

Ministry Outweighs the Law for Him

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES

Friday, February 3 (legislative day of Wednesday, January 4), 1950

Mr. MORSE. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD a very interesting and well-written article entitled "Ministry Outweighs the Law for Him," by Richard L. Neuberger, special writer for the Oregonian.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MINISTRY OUTWEIGHS THE LAW FOR HIM—PORTLAND ATTORNEY GIVES UP PRACTICE FOR CHURCH PULPIT

(By Richard L. Neuberger)

I remembered Corwin Calavan as one of the most brilliant students at University of Oregon law school.

In Portland, before the war, I heard occasionally of his steady progress up the staircase of the legal profession. His success as a lawyer seemed assured. Indeed, in large measure, it already had been achieved.

Then I lost touch with him, except to know that he was in the Navy while I was serving in the Army.

A few weeks ago he called on the telephone, asking me to speak at his church. To me, at the time, his church merely meant the parish to which Corwin Calavan belonged. It was St. Matthew's Episcopal Church.

But my friend of college days more than belonged to this church in Maywood Park, on the eastern fringe of Portland. He was its rector, a fact made obvious by the cassock and clerical collar he was wearing.

In 1946, when he was 36 years old, Corwin Calavan had abandoned the practice of law and gone to the Church Divinity School of the Pacific to study for the ministry. After 3 years of theological preparation in Berkeley, Calif., he now was commencing a totally new and different career at the age of 39.

That night we talked long and earnestly in his basement study at 9934 Northeast Mason Street.

UNIVERSITY OF WISCONSIN LIBRARIES

"My income is about 25 percent of what it was when I was an attorney," began Corwin Calavan, "and I'm happier and more at peace with myself than ever before in my adult life."

Because contentment is the most universal of goals, Calavan's decision fascinated me. What was the specific appeal of the church which had lured a man with two children and another on the way from a prospering law practice?

C. Corwin Calavan was born in Portland February 11, 1910, the son of a dentist. He attended Jefferson high school and got his law degree at University of Oregon in 1935. His campus career was orthodox and he was a member of the Kappa Sigma fraternity.

After embryonic legal work, he formed a partnership with Milton R. Klepper, an older attorney. Calavan undertook a good deal of civil trial work. He also drafted wills, contracts, and similar documents. In the summer of 1942 he entered the United States Navy and served until the end of 1945.

He emerged from uniform with the two and a half stripes of a lieutenant-commander. His principal duty was that of staff legal officer for the aircraft arm of the Seventh Fleet, assigned to the South Pacific amphitheater of war.

In 1942 Calavan had met a girl with a peaches-and-cream complexion named Frances Krumenacher at a Sunday afternoon garden party and married her. Today there are two children—bespectacled Sharon, aged 6, and Charles Corwin, Jr., 4. A third offspring is expected by spring.

These are the bare biographical facts of a career which was altered so drastically in mid-passage.

Was there one, incisive moment which, above all others, influenced Calavan's decision?

If so, he believes it occurred on the island of Manus, in the Admiralty Archipelago off the New Guinea coast. In the darkness of a Christmas eve, Lieutenant Calavan trudged over the brow of a tropical hill and heard hymns coming from a chapel. Beside the chapel, in the naked glare of arc lights, men bare to the waist were digging graves. Coffins lay promiscuously among the brown mounds of earth. Out in the harbor bulked dimly the superstructures of a convoy about to start for Lingayen Gulf in the Philippines.

"I stood there," said Calavan, "while the incongruity of it all sank into my consciousness. In the chapel men were celebrating the birth of the Saviour of mankind, the Prince of Peace. On the other side of the walls, men who had fallen in war were being buried. Soon our ships would leave to kill other men, or themselves be destroyed in the attempt."

Calavan continued: "Many terrible questions seemed unanswered. I wondered what I, in my profession, was doing to help unravel them."

Calavan moved on to the Philippines with the Seventh Fleet. With his natural inquisitiveness, he shared frugal meals with native families which owned nothing except a few cotton rags. These families had been bereaved by the war that the great powers of earth were conducting all around them. "Yet these simple men and women," recalled Calavan, "appeared to be contented and happy."

He went on, "I began to see that the important things were within a person. Genuine peace of soul was of far greater value than those external trivialities—transitory luxuries, expensive cars, fine clothes."

The lieutenant commander came home to Portland and resumed his torts and contract work. "All about me," he said, "I met people who had become rich during the war. Some of them were my clients. Their bank books bulged with impressive digits. But these people were not happy. Money was the only thing of tangible reality to them."

Calavan said he thought hard and stubbornly about his own fleeting role on earth.

"While practice of the law unquestionably was useful," said he, "it did not appear to be solving the problems which I had come to regard as basic. I realized I was not contributing what I wanted, in my heart, to contribute. As a lawyer, I was skimming the surface of mankind's troubles. As a minister, I might probe them to the depths."

Calavan had been raised a Presbyterian. He was a Presbyterian on the day he decided to sell his case reports and other legal references. But the religion which suited him the most, personally, was the Episcopalian.

"I liked the formalism of the Episcopal Church," he explained. "To me worship is not an intellectual process. It needs symbolism and ritual. These things make people feel their religion, and I believe religion should heavily involve the emotions. A person should worship God with all his senses, not merely the intellect. For these reasons, the formal nature of Episcopal services appealed greatly to me."

The attorney went to see Rt. Rev. Benjamin D. Dagwell, bishop of the Portland diocese. They never had met before, but to the older man Calavan poured out his soul. He was through with the law. He wanted to be an Episcopal minister.

Dagwell made it possible for Calavan to enroll in divinity school of the Episcopal Church at Berkeley. He graduated in June of 1949 with the degree of bachelor of divinity, the GI bill of rights having helped to finance the Calavan family during the 3-year course.

The new rector asked the bishop for a pulpit which would be a challenge. He feels that Dagwell satisfied this request.

Not only is Calavan a new rector, but St. Matthew's is a new church. The ex-lawyer is its first clergyman. The church began with only 15 or 20 parishioners. Today its membership is 130, and still growing. Does Calavan find being a minister a profound difference from being a lawyer?

He does, indeed.

In the first place, he has far less free time. Four or five nights a week he is occupied with the men's club of his church, with the various women's activities, with arranging day nursery programs, with visiting individual homes.

Calavan regards personal counseling as extremely important. During the summer of 1948 he attended the Massachusetts General Hospital in Boston to observe the work of psychiatrists and the general staff of the institution. Other clergymen joined him in this project.

"We learned a great deal about human behavior and human psychology," revealed Calavan. "Perhaps most fundamental of all, we learned to be good listeners. Some ministers may do too much talking themselves. I found out that distressed men and women can relieve their tensions and anxieties if they can tell what is disturbing them. I believe I have trained myself to be an intent and patient listener."

The rector of St. Matthew's deprecates the fact that his present income is only about a fourth of what it totaled as a lawyer. "So what?" sums up his attitude.

"We've dropped a few private clubs, curtailed my insurance program, and drive a smaller car," he added. "But what do these things amount to? They entail no real sacrifice. We eat all we want, and my wife and children are perfectly satisfied."

Pretty Frances Calavan corroborates this opinion. She enjoys being a clergyman's wife. "Our phone rings a lot more," she continued, "and I have a good deal more extensive social duties. But my relationships with the families of the church seem extremely worth while, and I share Corwin's pride in our new way of life."

Calavan believes he is not unique. He thinks the dislocations of the war induced many men to revaluate their careers. In one Wisconsin diocese of the Episcopal Church, for example, he explains that no fewer than 13 men who were in business or trade are preparing themselves for the cloth. "A time of great upheaval," said he, "tends to make us get down to fundamentals in our thinking."

The former barrister looks the part of his new profession. He has a long, serious face and a prominent, aquiline nose. A heavy mat of black hair, now heavily threaded with gray, surmounts a scholar's high forehead. His voice is pleasant but capable of a burning intensity. This tone comes into it when he says, "Religion to me is the channel by which people arrive at a better relationship with God. It gives men and women a sense of true fulfillment."

Calavan never has regretted his epic decision.

During his divinity studies at Berkeley, a long-distance call came through from Portland. A prominent lawyer wanted Calavan to take over his practice. It might yield a $20,000 annual income the first year. This would be five or six times the pay of a fledgling rector. Calavan did not hesitate in turning down the offer.

"I never gave the matter a second thought," he added.

We walked out on the level lawn in front of the parish house. A few flakes of snow were falling desultorily in the December night. They mingled with the fir needles on the frozen ground and were lost. "The basic thing," maintained Calavan, "is that I wasn't contributing as a lawyer what I was best equipped by temperament and conviction to contribute."

And he concluded: "Be sure to make people understand that."

I looked back at him. In the bright doorway of the little rectory he waved a hand in farewell. I thought then that his thick shock of hair stood up like a plume.

Proposed Change in Counting Electors

EXTENSION OF REMARKS

OF

HON. JAMES P. KEM

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Friday, February 3 (legislative day of Wednesday, January 4), 1950

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Proposed Change in Counting Electors," written by Arthur Krock and published in the New York Times of February 3, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IN THE NATION—THE PROPOSED CHANGE IN COUNTING ELECTORS

(By Arthur Krock)

WASHINGTON, February 2.—The amendment to the Constitution which more than the required two-thirds of the Senate agreed yesterday to submit to the States has taken only the first step on the long road to ratification. If the State delegations in the House of Representatives, which has yet to act, align themselves proportionately as the Senators did on this proposal to divide presidential electors on the basis of the popular vote in each State it will attract more than the two-thirds majority needed there also.

But this will not assure that the legislatures of three-fourths of the States will give the majorities of both branches that must be forthcoming before the Constitution can be amended.

The President hazarded a guess today that the process will still be incomplete when the voters of the United States go to the polls in the next general election, in 1952. Since the terms of the submission allow 7 years in which the States may consider the change, and it may well encounter local opposition which was not indicated in the Senate debate, that seems a good guess. But if the Senate vote truly represents mass opinion, and not chiefly that of politicians, toward a new method of choosing Presidents and Vice Presidents, the amendment may be added in far less time.

The majority in the Senate was made possible by the favoring vote of 16 southern Democrats who, with 30 northern and border State Democrats, joined 18 Republicans to make an approving total of 3 more than the essential two-thirds—61—of those "present and voting." If any 4 of these southerners had followed the 2 Virginians—Senators BYRD and ROBERTSON—in opposition, the Lodge-Gossett resolution, in which Senator KEFAUVER and former Representative Lea of California, also pioneered, would not have been submitted to the States.

The debate made very clear the reasoning by which these 16 Democrats were attracted to the proposal. They are at odds with the President's larger party group over the so-called program of civil-rights legislation. They believe that its genesis as the national party platform rests in the balance-of-power strength which is attributed to the Negro voters in non-Southern States with large blocs of presidential electors. If hereafter electoral votes are allocated in proportion to the popular vote in each State, these southern Democrats believe that balance-of-power groups, actual or claimant, will lose the power to dictate national Democratic policies because they will no longer be able to deliver a complete State electoral bloc by their affiliation.

The southerners are confident also that they will lose few electors in their own States by the change, unless that is the strategy of the Democratic organization; and that it will not stimulate in the South the rise of a two-party system, though this is one of the virtues asserted for the amendment by its advocates from all sections of the country. Convinced of these two things, the southern Democrats see in the amendment a sure way to reestablish their ancient power in the national councils of the party. They can, they foresee, deliver their electors substantially en bloc, or they can let some or all go by default to the opposition national ticket.

Others, apparently including Senator BYRD, regard these expectations as fallacious. They see situations in Northern States where splinter groups, unable to apply their present pressure on the major parties, will combine on independent tickets and get the bulk of the electors with a minority of the popular vote, then being able to wield a mightier balance of power. They see in the amendment also a bar to an independent Democratic movement in the South, as in 1948, because under the electoral change the political control of the State would then go, with most of its electors, to the Republicans.

But what probably troubled the Virginians most about the Lodge-Gossett amendment is an aspect which got no notice in the Senate debate but is sure to get it during the process toward ratification. This is its effect toward further dissolving States as units, thus amounting, as some see it, to another move toward a wholly Federal Government structure and away from the original Union of sovereign States.

When the Colonies which became States created the Federal Union they reserved all powers not otherwise delegated by them to the central Government in the Constitution, and in every other way the unit character of each State was stressed and protected. Hence, for example, the expressed will of a majority of Virginians was always to be registered in the Nation as the decision of Virginia. And this was true of all the other States, a concept maintained in the system whereby—with very slight deviations—all a State's presidential electors are allotted to the candidate who gets a popular majority vote.

Under the Lodge-Gossett amendment the will of a State in national elections is disunified. The voting majority gets some electors, the minorities above a certain fraction get the others, and both groups melt into a broad national alignment. Opponents of this result find it as unacceptable as they would a law prescribing that only 51 percent of a statute was enforceable because that was the size of the majority which approved it. And they are the more convinced that the amendment is an opening wedge for the direct election of Presidents because Senator LODGE announced that he introduced this amendment only because he never could get three-fourths of the States to ratify the Nation-wide method.

Displaced-Persons Legislation

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, February 3 (legislative day of Wednesday, January 4), 1950

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial in this morning's Washington Post entitled "Closed Door." We will soon be considering various amendments to the Displaced-Persons Act, and this fine editorial clarifies one of the proposed amendments which would bar so-called Marxists from obtaining visas under the act. Such a prohibition raises some serious questions not only for the effective administration of the legislation, but also for cherished American principles of free expression and peaceful change.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CLOSED DOOR

Senator MCCARRAN has added, let us presume in the interest of national security, an interesting new gimmick to the Displaced Persons Act. The amendments reported after so much delay by the Senate Judiciary Committee supplement the safeguards of the existing law against admission of undesirable persons by providing that "no visas shall be issued under the provisions of this act, as amended, to any person who is or has been a member of the Communist Party or a Marxist, or of any organization which has been designated by the Attorney General of the United States as a Communist organization * * *."

What interests us most in this catalog is the prohibition against any person who is or has been a Marxist. This means, of course, any person who is or has been a supporter of the present government of England. It means the entire body of Social Democrats who provided the most effective resistance to Hitler before the war and are now the most vigorous opponents of communism in many European countries. It means persons like Leon Blum and George Bernard Shaw and Pietro Nenni. In short, it probably means anyone to the left of Friedrich von Hayek or Ludwig von Mises. If Senator MCCARRAN had only thought to bar, in addition, any person who is or has been a Keynesian, he could have double-locked the door against anyone critical in any degree of the economic status quo ante bellum.

The ban on Marxists poses an obvious administrative impossibility. The term is too vague to convey any meaning, and individual political sympathies are too inscrutable to be determined by any consular examination. We hope the Senate will strike out this stipulation, however, not merely because it is absurd but even more because it is extremely dangerous. The punishment of unorthodox opinion is usually begun in relation to some helpless group such as aliens seeking admission to the United States. But once accepted, it is liable to be applied at home, say, to persons seeking employment in the Government. Marxists (or non-Marxists) who want to overthrow the Government of the United States by force can properly be excluded from this country, as they are under existing law. Marxists who believe in a peaceful change of the economic system can be excluded only at peril of imposing a sterile conformity.

Capehart Versus Acheson

EXTENSION OF REMARKS

OF

HON. CHAN GURNEY

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, February 3 (legislative day of Wednesday, January 4), 1950

Mr. GURNEY. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Capehart Versus Acheson," published in the Washington (Ind.) Herald of January 30, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CAPEHART VERSUS ACHESON

It was a bold thing to do when Senator HOMER E. CAPEHART stood on the floor of the United States Senate a week ago and demanded that President Truman request the resignation of Secretary of State Dean Acheson on the basis of revelations brought out in the Hiss trial. It was a bold thing to do but when Senator CAPEHART had finished documenting his case there could be no doubt in the mind of any reasonable person but that he had right and justice on his side.

Senator CAPEHART pointed out that it was in 1938 that Whittaker Chambers first came to Washington to lay the information he had about Communist activities in the Government before President Roosevelt. Presidential Secretary Marvin McIntyre referred Chambers to Adolph Berle, who then was in charge of intelligence matters in the State Department.

Berle listened to Chambers' story, including the part concerning Hiss, who was then employed in the State Department. Mr. Berle testified before the House Un-American Activities Committee that he discussed the matter with Dean Acheson, who then held a top post in the State Department. Nothing came of it. In fact, only a few months after the Chambers information concerning Hiss was developed to Acheson, Hiss received a promotion.

UNIVERSITY OF MINNESOTA LIBRARIES

For the past 12 years Acheson has had full knowledge of Hiss' activities during a 2-year period, 1936–38, in filching top-secret documents from the State Department and delivering them to Russian spies. He had this knowledge but he did nothing about it. On the contrary, he participated in promoting Hiss to positions of increasing responsibility, even to the post of confidential adviser to President Roosevelt at the Yalta Conference.

And after the second Hiss trial when Hiss was convicted of perjury; after a jury had said that Hiss was guilty of filching secret papers from the State Department and passing them to Russian spies; after Hiss had been proved to be a traitor; after all that, Mr. Acheson, Secretary of State of the United States, is quoted as having said, "I will not turn my back on Alger Hiss."

What other course could Senator CAPEHART have taken and still retained his self-respect as an American citizen and as a Member of the United States Senate? What other course was available to him but to stand on the floor of the Senate and request that President Truman demand the resignation of Dean Acheson?

We know not and care less what the "long hairs" in Washington may think, but to the good people of Indiana such straight talk and two-fisted action makes sense. We want no part of any person or group of persons who are disloyal to the United States.

The Potato Program

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Friday, February 3 (legislative day of Wednesday, January 4), 1950

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial which appeared in the Philadelphia Inquirer of February 3, 1950, entitled "Potatoes: Shocking Example of Wasteful Program."

This article emphasizes the need for an immediate lowering of our farm support price level, and point out how such action will benefit both the farmer and consumer.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POTATOES: SHOCKING EXAMPLE OF WASTEFUL PROGRAM

Federal support of farm prices at unreasonably high levels has, in the case of potatoes, led inexorably to the shocking situation in which the Government is faced with the necessity of destroying some 50,000,000 bushels which cost the taxpayers about $1.25 a bushel.

In the face of such flagrant proof of the waste involved in the present farm-price program it would be reasonable to expect demands for a prompt review of Federal policy. Instead, a move is under way to give the Commodity Credit Corporation some $2,000,000,000 more with which to buy up additional agricultural surpluses.

The housewife paying unnecessarily high prices for potatoes will be the first to recognize the need for lowering the price-support level to such a point that production will once again be geared to the level of consumption. Until this has been done the outlook is for a continued piling up of foodstuffs, many of them perishable, in Government warehouses at a constantly mounting cost to taxpayers.

Potatoes became the first crop to embarrass the Federal planners, but the situation with respect to wheat, corn, eggs, butter and other products differs only in degree.

Secretary of Agriculture Charles F. Brannan acted properly in going to the Senate Agriculture Committee for advice concerning what disposal should be made of the Government-owned potatoes, for his dilemma stems directly from the failure of Congress to lay aside political considerations and enact realistic farm legislation.

The committee's refusal to make any suggestion should deceive no one. In this instance Secretary Brannan has simply carried out a program laid down by Congress—a program with which he has been in disagreement.

The crisis in potatoes provides a most convincing demonstration of the necessity of a general lowering of farm-support price levels to a point where, without depriving producers of protection against sudden fluctuations of the market, food will be raised for the dinner table and not to be stored for a time in bulging Government warehouses—and then thrown away.

Proposed National Board of Education

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, February 3 (legislative day of Wednesday, January 4), 1950

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a copy of a letter which Dr. Hollis P. Allen, professor of education at Claremont College, California, and the compiler of the Task Force Report on Education for the Hoover Commission, recently sent to Pres. James B. Conant, of Harvard University.

The letter, in my opinion, presents a cogent argument in favor of establishing a National Board of Education, such as is proposed in the substitute measure, S. 656, which I introduced on October 19, 1949.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JANUARY 6, 1950.

President JAMES B. CONANT,
Harvard University,
Cambridge, Mass.

DEAR PRESIDENT CONANT: As compiler of the Hoover Commission Task Force Report on Education (pt. 3 of appendix P of the Commission publications) I am particularly pleased to note your selection as chairman of the schools and university committee of the citizens committee on the Hoover report. I recall your generous assistance to me in presenting data concerning the effect of the various Federal activities in education as they concerned Harvard.

There is so much good in the Hoover Commission findings and recommendations in general that I am extremely sorry to find it necessary to take issue with it in respect to its particular report concerning education. I do hope that you may see your way clear to approach these problems in the constructive manner which has been so typical of your past valued service to education throughout the country.

With many others who have the best interests of education at heart I am greatly concerned over the failure of the Hoover Commission to give serious consideration to any of the proposals and recommendations of this task force report concerning education. I suspect that this may have been due to the very brief time which the Commission was able to devote to its final deliberations. I trust that I am not imposing on you to present a few considerations:

1. As pointed out in the task force report, our difficulties concerning education at the Federal level has been largely due to lack of any consistent policy. Both the Brookings Institution, which prepared this and other welfare task force reports, and I had understandings with the Commission that policy consideration was an essential prerequisite to determination of organizational matters in education. In reports of progress to the Commission staff I stressed that evaluation and development of Federal policy in education must precede and to a considerable extent determine Federal organization for education, a point which was mutually agreeable.

In spite of this the Commission stated in its Report on Social Security and Education—Indian Affairs (p. 4) that "it is not the province of this Commission to pass upon policies." Again on page 12 it stated "this Commission is not dealing with policies." Under the same cover, however, in dealing with Indian affairs (p. 63) it first considered policy and stated "this policy should be the keystone of the organization and of the activities of the Federal Government in the field of Indian Affairs." If policy is the keystone in Indian Affairs it is many times more so in respect to education. Apparently the Commission could consider policy when it so desired.

2. The act of Congress which established the Commission specifically charged it with the following:

(1) Limiting expenditures to the lowest amount consistent with the efficient performance of essential services.

(2) Eliminating duplication and overlapping of services.

(3) Consolidating services of a similar nature.

(4) Abolishing services not necessary.

(5) Defining and limiting executive functions.

Our task force report makes specific recommendations in respect to each of these functions of the Commission, yet all have been ignored. For instance, the school-lunch program of the Department of Agriculture overlaps and duplicates similar activities of the Office of Education. Thus we recommended that this program—$92,000,000 in fiscal 1949—be consolidated in the Office of Education. In spite of the fact that the task force on agriculture made a similar strong recommendation, these two task force recommendations, in complete harmony, were entirely ignored. There is extensive overlapping and sometimes conflict between the Agriculture Extension Service and the program for vocational education in agriculture, particularly on the local level. This was treated both in the Agriculture and Education task force reports, and suggestions made for improvement, but these suggestions were ignored by the Commission. We felt it highly desirable to limit executive functions, in order to eliminate a partisan type of thought control which could easily permeate present programs of education, yet this has been ignored by the Commission. Many other illustrations could be given.

3. Our task force report took the position that educational activities on the Federal level should be evaluated in terms of the effect on States and local institutions where the basic responsibility for education rests. Both policy and organization should be developed in terms of similar criteria. At the one place where we most fear control

or an authoritarian approach to education we have given it the fewest safeguards. We have made recommendations to overcome this and to strengthen educational responsibility and leadership in States and in local institutions, yet they have been ignored by the Commission. The Commission has taken the point of view that what looks neat and streamlined in an organization chart, where partisan influence can be exerted, is of more importance than keeping education democratic and close to the interests of the places where basic responsibility should rest.

Out in the open I have little fear of undue Federal control of education. But with hidden and totally uncoordinated and highly specialized educational activities tucked hither and yon over most of the Federal departments and agencies, with no central or over-all plan or policy, I greatly fear a more subtle type of control which we now have and which is constantly increasing. The Commission would have this continue. Neither it nor I want a large and powerful Federal educational agency. But it is essential that we have an agency which is sufficiently effective to bring some semblance of order out of this chaos; sufficiently out in the open and unsubordinated to partisan considerations to be an adequate influence in coordinating these activities and keeping the American public informed of educational trends on the Federal level.

4. Frankly, when I started my study for the Commission, I held the hypothesis that a Federal Department of Health, Welfare, and Education was appropriate. As my evidence accumulated, however, I reluctantly had to desert this position as unsound and damaging to the best interests of education. After reviewing arguments for and against the various proposals, I firmly came to the conclusion that an independent agency for education, with a National Board of Education, holds by far the greatest promise for overcoming the present and potential dangers and the current chaos in educational activities of the Federal Government. Under our proposals I believe we can develop much highly effective teamwork between Federal, State, and institutional agencies in education which can be of material benefit in increasing the potentialities of education in the national welfare.

If you have not already done so I hope you can at least take time to read chapter V (pages 361 to 378 of Appendix P) of our task-force report. Unfortunately, this report was rather hurriedly condensed from more voluminous materials, and I consider it quite unsatisfactory in many respects. However, McGraw-Hill is publishing my complete manuscript in February of this year under the title "The Federal Government and Education." I hope the latter may have a desired effect in acquainting the public with the important issues and possible solutions to the many problems involved.

Sincerely,

HOLLIS P. ALLEN,
Chairman, Committee on Teacher Education.

Development of the Columbia River Basin

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Friday, February 3 (legislative day of Wednesday, January 4), 1950

Mr. CAIN. Mr. President, I ask unanimous consent that two letters and appendices, dated February 1, 1950, and written by Frank Pace, Jr., Director of the Budget, to the Secretary of the Army and the Secretary of the Interior, respectively, be printed in the Appendix of the RECORD. These letters which discuss the Pacific Northwest will be of interest to every Member of Congress and to all citizens of the area in question.

There being no objection, the letters and appendixes were ordered to be printed in the RECORD, as follows:

EXECUTIVE OFFICE
OF THE PRESIDENT,
BUREAU OF THE BUDGET,
Washington, D. C., February 1, 1950.

The honorable the SECRETARY OF THE ARMY.

MY DEAR MR. SECRETARY: On July 15, 1949, you transmitted to the President your report on a plan for the development of the water resources of the Columbia River Basin. This report has been considered along with the related report of the Secretary of the Interior, and in connection with the provisions of H. R. 5472, now pending in the Senate.

Because of the close relationships between the reports and the bill, particularly if H. R. 5472 is amended to include authorization of projects for the Bureau of Reclamation, it was felt that in the main, the President's views should be set forth in one letter. Accordingly, I have transmitted to the Secretary of the Interior a letter which, together with its appendices A, B, and C, and this letter, set forth the conditions attached to the President's approval of the two reports, and contain his views respecting amendment of H. R. 5472. A copy of the letter to the Secretary of the Interior is enclosed.

In summary, your report is approved for submission to the Congress, and the President recommends authorization by the Congress at an early date of the projects which are listed in appendix B, with the limitations indicated therein. This approved list omits certain navigation and flood control projects, listed in appendix A, and certain flood protection works for which sufficient data are not at present available to provide justification. These limitations and omissions are made without prejudice to their later reconsideration at such time as sufficient data are available to permit final determination concerning the need and economic justification for them.

You are requested to seek amendment of H. R. 5472, so far as the Department of the Army is concerned, to eliminate the Columbia Basin projects now included in it which are not listed in appendix B, and to include those projects listed in appendix B which are not at present in the bill.

The President has asked me to express his appreciation to you and to the Secretary of the Interior for the cooperative efforts made by the two Departments to present their respective plans in a complementary and coordinated framework.

A copy of this letter is being sent to the Secretary of the Interior for his information, and it will be appreciated if you will transmit a copy of it to the Congress along with your report.

Sincerely yours,

FRANK PACE, JR.,
Director.

EXECUTIVE OFFICE
OF THE PRESIDENT,
BUREAU OF THE BUDGET,
February 1, 1950.

The honorable the SECRETARY OF THE INTERIOR.

MY DEAR MR. SECRETARY: This letter sets forth the conditions under which your report on plans for the development of the Columbia River Basin is approved by the President for submission to the Congress, and replies to your letters of January 6, 1950, concerning amendment of H. R. 5472, now pending in the Senate.

Columbia River Basin report: On June 20, 1949, you transmitted to the President a supplemental report on a plan for the development of the water resources of the Columbia River Basin. This report, together with the related report of the Secretary of the Army, sets forth a plan of engineering works for the physical development of the basin's water resources, which, subject to certain qualifications noted below, is approved by the President for submission to the Congress.

The works projected by the Bureau of Reclamation and the Corps of Engineers represent a construction program which will extend over a period of about 20 years. When completed, they will make the Columbia River system the greatest source of hydroelectric power in the world and will yield additional benefits in terms of flood control, navigation, reclamation, and other beneficial uses of water. The President recommends the authorization by the Congress at an early date of the projects herein approved, so that orderly plans for construction and budgeting may be laid out.

At the same time, as you pointed out in your letter of June 20, 1949, an engineering program for the construction of physical works falls far short of meeting the need for truly comprehensive and coordinated development of the water and other resources of the Pacific Northwest. First, the program, concerned with one river system, is planned for construction and operation by two departments of the Government. Further, the program is confined to river projects and does not extend to such equally important aspects of resource conservation and development as soil conservation and land management, reforestation and forest management, and mineral exploration and development. For these reasons the President strongly endorses your view that authorization of this program by the Congress will make it more important than ever to establish a better organizational framework and a more uniform statutory basis for the conservation and development of all natural resources in the Pacific Northwest, such as would be provided by the Columbia Valley Administration he has already recommended.

We are only at the beginning of a tremendous development program in the Pacific Northwest. If the Federal Government is to carry out its part in this program effectively, in proper coordination with State and local governments and private activities, there must be unified Federal responsibility for scheduling, designing, constructing, and operating multiple purpose water control projects, and for assuring wise planning and integration of the contemporaneous activities of all the Federal agencies concerned with the land, forest, and mineral resources of the region.

In the meantime, it is obvious that the coordination of their respective programs which has been effected by the Departments of the Interior and the Army is essential. The agreements which they have reached on certain policies concerning the interrelationship of their programs in the Pacific Northwest appear to represent a practicable plan under which the two Departments can work together within the shortcomings of the present Federal pattern of piecemeal legislation and divided administrative responsibility. The President expects that the two Departments will continue to operate in conformity with agreements of this general character. However, such agreements, by their very nature, should be considered only as operating agreements, to be changed and brought up to date from time to time. Their form and content should not be frozen by statutory enactment.

To meet one outstanding deficiency in present laws the two Departments have recommended the establishment of a so-called basin account to permit a more intelligent accounting for power revenues from the

UNIVERSITY OF WISCONSIN LIBRARIES

various Federal plants in the Pacific Northwest and for the various costs which are to be returned from those revenues. Such an accounting method is obviously necessary to permit efficient management of the Government's power operations in the Columbia Basin and a proper assignment of power revenues to return the costs of irrigation facilities which are beyond the ability of the water users to repay. Subject to specific detailed changes in the proposed legislative provisions authorizing its establishment referred to in subsequent paragraphs, the President approves the establishment of a Columbia Basin account and recommends its enactment by the Congress.

The following numbered paragraphs set forth certain detailed comments on your report and that of the Secretary of the Army which reflect the position of the President concerning them.

1. Authorization for construction of the power-generating facilities proposed by the Bureau of Reclamation and the Corps of Engineers would be in accord with the program of the President except for the power features of the Garden Valley Dam and Power Plant of the Mountain Home project, which are not approved at this time because of their relationship to the irrigation features of the project.

2. Authorization for construction of flood control and navigation facilities by the Corps of Engineers would be in accord with the program of the President except for the specific items set forth in appendix A, which should be used as a basis for recommending such amendments as may be necessary in H. R. 5472.

3. Authorization of all irrigation projects would be in accord with the program of the President with the exception of the Mountain Home project. Objection to authorization of the irrigation features of Mountain Home project at this time is without prejudice to its reconsideration after the report of the President's Water Resources Policy Commission has been received. That report will deal with a number of the major policy issues involved, including the maximum length of time for repayment of irrigation costs, the levels of subsidy justifiable for irrigation projects, the source of such subsidies, and related considerations.

Two reservations are made with respect to irrigation projects. First, it is understood that in connection with the Crooked River project, investigation of an alternative dam site (Post Reservoir) is about to be concluded and that the alternative site may be preferred by reason of being more economical. A final report and justification of the site decided upon is to be submitted for approval in the usual manner before any request for funds is made. Second, in the case of the Canby project, while it would appear that the works proposed are economically justified and can be paid for in full in a 40-year interest-free period, it is noted that the project is located in an area of 42 inches of annual rainfall. This fact raises questions of national policy as to irrigation of lands in humid areas and even in the Eastern States where there are occasional shortages of rainfall. Approval of the project at this time does not constitute a precedent for general endorsement of similar projects on a Nation-wide basis.

4. A consolidated list of all projects approved by the President for authorization is attached as appendix B. This should be used as a basis for recommending amendment of H. R. 5472.

5. Allocations of construction costs to pollution abatement, salinity control, recreation, and sediment control are not approved at this time. The handling of recreation and sediment control as approved by the President in my letter to you dated January 27, 1950, concerning amendment of H. R. 1770, would be without objection.

6. Reallocations of cost are approved subject to the limitations set forth in the amendments to H. R. 1770 proposed in my letter of January 27, 1950.

7. Further discussion of the basin account and the use of the interest component on the power investment to the return of nonpower costs will be found in a subsequent paragraph dealing with specific amendments to H. R. 5472.

Amendment of H. R. 5472: There is no objection to the submission of your proposed report to the Vice President as attached to your letters to me dated January 6, 1950. The relationship to the President's program of specific amendments to the bill (as suggested in attachments to your proposed report) is discussed in subsequent paragraphs.

8. Section — (a) (as drafted for inclusion at the appropriate place in the bill), if enacted, would approve the reports of the Commissioner of Reclamation and the Chief of Engineers; would authorize construction of the projects, works, and improvements recommended in the reports as coordinated by the agreement of April 11, 1949; and would, in effect, provide statutory ratification of the responsibilities of the two agencies as set forth in the agreement.

As has already been pointed out, approval of the reports as submitted will not meet the requirements of the President. Authorization of projects is approved only to the extent indicated in appendices A and B. Statutory enactment of the interagency agreement is both unwise and unnecessary for reasons already indicated. Since the present bill already authorizes the projects of the Corps of Engineers, only textual changes are needed to bring its provisions in accord with the positions set forth in preceding paragraphs. New language, however, is needed to authorize the projects of the Bureau of Reclamation and to authorize appropriations for them. Proposed text for these purposes is attached in appendix C in the form of a new section for insertion in H. R. 5472. The President requests that you confer with the Senate committees in working out the details concerning the list of projects to be inserted in the section. He has authorized me to suggest that the aggregate total authorization for appropriations for projects for the Bureau of Reclamation be held at this time to $200,000,000, about half of the total required for the projects approved.

9. Section — (b) of your amendments would authorize the basin account. Since receipt of your letters of January 6, staff discussions have resulted in agreement as to the exact form of authorizing provisions to be recommended for enactment by the Congress. The text of these provisions will be found in appendix C in the form of a new section for insertion in H. R. 5472. I believe that the underlying concepts of the basin account, the revenues to be included in it, the charges to be made against it, and the other terms and conditions surrounding it are largely self-explanatory.

Four points are worthy of special mention. First, the basin account will provide a better method of accounting than is now the case, but it will in no way affect the flow of funds to and from the Treasury. Present law will continue to control the processes of making appropriations for constructing and operating projects, and of paying receipts into the Treasury. The basin account, in short, is for accounting but not for funding purposes. Second, projects will be included in the basin account only upon specific approval by the Congress. Third, the provisions concerning power rates require interest to be charged on the outstanding Federal investment in power facilities; that is, the amount of the investment less amounts for depreciation and amortization which have been repaid to the Treasury. Fourth, in setting rates for the sale of power, the Secretary may consider the application of interest on the power investment, from the various projects covered by the account, to the return of nonpower costs, only to the extent that he can do so under reclamation law—existing or as hereafter amended. As you know, this is one of the matters on which recommendations are expected from the President's Water Resources Policy Commission.

10. The provisions proposed in your amendments as subsections (c), (d), (e), (f), and (g) have been replaced in the proposed provisions in appendix C, or eliminated as unnecessary.

11. Elimination of section 208 of the bill (Alaska) would be in accord with the program of the President for the reasons set forth in your statement. The amendments which you suggest with respect to Grand Prairie-Bayou Meto, the study commission for the Arkansas-White and Red River Basins, and the study commission for the New England river basins would be in accord with the program of the President. It is believed, however, that provisions should be made to extend the jurisdiction of the New England Commission in such manner as to insure that it is authorized to consider the Passamaquoddy project and to take into account the interrelationships between development of power in New England and development of power in New York State and internationally along the St. Lawrence River.

A copy of this letter is being sent to the Secretary of the Army for his information and guidance, and I am enclosing a copy of my letter to him.

It will be appreciated if you will transmit a copy of this letter to the Congress along with your report.

Sincerely yours,

FRANK PACE, JR.,
Director.

APPENDIX A

COLUMBIA BASIN RECOMMENDATIONS FOR NAVIGATION AND FLOOD CONTROL HELD NOT IN ACCORD WITH THE PROGRAM OF THE PRESIDENT

Project: Snake River navigation channel and harbors on Snake River.

Comment: The benefits developed in the report are based entirely on a speculative demand for limestone for agricultural and industrial uses in the lower Columbia Basin. Use of the facilities is also contingent on completion of lower Snake and Columbia River dams, upon which construction may be under way for a decade or more. The navigation features may be determined feasible upon development of a firm demand for limestone products and upon completion of necessary downstream control units.

Project: Harbors on Columbia River.

Comment: Data sufficient to permit final determination of the size and location of necessary harbor facilities are not available. Local needs may be more accurately predicted when construction is advanced on The Dalles, John Day, and McNary Dams.

Project: Kootenai River at Bonners Ferry, Oreg.

Comment: Benefits to be realized through raising of levees at Bonners Ferry would be of an interim nature, since the protection would not be required after regulation of the stream by Libby Dam. There appears to be a lack of local interest in provision of additional levee protection at Bonners Ferry. Relative infrequency of flood stages sufficient to overtop existing levees appears to render an interim protection at this location inadvisable at this time. In case construction of Libby Dam is not undertaken within a reasonable period of years, this project might be resubmitted for consideration.

Project: Willow Creek at Heppner, Oreg.

Comments: The economic ratio of the project based on valuable benefits is less than unity because of the infrequency of excessive flows. The project would contribute little, if any, toward elimination of flood damages along the main stem of the Columbia. A more modest proposal for protection

at this locality may prove economically justified.

Projects: Cascadia Dam, Lewisville Dam, Gate Creek Dam, Wiley Creek Dam, modification of Fern Ridge Dam.

Comments: These projects or project modifications, in Willamette subbasin, having economic ratios of unit or less are held not in accord with the program of the President at this time.

Project: Supplemental levees, Willamette subbasin.

Comments: The report indicates that to prevent damage through overtopping, construction of the levees must be held in abeyance pending completion of all upstream storage units. Since the present economic ratio of the recommended work is considerably less than unity, this item is considered not in accord at this time. It is possible that the agency may wish to resubmit the proposal for authorization if and when a decline in construction costs may result in a more favorable economic ratio.

Project: Overflow channel closures, Willamette subbasin.

Comments: The report contains insufficient data to permit determination of location or design of necessary closures. It would appear that the effects of several reservoir evacuations would have to be observed to ascertain need for these structures. This fact, combined with the present economic ratio, indicates the advisability of delaying authorization of the feature.

Project: Engineering research and experimental laboratory.

Comments: The value of working models in solution of design problems is recognized, and their use in connection with advance planning on units of the proposed Columbia Basin project should be encouraged. A $15,000,000 laboratory to accomplish the experimental program, does not, however, appear necessary as an adjunct to the Columbia Basin plan. Construction of elements of the project will be prosecuted over several decades. The magnitude of the program will not in itself justify the laboratory since planning and design should conform generally with the anticipated construction program. The existing laboratories of the Corps of Engineers and Bureau of Reclamation available for this work can be expanded without additional authorization if necessary.

APPENDIX B

COLUMBIA BASIN RECOMMENDATIONS CLEARED FOR AUTHORIZATION WITHOUT OBJECTION

Corps of Engineers

Main control plan: Libby Dam, Albeni Falls Dam, Priest Rapids Dam, John Day Dam, The Dalles Dam. Lower Columbia River levees and bank protection works: The necessity for levees and bank protection on the lower Columbia River will diminish progressively with completion of upstream reservoirs. The recommendation for authorization is cleared without objection, subject, however, to the condition that requests for construction funds for this purpose should be subject to annual review to insure conformity with local requirements.

Willamette subbasin plan: Hills Creek Dam, Fall Creek Dam, Holley Dam, Tumtum Dam, Cougar Dam, Blue River Dam, Green Peter Dam, Waldo Lake storage development, White Bridge Dam, Meridian Dam power features, Dexter Dam. Although these projects or project modifications have economic ratios of unity or less the need for meeting anticipated power requirements in this shortage area together with the greater cost involved in building transmission facilities to meet the shortage from alternate sources justifies clearance without objection.

Willamette Falls fish ladder, channel improvements for flood control and major drainage, bank protection works, channel clearing and snagging.

Subbasin plans:

Jackson Hole levees, Snake River, Wyo.

Umatilla River at Pendleton, Oreg.

Local flood-protection projects, Columbia Basin: The report indicates that data sufficient to determine final design and justification of all proposed local flood-protection works are not available. Pending completion of current investigations which may indicate possibility of some additional items, the following features are cleared for authorization, subject to a limitation of $15,000,000:

Clark Fork: Missoula, Mont.; St. Regis River, Mont.; Lightning Creek, Idaho.

Yakima River at Ellensburg, Wash.

Okanogan River, Wash.

Methow River, Wash.

Entiat River, Wash.

Wenatchee River, Wash.

Crab and Wilson Creek, Wash.

Upper Snake River: Heise-Roberts area, Idaho; Shalley area, Idaho; Blackfoot area, Idaho; Teton River, Idaho; Blackfoot River, Idaho; Portneuf River and Marsh Creek, Idaho; Mud Lake area, Idaho; Little Wood River, Idaho; Camas Creek area, Idaho.

Central Snake River: Malheur River, Oreg.; Boise Valley, Idaho; Payette Valley, Idaho; Weiser River, Idaho.

Middle and Lower Snake Rivers: Whitebird, Idaho; south fork of Clearwater River, Idaho; Kendrick, Idaho; Palouse River, Oreg.; Grande Ronde River, Oreg.

Minor tributaries below the Yakima River: Lower Walla Walla River, Wash.; Mill Creek, Wash.; Touchet River, Oreg.; Umatilla River, Oreg.; John Day River, Oreg.; Prineville, Oreg.; Randle, Wash.; Lower Cowlitz River, Wash.; Umatilla Harbor, Oreg.; Columbia slough channel; Baker Bay channel, Washington; Westport slough channel, Oregon.

Other: Hydrometeorological reporting network for Columbia Basin and hydrologic reporting network for Willamette subbasin. Any requests for funds for these purposes should contain information relative to the plan of operation and should indicate the manner and extent of anticipated participation by cooperating Federal agencies and affected States.

Bureau of Reclamation

Mountain Home project, Idaho, following features only: Upper Scriver Creek power plant, Lower Scriver Creek power plant, Smiths Ferry Dam, Smiths Ferry-Scriver Creek tunnel, Scriver Creek Dam and Reservoir.

Cambridge Bench project, Idaho: Council project, Idaho; Hells Canyon project, Idaho. This item is cleared without objection, subject to elimination of transmission facilities ($120,000,000). These facilities, if and when required, would come more approximately under another Federal agency.

Bitterroot Valley project (including Woodside unit), Montana.

Canby project, Oregon.

Crooked River project, Oregon. Cleared subject to understanding that final report and justification of site decided upon will be submitted for approval before any request for funds is made.

Vale project, Oregon, Bully Creek extension.

The Dalles project, Oregon, west unit.

Grand Coulee Dam, Wash., modifications for flood control.

Upper Star Valley project, Wyoming, and the following projects, previous authorized under the Water Conservation and Utilization Act: Mann Creek poject, Idaho; Missoula Valley project, Montana, north side unit.

APPENDIX C

DRAFT OF CERTAIN AMENDMENTS TO H. R. 5472

(For insertion at appropriate place in bill)

SEC. — (a). The following projects are authorized to be constructed, substantially in accordance with the report of the Commissioner of Reclamation dated May 2, 1949, by the Department of the Interior under the supervision and direction of the Secretary of the Interior, who in prosecuting his activities under this section, and in operating and maintaining such projects, shall be governed by the Federal reclamation laws (act of June 17, 1902, 32 Stat. 388, and acts amendatory thereof and supplementary thereto):

(List to be inserted here)

(b) The sum of $200,000,000 is hereby authorized to be appropriated for the partial accomplishment of the projects authorized in this section.

SEC. —. (a) In order to provide a method of accounting which reflects the interrelationship of certain projects in the Pacific Northwest, the Secretary of the Interior shall establish a Columbia basin account. The account shall be credited with all power and miscellaneous revenues, including revenues on account of benefits to downstream power plants which result from upstream Federal improvements, derived from or incidental to the operation of Federal power plants now existing, or authorized heretofore or in this act, within the Pacific Northwest, including all transmission lines and other facilities incident to the marketing of power from such plants. The account shall be charged with all operation and maintenance costs of such power plants, transmission lines, and other facilities, with all construction costs of such plants, lines, and facilities that are allocated to power purposes, and with interest as provided in subsection (c). The account shall also be charged with all reimbursable costs properly allocable to purposes other than power, but which are assigned for return from power revenues, in connection with all projects now existing, or authorized heretofore or in this act, within the Pacific Northwest, whether or not such projects include power features: *Provided*, That assignment of such costs of existing or heretofore authorized projects in excess of amounts which are so assignable under the Federal Reclamation Laws (act of June 17, 1902, 32 Stat. 388, and acts amendatory thereof or supplementary thereto) shall be made only upon specific authorization by act of Congress. Revenues and costs in connection with projects hereafter authorized to be constructed in the Pacific Northwest shall be included in the Columbia Basin account only upon specific authorization by act of Congress. For the purposes of this section, the Pacific Northwest shall be defined as the area, within the United States, comprising the Columbia River Basin, the basins of other streams entering the Pacific Ocean between the Canadian boundary and the California-Oregon boundary, and the closed drainage areas of Oregon.

(b) As of the close of each fiscal year, beginning with the fiscal year 1951, the Secretary of the Interior shall report to the Congress on the status of the Columbia Basin account, and on the revenues from and cost of constructing and operating Federal facilities in the Pacific Northwest for the supply of water for irrigation, municipal water supply, or other reimbursable purposes. The Secretary's report shall be prepared in such a manner as accurately to reflect the Federal investment in power plants and facilities, and in water-supply facilities, and the progress of return and repayment thereon.

(c) The revenues and costs credited and charged to the Columbia Basin account, together with estimated future costs and revenues, shall be taken into account in fixing

rates for the sale of power and energy from Federal plants and facilities in the Pacific Northwest. Such rates shall be fixed from time to time by the Secretary of the Interior, after consultation with the Federal Power Commission, at levels which in the aggregate will be at least sufficient to cover (1) the operation, maintenance, and all other costs of generating, transmitting, and disposing of such power and energy, including among such costs depreciation on the depreciable properties included in the construction costs allocated to such generation, transmission, and disposition, plus amortization, over a reasonable period of years, of the nondepreciable properties included in the construction costs so allocated, and including interest on the balances of such construction costs remaining after the deduction of depreciation and amortization, at rates not less than those specified in existing applicable laws or, where no rates are so specified, at such rates as may be determined from time to time by the Secretary of the Treasury to be appropriate, having regard to the probable term of the power investment and the rates payable on outstanding marketable obligations of the United States; and (2) any additional amounts which may be required to return the reimbursable costs properly allocable to purposes other than power, but assigned for return from power revenues. In setting rates for the sale of power and energy, the Secretary of the Interior may take into consideration, for all properties covered by the Columbia Basin account, the application of interest on the power investment to the return of costs properly allocable to purposes other than power, but assigned for return from power revenues, to the same extent that application of interest on power investment to the return of such costs may be taken into consideration under the Federal reclamation laws.

(d) Allocations of construction costs for projects authorized in this act to be constructed in the Pacific Northwest, and for other projects included in the Columbia Basin account as to which allocations have not heretofore been made, shall be the responsibility of the Secretary of the Interior in the case of the projects constructed or to be constructed by the Department of the Interior, after consultation with the Secretary of the Army as to allocations to flood control and navigation and with the Federal Power Commission as to allocations to power. Such allocations shall be the responsibility of the Secretary of the Army in the case of projects constructed or to be constructed by the Department of the Army, after consultation with the Secretary of the Interior in the case of allocations to irrigation and the preservation and propagation of fish and wildlife, and with the Federal Power Commission and the Secretary of the Interior with respect to allocations to power.

(e) The Secretary of the Interior shall contract for appropriate repayment to the United States, in accordance with the Federal reclamation laws, for all irrigation services provided by or obtained from all projects in the Pacific Northwest constructed pursuant to the laws affecting the prosecution of works for the improvement of navigation and the control of floods.

(f) Except as specifically provided in this section, nothing herein shall be construed as repealing, modifying or affecting in any way the Federal reclamation laws, the laws affecting the prosecution of works for the improvement of navigation and the control of floods, the act of August 20, 1937 (50 Stat. 731), as amended, the act of June 5, 1944 (58 Stat. 270), the act of December 22, 1944 (58 Stat. 887), or the act of March 2, 1945 (59 Stat. 22). Nothing in this section shall be construed to apply to projects of the Bureau of Indian Affairs or to supersede existing provisions of law relating to the protection and conservation of fish and wildlife.

Germany's Relations With Eastern and Western Europe

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Friday, February 3 (legislative day of Wednesday, January 4), 1950

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an article entitled "Made in Germany" appearing in the No. 32 issue of the magazine Prevent World War III, published by the Society for the Prevention of World War III, 515 Madison Avenue, New York, N. Y.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MADE IN GERMANY

"UNTIL THESE PLANS ARE CHECKED, THEY WILL PRESENT A CONSTANT MENACE TO POSTWAR PEACE AND SECURITY"

"We long for a sword, but no God can give us one now." This was the fateful verdict of the Versailles Treaty, according to Gustav Stresemann, Germany's Foreign Minister from 1923 to 1929. God had failed the Germans. The time had passed when the Germans could count on some supernatural force to restore their power and glory.

Stresemann's judgment pointed the way out. The Germans must dispense with the guidance and help of God and take matters in their own hands. God had not only failed them, but was apparently on the side of their "mortal enemies." To discard illusions of a democratic peace, to exploit to the fullest the weaknesses of her adversaries, to disarm them morally and materially, to break up their solidarity, and to pit them against each other—this would be the German way.

In a brilliant analysis of Germany's relations with eastern and western Europe, Prof. Gordon A. Craig, of Princeton University, quoted Herr Stresemann's exposition of the strategy that German foreign policy must pursue:

"The question of a choice between east and west does not follow from our entrance into the League of Nations. One can make such a choice only if he has military power at his disposal. In our case, unfortunately, that is lacking. We can neither become a continual dagger for England, as some desire, nor can we trust ourselves to a German-Russian alliance. I warn against the utopia of flirting with Russia. Once the Russians are in Berlin, the red flag will fly from the castle; and in Russia they will be satisfied with having bolshevized Europe to the Elbe and will allow the rest of Germany to be gobbled up by the French. On the other hand, we are perfectly ready to deal with the Russians on another basis in order to prevent selling ourselves to the west. * * * The most important task of Germany foreign policy is the liberation of German soil from any occupying force. We must get the stranglehold off our neck. On that account German policy will be one of finassieren (of finesse), and of avoiding the great decisions."

Out of this policy of finesse and the avoidance of the great decisions Germany was able to forge a new and more potent sword.

During the Weimar Republic, when the world—shortsighted then as it is today—hailed the advent of democracy in Germany, the Germans began their steady march along the new path outlined by Stresemann. The Germans bargained with the Russians and when the western powers became alarmed, they turned around and made deals with them. They posed as friends of the Bolsheviks against the plutocratic west and then promised to defend western civilization against the communist menace.

By keeping Europe in a turmoil and blinding her conquerors, Germany was able to mask her true designs. Thus the Germans succeeded in preventing the consolidation of the peace after Versailles. But this was only the beginning. The next step was to smash the solidarity of the western allies. They were out to disarm the victorious entente and succeeded by offering assurances of security to the victors.

In 1925, Stresemann said: "Our policy of offering the entente powers a security pact was undoubtedly correct * * * It broke up the entente."

Having split their opponents, the "democratic" Germans had reached a point where they could extract a maximum advantage for themselves and destroy all other security provisions of the Versailles Treaty. The sensational victories of the Stresemann plan paved the way for Hitler's Third Reich.

Hitler was a leading apostle of the Stresemann strategy. He never forgot the childish statement of Britain's Foreign Minister Austin Chamberlain to Stresemann, "Whenever we make a concession to you, instead of acknowledging it, you ask for more." Hitler had to deal with the half-brother of this British statesman, Sir Neville Chamberlain, who bent the knee each time the Fuehrer raised his voice.

The peoples of the west were told that a strong Reich would guarantee peace and stability in Europe and ward off the Communist threat. This was Hitler talking through the mouths of the western politicians. The peoples of the west were told that the Germans needed room and space; that German economic power was the sine qua non for a prosperous Europe. This, too, was Hitler talking through the voice of western statesmen and business leaders.

But as soon as these words were spoken and as soon as concessions were made, Hitler bellowed for more. And when the time came for the pay-off, Hitler turned around and made his pact with the Russians, while the western powers were trapped and blitzkrieged into submission.

This was to have been the grand climax of the Stresemann plan. But the horrors and devastations inflicted by the Germans, both east and west, unmasked for a moment the real intentions of the Germans. The lesson was clear. Only by joint military efforts could the Germans be defeated. The victims of the Stresemann plan were further taught that the future peace could only be preserved and maintained by thwarting the schemes of the Germans to evade their responsibilities for the war which they brought upon a trusting but deceived mankind. These lessons were embodied in numerous agreements made by the victorious Allied Powers. They solemnly pledged to one another that they would eliminate Germany's capacity to wage war, break up the German cartel network, rid the world of the war criminals, and force the Germans to compensate, at least in part, for their looting and spoliation.

To the common man who honestly believed that a new day was dawning, it was inconceivable that the ghost of Stresemann would so soon emerge from the ruins of World War II. Yet, as early as April 1945 the State Department made the following announcement which we, for reasons of space, can only quote in part:

"The Department of State announced today that reliable information collected by allied governments clearly indicates that the Nazi regime in Germany has developed well-

arranged postwar plans for the perpetuation of Nazi doctrines and domination. Some of these plans have already been put into operation and others are ready to be launched on a widespread scale immediately upon termination of hostilities in Europe.

"Nazi Party members, German industrialists, and the German military, realizing that victory can no longer be attained, are now developing postwar commercial projects, are endeavoring to renew and cement friendships in foreign commercial circles and are planning for renewals of prewar cartel agreements.

"An appeal to the courts of various countries will be made early in the postwar period through dummies for unlawful seizure of industrial plants and other properties taken over by Allied governments at the outbreak of war. In cases where this method fails, German repurchase will be attempted through cloaks who meet the necessary citizenship requirements.

"German technicians, cultural experts and undercover agents have well-laid plans to infiltrate foreign countries with the object of developing economic, cultural and political ties."

In connection with this announcement, Julius C. Holmes, who was then Assistant Secretary of State, revealed:

"In August of 1943, von Papen, the German Ambassador in Turkey—and he's the self-same von Papen who violated all the rules when we were neutral before we entered the first World War and whom we deported in 1915—von Papen told a close friend of his in 1943 that Germany could no longer hope to win the war, and that every possible move should be made to save German industry and military power for the future."

In disclosing these documents, the State Department admitted "Until these plans are checked, they will present a constant menace to postwar peace and security."

Look around—look at the state of the world today. Is it not clear that the ghost of Stresemann still stalks the earth? Is it not clear that our State Department and, for that matter, the foreign offices of Soviet Russia and England, have failed miserably in checking these plans?

Where is that much heralded Allied policy which announced to the world that Germany was through as a spawning ground of aggression? In truth, the policies which are now followed by Washington, Moscow, and London correspond to the German plans. They fit in so neatly with German strategy that one might be justified in saying that they were actually made in Germany.

The Germans knew that the only way they could obtain advantage and new power was by pursuing a conscious and well-thought-out program that would undermine the unity of their military opponents. Only in a climate of political and economic unrest, in an atmosphere of war fever, could the Germans begin to operate as they did after World War I.

The developments of the past 4 years since the defeat of the Germans militarily, show that this strategy is working and making alarming headway. They have been able to capitalize on and, yes, encourage the differences between Russia and the United States. They have graciously allotted part of their energy to making deals with the Russians but simultaneously they flatter and cultivate western sympathies. They encourage every move on the part of the Russians that could challenge the security of the west, but at the same time they egg on the western powers with assurances that only the Germans can be relied upon as a bulwark against Soviet Russia.

To these attractive guarantees the Germans have attached their price. They called for the destruction of denazification, and both Russia and the west raced for the honors to comply. They demanded a halt to the reparations program and again their opponents trampled over each other in order to meet the German diktat.

As matters stand, there seems to be no end to this disgraceful retreat from victory on the part of the west and east. The mad bid for the bloody hand of the former enemy continues. Illusion has become the soil out of which foreign policies grow. Thus, the New York Times rushes in with a new plea to the Germans: "It should be clear to all informed Germans that the west is offering them a free and decent future." The informed Germans know exactly what they are gaining from the west, as they know what they are extracting from the Russians who have taken over the German slogans of unity. Both sides are dancing to the Pied Piper. Both sides are being drawn into the web which has been woven so artfully by the German spider. And as they become more enmeshed in this web, they prate about their success with the Germans.

We have no intention of oversimplifying the basic causes of enmity between Russia and the western powers today. But it is certainly no oversimplification to state that German hopes for the future are based on the continuation of this breach even if it means a new and more terrible war. If any such eventuality should arise, the Germans will be in the position where they can choose and make decisions and play their usual role of blackmail, deceit, and treachery.

The break-down of the Allied occupation with its dangers to world security no longer seems to be of account to those who make policy. These Allied officials have either been hypnotized or have become the willing mouthpieces of the renewed Stresemann plan. Each of the occupying powers visualize a rearmed Germany fighting by its side against the others. For only this can explain the deliberate sabotage of their agreed aims to eliminate Germany's capacity to wage war. This sabotage, however, is a double-edged sword and the Germans are carefully sharpening both ends. The Germans are experienced hands at creating tensions and turmoil. They know how to fan the flames of war which broaden the scope of their own operations.

The Herrenvolk carefully cultivate the illusion that a strong and powerful Germany will ever be grateful to the west. But the Germans show only one part of their face—for the other part looks toward the east. Thus, the rebuilding of German war power can really become a one-way ticket to disaster.

It is an illusion to say that the alternative is—whether the west or the east will dominnate Germany. The Stresemann plan does not contemplate such a finale, nor do the schemes of the present German political leaders of all parties. On the contrary, the real question is how west and east can prevent their own subjugation to German designs. This is not fantastic as the State Department documentation demonstrates. It is the aim of the Germans today, whether they live in the eastern zone or the western zone. It is expressed privately and even publicly by their politicians, their military and their industrial war lords.

It is for this reason that of all the nations in Europe, it is precisely Germany which finds the danger of war to be her own salvation. Through blackmail to victory—that is the latest edition of the Stresemann plan.

This is the reality of today which is ignored by the occupying powers who thereby fail to discharge their great responsibility to mankind.

When will the statesmen wake up?

When will they throw off the hypnotic spell of German slogans?

When will they discard the influence of the German cartel partners and other special interests?

When will they get down to the serious task of unmasking the war plots of the former enemy and hammer out a peace of the victors?

If they will fail to act in time, war will also be "Made in Germany."

Catholic Schools Become a British Election Issue

EXTENSION OF REMARKS

OF

HON. CARL D. PERKINS

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1950

Mr. PERKINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Louisville Courier-Journal of February 1, 1950:

CATHOLIC SCHOOLS BECOME A BRITISH ELECTION ISSUE

State support for sectarian schools is certain to become an issue in the British election. The Catholic Church is leading the fight to force candidates of all parties to state their views. The question now is not whether church schools shall receive state aid; they do receive it in fairly large amounts. What the church is attempting to force, and to enlist the aid of all denominational schools in forcing, is a pledge that the government will actually take over parochial schools, leaving the church the right to decide who will be employed as teachers, and, presumably, to conduct some sort of religious observance on school premises.

This goes, of course, far beyond anything American Catholics have asked of government. But in its beginning the British Catholic problem was not very different from the one now confronting Americans. The seeds of today's trouble in England lie in the methods proposed by the Education Act of 1924 to remedy the often marked disparity between parochial and State schools. The British law proposed to grant denominational schools sums of money designed to bring their buildings, curricular and general facilities up to a par with the State's schools. But the parishes and foundations themselves had to promise to meet minimum standards in order to become eligible for this aid.

The bill was eagerly welcomed when it was first passed by schools of all denominations. Since then, the gap between existing church schools, many of them old and entirely inadequate for modern educational methods, and the Government's minimum standards has become increasingly obvious. Scores of parochial schools, unable to meet the minimum, find themselves ineligible for aid and see their pupils attracted by the undeniably better facilities of State schools.

Efforts to force the Government to provide still larger sums for modernization of church schools have not succeeded. The Government cannot very well divert funds from its own huge schools program which is already far behind expectation. And neither major party is likely to welcome the proposal that scores of small, inadequate school buildings, many of them in locations already well served by State schools, be taken over as is, improved at tremendous cost, but left free to maintain their status as a unit of parish life, subject to clerical control.

The Catholic drive is not aimed wholly at the Labor Government. The Education Act was a creation of Winston Churchill's wartime coalition. It is an excellent law and

has had full support from the Socialist Party, but neither party is likely now to commit itself to a blanket expenditure which would make church schools everywhere a part of the state system in everything but control of educational policy. There may and probably will be some concession to present pleas, but it will by no means satisfy Catholic demands, or solve all future problems for the worried sponsors of church schools.

Republican Program

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Friday, February 3 (legislative day of Wednesday, January 4), 1950

Mr. IVES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD, an editorial entitled, "A True Orthodoxy," which appeared in the New York Herald Tribune of February 2, together with the preamble, the section entitled "Foreign Affairs," and the section entitled "Human Rights," from a policy statement framed by the New York Young Republican Club—Blueprint for a Better America, to which the editorial refers.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune of February 2, 1950]

A TRUE ORTHODOXY

The widespread and growing realization that the Republican Party must reshape its program in the light of current problems has led many groups and individuals to try their hand at a blueprint. Few have gone about the task with more care and imaginative good sense than the Young Republican Club of New York. The Republican policy statement framed by this group is printed, unfortunately in a much abbreviated form, on another part of this page. It deserves a sympathetic reading in high quarters.

The Young Republicans are orthodox in the basic and original sense of that much-abused word. They do not follow blindly any particular leader, but they adhere to the undenying principles and ideals of their party. Thus on civil rights they are at the same time traditionalists and infinitely more progressive than the Democratic Party as a whole can afford to be. On social issues like old-age insurance, education, and health they show in new forms the concern for human values, and the adaptability to new needs, which their party has revealed in its best days. Yet they hold fast to an insistence that the individual must be kept free of centralized authority, oppressive debt, and paralyzing controls. They are convinced that the individual can be kept free and at the same time provided with safeguards against insecurity.

Not everyone will agree with all the details in this document; this newspaper could criticize it at several points. But we believe that the spirit in which it is drawn is the right spirit, and that it bodes well for the Republican Party.

PREAMBLE

The goal: At home—an opportunity society that offers each individual a maximum chance for achievement, well-being and security.

Abroad—a world at peace working out the common problems of mankind through effective international organization in a spirit of mutual trust and cooperation and with an increasing regard for the dignity of every man.

The promise: At home—increasing economic prosperity with a renewed faith in moral values. New energy sources, new products and new production techniques can greatly improve the material well-being of each citizen in our time. But the pursuit of material wealth must be accompanied by a renewal of spiritual and moral values on the part of the individual, the family and the Nation.

Abroad—a community of free nations living at peace. The free exchange of goods and ideas among nations affords the best hope for maintaining the peace and raising the standard of living in all countries.

The threat: At home—gradual surrender of individual freedom. In our country, the danger to our democratic way of life lies chiefly in our adopting schemes for attaining economic security which compel or result in the surrender of individual freedom.

Abroad—breakdown in international relations. Failure of the United States to develop a sound affirmative foreign policy to meet the threat of Soviet imperialism and the revival of fascism, and to assume its responsibilities of world leadership, may lead to a breakdown in international relations resulting in economic or military warfare between nations.

Our position: The present administration is neither realizing the promise nor warding off the threat. Instead, it is creating a hand-out state which slowly destroys individual initiative and enterprise, limits the right of the individual to make personal decisions, and compels a surrender of individual decision and action to a bureaucratic central government.

Our own position can be summed up in two main principles: "Individual freedom with security" at home and "international responsibility" abroad.

INDIVIDUAL FREEDOM WITH SECURITY

Individual freedom has always been the cornerstone of our Constitution, of liberal thought, and of Republican Party action. It includes civil liberties such as freedom of speech and freedom of religion. It means freedom to choose a home, a job, and a way of life. But it also means freedom for the individual to exercise his initiative, ability, and judgment, to develop his own personality, and to realize his dreams and aspirations. These aspects of individual freedom are being threatened by bigness and bureaucracy in Government.

Individual security is also one of our common aims. The complexity of our modern society requires that the individual be assisted when his economic security is imperiled by physical or economic disaster, such as unemployment, sickness, disability, old age, or death, over which he has no control and against which he is unable adequately to protect himself. The need is for an intelligent balance between the extremes of selfish individualism, on the one hand, and the irresponsible hand-out state, on the other. The socialist governments in Australia and New Zealand were ousted neither by a reactionary nor a radical movement but by parties which combined a belief in economic security with a recognition of the roles of individual initiative and efficient government.

The ultimate purpose of our society is to preserve the freedom of action of the individual. We should be especially watchful, therefore, that we do not confer upon our governmental institutions powers beyond those required to attain our common goals, for the ultimate and fatal curse of big government is the regimentation of the individual.

INTERNATIONAL RESPONSIBILITY

As a nation, we must never forget that this is one world. We must live up to our responsibility of active leadership in the world community. While we do not seek to impose our form of government on other countries, we must contribute to world-wide economic health and political security so that all peoples will have the opportunity to establish and maintain free governments of their own choosing.

Further, we recognize that the United States, as the leader of the democratic forces in the world, must do more than adopt a merely negative policy of containing totalitarian aggression. Our foreign policies must be directed toward rekindling the love for freedom in the hearts of all men throughout the world, and toward enlisting their enthusiastic support for the establishment of free governments everywhere. We believe that such a policy must be founded upon the active practice of democratic principles here at home. Only by practicing these principles can we demonstrate to the world that men who are free can best provide for their common material security, and that a free society is the only means for achieving moral advancement and spiritual freedom.

We approach the second half of the twentieth century with an abiding faith in the ability of our democratic system to meet and conquer each new problem as it arises. We are confident that our common goals and ideals can be achieved so long as we keep open the channels of free expression. In this spirit of optimism, we present, from the young Republican point of view, a blueprint for a better America.

FOREIGN AFFAIRS

WORLD ORGANIZATION

Problem: If world war III becomes a reality, it could well mean the paralysis of freedom, if not the end of civilization. With the monstrous weapons of mass destruction man has developed—atomic and hydrogen bombs, rockets and biological warfare—wars can no longer be won by any nation. The present armament race consumes billions of dollars which might otherwise be devoted to education, medical facilities, housing and other basic human needs. Moreover, the cost of past wars and the burden of preparedness for future wars threatens to tax and regulate individual freedom and private enterprise out of existence.

Proposal: A fundamental objective of our foreign policy should be to support and strengthen the United Nations through the enactment, interpretation, and enforcement of world law. The United States should take the initiative in calling a convention, in accordance with the provisions of the UN Charter, for the purpose of making the UN the means to achieve this end. The abolition of the veto is a major element in such a program.

RUSSIA

Problem: The central problem in the field of foreign affairs is the relationship between Soviet and non-Soviet nations.

The foreign policy of Soviet Russia is primarily a reflection of its internal political structure. With the ruling Communist Party a minority in Russia itself, a dictatorship has been established in which all opposition and dissent have been effectively eliminated. The party leaders exploit the Marxist-Leninist concept that capitalism abroad is a menace to Russia, and use capitalist encirclement as justification for continuing to deprive the Russian people both of their freedom and of the material benefits which have been promised them.

Externally, claiming that it requires friendly nations on its borders, Russia has either annexed outright or, through fifth-column activity and the pressure of her armed forces, converted into puppet states the now-familiar list of formerly independent countries. China is the latest and most significant acquisition.

In 1947 a policy of "containment" of world Communist aggression was enunciated by the administration. While that policy has been adhered to in Europe, it has never been effectively applied in the Far East. A policy of containment can be effective only if we are steadfast in our determination that the area of freedom shall not be further reduced. Moreover, containment by means of United States efforts alone is not enough. If civilization is to be saved, a coordinated plan for the defense of all free nations must be devised.

Proposals: 1. The Atlantic Pact, in which the United States and 11 European countries are associated, should be supplemented by a "Pacific Pact," which all non-Communist Pacific nations may join for the purpose of mutual protection in case of aggression.

2. Economic aid, within the limits of our resources, must be extended to nations which demonstrate their willingness to resist Soviet aggression and to maintain basic freedoms, as well as their need for such aid.

3. The freedom of movement of Soviet diplomats and their large staffs in the United States represents a startling contrast to the prisoner-like status of the few American representatives in Russia and her satellites. Reciprocity should be required. Conditions under which Russian and American envoys carry out their missions should be equalized.

4. The forum provided by the United Nations should be used to full advantage by American spokesmen to reveal the differences between Soviet theory and practice. No charge should remain unanswered, no lie should pass unexposed. Only mobilized world opinion can convince the Soviet Union that its aggressive and subversive designs will not be permitted to succeed.

WESTERN EUROPE

Problem: The tremendous sums devoted to postwar European relief and recovery by American taxpayers indicate continuing interest in the protection of this area against Soviet expansion, and in a healthy European economy. But such a financial burden cannot be borne indefinitely. The best hope for a self-sustaining Europe lies in the elimination of trade and monetary barriers, the continuation of the reciprocal trade policy, and the development of new non-European markets.

A related European question is the political and economic—but not the military—rehabilitation of Germany, so that Germany can contribute to the stability and prosperity of western Europe.

Proposals: 1. Continuation of our commitments under the European recovery program, with a view to termination by 1952.

2. Encouragement of a western European union.

3. Admission of western Germany into the European community and gradually greater delegation of responsibility to the west German government, but with continued Allied control over German foreign relations and military affairs.

4. The German economy should be dovetailed as far as possible into that of western Europe, to promote interdependence.

5. Maintenance of Allied military occupation of Germany as long as the East-West division continues.

THE FAR EAST

Problem: The recent loss of China to the Communists requires reexamination of our entire far-eastern policy.

In Europe our program of helping war-devastated countries to help themselves, and of aiding legally constituted governments in their resistance to Soviet-directed revolts has met with partial success. Not so in Asia.

Indecision on our part, the withholding of aid at a critical period, and secret concessions to Soviet imperialism made by the administration at Yalta have all contributed to the Communist victories.

What happened to China must not happen to other nations of the Far East.

Proposals: 1. Recognition should be withheld from the Chinese Communist Government as long as that Government remains an instrument of Soviet policy.

2. The Japanese economy should be utilized in raising the standard of living of non-Communist Asia.

3. Technical and economic assistance to aid agricultural and industrial development in non-Communist Asia should be offered. Where local conditions are favorable, American private investment should be encouraged. Above all, we must demonstrate to the newly independent Asiatic nations that in offering help and advice we respect their right to control the development of their own resources.

4. A "Pacific Pact" (see discussion on Russia) should be concluded as part of a coordinated plan for the mutual protection of all free nations.

BIPARTISANSHIP

Problem: A bipartisan foreign policy can help the United States to fulfill its responsibilities for world leadership. However, it is essential that the principle of bipartisanship be thoroughly understood. Bipartisanship should not be used as a means of cutting off free and open debate. The basic concept of bipartisanship is that foreign policy will be formulated by joint consultation and that neither party will seek partisan advantage therefrom. This principle has not been accepted by the administration in good faith.

Proposal: The initiative in establishing true bipartisanship lies with the President and the Secretary of State—not with the Republicans in Congress. The disastrous failure of American foreign policy in those areas where Republican advice was not sought requires that the administration demonstrate its intention either to seek full bipartisan assistance and to consult in advance with Republican leaders, or to abandon the pretense of favoring a bipartisan policy.

HUMAN RIGHTS

Problem: Discrimination because of race, color, or religion condemns a large segment of our population to limited opportunity for useful employment, to substandard housing, to inadequate educational institutions, to denial of full voting rights, and at times to outbursts of violence. Moreover, when the entire world looks to the United States for encouragement and leadership in the constant battle of ideas between the forces of freedom and slavery, it is more important than ever that we practice the principles that we preach.

The Republican Party was formed and first brought to power on its opposition to the spread of Negro slavery. The thirteenth, fourteenth, and fifteenth amendments and eight of the nine civil-rights statutes enacted by Congress were passed during Republican administrations. In contrast to the inherent division within the Democratic Party, the Republican Party has no large and solid bloc of votes which consistently opposes any civil-rights legislation. The Republican Party can meet one of the great challenges of our times by acting in adherence to its own traditional principles and the principles of the Constitution.

Proposals: We believe that voluntary recognition and acceptance of the principle of equal opportunity for all men regardless of race, color, or creed offers the most desirable and permanent solution to the human-rights question. The efforts of social and religious groups directed to this end are therefore to be commended and encouraged. However, in view of the plight of our minority groups and our responsibility for world leadership in preserving the rights of man, we recognize that more immediate action to eliminate the evils of discrimination is required. We therefore propose the following:

1. A Federal fair employment practice act should be enacted which will declare that the opportunity for employment without discrimination because of race, religion, color, national origin, or ancestry is a civil right of all the people of the United States. A Federal commission should be set up to carry out the policies and provisions of this act, and this commission should be given power to use effective sanctions against any offenders.

2. The Taft-Hartley Act should be amended to prohibit the National Labor Relations Board from certifying as bargaining representative any labor organization which denies full membership rights and privileges to, or which segregates or otherwise discriminates against, any employee because of race, religion, color, national origin, or ancestry.

3. Segregation or any other form of discrimination on the basis of race, religion, color, national origin, or ancestry in any of the armed forces of the United States should be prohibited.

4. Legislation should be enacted to prohibit segregation and other forms of discrimination in public places and on public conveyances in the District of Columbia.

5. The Interstate Commerce Act should be amended to prohibit segregation of passengers on interstate carriers because of their race, religion, color, national origin, or ancestry.

6. Legislation should be enacted to prohibit the payment of a poll tax as a prerequisite to voting in any Federal election.

7. A Federal antilynching law should be enacted to provide for criminal penalties and also to authorize civil suits in the Federal courts by lynch victims against individual offenders.

8. The displaced-persons law should be amended to eliminate occupational, religious, and nationality discriminations.

9. Legislation should be enacted to prohibit discrimination on account of race, creed, or color in the expenditure of Federal funds for housing, health, or education.

10. A permanent congressional committee on civil rights should be established to study and recommend further ways of promoting individual civil rights in the United States.

11. The Senate cloture rule should be amended so that two-thirds of the Senators voting can invoke cloture on any measure or motion to take up a measure, including a motion to change the Senate rules. If it is necessary to face a filibuster in order to bring this proposed amendment to a vote, we recommend that the Senate remain in session until such vote be taken.

Coddling of Communist Agents

EXTENSION OF REMARKS

OF

HON. CHAN GURNEY

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, February 3 (legislative day of Wednesday, January 4), 1950

Mr. GURNEY. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD an editorial entitled "Coddling Communist Agents," published in the Washington (Ind.) Herald of January 30, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CODDLING COMMUNIST AGENTS

The revelations of the Hiss trial and the revealed actions of Government officials, before, during, and since the trial serve to spotlight a situation which has received little, if any, publicity.

At the time President Roosevelt agreed to recognize the Communist regime in Russia in 1933, one of the conditions was that Russia would cease and desist from any efforts to spread its propaganda and extend its system to the United States.

It is a fact well known that Russia has paid no attention to that stipulation. It is a fact well known that the Russian propaganda machine has worked at top speed in the United States and that Communist agents have been working at top speed to build up the Communist organization in the United States.

All that has been going on for years but this is the first time that such facts have been brought out in a formal trial and made a matter of Federal court record.

Now that the facts are established as a matter of court record, what does the administration propose to do? Will it ignore the facts and go ahead playing footie-under-the-table with Communist Russia? Or will it bring the situation forcibly to the attention of the Russian Government and demand the immediate withdrawal of the Communist agents (the FBI knows who they are) and sever diplomatic relations with Russia if they do not do it?

To go ahead as we are only makes us a laughing stock for those Russian officials who know of the 1933 agreement and how it has been completely ignored.

The Alger Hiss Conviction

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Friday, February 3 (legislative day of Wednesday, January 4), 1950

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial entitled "A Liar and a Spy," which appeared on Monday, January 23, 1950, in the Journal-Every Evening, Wilmington, Del.

I agree completely with the editor that the country owes a deep debt of gratitude to Representative NIXON and other members of the Committee on Un-American Activities for their persistence in uncovering this situation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A LIAR AND A SPY

Unless the verdict is reversed on appeal, Alger Hiss will stand before his fellow citizens as a liar, a spy, and as one who was willing to hand over his country's secrets to the agents of a foreign power. For a man like that, whatever his gifts in other directions, Americans may have pity but not the slightest sympathy. He was the enemy of all of us.

And this is what President Truman called "a red herring," an effort by the Republicans to draw attention away from their own shortcomings in the days when they had control of Congress. It is now plain that the only red herring in the case was the one which was dragged across the trail by Mr. Truman himself and which, if Representative NIXON is to be believed, is involved in the furious campaign which was waged by high-ranking officials of the administration to keep the affair from ever seeing the light of day.

As a result of this verdict there should be on the part of many Americans a new attitude toward the Committee on Un-American Activities. It will now be an indifferent citizen who will dare to say that this committee is not needed or that it should be shorn of its authority.

Sordid as the whole story may be, there is one cause for pride. Mr. Hiss had as fair a trial as it was possible for any man to receive and there were times when the court actually leaned over backward in its consideration of the interests of the defense. And whatever happens, Mr. Hiss will still be alive. He can thank his lucky stars that it was America and not the Soviet which he sought to betray.

Why Not an Anti-Cominform?

EXTENSION OF REMARKS
OF
HON. EDWIN C. JOHNSON
OF COLORADO

IN THE SENATE OF THE UNITED STATES

Friday, February 3 (legislative day of Wednesday, January 4), 1950

Mr. JOHNSON of Colorado. Mr. President, all over the world, and significantly inside Russia and in her satellites, there is widespread unorganized opposition to the Cominform. The problem is to unite behind one banner this deep-seated antagonism. A resident of my State, Siegfried Wagener, writing in the January 1950 edition of Plain Talk, has come up with a provocative suggestion. At least he has a plan which should challenge the thinking of every anti-Communist in the world. I ask unanimous consent to insert his article on Why Not an Anti-Cominform? in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHY NOT AN ANTI-COMINFORM?

(By Siegfried Wagener)

In the heartland of the Cominform Tito is visible evidence of what is going on in the minds of millions of outwardly loyal subjects of the Kremlin. In the Russian zone in Germany morale is so low that soldiers not on duty are confined behind barbed wire, and 20 minutes' absence without leave is treated as desertion. How can we exploit this state of affairs to win tactical advantage in the cold war?

The best defense being attack, why not strike now by organizing an Anti-Cominform and watering the seeds of democratic rebellion which are germinating behind the iron curtain? Why not advance at the hostile Cominform with its own weapons on its home ground?

Military defense measures are costing us $15,000,000,000 annually in direct expenditures, not counting the billions for ECA, aid to the North Atlantic Pact nations, private relief work, etc. This drain on our national resources is so heavy that the Kremlin and many Americans are, for once, unanimous in considering it only a matter of time before we shall be exhausted.

An Anti-Cominform, on the other hand, would cost us little. One hundred million dollars for a starter would carry it a long way. Even if its maintenance would cost us annually several times that much it would be comparable only to a minor item in the military budget. Should it succeed, it would have prevented the nation from bleeding itself white before the first A-bomb was dropped.

The Anti-Cominform would not rely on educational propaganda of the type of the Voice of America, nor on economic and military aid to countries threatened by communism. It would supplement these measures by forming revolutionary action committees staffed by the rank and file of refugees from the iron-curtain countries. Modeled somewhat along the lines of its Russian counterpart, it would set up these revolutionaries, give them the means to proselytize the Russian and vassal peoples by radio, pamphlet, direct underground contact, and furnish the arms they will ultimately need. It would pursue its objective on all fronts in Asia and Europe, wherever the spark of rebellion can be fanned into overthrowing Soviet tyranny.

Uncounted DP's, refugees and deserters would rally, including many old hands experienced in the business of revolution; the Anti-Cominform would give these people, for the first time since their exodus from home, a hard-fisted cause to live, fight, and if need be, die for. There are so many of them that great care must be taken in screening them, weeding out Cominform infiltrators, unreliables, and adherents of fascism and reaction.

The Anti-Cominform would work under strictly American control and direction. We have men like Col. Heber Blankenhorn, who helped foment the German revolution of 1918 and who was prevented from repeating the performance in 1944; Maj. Gen. William J. Donovan, of the erstwhile Office of Strategic Services; his associate, Allen Welsh Dulles, who kept his finger on the pulse of the abortive anti-Hitler rebellion in 1944; and a number of others in whose judgment of, and sympathy with, revolution as a means of democratic survival we can trust.

The American conspirators could work right out in the open as there is no ethical or practical need to keep the Anti-Cominform under cover. Nor would there be any sense in hiding the fact that it is, as the case may be, either an agency of the United States Government or a private organization with Government approval. The Cominform against which it operates is a direct part of the Soviet Government and the Red Army, overtly aiming at the overthrow of self-government in the United States.

Hence, if the Anti-Cominform constitutes an unfriendly act in our relations, with the U. S. S. R., let Cominform propaganda make the most of it. Every single mention the Kremlin would make of our organization would be a boost for millions of silently suffering, praying, hopeful Russians. They who have been so often and so excruciatingly disappointed by their own and outside governments would at last feel reassured if they knew that the Anti-Cominform agent who contacts them is backed by the United States.

What are the chances for success?

First of all, we could not lose, no matter what the future holds in store. If war came our psycho-political warfare would be organized down to the last detail if it had not already succeeded in laying the groundwork for internal Russian combustion. Conversely, should the Kremlin mend its ways and meet us on sensible terms, we would recall our Anti-Cominform simultaneously with Russia's dissolution of the Cominform;

among realists there need be no hard feelings, although the very existence of the Anti-Cominform might have assisted in bringing this desirable turn of events.

However, neither of these possibilities being immediately feasible, we are faced with long protraction of the present stalemate whose peaceful termination the Anti-Cominform is seeking. For this the prospects are substantially brighter than is generally conceded.

Nobody knows how many millions of Russian dissenters rot in slave-labor camps and prisons, or are liquidated. Estimates range all the way up to 1 out of every 10 Russians. Western Europe harbors millions of displaced persons with more coming every day. And how many thousands of Red Army deserters are quietly cared for by American-British forces is a military secret.

This indicates a far better precondition to revolution than existed in Nazi Germany where we had a good chance and threw it away—a catastrophical mistake which we cannot afford to repeat.

The evidence is now in and well documented that German labor and underground leaders were right when they assured me in London that Germany was ripe for revolution during World War II. They pleaded for American help. Mainly due to our politically unwise unconditional-surrender policy this was refused. Thus we probably missed shortening the war by many months, sparing ourselves long-term occupation and reeducation of Germany, and we missed the chance to keep Russia out of central Europe.

By now it should be clear to all that we have already crossed the Rubicon. For the Anti-Cominform would only invigorate and bring to climactic effect existing agencies and organizations working in precisely the same direction.

At present these movements and efforts are extremely minor, widely scattered, and uncoordinated. At best, they affect only pinpricks in Moscow but, uncontrolled as they are, they could also cause the kind of irritation which in a tense situation might lead to a premature incident.

The Anti-Cominform would give them unity of purpose, discipline, wherewithal, and efficiency. Moreover, it would be controlled. Behind its task force of freedom-loving legions would stand in solid ranks the anti-Communists of this country and the world—churches, industry, labor, the arts and sciences, the professions, and last but foremost, the Government of the United States.

"Help From America"—in the form of Wilson's Fourteen Points—was the magic slogan of the German revolutionaries of 1918, of whom I was one. It could have been the key to Germany in 1944. We can start a subterranean rumbling throughout Russia and shake her rulers either to their senses or have them overthrown by her own oppressed masses. In this role America would emerge as the true champion of freedom in the world.

Wards of the Government

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Friday, February 3 (legislative day of Wednesday, January 4), 1950

Mr. BUTLER. Mr. President, I ask to have inserted in the Appendix of the RECORD an address entitled "Wards of the Government" delivered by Dean Russell at the convention on individual liberty held at Billings, Mont., on January 20, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WARDS OF THE GOVERNMENT

(By Dean Russell)

(This is the text of a speech delivered before the convention on individual liberty at Billings, Mont., January 20, 1950. The convention was sponsored by the Montana Chamber of Commerce. Dean Russell is a member of the foundation staff.)

The constitutions of former American slave States generally specified that the masters must provide their slaves with adequate housing, food, medical care, and old-age benefits. The Mississippi Constitution contained this additional sentence:

"The legislature shall have no power to pass laws for the emancipation of slaves * * * [except] where the slave shall have rendered the State some distinguished service."

The highest honor that Mississippi could offer a man for distinguished service to his country was personal responsibility for his own welfare. His reward was freedom to find his own job and to have his own earnings, freedom to be responsible for his own housing, freedom to arrange for his own medical care, freedom to save for his own old age. In short, his reward was the individual opportunities—and the personal responsibilities—that have always distinguished a free man from a dependent.

What higher honor can any government offer?

THE RIGHTS OF A SLAVE

But many present-day Americans are trying to avoid this personal responsibility that is freedom. They are voting for men who promise to install a system of compulsory, Government-guaranteed security—a partial return to the old slave laws of Georgia that guaranteed to all slaves "the right to food and raiment, to kind attention when sick, to maintenance in old age." And the arguments used to defend this present-day trend toward the bondage of a welfare state are essentially the same arguments that were formerly used to defend the bondage of outright slavery.

For example, many of the slaveholders claimed that they knew what was "best for the slaves." After all, hadn't the masters "rescued" the slaves from a life of savagery? The advocates of Government-guaranteed security also claim that they know what is best for the people. Many of them argue in this fashion: "After all, haven't the American people conclusively shown that they are incapable of handling the responsibility for their own welfare?"

Many of the slaveholders sincerely believed that the dumb, ignorant slaves would starve to death unless their welfare was guaranteed by the masters. And the advocates of compulsory security frequently say: "Are you in favor of letting people starve?"

MOST PRECIOUS OF ALL

But as proof of the fact that personal responsibility for one's own welfare brings increased material well-being, consider the emancipated slaves. Among them, there were old and crippled and sick people. They had no homes, no jobs, and little education. But—most precious of all—the former slaves were responsible for their own welfare. They were free. They had the privilege of finding their own security.

Now compare the remarkable progress of those former slaves to the lack of progress of the American Indians who were made wards of the Government; who were given State-guaranteed "security" instead of freedom with responsibility. In 1862, most American Negroes were slaves. Today they are about as self-supporting and responsible as other American citizens. Meanwhile, the Indians as a group have become less self-supporting and more dependent on Government aid. It has been claimed that many thousands of Indians will actually die of starvation unless the Government feeds them. If this is true, why is it so?

CARETAKERS

There seems to be no scientific basis for calling the Indians an innately inferior race. As has been proved by the success of many individual Indians, they have just as much capacity for understanding and advancement as the Negroes and the so-called Nordics. But today there are more than 12,000 Federal employees directly taking care of the 233,000 reservation Indians who are still classified as wards of the Government. The number of Government caretakers for the Indians has been steadily increasing over the years. As a result, the reservation Indian is becoming less self-sufficient and more dependent upon what he calls "the Great White Father in Washington."

Instead of freedom, the Indian has Government-guaranteed security. Instead of individual responsibility, he has a Government bureau to handle his personal affairs. There are special laws governing his right to own land and to spend tribal money. Under that system of bondage it should surprise no one to find that many thousands of Indians have remained uneducated, hungry, diseased, and mismanaged.

THE ONLY SOLUTION

The only lasting solution is for the Indians themselves to handle their own affairs on the basis of individual freedom and personal responsibility. If this is not true, then the blessings of freedom would appear to be fanciful myths. But for some queer reason, we Americans seem to believe that just because our pioneer fathers once subjugated the Indians, we in turn are obligated to keep them in the bondage of Government security. As a result, the Indian has the status of a ward instead of a citizen. Instead of being a responsible person, he is a dependent.

And in a like manner, if we free Americans continue to turn to Government for our security, we, too, will surely become dependent wards instead of responsible citizens. There will be a commissioner to control our personal affairs and our individual responsibilities. Instead of calico and blankets, we may be promised a hundred dollars every month. But since the principle is the same in both cases, the results will also eventually be the same.

A RETURN TO BONDAGE

The advocates of this compulsory security honestly seem to believe that most Americans—including the Indians—are too ignorant, or lazy, or worthless to be trusted with their own destiny; that they will literally starve in the streets unless their welfare is guaranteed by a benevolent Government. However good their intentions may be, these disciples of a relief state are demanding that they be given the power to force mankind to follow their plans. In the name of liberty they advocate bondage.

This is true because the persons who receive support from the state are thereby led to expect—and then to demand—more support from the state. They become dependents. Thus they enter into a form of bondage. They lose their individual freedom of choice to whatever extent the state assumes responsibility for their personal welfare. In time, as is now the case in the welfare state of Russia, the people become completely subservient to the state. In effect, they become slaves of the benevolent government that has promised to solve all of their personal problems for them.

Admittedly, this is not the intent of the planners. Apparently, most of the advocates of government paternalism really believe

that they are able to know and to do what is best for all of the people. Most of them may honestly desire to help the people. But their efforts always result in some form of bondage. For example, the leaders of the Labor government of Britain probably never even dreamed of bringing compulsory labor to its supporters. Yet that is what they did. In England today the democratically elected leaders can—and do—force persons to work where the Government decrees they are most needed. And if the person objects to his Government's decision, force is used to make him conform.

THE ROAD TO HELL

In Russia we find another example of the fact that good intentions are no guarantee of freedom. For instance, in the beginning Lenin and Stalin probably had no desire whatever to bring slavery to Russia. Their announced plan was to free the Russian people from the slavery of an all-powerful government. But look what happened.

We Americans of today are following this same path toward the bondage of a welfare or slave state. Just as the law once guaranteed adequate medical care for American slaves, so a law to guarantee adequate medical care for all Americans is being demanded today. And who will determine what is adequate medical care for a person? Not the person, but the Government official who has the authority.

And jobs? Of course the Government can guarantee every man a job—just as every slave was guaranteed a job; just as every Russian is guaranteed a job. But it is impossible, of course, for the Government to guarantee everyone a job of his own choosing. Some persons must be guaranteed the scavenger jobs. They may not like it, but dependents have little choice.

THE ONLY HOPE

It is true that many citizens in this country are old and crippled and sick and homeless. Possibly some of them are jobless through no fault of their own. The same conditions existed during our Revolutionary War. But our ancestors knew that their only hope for permanent security lay in their own individual efforts. They knew that the main purpose of Government should be to protect whatever security the people were able to attain individually or in voluntary cooperation. They knew that electing or appointing a man to public office cannot endow him with wisdom; it can endow him only with power. Thus they took no chances on this power of government being used to encroach upon their individual liberties and their personal responsibilities. In advance, they put positive restrictions on all office-holders. And as a final guarantee of freedom, they specified that any powers not expressly given to the Federal officials were to remain with the individual citizens and their local governments.

THE USE OF FORCE

The American Constitution naturally did not list virtues—such as compassion, charity, and respect for one's fellow man—as functions of government. The statesmen who founded our Government knew that all virtues are purely personal and voluntary. It is utter nonsense to imagine that a person can be forced to be good. Government can and should use force to punish a person who commits a crime. But this same force cannot be used to create kindness and compassion within the mind and heart of any person.

Thus the authors of our Constitution left compassion and charity—aid to the unfortunate—on a strictly voluntary basis. They designed a form of government based on individual freedom, personal responsibility, and equality before the law for all citizens. Wisely, they made no attempt whatever to separate freedom of choice from the resulting reward or punishment, success or failure. Since they recognized the absurdity of passing laws to protect a person from himself, they left all citizens free to make their own decisions concerning their own personal welfare. From all viewpoints, including that of material security for the so-called common man, those decisions concerning the proper functions of government proved to be the most effective that the world has ever known in this field.

BREAD AND CIRCUS

If this state-guaranteed security idea were new, it might help explain why so many people insist on trying it. But it is not new. It was written into the Code of Hammurabi over 4,000 years ago. In one form or another, it has been tried time and again throughout history—always with the same result. In the Roman Empire it was called "bread and circus." More recently, Karl Marx called it socialism. He believed that the state should take "from each according to his abilities" and give "to each according to his needs."

Marx said that it was the duty of government to provide all people with adequate housing, medical care, jobs, and social security. Word for word, the advocates of government security in this country are saying the same thing today.

And just as the Russians are enslaved to a welfare state, so this country is being carried into bondage by accepting the same false principle. Just as force is used in Russia to make the people conform to the security laws designed "for their own good," so we also are now forced to submit to American security laws designed "for our own good." And just as the Russian state punishes any objector, so the American state will now imprison us if we refuse to conform.

ENEMY OF THE STATE

If you doubt that compulsory socialism has gone to that extreme in this country, just test it, for instance, by refusing to pay the social-security tax that is taken from your salary. The Government will do the same thing to you that it did to the owner of a small battery shop in Pennsylvania who balked at the idea of compulsory social security. First, the state confiscated his property. Still he refused to obey. Then the state preferred criminal charges against him. And in January of 1943, the Government gave him the choice of conforming or going to prison as a criminal—an enemy of the state because he refused to pay social security. He paid. And his 6-month prison sentence was suspended.

Next may come total Government housing—for our own good, of course. Then the state will assign us so many square feet of adequate living space. This is true because, under complete state ownership of housing, there is no other way that Government can do. We may ask for more space, a different location, better service, or a choice of neighbors. But we already know the Government's answer. Even today, a person has no real choice when he lives in Government housing.

Next may come full employment with Government-guaranteed jobs for everyone. A person will say: "I don't want this job." And as happened under England's program of Government-guaranteed full employment, the American welfare state will also answer: "We will put you in jail as a criminal unless you work at your assigned task."

Along about then, the advocates of Government-guaranteed security may begin to understand the inevitable result of their ideas. They may realize that it is power that makes a dictator, and not what he's called or how he's elected. When that fact has become obvious to everyone, the advocates of compulsory security will then exclaim: "But we didn't mean this!" It will be too late to turn back at that point. Just as the night follows the day, so Government aid to the individual is followed by Government control of the individual, which necessarily means Government force against the individual.

NO EASY WAY

Fortunately, it is not yet too late for America to turn away from the evil that is a welfare state; a slave state. But, unfortunately, there is no simple or easy way to do it. Both major political parties—along with the smaller ones—seem to be trying to outbid each other by promising more Government housing, more social security, more "free" medical care, more Government "welfare" projects, and more special privileges to various groups and interests.

Most of our movies, magazines, newspapers, and radio programs generally endorse—directly or indirectly—the idea of some form of Government-guaranteed security. Even the few objections seem to be aimed mostly at poor administration instead of a recognition that the theory is wrong in principle.

And, whether we like it or not, many of the instructors in our schools and colleges are teaching the desirability of the relief state, the planned economy, and Government ownership in general.

GOLDEN RULE REJECTED

Finally, even some of our church leaders are teaching that the force of government should be used to make people charitable and good. Some of these Christian leaders seem to have forgotten that the principles of the Good Samaritan and each individual doing unto others as he would have others do unto him are voluntary principles. In many cases these principles have now been discarded for this evil slogan: "It is the duty of government to care for the sick, to feed the hungry, to aid the unfortunate, and to build houses for those who need them." Probably one of the main reasons for the declining influence of the church is that the church is defaulting on many of its own responsibilities by turning them over to government. Many of our church leaders are rendering unto Caesar that which does not belong to Caesar.

But the politicians, periodicals, schools, and churches generally reflect the opinions of the persons who support them. Thus the final decision rests on the attitude of each individual American. If enough of us accept the degrading idea of a welfare state—a relief state, a slave state—the process will soon be completed. But if enough individual Americans desire a return to the personal responsibility that is freedom, we can have that too.

THE CHOICE IS OURS

Before choosing, however, consider this: When one chooses freedom—that is, personal responsibility—he should understand that his decision will not meet with popular approval. It is almost certain that he will be called vile names when he tries to explain that compulsory Government security—jobs, medicine, housing, and all the rest—is bad in principle and in its total effect; it saps character and strength by encouraging greed and weakness; it destroys the individual's God-given responsibility for self-help, respect, compassion, and charity; in some degree, it automatically turns all who accept it into wards of the Government; it will eventually turn a proud and responsible people into cringing dependence upon the whims of an all-powerful state; it is the primrose path to serfdom.

No, the choice is not an easy one. But, then, the choice of freedom never has been easy. It never will be easy. Since this capacity for personal responsibility—freedom—is God's most precious gift to mankind, it requires the highest form of understanding and courage.

The Global Challenge to the GOP

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, February 3 (legislative day of Wednesday, January 4), 1950

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Global Challenge to the GOP," written by the junior Senator from Oregon [Mr. MORSE] and published in the United Nations World magazine for February 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE GLOBAL CHALLENGE TO THE GOP

(By WAYNE MORSE, United States Senator from Oregon)

(In this hour of decision when the battle for Asia moves toward a climax, a far-sighted Republican statesman warns that for the United States to give up its bipartisan foreign policy is to play politics with peace.)

Is the Republican Party about to abandon the principle of a bipartisan foreign policy, a policy which Senator VANDENBERG—one of its chief architects—has rightly described as "our best available insurance for peace"? I don't believe it. For this would mean that the United States is on the verge of another postwar era of perilous nationalism.

It would mean that the forces which would have America embark on a course of imperialism, which is the partner of isolationism, have staged a comeback. It would mean a return of dollar diplomacy. It would mean that certain harsh preconditions would be imposed on countries now receiving Marshall-plan aid on the ground that they must conduct their domestic affairs in a way that meets our entire approval—or else. Fortunately, at the Philadelphia convention in 1948, the Republican Party firmly backed the bipartisan precept. Its platform officially pledged the party to continue that kind of policy. In its plank No. 5, written in anticipation of a Republican victory, the GOP declared that the minority party (i. e., the to-be-defeated Democrats) would be invited to join "in stopping partisan politics at the water's edge." That kind of plank is still the core of official foreign policy for the Republican Party. Those within the party who deride the bipartisan program perhaps need to be reminded that to differ over the practices of a united American position in international affairs does not in any way justify the scuttling of the bipartisan principle. On the contrary, the shortcomings which have developed merely dramatize the urgent need to perfect the mechanics of cooperation. Surely the reasons for a bipartisan foreign policy are plain enough. What we Americans want is to achieve and maintain international peace and security in a world of free men and of free nations. We want a world where human rights are not merely an exercise in verbal piety, but a living embodiment of human dignity and individual opportunity. To fulfill our obligations as a leader among free nations, we must have a foreign policy clear in its aims and consistent in execution.

National security itself demands that our foreign commitments can weather changes in the political direction of our Government. Any Member of the Congress who searches his heart must agree that a strong effective and dynamic American policy in foreign affairs is to be preferred to a strictly Democratic policy or Republican policy—even in the heat of an election year.

What, then, are the indispensable ingredients for a workable bipartisan foreign policy? They would seem to be obvious enough and yet they need to be restated in view of the charge that to support bipartisanship signifies "me tooism" and GOP addiction to the dubious virtues of the rubber stamp.

First of all, Republicans and Democrats must agree that bipartisanship means that "both parties are committed to working together" for world peace. In the second place, the responsible party leaders must achieve and display both mutual tolerance and common readiness to strive together in the common cause. They have to agree that all pertinent information will be shared and that ample time be spent in advance consultation and scrutiny of every issue.

During the past decade, very earnest efforts have been made to attain a functional interparty cooperation in coping with foreign affairs. Soon after Hitler attacked Poland, the late President Roosevelt invited key figures of both parties to the White House for some extremely candid discussion. And the next day he told the joint session of Congress that "these perilous days demand cooperation between us without a trace of partisanship." There have been many heartening examples of constructive and fruitful interparty teamwork as exemplified by lend-lease, the establishment of the UN conference and the drafting of its Charter, the Marshall plan and the Atlantic Pact. Despite the strains and tempers which accompanied three national election campaigns, bipartisanship has survived. Sometimes its workings have been very far from perfect. But its imperfections hardly warrant the palpitant yearnings to go back to an isolationist past that can never be recaptured. Our only sane and sensible course is to summon forth our most creative and constructive efforts to tool up the machinery of bipartisanship and make it run more smoothly than ever before. Only thus can America really present a united front whether to eager foes, reluctant friends, or enthusiastic co-opters.

Perhaps today's heaviest obligation for both Republican and Democratic Parties is to foster and further a bipartisan foreign policy and to carry it out in a spirit of good faith. By this means the long-range stake of the American people in winning the peace will be placed above and beyond any short-range partisan advantage. The leaders of neither party can justify playing politics with peace.

A genuine bipartisan foreign policy contains within it the obligation upon the party in the White House—whether Democratic or Republican—to consult in advance with the leaders of the minority party before entering into any international understanding which would commit the United States to a definite course of action. Nobody can be permitted to forget that it is a two-way street between the White House and Capitol.

It is true, of course, that under our Constitution, the primary responsibility for formulating foreign policy rests with the President of the United States. But it is equally true that whenever foreign policy questions generate friction between the White House and the Congress our country is greatly embarrassed in its overseas concerns. This is particularly important whenever the President makes an international pledge or agreement which later may require implementation by the Congress. Much of the confusion which now surrounds American foreign policy at the moment derives from the regrettable fact that in recent years Presidents and Secretaries of State too often have entered into understandings with the heads of foreign governments without prior consultation with Democratic and Republican leaders in the Congress. The latter indeed were kept in ignorance until discord and misunderstandings of potentially serious propositions had developed.

It is not too wise to discard entirely the use of hindsight when charting a course for future action. The defects of our bipartisan foreign policy as they have been revealed over recent years can be appraised in calmer perspective by a realistic analysis of some of the errors which have resulted from this very failure of Presidents and Secretaries of State to take into their confidence and to consult with congressional leaders from both parties. For it is upon these men that the administration must in the last analysis lean heavily to gain and to preserve congressional support for any international commitment. The Cairo understanding, the Yalta agreements, the Potsdam pledges, the administration's improvisations in China during and particularly since the war, all exemplify flaws and faults in applying the spirit of a bipartisan foreign policy. Nobody can for a moment think that the entente reached by the President with representatives of foreign powers at Cairo and Yalta would have been acceptable, even at the time they were made, to the bipartisan leaders of the Senate Foreign Relations Committee.

The Cairo and Yalta decisions involve not only the prosecution of the war but also the building of the peace. Historians will undoubtedly record that these international conferences of the Roosevelt administration represented, in a very real sense, an attempt to write peace treaties on the installment plan. It is difficult to answer the charge put forth by many Republican spokesmen, that in these conferences the treaty-making clause of the Constitution was circumvented by the President of the United States. In any case the conduct of the executive branch was not consonant with the essential aim and purposes of a bipartisan foreign policy. Even the Potsdam agreement cannot escape its need of criticism on this score.

If bipartisan leaders of the Senate Foreign Relations Committee had been given an opportunity to present the Potsdam proposal to their committee, they would have raised some pertinent and pointed questions about America's prerogatives in Berlin. Certainly the failure of the agreement to clarify America's ability to enter and leave a city in which she was to have joint occupational rights and obligations with Russia would have been avoided.

The administration's handling of our policy in China, particularly since the war, cannot be fitted into a traffic design of two-way coordination and communication between the White House and the Congress. For many months the State Department failed to discuss with the bipartisan leaders of the Senate's Foreign Relations Committee its plans for China, if any. Warning signals of dissension and criticism were raised in debate in the Senate many times during this period. On one occasion during the Eightieth Congress, the Republican chairman of the Foreign Relations Committee—and the man who is perhaps more responsible than any other living American for a willing acceptance on the part of Republicans, and for that matter Americans generally, of the need for national unity in support of a bipartisan foreign policy—admitted under questioning on the floor of the Senate that the State Department had not consulted with the Foreign Relations Committee for many months on any phase of the China problem. He declared in the course of that debate, that the contents of the Wedemeyer report had not been made known to the bipartisan leaders of the Foreign Relations Committee.

At that time, which was the fall of 1947, a series of cracks and fissures developed in

the seams of America's bipartisan foreign policy. It should have been cemented very quickly by a mutual exchange of points of view and information between the State Department and the Senate Foreign Relations Committee. Instead, the misunderstandings and criticisms in respect to American policy in China became greater throughout 1947, 1948, and 1949. True, the predominant tendency in the Congress was to favor any administration proposal offered in the name of a bipartisan policy. Nevertheless, those of us in the Senate who strongly supported the idea of maintaining a bipartisan foreign policy were both grieved and handicapped on many occasions when the State Department neglected to inform the bipartisan leaders of the Congress about what America intended to do in Asia.

A great deal of the dissension which marked debates over the European recovery program, both in 1948 and 1949, was rooted in the dissatisfaction of some Senators with the administration's lone-hand action in Asia. In the closing weeks of the first session of the Eighty-first Congress, Senators who were battled and displeased with the administration's seeming unwillingness to make clear its position on China, gained considerable support not only in the upper Chamber but also from public opinion.

THE CHINA INCIDENT

When the second session of the Eighty-first Congress convened on January 3, it was from the outset obvious that the administration would be confronted with a serious attack upon some aspects of its foreign policy, particularly those relating to China.

It is not too late to arrest and reverse the trend toward partisanship in the field of American foreign policy. It is not too late to replace with a spirit of confidence and participation, the distrust which some Senators have of the adminstration's foreign policy. If the administration will hasten to assure the people of the United States that the leaders of both the Democratic and Republican Parties in the Congress will be consulted before major policy on any international issue is formulated by the State Department and the White House, the breach can be healed before irreparable damage is done.

This today is the acid test as to whether a bipartisan foreign policy actually prevails. No other course on the part of the administration will ever satisfy those who are questioning not only the existence, but the worth, of a bipartisan foreign policy. No other kind of cooperation will sufficiently strengthen the hand of the great VANDENBERG. Nothing else can place him in the powerful position he deserves to have within the Republican Party when he is faced with laying an administration foreign policy request before the Republicans in the Senate for approval.

A bipartisan foreign policy does not mean that Members of the Congress should refrain from criticizing any proposed course of action contemplated by the administration in the name of a bipartisan foreign policy. Rather, it is the duty of the Congressman to voice doubt and disagreement whenever, in his honest judgment, these are due. However, experience shows that mutual cooperation and mutual exchange of ideas and viewpoints between the administration and the leaders of Congress, in advance of an international commitment, usually remove any basis for fair and just criticism.

What is more, the greatest guaranty the administration has for maintaining a united American people behind the foreign policy of our country is to keep it bipartisan from conception to delivery. The American people can be counted upon to endorse and help effectuate a foreign policy which results from the cooperative efforts of the leaders in both the Democratic and the Republican Parties. Whenever a split occurs between those leaders, then division of a perilous nature is likely to develop.

American foreign policy cannot be separated from the cause of peace. The destiny of the American people depends upon winning that peace. Hence, they have the right to look to the party in the White House, Democratic or Republican, in the years immediately ahead to raise the issue of foreign policy above the level of partisan politics. They have the right to expect that the leaders of the minority party in the Congress will cooperate in good faith with the majority party and the Executive in formulating a foreign policy bipartisan in blueprint and in building.

A Factual Digest Detailing the Background and Significance of the Conviction of Alger Hiss

---

EXTENSION OF REMARKS
OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, February 3 (legislative day of Wednesday, January 4), 1950

Mr. MUNDT. Mr. President, under permission granted me by the Senate, I call attention to the following copy of a letter I have just sent to the editor of the largest and most widely read daily newspaper in South Dakota. It includes a condensed summary prepared at his request of some of the most significant factors in the Alger Hiss case as they were brought out in my speech on the Senate floor during the afternoon of Wednesday, January 25.

Due to the unusually wide interest which is developing in the background and significance of the conviction of Alger Hiss, I am taking this means of calling this digest to the attention of the Congress and the country.

UNITED STATES SENATE,
Washington, D. C., February 3, 1950.

Mr. FRED C. CHRISTOPHERSON,
Editor, the Daily Argus-Leader,
Sioux Falls, S. Dak.

DEAR FRED: It was indeed good of you to write and let me know that you had come across my address on the Senate floor entitled "What the Hiss Trial Actually Means," and telling me you had read the address in its entirety.

I certainly agree with you, fully, that the Hiss case is destined to go down in the annals of history as one of the strangest—and perhaps one of the most significant—chapters in our American history. Surprisingly enough, a great many of our otherwise very well informed citizens have never gone far enough into the actual evidence and ramifications of the Hiss case to realize its full importance and its far-flung significance.

I think your suggestion is therefore most timely and valuable; it is certainly true that editors, commentators, public officials, and most of our active private citizens are all very busy these days, and so your proposal that I prepare a condensed summary of the more important factors in the background and significance of the Alger Hiss case is entirely sound. I am grateful for it.

Enclosed with this letter is the digest high lighting some of the major points of the case, and more careful students can of course have access to the full text of my address starting on page 889 of the CONGRESSIONAL RECORD for January 25 or the address covering the same record which was recently made by Congressman NIXON on the floor of the House and which appears in the Appendix of the CONGRESSIONAL RECORD for January 30. As you know, DICK NIXON and I devoted many weeks almost exclusively to the congressional investigation which revealed the evidence on the basis of which Hiss was convicted.

Due to the many requests which have come in for the full text of my analysis of what the Hiss case actually means, I have had a limited number of reprints made of my address of January 25. I am enclosing one herewith.

Again thanking you for your constructive and helpful suggestions and with best wishes and kindest regards, I am,

Cordially yours,

KARL E. MUNDT,
United States Senator, South Dakota.

P. S.—If any of your friends desire a copy of the complete address for historic reference or to acquaint themselves fully with its full significance I shall be glad to send them a copy direct if they will write me here in suite 432 of the Senate Office Building in Washington.

A FACTUAL DIGEST DETAILING THE BACKGROUND AND SIGNIFICANCE OF THE CONVICTION OF ALGER HISS

(Prepared by request by Senator KARL E. MUNDT who, as a Member of the House of Representatives in the Eightieth Congress, was chairman of the subcommittee handling the investigations leading to the conviction of Alger Hiss)

1. Whittaker Chambers, at that time a $30,000-a-year member of the editorial staff of Time magazine, was not a voluntary witness before the House Committee on Un-American Activities. He came in response to a subpena served on him by the committee after it had been learned from independent sources that Chambers was a former member of the Communist Party. Chambers was not motivated by dislike or personal enmity for Hiss—in fact, if anything, throughout the hearings Chambers tended to protect Hiss by refusing to volunteer incriminating evidence against him.

2. Since it is an established fact that Chambers for years was a functionary of the Communist Party operating both as a transmission belt ferrying secret information out of Washington to the Communists and as a Communist agent seeking to influence the thinking and attitudes of top policy makers in high Government officialdom, the vital aspects of his relationships with Alger Hiss do not rest upon the court trials leading to his conviction but in the admissions which Hiss himself made while testifying under oath before the House Committee on Un-American Activities.

3. As a witness before the House Committee on Un-American Activities, Hiss first denied knowing Whittaker Chambers or anybody resembling his likeness. Later, when confronted with a vast body of testimony from Chambers demonstrating that Chambers knew many intimate details of the home surroundings, and the personal habits of Alger and Priscilla Hiss, Alger Hiss admitted that he did know Chambers under the name of "Crosley." He, in fact, admitted he knew Chambers so well that the Hiss and Chambers families had lived together under the same roof, that Hiss had loaned Chambers his furnished apartment for a period of several months without pay, that he had "loaned or given" Chambers the Hiss family automobile, and that he had loaned Chambers money. Incredible as it may sound, Hiss finally disclosed that he knew Chambers so intimately and well that it was only after an inspection of his teeth that he was willing to identify him positively!

4. At the time of the associations which Alger Hiss told the committee under oath he had with Chambers, Whittaker Chambers

was a paid Communist agent assigned to the Washington Communist apparatus in the dual role as an espionage agent and a man planted here to contact high American officials for the purpose of influencing their thinking and their policy decisions. At this period of history, Alger Hiss was an important figure in the State Department in Washington serving here as an assistant to the Assistant Secretary of State.

5. The court case in New York City dealt only with the question of the specific date that Hiss last associated with Chambers—in the trial, Hiss did not deny his past close associations with Whittaker Chambers. The trial also dealt with the truthfulness of Hiss when he denied smuggling State Department security documents from their official files and giving them to Chambers to photostat and relay to his Communist employers.

6. The conviction of Alger Hiss for perjury because he was accused of lying when he denied continuing his associations with Chambers down to a specific date—was made certain on the testimony of Mr. and Mrs. Chambers, supported by the corroborative testimony of a maid who worked in the Chambers household at that time and other evidence.

7. The conviction of Alger Hiss on the second count of his perjury indictment, however—the charge that he stole and delivered State Department security documents to Chambers—was based on a vast amount of documentary and tangible evidence in support of the testimony of Whittaker Chambers. For example, there was the unchallenged evidence that Chambers had these highly secret and important security documents in his possession. There was the evidence that the contents of many of these security documents had been typed on a Woodstock typewriter which Alger Hiss admitted belonged to him. No denial was made that the Hiss typewriter was the one used in transcribing the documents. There was the evidence that Chambers had several photostats of documents made in the handwriting of Alger Hiss; no denial was made that this was the handwriting of the accused. There was the admitted fact that Alger Hiss in the State Department had access to the documents the contents of which were found in the possession of Communist agent Chambers. Thus those who through lack of information suggest that no jury should take the word of an ex-Communist like Chambers either speak without knowledge of the documentary evidence in support of the perjury charge or else deliberately for reasons best known to themselves refuse to face up to the fact that it was the documentary evidence against Alger Hiss which resulted in his conviction in New York City.

8. Now that the country knows—or has available to it—the evidence showing that Alger Hiss was (by his own admission) a close associate of the Communist, Chambers, and since tangible and documentary evidence has convicted Hiss of lying when he denied supplying Chambers with State Department secret documents, it becomes highly important to know just what part Alger Hiss may have played in the history-shaping decisions which were made during the time that he served as a high-ranking State Department official. It is important as well to know how many close associates of Alger Hiss, whose present employment in Government may have been made possible by his intercession in their behalf, are still in position to sabotage our policies and to serve the cause of Soviet Russia and communism.

9. What, then, are the positions of vast influence held by Alger Hiss during his long career in Government?

Overlooking for the purposes of this digest, his other positions in Government, there were at least four strategic positions which Alger Hiss held in which he was in an ideal position (1) to influence high-policy decisions in the field of international relations, and (2) to seek, secure, and smuggle out vital secrets essential to our national security and the success of our foreign policy.

These four strategic positions were as follows:

(1) Hiss was a high functionary in the Far Eastern Division of the State Department, where recommendations originate concerning our foreign policy toward China.

(2) Hiss was the executive secretary of the Dumbarton Oaks Conference—one of the forerunners of the San Francisco Conference.

(3) Hiss was the Secretary General of the San Francisco Conference, where Time magazine reported he was in an ideal position to "have a lot to say behind the scenes about who gets the breaks."

(4) Hiss was one of a very small group of personal and confidential advisers to President Franklin D. Roosevelt and Secretary of State Edward R. Stettinius both before and during the entire Yalta conference.

10. This digest will not permit detailing the specific functions of Alger Hiss in each of these important posts. Those seeking more complete information will find it in my address on the Senate floor delivered on January 25.

At Yalta, however, the books written by Stettinius, James F. Byrnes, James A. Farley, Arthur Bliss Lane, and Secretary of War Henry L. Stimson (all quoted literally in my address) provide ample testimony of the important part that Alger Hiss played at the Yalta conference.

In addition, Hiss was one of the very small coterie of advisers taken by Stettinius to Yalta prior to their meeting with President Roosevelt there, and at which meeting the State Department advisers were briefing and counseling Stettinius on what he was to urge President Roosevelt to do, to say, and to decide at Yalta. It is hard to conjecture a more vital spot in the entire Government for rendering a permanent disservice to this country than the succession of offices held by Alger Hiss and by the part he had in determining the decisions at Yalta.

11. Up to now, no committee of Congress has had made available to it a list of the State Department employees or other Government officials who may owe their appointments to Alger Hiss or whose promotions to positions of enhanced influence may have resulted from recommendations by Hiss. President Truman, unfortunately, has issued a "freeze order" denying all committees of the Congress access to these employment records.

12. It is now common knowledge that President Truman, Dean Acheson, and others high in Government endeavored to discredit the work of the House Committee on Un-American Activities in conducting the investigation and hearings leading to the indictment and conviction of Alger Hiss. President Truman—not once, but at least twice—publicly denounced it as dealing only with a "red herring." The President said it was simply a political attempt to draw attention from his special session of the Eightieth Congress.

13. Even after the discovery that Chambers had in his possession the security documents from the State Department, a United Press news dispatch issued on December 1, 1948, stated, "The Department of Justice is about ready to drop its investigation of the celebrated Alger Hiss-Whittaker Chambers controversy, it was learned today * * * officials said privately that unless additional evidence is forthcoming, they are inclined to forget the whole thing." (Entire text of news story was inserted with my address in the CONGRESSIONAL RECORD of January 25, beginning on p. 889.)

14. Against the opposition of the White House and overcoming the lethargy of the Department of Justice, the House Committee on Un-American Activities stuck doggedly to its task until the documentary evidence was discovered which resulted in the conviction of Alger Hiss.

It stands today as an uncontrovertible fact that had it not been for the House Committee on Un-American Activities, this country would never have learned about the activities of Whittaker Chambers and Alger Hiss and the celebrated "pumpkin papers" would never have been located or disclosed.

15. Observers endeavoring to analyze the scope of activity engaged in by the particular Communist apparatus in the Federal Government which was operated by Whittaker Chambers should bear in mind that Alger Hiss was not the only member of this apparatus. Henry Julian Wadleigh, also of the State Department and also named by Chambers, has confessed to his important part in this espionage and policy-fixing apparatus. In fact, every important member of the apparatus named by Chambers has by this time either confessed, been convicted in court, fled from the country, or is dead.

16. In evaluating Yalta, and the importance to Communist sympathizers that policies agreed to there should be favorable to the Soviet and detrimental to the forces of freedom everywhere, we should bear in mind that it was at Yalta that (1) Poland was divided and its eastern portion given to the U. S. S. R.; (2) China was doomed as an autonomous country under its own government because at Yalta the United States of America yielded to the demands of the U. S. S. R. that the power spots in Manchuria—"The Ruhr of China"—should be turned over to the Communists; (3) the weird arrangements, which were later confirmed at Potsdam by President Truman, were devised whereby the American occupation forces in Berlin were to be entirely surrounded by the unfriendly Red armies of Russia; (4) the fate of the Balkans was sealed; and (5) the extra votes for the Soviet and the veto in the United Nations Charter were agreed upon which have done so much to enable the U. S. S. R. to sabotage the peace-preserving efforts of that great international organization.

17. There are other serious and important consequences disclosed by the trial, the activities, and the conviction of Alger Hiss, but those wishing to pursue the subject exhaustively can find this material in the printed hearings of the House Committee on Un-American Activities, in my address on the Senate floor on January 25, in the report of Congressman NIXON's analysis of the same subject as it appears in the Appendix of the CONGRESSIONAL RECORD for January 30, and from the files of the Library of Congress and the House Committee on Un-American Activities. More careful students can find much information also in the printed transcripts of the two trials in New York City which resulted in the conviction of Alger Hiss. This digest simply chronicles some of the more significant and obvious factors involved in this epochal case.

18. Out of this experience the United States should learn some lessons and take some action which will tend to strengthen its security and to protect more adequately this last great bastion of human freedom on this earth. Among these lessons are the following:

(A) Since the statute of limitations necessitates crimes of this type being disclosed within 3 years, or grants the offenders complete immunity from punishment, Wadleigh, Chambers, Hiss, and others will go scot free, insofar as punishment for their espionage activities is concerned. Hiss has been sentenced to 5 years in the Federal penitentiary solely because the jury found him guilty of perjury for lying about the part he played in this great conspiracy. Therefore, the statute of limitations for crimes of this type against the security of our Government should be promptly extended to at least 10 years.

(B) Strangely enough, this free Republic has no law of any kind which prevents the employment of Communists on the Federal pay roll or which punishes these traitorous agents when they work their way into such employment and are caught in the act. There is real need for the early passage of some such law as the Mundt-Nixon bill which passed the House in the Eightieth Congress by a vote of 319 to 56 but which was never acted upon in the Senate. This bill has been modified and rewritten and is again before Congress having been introduced in the Eighty-first Congress by Senators MUNDT, FERGUSON, and JOHNSON of South Carolina. It should be passed despite the Communists' boast that they have spent over a million dollars in a successful effort to block its passage in the Eighty-first Congress.

The aggressive and adroit propaganda and campaigning of the Communists and their fellow-travelers has entirely misrepresented the contents and purposes of this legislation until many who have never even read the bill have lent their good name to those desperately opposing its passage. Unless this country acts to protect its public offices against disloyal elements who desire to take them over and infiltrate them we are apt to so weaken our nternal defenses against communism that it will be impossible to defeat it successfully by military might and by expenditures of time and effort on our external defenses alone.

(C) Appropriate committees of Congress should make a thorough check to determine to what extent our State Department and our other Government offices are still permeated and peopled by Communists and their sympathizers and coworkers. All disloyal elements should be summarily weeded out without further apology or appeasement—the time is amply here when once again we should "place only Americans on guard."

(D) A complete reappraisal should be made of the so-called loyalty checks now being conducted by the administration at great expense but with highly inadequate results insofar as protecting the public interest is concerned. What we are actually getting is simply a name check and not a loyalty check at all. Only those who openly affiliate with some obviously Communist group are now detected and removed. At least in the more important posts in public office we need a security check rather than a name check to determine merely whether a person has openly indicated disloyalty by joining a Communist group. There is still inexcusable laxity in high places in the matter of preventing the employment on the Federal pay roll of disloyal individuals.

(E) The House Committee on Un-American Activities should be strengthened and it should be encouraged to continue the great work it has done in the past. Carping critics and chronic accusers of this hard-working committee should not be permitted to drive it into ineffective idleness. It should be adequately staffed and courageously manned. No political party should be permitted by the public to stifle its work or to soft pedal its disclosures.

(F) As a consequence of the currently sorry situation which has developed in our foreign policy and the disturbing disclosures of policies detrimental to American interests as well as the revelations that atomic secrets, information on the new H-bomb, and diplomatic security matters have been freely funneled out of this country to Russia, a careful, candid, and complete reappraisal should be made of the entire international situation. A positive, constructive, freedom-serving, and peace-preserving foreign policy should be developed as the result of the best efforts and thinking of both of our major political parties rather than by either one of them.

The Republican Party should begin measuring up to its responsibilities as a great and independent political party. "Me-tooism" in foreign policy should be stopped. A political party which is too timid or too tired to make constructive, positive, and realistic foreign-policy proposals of its own and to match them in debate and discussion with the suggestions of the White House and the Secretary of State can scarcely expect the public to entrust it with their future and their fate. We Republicans have not for several years met our full obligation in this regard as a great political party.

To preserve America and to protect the peace, we must do so now. Once a foreign policy is established by merging the best ideas of both political parties and all good American minds into a common pattern, it should have complete support by both political parties and by all good citizens. That is true bipartisanship in foreign affairs. Our foreign policy of the future must not be isolationism, it must not be narrow nationalism, it must be global in its thinking and realistic in its operation and it must serve the best interests of the United States; because in so doing it best serves the interests of permanent peace and of the entire world.

The foregoing is a sketchy digest only of the 3-hour discussion of the ramifications and background of the Alger Hiss case which I delivered on the Senate floor on January 25. The full account begins on page 889 of the RECORD for that day. In limited numbers I have some extra copies of that detailed discussion available to those who care to request them by post card or letter addressed to me here in my office, No. 432, Senate Office Building, Washington, D. C.

The Road to Peace

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Friday, February 3 (legislative day of Wednesday, January 4), 1950

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an article entitled "The Road to Peace" appearing in the January-February 1950 issue of the magazine Prevent World War III, published by the Society for the Prevention of World War III, 515 Madison Avenue, New York, N. Y.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE ROAD TO PEACE

It will be recalled that after each concession granted to Adolf Hitler, the Nazi propaganda machine would announce to the world that there were new "problems" which demanded immediate solution. This would invariably cause western diplomats to put on an expression of pained surprise—sometimes indignation.

The shock quickly wore off and again concessions were made to Hitler. Again demands by Hitler. Again surprise. Yet, these diplomats were filled with optimism. In his book, Defense of the Peace, Georges Bonnet, the French Foreign Minister, during the late 1930's relates that "Mr. Neville Chamberlain furthermore wondered whether the European situation was as black as Daladier believed. He doubted very much that Hitler desired the destruction of the Czechoslovak state or of a refashioned Czechoslovak state; he did not believe the Fuehrer wanted an anschluss."

As we now know, Mr. Chamberlain's hopes were unfounded. Hitler obtained new concessions—made new demands—then caused Mr. Chamberlain to express astonishment again.

This routine continued right up to and including the fateful Munich sell-out. During all those years, peoples in western Europe and the United States were fed the delusion that there was no real connection between old concessions and new demands. Their failing to perceive the underlying strategy of the Nazis enabled Hitler to grab a good part of Europe without risk or opposition.

When the people awoke to the fact that appeasement had its own deadly logic, the bombs were already falling on Rotterdam, Coventry, and Warsaw. Must we pay the same price again? Shall we allow ourselves to be taken down the road to disaster step by step?

Since the day that the Allied Powers declared as their common objective "the complete disarmament and demilitarization of Germany and the elimination or control of all German industry that could be used for military production," this war-torn world has witnessed ever-increasing violations of this sacred pledge.

The Germans demanded that denazification cease. The Allied Powers hastily acceded to their wish. Even the members of the German general staff have been spared.

The Germans demanded that the war criminals be spared, and the Allied Powers forgave these criminal elements, with few exceptions.

The Germans demanded that their cartel empires be preserved, and the Allied Powers have acceded.

The Germans demanded that there be a halt to the reparations program and the Allies scaled down reparations deliveries to an insignificant level.

The Germans demanded the retention of prohibited industries which are the basis of a war potential, and the Allied Powers complied.

The list of concessions, demands, concessions, demands, is by no means complete. But is it not clear that there is an organic connection between the concessions granted and the new demands made? Is it not plain that the logic of this steady retreat from victory points to the rebirth of the German army? The authoritative London Economist naively declares: "The problem of the part that Germany should play in its own defense has suddenly sprung to the surface of thought and discussion." There is nothing sudden about this development. It is merely the end result of the steady deterioration of our original policies and position in Germany.

Shall we rearm Germany? The question is unreal and when it comes from the lips of the German-Firsters who have such thorough control over the occupation, it is downright dishonest. For the bitter truth is that Germany is being rearmed. You do not build up a modern army without first building up the steel plants, the ball-bearing plants, the synthetic oil plants, the machine-tool plants, the chemical plants—and these are going full blast again.

In addition, the tradition of militarism and pan-Germanism has also been preserved. Pensions are paid to former members of the German general staff. Even the little children are being groomed for their future role. Military toys are reappearing this Christmas season in Germany.

As the Society for the Prevention of World War III has revealed in previous issues, the east German police are being attuned for new tasks of a more portentous nature. According to western military intelligence sources, the police forces are the precursors

for a new German people's army. Presumably this army will have to save the Germans from the imperialist plots of the Anglo-Saxons. But what about the West? Are our statesmen Simon-pure? The answer by this time is obvious, we believe. It does not make military sense to preserve a war potential far in excess of Germany's peacetime needs and yet piously assure peace-loving peoples that there is no intention to organize a German army.

For weeks, official denials have been crossed up by weasel-worded qualifications. You can pick up magazine after magazine, newspaper after newspaper and you will find reports and rumors about a new west-German army. For example, in the November 25, 1949, issue of the United News and World Report we read the following:

"Dean Acheson, Secretary of State, signaled a vital turn in United States policy when he traveled to Germany to promise things to the Germans instead of having German officials representing a defeated nation travel to a meeting with United States officials to ask for favors, hat in hand. Original United States plan to turn Germany into a sheep pasture is revised into a secret plan to rearm the Germans into a powerful nation."

It has been said that General Bradley has spoken off-the-record on the practicability of a west-German army.

General Lucius D. Clay, who shares in the responsibility for the decline of American prestige and authority in Germany, is openly lobbying for a German army. Some Americans have expressed surprise because 10 months ago General Clay told American correspondents that if the United States allowed the creation of a new German army "We should never have come over here in the first place." His change of mind stems from the very policies he pursued which laid the groundwork for the rebuilding of Germany's industrial war potential.

According to newspaper columnists, Viscount Field Marshal Montgomery, a recent visitor to this country, has adopted the same line as General Clay.

And what about the Germans? There has been no official denial that Chancellor Adenauer has requested war equipment for 25 German divisions. As a matter of fact, Adenauer has recently said that he would, under certain conditions, be ready and willing to organize a new Wehrmacht.

Adenauer seems to have a short memory because in the agreement of November 24, 1949, Adenauer's government pledged as follows: "The Federal Government further declares its earnest determination to maintain the demilitarization of the Federal territory and to endeavor by all means in its power to prevent the re-creation of armed forces of any kind. To this end the Federal Government will cooperate fully with the High Commission in the work of the military security board."

Adenauer did not wait very long to shatter the illusions of some naive politicians about the new Germany. When Dean Acheson visited the German leaders on November 13, he expressed his aim to establish a relationship of trust and confidence and feelings of personal regard with the Germans. (New York Times, November 14, 1949.)

The Germans are playing their cards carefully. They do not want to make any premature promises until their economic power has been fully revitalized. The Germans do not want to open all their cards until they are in the position where they can dictate the terms and conditions upon which they would agree toward the reestablishment of German armed forces.

The London Economist, in discussing the question of an army for Germany, recently admitted that an independent German Army would be on every score politically disastrous. But it then urges a practical plan to integrate such an army under the control of the Western Allies. The London Economist apparently believes that the Germans will consent to play the role of European Gurkhas. On the other hand, the President of the Bonn Government, Mr. Heuss, told newsmen "Frankly, I cannot see the people's police waging a Socialist Unity Party crusade to conquer and subdue democratic west Germany, just as I cannot see the west fighting the men from the Soviet zone. This would not be the German way of handling internal political matters."

The London Economist should ponder the words of Herr Heuss. And while it does so, it should recollect the fateful September days of 1940 when Goering's Luftwaffe poured tons of bombs on London. Indeed, the Germans will not accept an inferior position. They regard the creation of a German army as an internal political matter, for such an army must first and only be at the service of the Germans.

What does this all mean? First, let it be said that our society is dedicated to the prevention of a new holocaust. It does not believe that war is inevitable. Yet the Germans have been able to extract concession after concession on the assumption of the inevitability of a new war. It is therefore understandable that the Germans should have a vested interest in keeping the pot boiling.

Only by maintaining a war-charged atmosphere can the German plan for resurgence succeed. There are people who believe it far more practical to allow the Germans rather than Americans to do the fighting and the dying in a new war. But is it not far more prudent to put an end to German intrigue which thrives on the mounting tensions and cultivates the propaganda of the inevitability of a new war between east and west?

If the Germans were deprived of their ability to pit east against west as they are succeeding in doing today, then the inevitability thesis would not be as plausible as it seems. The German strategy can be checked by an honest and determined effort on the part of the four occupying powers to neutralize Germany. Our concept of neutralization calls for a four power agreement to deprive Germany of those instruments of economic, political, and military power which have enabled her to blackmail east and west. (As can be seen, our concept of neutralization has nothing in common with similar projects advocated by the so-called Nauheimer circle of Prof. Ulrich Noack, whose background we have on various occasions exposed in these pages.)

The American Friends Service Committee prepared a report last summer in which it discussed ways and means of reducing tensions between Russia and the west and thereby decreasing the chances of a new war. It, too, advocated the neutralization of Germany "for the United States and the Soviet Union to continue the competition for Germany will almost certainly lead to disaster."

It is encouraging to note that responsible groups dedicated to the brotherhood of man are aware of the fundamental importance of Germany with regard to the future peace and security of the world. We have said this on frequent occasions: "For so long as Germany remains a potential asset to one or more of the Allied Nations she will be used for ulterior, selfish, political, military, and economic purposes. And so long will the world remain insecure. So long as Germany is available for one of these marriages, she will be in a good position to recapture her military strength. Only when we have conclusive proof, supported by acts, that the big powers will not establish any liaison with Germany to use her as an eventual ally in any extra national activity, will there be a reasonable chance of destroying mutual suspicions and of establishing a genuine world collaboration for peace."

This statement was published in our magazine, Prevent World War III, in April 1946, long before there was any apparent sign that the Germans were climbing back to positions where they could embroil the world in a new war.

We refused to live in Mr. Chamberlain's dream world of the 1930's, because we were already aware of the violation of common agreements made by the Allies to eliminate Germany's war potential. Thus all the talk and noise today about new German armies in the east and in the west is not surprising to us.

It must be said that German armies will inevitably be created again if the present policies which are repeating the same blunders made by the Allies after World War I, are continued.

The neutralization of Germany can be a major step toward the prevention of new conflicts. Such a neutralization requires the following steps:

A. The establishment of a four-power disarmament committee to prevent the remilitarization of any of the zones in Germany.

B. Four-power agreement to hold the level of German steel production to peacetime needs—not exceeding present permitted levels.

C. Prompt fulfillment of the original reparations program under four-power control.

D. Four-power agreement on the elimination from key positions of former Nazis and Hitler supporters.

E. Four-power action to break up the German cartel empire.

F. Genuine international control of the Ruhr to prevent the reestablishment of German economic domination of her neighbors, and, at the same time, give Germany a viable economy for peace.

The carrying out of these measures and subsidiary steps would take Germany out of the international arena as a major bone of contention between east and west.

The hour is late, but it is up to us, the living, to make our final decision. We must bear in mind that a German army is inevitable if the people consent to policies which preserve a dangerous war potential in her heavy industries. It would be wishful thinking to believe that the creation of German armies, east or west, would be a boon to either side or to mankind in general.

President Heuss has told the truth: An east German army will not fight a west German army or vice versa. They will unite and when they unite, the betrayal of the peace and the security of the United States and her friends abroad will be complete.

Does the Republican Party Want the Negro Vote?

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1950

Mr. BIEMILLER. Mr. Speaker, there has been an increasing attempt by the Republican Party to avoid the blame for the failure of Congress to pass FEPC legislation.

With permission to extend my remarks in the RECORD, I include excerpts from a singularly clear explanation of Republican political strategy. It is an article by Arnold Aronson and Samuel Spiegler published in the Crisis, official magazine of the National Association for the Advancement of Colored People.

It points out that the Republican Party has been responsible for every major defeat of civil-rights legislation in the last year. Beginning with the fact that President Truman campaigned courageously on the civil-rights issue while Dewey was silent, these writers find the Republican Party record consistently against civil rights.

They cite the revealing fact that in last year's civil-rights filibuster fight five of the Republicans' nine-member Senate policy committee voted with the Dixiecrats.

They quoted Mary McLeod Bethune, famed educator, as remarking on that same fight closed by the atrocious Wherry resolution:

> The loss of the battle, while disappointing in itself, was not so piercing a blow as the way the Republicans appear to have insulted our intelligence.

These writers recite the same stories in California, Ohio, Illinois, and Pennsylvania Legislatures where Democrats went down the line for FEPC, but Republicans used parliamentary jockeying and direct votes against the measure when necessary to prevent enactment into law.

DOES THE REPUBLICAN PARTY WANT THE NEGRO VOTE?

(By Arnold Aronson and Samuel Spiegler)

Once again a congressional session has come to a close without enacting any civil-rights measure. FEPC was fought through committee in both Houses in the last session and is on the calendar in both the Senate and the House of Representatives ready for floor action when Congress reconvenes in January. Thus, while poll tax, antilynch, antisegregation, Army Jim Crow, and other civil-rights bills rest in committee pigeonholes, the most important of all civil-rights measures is in a position to be taken up forthwith when the legislators resume their seats.

There is no doubt about the crucial character of FEPC in the whole civil-rights struggle. It is this measure to which virtually every Negro assigns first priority. As one Negro spokesman has put it, FEPC means bread and butter, rent and fuel, shoes for the baby, and clothing for millions of colored people. Moreover, not only Negroes, but Jews and other minority groups, religious and labor organizations, and liberal bodies of all sorts, have called for enactment of FEPC as the real test of congressional sincerity on civil rights.

Next year, 1950, is an election year. One-third of the Senate and the entire House of Representatives goes before the electorate. Not only will the strategy of the major parties in dealing with FEPC quickly reveal where they really stand on civil rights when the chips are down, but the way Senators and Representatives vote in crucial tests on this issue may determine how they, and their parties, will fare at the polls in 1950 and 1952.

* * * * * *

Traditionally the Negro used to be a Republican. Until 1932, when Franklin Delano Roosevelt swept the country, including the Negroes, into the Democratic fold, the Republican Party, the party of Abraham Lincoln, the adversary of southern white oppression, commanded the Negro's support. Since that time, the Negro vote in every national election has gone Democratic. Only Wendell Willkie, with his unequivocal stand against racial discrimination, recaptured any significant part of this vote.

* * * * *

Republican strategy has seemed to many Negroes deliberately designed to alienate rather than to attract their support. During the Presidential campaign, Dewey made no move to exploit his excellent record on civil rights as Governor of New York. At no time did he or any of his major supporters make any reference to the pioneer laws against employment discrimination or discrimination in educational institutions which New York State had adopted during his administration. While Truman made capital of his civil-rights proposals, Dewey kept silent about his civil-rights accomplishments. While Truman made a major campaign speech in Harlem, New York's Negro Metropolis—the first Presidential candidate ever to do so—Dewey, Taft, Stassen, and other Republican bigwigs campaigned in the solid South. While Truman defied and denounced the Dixiecrats, Republican spokesmen all but openly invited the dissident Southern Democrats into the Republican Party. While the Republican platform pledges on civil rights in 1948 represented a retreat from the position taken by the party in 1944, the Democratic civil-rights plank was the most far reaching ever to be adopted by a national party convention.

While Congressman DAWSON of Illinois was named assistant to the chairman of the Democratic National Committee and secretary of the Democratic Congressional Committee the Republicans failed to give any Negro a position of prominence or importance in the party organization.

NEGRO REPUBLICANS DISMAYED

Influential Negro Republicans were confounded and dismayed. The Republican American Committee, comprising Republican Negro leadership in 38 States, as early as August 1947 felt impelled to warn the party leadership of the dangers which lie ahead if it continues its policy of inaction in respect to these issues (i. e., civil rights). Negro leaders both inside and outside the party became steadily more and more convinced that they were being offered lip-service and political double-talk.

One of them, a life-long Republican, said: "In 1944 our party pledged itself to the enactment of FEPC, in 1946 it had the opportunity to make good on that promise. It did not do so. You cannot say it failed. The plain, sad, regrettable truth is that it did not try."

A writer in the Republican, the national party magazine, for October 1947, took up the warning. Apparently addressing the white leadership, he wrote:

"If the Republicans don't wake up to the factor behind the Negro vote, it will soon be too late. * * * If the shoe were on the other foot and you were the Negro seeking political affiliations, would you be honest in considering the Republican Party as your party today? Wouldn't you demand better treatment and more recognition from the Republican Party than you, as a Negro, have been receiving?"

VOTE WRITTEN OFF

This cursory review of Republican campaign behavior suggests that the party leadership may have decided, quite deliberately and as a matter of long-range political policy, to write off the Negro vote. If such is the case, the decision must have been taken with a view to attracting some larger or at least off-setting advantage. What might have been?

Perhaps Senator TAFT offered a clew in his speech at Nashville, Tenn., when he told a southern States' rights audience, "There is a basic agreement between the southern Democrats and the Republican Party." It is not necessary to interpret this as a reference to a deal in order to support the conjecture that the Republican Party may have been making a genuine bid for a basic realinement of political forces. The endorsement of Dewey and Warren by Jesse Jones, of Texas, Secretary of Commerce in the Roosevelt administration, and the apparent willingness of the Byrd machine to see the Virginia electoral votes go Republican lend credence to this conjecture. Also supporting such speculation is TAFT's prediction that the Republicans might carry Virginia, North Carolina, Tennessee, and Georgia. Most of the Republican votes in those States, he said, would come from conservative Democrats.

After all, a Republican victory was expected by virtually everyone. The Republicans may have been convinced that they did not need the Negro vote to win, and that the occasion was ripe for breaking the solid South once and for all. If this was, indeed, their objective, the prize was a tremendous one; perhaps tempting enough to induce the Republicans to gamble the election on it.

Having lost the election, and having failed to win any southern electoral votes, the Republicans might have been expected to seek to regain some of the Negro vote which had been such a major factor in their defeat.

REPUBLICAN BEHAVIOR

Does their behavior in the present Congress suggest any such basic change in strategy on their part?

Following the defeat of the antipoll-tax bill by a filibuster during the special session of Congress in the summer of 1948, Republican leaders pledged a change in the Senate rules governing cloture as the first order of business in what they confidently expected would be a Republican-controlled Eighty-first Congress.

Rule XXII of the Senate, the point at issue, was adopted in 1917 to "terminate successful filibustering." It provided that debate on a "pending measure" would be brought to a close by a favorable vote of two-thirds of those Senators present and voting. However, the rule proved largely ineffective. Only four times in the 32 years during which it was in force had cloture been invoked successfully—and never on a civil-rights bill. Despite repeated passage of civil-rights measures by the House they were always filibustered to death in the Senate; and all efforts to invoke cloture failed for want of the necessary two-thirds majority. It was abundantly clear, therefore, that a more liberal cloture rule, which would permit limitation on debate by something less than two-thirds of those present and voting, was basic to the enactment of civil-rights legislation.

* * * * *

CRUCIAL TEST

The crucial test came on a ruling by Vice President BARKLEY which in substance declared that rule XXII applied to any business before the Senate whether technically a motion or a measure. Had this interpretation been upheld the filibuster on Senator Lucas' motion to take up the cloture change would have been brought to a close and the Senate enabled to debate the issue itself. A reversal of the Vice President's ruling left the road open for endless filibustering subject only to the limitations of lung power. By a vote of 46 to 41 the Senate overruled the Vice President. A shift of but three votes would have changed the result.

The 46 Senators who voted to override Mr. BARKLEY were divided equally among Democrats and Republicans. Of the 23 Democratic Senators who voted against the Vice President's ruling, 18 were from the South; the remaining 5 from the border States of Arizona, Oklahoma, Kentucky, and Nevada. Southern opposition to any anti-filibuster resolution was to be expected, however. It was much more difficult for Republican leaders to square the 23 negative Republican votes with the party's professed zeal for civil rights legislation, and it was probably not pure coincidence that a majority of the 23 were from such States as the Dakotas, Maine, Iowa, Kansas, Nebraska, Minnesota, Oregon, Washington, and Wisconsin, States where there is no appreciable Negro vote. The top-level character of the

Republican back-turning on its civil rights platform pledges may be gleaned from the fact that 5 of the GOP's 9-man policy committee voted with the southern Democrats as did 15 of the very Republican Senators who originally had challenged Senator LUCAS to take up the cloture rule.

The same coalition of Republicans and southern Democrats then pushed through a new cloture rule bearing the name of Republican floor leader KENNETH WHERRY and the blessing of Dixiecrat strategist, Senator RUSSELL, of Georgia. The new rule extends the application of cloture to any "measure, motion, or other matter pending before the Senate," and to that extent is an improvement on the 1917 rule. More fundamentally, however, instead of lowering the hitherto unattainable two-thirds present and voting requirement, the Wherry substitute ups the number necessary for cloture to two-thirds of the entire Senate; that is, to 64 votes. In addition, any future attempt to liberalize the rule is specifically exempted from any limitation on debate. This 64-vote requirement for cloture has, perhaps, scuttled civil-rights legislation for many years to come.

NEGRO REACTION

Negro reaction was immediate and violent. The NAACP called the Republican role in the Senate rules maneuver a sell-out. In a special message to its branches throughout the country, the association adjured its members "to fix firmly in your minds for 1950, and following election years, the names of those who tried to stop the clock so far as civil rights are concerned."

The chairman of the politically important Negro Republican American Committee in a letter to WAYNE MORSE expressed his heartfelt thanks for the Oregon Republican's speech against the transparent sham of the Wherry compromise. The writer of the letter, remarking that he had "been a delegate to as many Republican national conventions as any man alive today," called the debate on the rules change a cream puff farce, and the amendment "an absolute and complete surrender to the ideas and policies of the Ku Klux Klan. The defeats of 1932, 1936, 1940, 1944, and 1948," he wrote, "have not taught the Republican leadership anything about the wishes, hopes, and aspirations of colored Republicans to become full-fledged citizens of this great America."

Efforts of Republican leaders to justify the Wherry resolution on the ground that it closes the loopholes in the old rule have therefore merely aggravated the resentment of Negro voters. As famed educator Mary McLeod Bethune put it: "The loss of the battle while disappointing in itself was not so piercing a blow as the way the Republicans appear to have insulted our intelligence."

This recital scarcely supports the conjecture that the Republican strategy was designed to appeal to the Negro voter. What might its objective have been? Some observers have suggested that it was the achievement of the same practical result through coalition with the southern Democrats which had been denied the Republicans in the election, namely, control of Congress. If this was so the Republican strategy, it must be conceded, paid off. Not much has been done by the present Congress over Republican opposition.

It is possible thus to explain Republican congressional tactics. But it is not possible on the same grounds to explain the actions of Republicans in state legislatures during the sessions just ended. In the States there are no southern Democratic blocs with which to seek coalitions, and there are no bases for fundamental reorganizations of party lines. Yet in legislature after legislature, Republicans have voted against bills which had been given the highest priority by Negro citizens.

Let us look first at the Republican record in the three key States of California, Illinois, and Ohio, where, as we have seen, the Negro vote may well have determined the outcome of the last presidential election.

In California, where the Republicans will be contesting in 1950 for the United States Senate seat now held by Democrat SHERIDAN DOWNEY, Governor Warren's administration has a moderate but firm majority in both houses of the State legislature. Democratic sponsors fought desperately to get an FEPC bill through the Assembly, California's lower chamber. The bill would have created a State commission modeled closely on New York's successful State commission against discrimination. It was voted on unfavorably in a Republican-dominated committee, the vote being 11 to 8 on straight party lines. However, three record votes on the measure were forced on the floor.

A motion to discharge the bill from committee first carried 41–34; but the Republican leadership swung into action, and a few days later the body voted 46 to 28 to reverse itself. The bill's sponsor charged that the Republican speaker of the assembly had threatened committee chairman with loss of their jobs if they did not vote for the reversal. Four committee chairmen did in fact change their votes, and a fifth absented himself from voting. A further and final attempt to get the bill out of committee was defeated 35 to 31. An analysis of the voting reveals that only one of the 35 Democrats in the assembly voted against FEPC on all three tests; whereas 28 of the 45 Republicans did so.

Illinois, for the first time in many years, emerged from the 1948 election with a Democratic Governor, Adlai Stevenson, and a lower legislative house under Democratic control. In the senate the Republicans retained an almost two to one majority. The United States Senate seat, now occupied by majority leader SCOTT W. LUCAS, will be in contest in 1950, and a Republican victory would represent a major set-back for the Truman administration.

With both party platforms pledging enactment of FEPC, passage of a fair employment act in Illinois seemed almost assured. But the succession of events paralleled that in California. The Democratic-controlled house passed a bipartisan FEPC bill sponsored by no less than 57 members, by a vote of 81 to 53. Sixty-nine Democrats and only 12 Republicans voted for it; 40 Republicans and but 3 Democrats opposed it.

But it was in the senate that the crucial test came. Here the 32 Republicans comprise a clear majority of the 50 members. The Democrats lined up early in support of the measure; by early June, 16 of the 18 Democratic senators were committed to vote for it. Although the Republican caucus publicly announced that it was taking no party position on the issue, it was reported that a secret caucus committed the Republican members to oppose the measure. Whether this is true or not, the Republican leadership, in debate, did demand that Republican senators vote against the bill as a matter of party regularity. One Republican stated on the floor, in explaining why he was voting against the bill, that he was doing so against his convictions; that not only had political and economic pressures been applied to him, but his wife and his children had been threatened with social ostracism if he supported the measure.

FORGET NEGRO VOTE

* * * * *

On the final test, FEPC lost, 25–23. Twenty-four of the 25 adverse votes were cast by Republicans. Only 7 Republicans joined 16 Democrats in support of the legislation.

Although the final vote was three short of the necessary constitutional majority, actually the bill would have passed had one more Republican been for it. The lone Democrat who voted against the measure, and one Republican answered "no" only when and because it was evident that enough votes could not be mustered for enactment. Had one more Republican come forward and committed himself to vote for FEPC before the roll call, Illinois would today be among the States which have prohibited discrimination in employment because of race, color, or creed.

* * * * *

OHIO STORY

The story was the same in Ohio. Senator TAFT's present term expires in 1951, and it is generally agreed that, with labor grimly determined to accomplish his political demise, and liberal sentiment generally opposed to him, he will face the toughest campaign of his long career in 1950. The Republicans slipped badly in 1947 in Ohio. The State legislature went Democratic for the first time in history, but by a small majority, so that the Republicans hold the balance of power on many controversial issues. In the circumstances, one might expect the Republicans to be even more than ordinarily solicitous of the interests of so influential a group of voters as the Negroes.

The Republican State platform in 1948 had promised to enact an FEPC law, and early in the session a bipartisan bill was introduced. But Republicans promptly introduced a substitute bill, establishing a purely educational commission, generally considered worthless by FEPC advocates. This was defeated in the house by one vote, 67 to 66. The support for this emasculated measure was almost wholly Republican, the opposition almost wholly Democratic. The house then passed, 70 to 61, the original, effective bill, 62 Democrats and only 8 Republicans comprising the majority, with 55 Republicans and 6 Democrats opposing.

The senate, however, by a vote of 17 to 15, passed the same ineffective bill which the house had rejected. The vote in the senate on this measure was crucial. Favoring the innocuous bill were 13 Republicans and 4 Democrats. The 15 votes in opposition were solidly Democratic. If a single Republican had voted against the measure it would have been defeated. Friends of FEPC exerted every form of persuasion to obtain that critically needed Republican vote. George Bender, chairman of the Cuyahoga County Republican Committee, warned Republican legislators: "Our party's platform pledge will be a crucial issue in our 1950 campaign," he telegraphed. "The political implications of this question may be of decisive importance in determining the outcome of these elections." TAFT was importuned to use his influence, but to no avail.

A conference committee of senate and house which was appointed to iron out differences between the strong house measure and the weak senate bill agreed upon a compromise. The Republican Cleveland News said editorially that this seemed "fair and cautious." It urged its adoption, resting its advice, it stated, on political considerations: "We want to see Republicans get credit among the sympathy groups in the large Ohio cities so these more or less dissident groups can be wooed to the Republican cause in the 1950 and 1952 elections." But even this compromise was rejected by the senate, 17 to 13. Not a single Republican voted in favor of the conference report.

MICHIGAN STORY

Other case histories could be recounted. They would all fall into the same pattern. Take Michigan for example. A Democrat introduced a bill for an effective FEPC. Bipartisan sponsorship was sought but rejected by Republicans. The bill was bottled up in

committee. An alternative bill was introduced under Republican sponsorship late in the session. This lacked features which FEPC advocates considered essential. Amendments to strengthen it were added in committee, and Democratic members of the legislature announced that they would support this measure as amended, even though it was known by the names of its Republican sponsors. The committee failed to report it out. A motion to discharge the committee from further consideration, which would have had the effect of bringing the bill to the floor of the House, was defeated by a straight party vote: 57 Republicans voting no, 39 Democrats voting yes.

PENNSYLVANIA

Somewhat more labyrinthine is the history of FEPC defeat in Pennsylvania. Several bills were introduced by Republicans in both senate and house. Pledged to enactment of fair employment practices legislation, Governor Duff publicly declared that the Republican Party had an unmistakable obligation to pass an FEPC act. One bill, specifically supported by the Governor, became known as an administration measure. The Pennsylvania Manufacturers Association opposed the bill. Its president, Republican National Committeeman G. Mason Owlett, after an interview with the Governor, told newspaper reporters that the Pennsylvania Republican Party was united (referring to the deep differences between the Governor and the Grundy-Owlett machine), that the administration's legislative program would go through, but that passage of FEPC seemed unlikely. Both senate and house committees kept FEPC bills bottled up. In an effort to obscure responsibility for the action, the senate committee on judiciary finally voted by secret ballot to kill FEPC. A Democratic motion to discharge the bill from a house committee lost, 107 to 89; every Democrat in the house and one sole Republican voted for discharge. An effort to discharge a senate committee met a similar fate, the motion losing 35 to 15 on a straight party vote. An example of newspaper comment was a front-page Philadelphia Inquirer article headlined, "Death of FEPC looms as big '50 issue."

At a meeting of the executive committee of the State council for a Pennsylvania FEPC, coordinating body for groups backing the legislation, following defeat of the bill, it was recommended that FEPC should be exploited as a political issue by using education to induce voters to change their political affiliations, if necessary, especially in areas where the Republican representatives were against FEPC.

In Minnesota, Republican Governor Youngdahl's efforts to redeem his campaign pledges by getting an FEPC bill through the legislature were thwarted by members of his own party. In Colorado, FEPC passed the Democratic-controlled house; the Republican-dominated senate passed an emasculated measure and blocked all efforts at compromise on an acceptable bill. In Indiana, young Philip Willkie, son of the late Wendell Willkie, was the only Republican member of the assembly to vote for FEPC.

* * * * *

In the Northern States, FEPC has become a touchstone not only for Negro voters, but for large blocs of others as well—church bodies, labor groups, members of non-Negro minority groups, and great numbers of independent voters who merely want to see legislation enacted against racial repression and discrimination.

On the evidence of the past year, the Republican Party, by seeming design, appears to have cut itself off from any reasonable hope of support by precisely that crucially pivotal segment of the electorate which it once could rely upon, whose defection played a major role in costing the Republican Party the last national election, and which now appears alienated beyond any possibility of reconciliation short of a drastic turn-about in the Republican approach to civil rights. Republican performance on FEPC in the coming session of Congress will provide the test.

Address by Hon. William Benton, of Connecticut, Before Connecticut Editorial Association

---

EXTENSION OF REMARKS

OF

HON. BRIEN McMAHON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Monday, February 6 (legislative day of Wednesday, January 4), 1950

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by the junior Senator from Connecticut [Mr. BENTON] before the Connecticut Editorial Association, at Waterbury, Conn., on February 4, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I shall start with a confession. I admit frankly that I am a rarity in gatherings such as this—a man who doesn't claim that he used to be a newspaperman himself.

I am sorry about it, too; I wish I had been one—note that past tense—because I suspect I might be a better Senator if I had been a newspaperman. I've always had a special weakness for newspaper people, in part because they've enjoyed one of the few types of experience in the field of human communications that I admit I have missed.

I've spent all of my adult life in the field of communications. I started in it—as I suspect many of you did—because somebody once told me I could write.

For example, I have been in every branch of broadcasting except television: In commercial broadcasting, in boiler-plate broadcasting, in educational broadcasting, in international short-wave broadcasting. I spent half of my time or more for 9 years in university work—in education—surely the most serious of all forms of communication. I have published books. I have produced classroom motion pictures and now I find that part of my job is this lower (or perhaps even lowest) form of communication—making speeches.

The moral from the foregoing may be the danger of telling a young man he can write.

The conclusion I draw, however, is that a principal motif of my existence is this: My deep belief that human communication is the most important—potentially the noblest—certainly the most characteristically human—of all human activities and pursuits.

Let me assert this as dramatically as I can. I do not believe that communism as such, or the USSR as such, or the Red Army as such, constitute public danger No. 1. I do not believe that the atomb bomb, or even the hydrogen bomb when the Russians learn how to make it—is public danger No. 2. I do not believe that any of the familiar dangers, such as depression and disease, can compete for the No. 3 position. Public enemies Nos. 1, 2, and 3 are ignorance, the willful effort anywhere in the world to preserve ignorance, and the fear and suspicion and hatred that ignorance engenders.

Ignorance cannot be cured except through communication. Surely the hydrogen bomb is no cure. And if I can, as a United States Senator, advance the cause of better human communication, even in the smallest degree, I shall count myself a success. Parenthetically—I shall be a greater success if I can also help advance the cause of communication in Connecticut.

There are two sides of the problem of communication. They are equally important; one I shall call a negative side, and the other positive. The first is merely the freedom to communicate—which means simply that no one may dictate to you what you can or cannot say. This is indeed a negative freedom. It forbids interference with an inalienable right. You will find me an ardent champion of this freedom. You will find me fighting all man-made barriers against this freedom. Freedom of speech, freedom of the press, freedom of information in any medium—these are the beginning and the foundation of good human communications. They are the father and the protector of all other freedoms, and of all human rights.

The other side of human communications, the positive side, is the substance of what is communicated—the copy, if you will. It is the use we make of our freedom of speech. It is the integrity of the information that flows among men. It is its constructive quality. About this positive side I am also deeply concerned. On this, we have a very great deal to learn. Perhaps you will agree with me that even newspaper publishers and editors have a very great deal to learn about improving the quality of the information which flows among men.

No country in the world has a press more free than ours. The first amendment to our Constitution is a classical—and classically brief—guaranty: "Congress shall make no law abridging the freedom of speech or of the press." The amendment was born out of a long history of attempts by strong rulers to interfere with the press; and indeed you will find that the only successful bills of rights in past centuries have been cast in this negative form—as curbs on tyrants or strong governments. Our newspapers are properly vigilant to every threat against freedom of speech and the press, however minor.

Our first amendment was drafted on the solid premise that out of the free conflict of fact and opinion the truth would emerge; and on the hope that out of this competition would emerge not only diversity but adequacy—and an ever-increasing quality and responsibility in the press. This hope needs constant rekindling.

As far as the press is concerned, one present ground for concern is the decline in the number of American newspapers, and the tendency toward standardization of content and centralization of control. This applies to the weekly field, as we know, as well as to the great urban centers. The New Yorker magazine made the appropriate comment on the recent death of the New York Sun. It mourned the passing of the Sun not because of any special attachment to the Sun, or out of nostalgia for its colorful past, but because one more newspaper had disappeared.

No one knows better than you men here who are editing and publishing Connecticut's home-town weeklies the struggle involved in putting out a paper which is both independent and profitable.

It is not enough just to be free. You must be able also to exercise that freedom.

The small weekly—the small, independent weekly—is as traditional to our New England way of life as the village green. And as our village greens are being carved away by bus terminals and superhighways—so the spark and spirit of our community newspapers are also threatened by boiler plate and chain operation.

We cannot afford this kind of progress, any more than we can afford to trade our conscience for vitamin pills.

But what I want to stress in the balance of this talk is not the problem of our Connecticut press or even our domestic American press. I want to direct your thought today toward the international flow of information—between peoples everywhere throughout the world. This is a field in which I have really had intensive experience, perhaps more of it than anybody here today. And let me assert my position as dramatically as I can.

If we could achieve international freedom of information, and extend it to all the peoples of the world—and this would indeed be a colossal achievement—and if we could find means positively to stimulate the integrity, the responsibility, and the constructive quality of this freely flowing information—then we would, in my judgment, reduce the danger of war by a factor of 90 percent. Is that a goal worth pursuing or isn't it? Is there any other such goal—anywhere in the world today? This goal, my friends, holds the real answer to the hydrogen bomb. It is the only real answer.

Now what progress are we making toward this goal?

The hard fact is that, on a world-wide basis, freedom of the press and freedom of communication are in worse shape today than they have been for decades. Four years ago International News Service made a study which showed that more than half of the member states of the United Nations practiced some form of censorship. Last month the Associated Press in its semiannual survey on the subject reported that the world situation on press freedom has declined still further. Mr. Robert Brown, of Editor and Publisher, wrote me 2 weeks ago that progress has been backward instead of forward. "Around the world," he wrote, "more barriers to freedom have been set up in the last year, and none have been torn down."

Now if I thought this were an irreversible trend then I should indeed despair. We cannot despair. We must not concede that this trend is irreversible. The instinct for freedom—including freedom to communicate—is one of the deepest of all human drives. It is only in the last two or three centuries that men of the western world have learned how to build freedom of communication into their political and economic institutions; but the lesson has been deeply learned. The fact that there has been retrogression and reaction in major areas of the world in the past 30 years does not prove that the great historical movement toward freedom has been permanently reversed. The task of statesmanship is now to restore that great movement before the reaction causes a cataclysm.

I had the privilege, 2 years ago, of serving as chairman of the United States delegation to the United Nations conference on freedom of the press at Geneva, Switzerland. It was the first international conference of its kind. Every one of the 54 nations present professed its devotion to the free-press ideal. So powerful is this ideal that even the Russians pay lip service to it. But the Communist version of a free press, is, in effect, a press free to advance the truth as laid down by the Kremlin. It is a press free from what the Kremlin regards as error. It is a press free to say that war is peace, slavery is freedom, depression is prosperity—and black is white.

I went to Geneva fully realizing that there is no hope at the present time of converting the Russians to real freedom of the press and determined that the United States would not compromise on the basic principle. Our strategy was to rally the forces of freedom, and to strengthen the will of the waverers. The measure of our immediate success was that on almost all important issues the Russians and their satellites found themselves voting as a lonely bloc of six.

The United States delegation brought to Geneva a draft convention which proposed, for the first time, to give the protection of international law to the free movement of foreign correspondents, and to the movement of their copy, with military secrets the only legitimate subject for censorship. After we had staved off a number of dangerous proposed amendments, this convention was finally approved by the Geneva conference, with only the Soviet bloc in opposition. Since the conference, this convention has run the gantlet of the Economic and Social Council and the United Nations General Assembly. It is now scheduled to be opened for signatures this coming autumn. It has been somewhat weakened in the gantlet process but in my judgment it still represents—without compromise on principles—a major advance for the cause of world-wide freedom of information.

I have been disappointed that this convention has been subjected to so little analysis in the United States newspapers. Our newspapermen are usually ready to editorialize on the subject of a free press and I can only conclude that they are discouraged at the tedious pace of international agreement, and at the fact that a proposition which seems so self-evident to us should require so much debate. (Let me give you, parenthetically, just one example of why the danger of censorship over the press is not always self-evident to others. (The Indian spokesman at Geneva illustrated the need for press "censorship" by stating that a single false rumor appearing in a Hindu or Pakistani newspaper at that time of tension might have ignited riots, before the rumor could be corrected, that would cost thousands of lives.)

The point I am trying to make here is that we must keep everlastingly at the job of freedom—internationally as well as domestically. If I am right that freedom of information at the international level is necessary for peace, then the lives of all of us are at stake—in keeping everlastingly at it.

The most important development now to watch is the action to be taken on article 19 of the Universal Declaration on Human Rights, as approved by the United Nations General Assembly 14 months ago. It could scarcely be more sweeping: "Everyone has the right to freedom of opinion without interference and to seek, receive, and impart information and ideas through any media and regardless of frontiers." I invite you to watch the efforts of the Commission on Human Rights over the coming months to translate this article 19 into a legally binding treaty, applicable to every citizen of every nation that signs it. This is important to the United States press as it is to every United States citizen.

The objective of this treaty is to tear down the man-made barrier to international freedom of information. The theme of the treaty is the negative theme of no interference. The first task is to work incessantly to lower the political barriers represented by censorship. The second is the reproduction of other types of obstacles to the free flow of information—chiefly economic—for example the shortage of newsprint and modern communication equipment in many parts of the world. You can't use radio without microphones or a printing press without paper.

Now what about the positive side of the freedom of information issue? Let me begin by citing China as an example.

Chiang's army in 1945 was stronger than the Communist army. The Russian army was not involved. But Chiang could not produce or project a program that appealed to the masses of the Chinese people, and the Communists, with incessant and skillful propaganda, could and did.

I listened to General Marshall speak at the Press Club in Washington when he was back from his mission to China in 1946. He spoke off the record, but since he spoke to 500 newspapermen, perhaps I can paraphrase a few sentences.

General Marshall described the great problem of communication in China. He couldn't get around fast enough. He couldn't communicate with the various conflicting groups and their constituencies. They couldn't communicate with each other. He called for the use of radio and the motion picture on a scale hitherto undreamed of.

The implication of his remarks seemed clear to me then and now, though nothing was done about them or has been done. The Marshall plan in the field of ideas still awaits development and leadership.

With adequate communication, the history of General Marshall's mission to China could be a very different one. The history of China could be very different. I shall go further. It would be very different. How important would that be to us? How much might it be worth to us in cash? We shipped billions of dollars in arms to China and vast quantities are now in the hands of the very Communists for whose destruction they were given. Would we not have been wise to have invested a few tens of millions in radio broadcasting and in motion pictures? I omit newspapers, not only because General Marshall omitted them but because, as I once said in a congressional hearing, if you pasted the Associated Press dispatches on every tree in China this could not be wholly effective because 80 percent of the Chinese can't read and far more than 80 percent in some areas. The impact of these on the minds of the Chinese could be of benefit to us still—even though the Communists are in power. The impact could change the history of China in the future, even if the Communist wave could not have been turned in the past. Here is an investment in peace and our security which is still largely neglected by our media of communications in the United States and by our political leaders.

The inventions of this century in the field of communications are as outstanding technically as those in any other field of human activity. They are potentially far more important to the future of mankind than any others. I contend they are far more important to the future of mankind than any others. I contend they are far more important to our future than the development of atomic power. They, too, are a matter of life and death. No other problem rivals the enormity of the international misunderstanding we now face.

We are not yet using the radio and the motion picture and the printing press in the international field. Their impact today, in our interests, is that of a midget. They have the potential strength of a giant. Let us give them a chance. They are our best chance. Fortunately, we now have two new agencies which can stimulate their constructive use. One is the United Nations Educational, Scientific, and Cultural Organization, which has not yet begun even to realize its own potential. It needs real support and nourishment from our national leaders. This it has not yet received.

The second is the program of our State Department in international information and educational exchange. For 2 years in the State Department I read daily reports of the distortion of American life and American policy presented to foreign peoples, and saw their effects on our international relations. Much of this distortion was traceable to Communist propaganda. Make no mistake, the Communists are professionals. We are in comparison amateurs. They are skillful, determined, and successful. The Red Army is merely a reserve force; the front line troops are propagandists and political agitators.

We cannot and should not copy tactics. But we must tell our story straight, and see that the story of the free world is told straight. In many areas, and in some media, our private agencies cannot operate profitably across the globe.

The United States Advisory Commission on Information headed by Mark Ethridge, has just issued its semiannual report to Congress. This report criticizes the State Department and the Budget Bureau for slashing the program of the Department's overseas information division. We are spending on this program today less than the Procter & Gamble Co. spends in advertising its soaps. At the same time we are spending twenty billions a year for defense, including the foreign-aid programs. Much of this twenty billions is indirectly psychological in purpose—to deter aggressors, and in the belief that hungry and hopeless people are easy victims of Communist propaganda.

I propose now that we start at once to spend 1 percent of these twenty billions for programs that have a direct and constructive psychological impact on world opinion and world peace. Specifically, let us begin, immediately, to plan for a true world radio network, capable of laying a signal into every radio receiver in the world, even if it costs as much to build and operate as the battleship Missouri, including hauling it off the shoals of the Chesapeake. The American people are prepared and ready for such a program. They want to hear it discussed. They want to read about it. They fix their eyes on Washington seeking leadership. Senator MCMAHON won a warm response, as you may have noticed if you read the right papers, for his efforts along this line in his eloquent speech on the floor of the Senate on Thursday.

Now my talk today may seem remote from the problems of a Connecticut daily or a Connecticut weekly. I hope it does not for believe me it is not. The world would be a far happier place if we could lay a copy of a good Connecticut paper, or its counterpart, regularly on every doorstep in the world. They are editorially free papers, and what we seek is freedom. They build the sense of community, and I do not see how a better world order can develop without a growing sense of world community.

It is to this task, building a world community of free men, that freedom's past inspires us. It is to this task that freedom's future calls free men everywhere in the world today.

Career of Fulton Lewis, Jr.

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, February 2 (legislative day of Wednesday, January 4), 1950

Mr. HUMPHREY. Mr. President, the New York Post performed a valuable service to the American people a few weeks ago when it published a series of articles by its Washington correspondent, Mr. Charles Van Devander, analyzing the career of Mr. Fulton Lewis, Jr.

It is because I share many of the conclusions arrived at by Mr. Van Devander and because I consider the articles to be a public service that I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD the first two installments in the series appearing in the New York Post for December 5 and 6, 1949.

There being no objection, the articles were ordered to be published in the RECORD as follows:

INSTALLMENT 1

(By Charles Van Devander)

WASHINGTON, December 5.—Nightly at 7 o'clock, Monday through Friday, somewhere between five and ten million Americans religiously dial their radios to local stations of the Mutual Broadcasting System to have their prejudices massaged.

Last Friday, this multitude was regaled with a fresh assault on the long-dead Harry Hopkins.

Mostly, Lewis' listeners are the irreconcilables—the people who have never ceased to regard all phases of the New Deal and the Fair Deal with profound distrust and suspicion.

The high priest of this 7 p. m. radio cult is Fulton Lewis, Jr., an exuberant, robustly self-assured, full-throated broadcaster, who, under the guise of news, reports his own peculiar version of the daily Washington scene. It is a scene unrecognizable to most of the Capital's residents.

Lewis cannot be explained or understood except in conjunction with his specialized audience. Nightly he confirms and gratifies his regular listeners in their conviction that the Government is being run by fools and knaves. They, in return, provide him with a devout support which makes him a potent minority force in public affairs and, incidentally, enables him to earn about $5,000 a week as radio's golden voice of reaction.

For 12 years—right through the war no less than in times of uneasy peace—Lewis has spread the seeds of confusion, doubt, and distrust of Government over the stations of the Mutual chain.

He has assailed and misrepresented with destructive effect such vitally important national endeavors as wartime rationing, price control, the veterans' housing program, and the present work of the Atomic Energy Commission.

The Government officials in charge of these programs have been singled out for personal abuse and attacks on their characters, against which his victims have no adequate defense.

His bitter and long-continued campaign of harassment against David E. Lilienthal almost certainly contributed to the final decision of the Atomic Energy Commission chairman to surrender the doubtful privilege of public office.

Others who have known the frustration that accompanies an all-out Lewis attack are Chester Bowles, Wilson Wyatt, Leland Olds, John Carson, and dozens of lesser Government officials.

His heroes make up an equally significant list. They include the Un-American Activities Committee, Senator Bridges, Republican, New Hampshire, and assorted right-wing Republicans, Senator Byrd, Democrat, Virginia, John L. Lewis, and almost anyone else who is willing to assail the motives or practices of the national administration.

Lewis' methods are unvarying. His prejudices parade usually as facts, seldom as opinion. His voice is superb. Its calculated stumbling, the deprecatory chuckle, convey an impression of sincerity. He repeatedly professes his own impartiality. A casual innocent listener, open-minded for an interpretation of the kaleidoscopic and confusing Washington scene, may be taken in for months.

Lewis' Washington, which he recreates nightly on the air, is peopled almost entirely by left-wing radicals and their well-meaning but inexperienced colleagues in Government, all pursuing crackpot or hair-brained schemes, and by Fulton Lewis and a few stalwart legislators on guard to expose them and protect the public.

Lewis is no sour-visaged, pinch-faced misanthrope, as many of his enemies assume. On the contrary, he is robust, blustery, and completely self-confident. He is blond and blue-eyed, walks with a strut, and is as positive in private conversation as he is on the air.

He strides determinedly through the welter of Washington news, contemptuously brushing aside everything which does not fit into his preconceived pattern and gleefully grabbing every scrap of news or opinion which can be made to serve his purpose.

He has been described by one biographer as being as innocent of guilt as a collie.

Lewis is a member of an old and vaguely aristocratic Washington family. He was born here April 30, 1903. He was graduated from Western High School and then attended the University of Virginia, where his academic record was less than distinguished.

In college he gave most of his interest to music and drama. He won a $25 prize for composing the Cavalier song, which is still played at Virginia football games, conducted his own orchestra, and picked up spending money by playing the organ in a movie house. His music nowadays is confined to the piano, which he is said to play somewhat better than does President Truman.

THREE HUNDRED AND TWENTY-FOUR ADVERTISERS SPONSOR HIS PROGRAM

Lewis solidified his place in Washington society in 1930 when he married Alice Huston, daughter of the then chairman of the Republican National Committee. It was a big June wedding, and President Hoover sent a gift. They now have two children, Betsy, 17, and Fulton III, 14, and live on a farm in Maryland, outside of Washington.

Lewis started work in 1924 as a cub reporter for the Washington Herald (since absorbed in the Times-Herald). From 1928 to 1937, he was a reporter in the Washington office of the Hearst news services. Meanwhile, he made a few radio broadcasts and attracted the attention of William Dolph, then owner of WOL, the Mutual station. The present 7 p. m. program was inaugurated on WOL November 27, 1937.

The Lewis program is now carried by 440 Mutual stations, although he is sponsored on only 240 of them. His 325 sponsors, who pay for an advertising spot on a single station one or more nights a week, are all local concerns in the various cities.

This multiple sponsorship makes Lewis virtually immune to the pressure of public indignation, since if one sponsor is persuaded to drop him, there are 324 left, and some other admirer may pick up the open spot.

In Washington, where the listening public has the best opportunity to recognize the distortions and falsities in his nightly program, his sponsors have tended to become discouraged rapidly in recent years.

MERCHANT SWITCHES TO ELMER DAVIS

Mazor Masterpieces, a Washington retail furniture store which sponsored Lewis on WOL for 5 years, dropped him after his anti-OPA campaign of 1946 and switched to Elmer Davis on another network station. Meyer Mazor, the owner, told this writer that the change was made as a result of widespread protests by customers, who not illogically assumed that the store would not sponsor Lewis unless its management was sympathetic to his peculiar viewpoint.

"Elmer Davis just gives the straight facts," Mazor added.

Since then Lewis has had a long succession of sponsors in the city from which he operates and with whose affairs he is chiefly concerned and at times has gone unsponsored for weeks. At present his program is sponsored here on a part-time basis by a stock-brokerage house and a motor-sales company.

Throughout the country Lewis' request and flagrant distortion of the facts has grad-

ually built up an opposition which, while it has no ready means of expression, is as fervent and possibly as numerous as his admiring audience.

FIGHT ON CO-OPS SHOCKED FARMERS

Thousands of farmers—perhaps the most susceptible victims of Lewis' antigovernment propaganda—were shocked and disillusioned when he conducted a virulent campaign against cooperatives, to which about 5,000,000 farmers belong with satisfaction and profit.

Other thousands of essentially nonpolitical citizens who gave their time and effort to voluntary work in rationing and price control, were outraged by Lewis' barefaced misrepresentation of that endeavor, of which they had first-hand knowledge.

More recently he received the doubtful distinction of having his postwar broadcasts selected for a case study of "Irresponsibility on the Air." This study, by Giraud Chester, former assistant professor of speech at Cornell University, resulted in a scholarly and documented exposure of some of his most flagrant distortions of fact and outright misstatements. It was publised in the spring, 1949, issue of Princeton University's Public Opinion Quarterly.

INSTALLMENT 2

WASHINGTON, December 6.—Among the many harassments to which a liberal-minded servant in present-day Washington may be subjected, nothing quite equals the frustration that accompanies a concentrated attack by Fulton Lewis, Jr., Mutual's 7 p. m. news commentator.

Night after night the hapless individual singled out for Lewis' attention will hear himself ridiculed and maligned over the air, his efforts misrepresented, his work hampered, his accomplishments undermined.

There is little that he can do to defend himself. Lewis usually stays just inside the laws dealing with libel and defamation of character. Even when he may have wandered outside those legal bounds, most public officials have figured they had more to lose than to gain by court action.

Several high-ranking public servants who attempted to fight back in Lewis' own medium have forced the Mutual Broadcasting System to grant them the opportunity to reply over the air. In such cases, Lewis blandly, and incorrectly, assures his audience that he has given up his time voluntarily and in the interest of fair play. And with that, he returns to the attack with even more deadly venom.

The experience of David E. Lilienthal, Chairman of the Atomic Energy Commission and one of Lewis' major targets, proved that silence under the radio broadcaster's attacks is an equally futile defense. Far from tiring of his subject, Lewis kept up a steady drumfire of misrepresentation and distortion against Lilienthal and the atomic energy program for 2 years. He was largely responsible for Senator HICKENLOOPER's charges of incredible mismanagement, which led to a formal congressional investigation of the AEC last summer. While the charges fizzled out into nothing, the investigation tied up top officials of the AEC for months.

Lewis opened up on Lilienthal immediately after President Truman nominated him for the AEC chairmanship in 1947.

He took the position that no one who had run the Tennessee Valley Authority—whether he had run it well and successfully was beside the point—should be named to head the AEC.

"The thinking behind it (TVA) is the same thinking and the same philosophy that rules the Soviet Russian Government and the economic structure," Lewis declaimed on his news program.

In a period of slightly more than 2 years, the Mutual broadcaster devoted all or part of 52 broadcasts to attacks on Lilienthal, the Atomic Energy Commission, and the left-wingers, whom he pictured as running the Nation's atomic-energy program. These broadcasts were, as usual, completely one-sided. Under the thin mask of an objective Washington radio reporter, Lewis was actively creating distrust of the atomic-energy program and the men in charge of it.

His own attitude toward atomic energy and the underlying dispute over military or civilian control was revealed February 2 of this year when he suggested that it would be a good idea to say how many ready-to-drop atom bombs this country had, in order to induce what he thought might be a much more respectful attitude on the part of Soviet Russia. Lewis airily assured his listeners that this would be entirely safe since there was complete agreement that Russia did not have the secret of the atomic bomb and wouldn't have it for considerable time yet.

The implied confidence that information as the number ready-to-drop United States bombs would be gratifying to this country and terrifying to the Kremlin apparently didn't strike Lewis as incongruous with his criticisms of the inefficient AEC management.

His sporadic attack on Lilienthal turned into an incessant daily drumfire early in January 1949 when Lewis discovered that the AEC had overridden its supercautious Security Advisory Board to grant an atomic energy security clearance to Dr. FRANK P. GRAHAM, then president of the University of North Carolina, and now a member of the United States Senate.

Dr. GRAHAM is a distinguished educator and scientist, and a public-spirited citizen who earlier had served on the War Labor Board. Using some of the less reliable data of the House Un-American Activities Committee, Lewis smeared him as a supporter of Communist fronts and implied that he was an outright party-liner or fellow-traveler.

To fit this incident into the pattern of his attack on Lilienthal, Lewis blurred the fact that the five members of the AEC had unanimously approved Dr. GRAHAM for access to classified and secret atomic energy data. He reported that Lilienthal had maneuvered through the Commission, the clearance for his friend and fellow left-winger, Dr. GRAHAM.

Lewis was at the height of his campaign against GRAHAM (as a means of hitting at Lilienthal) when Senator Broughton, of North Carolina died unexpectedly in March and Gov. Kerr Scott—no Communist sympathizer even by the weird standards of Fulton Lewis and the Un-American Activities Committee—appointed Dr. GRAHAM to fill the vacancy in the Senate.

With his carefully built-up case against GRAHAM and Lilienthal in dust, Lewis breezily told his somewhat shaken listeners:

"Administration Democrats persuaded the Governor to appoint Dr. GRAHAM as a means of getting Mr. David E. Lilienthal, the Chairman of the Atomic Energy Commission, off the hook. * * *"

Following this fiasco, Lewis dropped the subject of Lilienthal and the AEC for more than a month. Then, on May 10—a historic date in the Lewis saga—he was back with an even bigger sensation.

Hans Friestadt, one of hundreds of students to whom an AEC agency had granted fellowships for scientific study, had turned out to be a known and admitted Communist. Moreover, he was a student at the University of North Carolina, "the same university, ladies and gentlemen, of which Dr. FRANK P. GRAHAM was until recently the president," and so on.

Apparently convinced that this time he had the AEC cold, he went through the unaccustomed procedure of telephoning that agency and actually reported, in his broadcasts, its viewpoint.

"They said," he told his radio audience that night, "that they did not go into the loyalty background of any individual until the time comes for that individual to be placed in a position in which he will have access to confidential and secret information."

PERHAPS PART OF A PLAN?

Lewis concluded:

"Now is it a fair question to ask, ladies and gentlemen, whether this could be just a matter of stupidity, or does this perhaps pass stupidity and become perhaps part of a plan? What do you think?"

When Lilienthal issued a statement on the Friestadt case, Fulton Lewis reported that "it's too long to go into details about tonight * * * (but) * * * it's as full of holes as Swiss cheese."

Hammering away nightly on the subject, Lewis said it was preposterous to be using tax money to provide a free education for Communists, whatever the purpose or ultimate objective may be—a view which would suggest the need for a loyalty check of every grammar- or high-school student.

The argument that intellectual freedom was involved, he observed, was sheer sophistry, of the first water. Don't swallow it for a single moment.

When noted scientists voluntarily came to the defense of Lilienthal and the AEC, Lewis promptly questioned their loyalty and good sense.

"It was an amazing performance," he said. "Sitting there listening to them you wondered whether you were hearing correctly. For example, one witness said that among the reasons it is dangerous for any loyalty tests to be required of scholarship students is that it is worrying to the older scientists for fear they, too, may be investigated for loyalty. can you imagine that statement?"

Not content with giving his own radio audience a completely biased and one-sided account of the alleged theft of uranium 235 from a Chicago atomic laboratory, Lewis reproved the Associated Press for sending out a clarifying statement by the AEC, "as though it (the AEC statement) was gospel fact."

On July 6, when Lilienthal testified before the congressional committee, Lewis gave less than 30 seconds (about 50 words) of his broadcast to a summary of his testimony, and then went back to the attack with this prelude: "It would seem to be a fair question to ask how that is an explanation of the lax security conditions, the squandering of untold millions of dollars unnecessarily."

The following day, he was back with this account of "the top of the news as it looks from here:"

"Mr. David E. Lilienthal, head of the Atomic Energy Commission, presented a further array of his scientists and contractors and assistants before the AEC investigating committee of Congress today in defense of his administration * * * and once again there was nothing specific in what he said; no specific explanation of the evidence against the Lilienthal administration which has been brought out to date. It was as yesterday merely a continuing series of general personal opinion on the part of the individuals who testified and after all they are unprejudiced witnesses, being part of Mr. Lilienthal's organization."

The hearing on the HICKENLOOPER charges finally petered out completely for lack of any further evidence, and Lilienthal soon afterward submitted his resignation.

Lewis asserted that this action would "leave forever moot" the question of whether the HICKENLOOPER charges had forced Lilienthal out of office.

The story ends, for the present, with one of the biggest of all Lewis whoppers.

It arose from a Presidential order to Attorney General McGrath to see that laws dealing with military security were strictly enforced. The order was occasioned by some loose-mouthed talk by Senator ED JOHNSON, Democrat of Colorado, about the development of an atomic bomb 1,000 times more powerful than any so far known.

Lewis, ignorantly or deliberately confusing military security with atomic secrecy, asserted on his news program that the President's position was diametrically opposite to that of Lilienthal, when, in fact, the two were in complete agreement.

This theory was not merely in some quarters, Lewis said, "that the President made his security views known to Lilienthal some time back and Lilienthal declined to go along with them and the President gave Mr. Lilienthal the opportunity of resigning before putting them into effect."

This theory was not merely unfounded; it was so obviously false and at variance with the known facts that no capable and conscientious reporter could ever have entertained it for a moment, much less broadcast it with his approval.

Price Survey Comparisen

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, February 6 (legislative day of Wednesday, January 4), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a study made by the Bureau of Education on Fair Trade of New York, on the subject of fair-trade laws.

There being no objection, the study was ordered to be printed in the RECORD, as follows:

FIRST COMPARISON PRICE SURVEY SHOWS FAIR-TRADE STORES FAVOR CONSUMER—COMPANION STUDY INDICATES RETAILER EFFICIENCY HIGHER IN FAIR-TRADE STATES THAN IN NON-FAIR-TRADE AREA

HARTFORD, CONN., February 1.—A price survey of 18 of the country's best-known nationally advertised brands of drug products reveals the American consumer pays slightly less for 12 of these products in States with fair-trade laws than in those without fair trade, and slightly more for only 6.

These findings were disclosed here today by Maurice Mermey, director of the Bureau of Education on Fair Trade for which the survey—the first of its kind—was made, in an address before the Connecticut Pharmaceutical Association at its midwinter convention at the Hotel Bond.

At the same time, Mr. Mermey also made public the results of a companion study on retailer efficiency "which shows that drug stores in the 45 fair-trade States—in the aggregate—have a lower operating cost than do those in the non-fair-trade area (Missouri, Texas, Vermont, and the District of Columbia)."

"Since all products in the price survey are typically used as loss-leaders by predatory price cutters in the non-fair-trade area," Mr. Mermey said, "the scant price differential noted in the price survey proves that fair-trade prices are, indeed, the lowest at which a retailer can sell these products and earn an honest profit. They also show conclusively that the protection of trade-marks, manufacturers, distributors, and consumers, the objective of the fair-trade laws, is achieved at no cost to the American people."

The cost of operations study, Mr. Mermey said, showed that operating expenses in 1948 of drug stores in the fair-trade States averaged 26.17 percent of sales while comparable figures for stores in the non-fair-trade area was 27.57 percent of sales. "Thus, in terms of retailer efficiency, there is an absolute difference of 1.4 percent in favor of fair-trade stores," Mr. Mermey explained, "but expressed as a percentage of the lower operating cost figure, stores under fair trade show 5.35 percent greater operating efficiency."

This study on operating costs was made for the Bureau by William R. Spurlock, director of the economic research division of Eli Lilly & Co., from data which the company compiles for its annual Lilly Digest.

PRICE PICTURE FAVORS FAIR TRADE

Covering leading national brands of dentifrices, laxatives, and headache remedies, the comparative price survey was conducted by a well-known independent research agency for the Bureau's research advisory committee, according to Mr. Mermey.

The data were gathered from 700 stores in the 45 fair-trade States and 70 stores in the non-fair-trade area, thus maintaining the proportion between fair-trade and non-fair-trade areas. Included in the sample were independent and chain stores in both rural and urban areas. Similar types of stores were compared, and prices were weighted according to sales volume, Mr. Mermey pointed out.

The figures on prices were collected over a 2-month period (July 15 to September 15, 1949), with the September 1, 1949, price representing the average for the period—the average being weighted to reflect volume. Mr. Mermey presented the following detailed break-down of the price survey:

Consumer prices in fair trade—Non-fair-trade areas

Brands	Fair trade minimum price	Consumer prices—all stores	
		Fair-trade States	Non-fair-trade States
Dentifrices:			
1	$0.43	$0.432	$0.416

STUDY ON RETAILING EFFICIENCY

In addition to showing that retail efficiency in the drug field, with respect to keeping operating expenses down, is greater under fair trade, the Lilly survey, Mr. Mermey disclosed, reveals that the cost of sales in fair-trade areas is 67.46 percent of the stores' total sales volume in 1948 as compared with 67.26 percent in the non-fair-trade area.

"The slightly higher cost of sales in fair-trade areas obviously reflects the slightly lower consumer prices in those areas," Mr. Mermey noted. He added that net profit for fair-trade stores is found to average 6.37 percent of sales while net profits for non-fair-trade stores averages 5.17 percent of sales.

In the Lilly survey, a sample of 1,051 stores in the 45 fair-trade States was used, plus 71 stores in the 3 non-fair-trade States and the District of Columbia, Mr. Mermey pointed out. Stores were broken down by size, in terms of dollar sales volume in 1948, ranging from under $50,000 to $100,000 and over. The sample was also analyzed with respect to community size, ranging from a population of under 5,000 to 500,000 and over.

Mr. Mermey presented the following summary of comparative figures from the study on retail efficiency:

Summary comparison of average operating data of drug stores in fair-trade and non-fair-trade classification

[In thousands of dollars

	Fair-trade classification		Non-fair-trade classification		Combined	
Number of stores	1,051		71		1,122	
	Amount	Percent of sales	Amount	Percent of sales	Amount	Percent of sales
Average sales volume per store	86.4	100.00	81.4	100.00	86.1	100.00
Consisting of:						
Cost of sales	58.3	67.46	54.8	67.26	58.1	67.44
Operating expenses	22.6	26.17	22.4	27.57	22.6	26.25
Net profit (pretax)	5.5	6.37	4.2	5.17	5.4	6.31

Government Financing and Spending

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, February 6 (legislative day of Wednesday, January 4), 1950

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me before the National Industrial Conference Board, in New York, on January 26 last.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SHOCK AND ALARM

If this Nation is not shocked by the President's recommendations to the current session of Congress it is because we are stupefied by overindulgence in debt and deficit spending.

The Federal Government has been in the red 18 of the last 20 years. We had surpluses in fiscal years 1947 and 1948. We then started deficit spending again in fiscal year 1949.

Against this background, it is alarming enough that the President would launch us into a third deficit decade by his admitted incapacity—for the third consecutive postwar year—to hold expenditures to the level of revenue. But the President three times in the first 3 weeks of the session has, in effect, deliberately recommended that Congress refrain from balancing his budget for the coming year.

The ominous part of this postwar deficit spending is that we are unable to balance the budget in time of greatest prosperity. If we cannot balance the budget now, I ask you, when can we?

ADVERSITY AND PROSPERITY

There are a few businessmen, or heads of families, who have not experienced the necessity of borrowing in times of adversity, but there are no successful men of integrity who have not hastened in periods of prosperity to liquidate their lean-year debts.

From their own experience, there may be many men who could sympathize with some of the deficit financing in periods of depression and war, and even in periods of prewar emergencies and postwar foreign aid. But, no domestic emergency confronts us now. The President himself recommends

reductions in war-related expenditures for foreign recovery and veterans. And he says we are in a position where we can look forward to early reduction in defense costs. No recession in business is on the present horizon. National income is at or near its all-time peak, and so is employment, with the exception of those who choose the idleness of strikes precipitated by the distorted ego of labor czars.

The country is admittedly prosperous, but the prosperity is suspended dangerously from the unpredictable economics of a Federal debt already more than a quarter of a trillion dollars. The sound course is obvious to every prudent person. Yet, the President proposes that we pile up more debt with the continuation of deficit spending at the rate of nearly a half billion dollars a month.

SOLVENCY AT STAKE

The influence of the President of the United States and the prestige of his office must not be underestimated in consideration of the fact that the sound fiscal course under existing conditions is not obvious to him at a time when the solvency of the Nation may be at stake.

The President first brought in an expenditure budget and urged Congress not to cut it to meet revenue. Then he brought in his tax proposals which admittedly were not even designed to meet expenditures.

If we followed this advice we would nullify one of the fundamental tenets which have safeguarded this Government from its beginning. In their infinite wisdom, the founding fathers tied all the fiscal procedure of our Government to what they believed was a fool-proof system of checks and balances. They believed excessive spending would be checked by excessive taxation; that the hardships of taxation would act as an irritant to compel the Congress to reduce spending and thereby keep the budget in balance on a basis of taxation within the ability of the people to pay.

This official embrace of chronic deficit financing, written into Presidential messages, in time of peace and prosperity poses the question: How long can we continue to add to our debt and remain solvent?

VIOLENCE BY SPENDERS

One fundamental reason this Nation is greater than others in all respects, including living standards, individual security, civil rights, and personal privileges, is the productive capacity of our private-enterprise system, operating under a democratic form of government. Neither can exist in insolvency. Solvency requires balanced budgets.

You may be sure that under a balanced budget, within our ability to finance it, the havoc irresponsible spenders could wreak upon our system and form of government would be limited to misdemeanors. But an unjustifiable policy of indefinite deficit spending such as the President proposes would invite violence by the spenders to our system, our form of government, and our way of life.

Thus, nothing at this time is more important to democracy and freedom in the world, than for Congress to balance the Federal budget for the year beginning July 1, and then while keeping it in balance start gradual reduction of the public debt.

A balance can and must be achieved by reduction in expenditures. It cannot wait until deficit financing inflates income up to $300,000,000,000 to make the revenue available, as the President suggests. Insolvency would inflate money far more than that, and sooner. It should be noted in passing that inflation is always reflected in the cost of all the Government buys just as it is in the pocketbooks of all of us as individuals.

TAXES

If the President thought the Nation could take the taxes to pay for his expenditure proposals, he would have asked for them. He did last year. When he forecast a deficit of only $800,000,000 he asked for $4,000,000,000 in new taxes, and a recession in business followed.

In the present volatile state of our economy new taxes could easily accelerate a minor business decline into a major business recession. Federal revenue from taxes on corporation income now totals more than $11,000,000,000. If we attempted to cover the President's expenditure requests with additional taxes on corporation income it would require an increase of 50 percent on this source. And if the deficit were erased by increased taxes on individuals, it would mean an average increase of nearly 30 percent in our personal income taxes.

This would be in addition to a 24-percent increase in postage rates and a 43-percent increase in pay-roll taxes which the President already had proposed.

Indisputable calculations confirm my estimate that such increases in individual, corporate, and pay-roll taxes would raise the total tax take—Federal, State, and local—dangerously close to the confiscatory level.

Even the existing tax rates are drying up the Nation's venture capital, and this is the lifeblood of production expansion required to produce more of what people need at prices they can pay.

EXPENDITURES

Thus, it is clearly seen that reduction in Federal expenditures to balance with revenue is the only sound course open to us. To say that this cannot be done is not only fatalistic. It is inaccurate. It can be done if there is the will to do it. It can be done if the President and the Congress believe that a solvent Government should be preserved. As proof I submit that in the 18 months of peace and prosperity since the end of fiscal year 1948 we will increase Federal expenditures by $8,250,000,000 if we enact the President's recommendations.

I have proposed an over-all expenditure budget totaling $36,000,000,000. This is four times as much as we expended the year before the war and nine times as much as we spent when I came to the Senate in 1933.

I give you the Byrd budget in contrast with the Truman budget:

A $36,000,000,000 budget for progress, in tabular form with comparisons

[In billions of dollars]

Expenditure categories	Fiscal year 1948 (which ended June 30, 1948), actual	Fiscal year 1950 (which will end next June 30), estimated; Jan. 9, 1950, revision	Fiscal year 1951 (which begins next July 1)	
			Byrd $36,000,000,000 budget	President's Jan. 9 proposals
I. Domestic-civilian (exclusive of veterans and interest)	$6.9	$11.4	$8.9	$12.2
Social welfare, health, and security	$1.9	$2.5	1.5	$2.7

[2] Maximum estimate.
[3] Minimum estimate.

NOTE.—Detailed figures may not add precisely to totals due to rounding and omission of reserves.

AT THE END OF THE RAINBOW

It is in the domestic civilian programs detailed in the table that the spenders are having their field day. And, it is in these programs that we are chasing a mirage of easy money in the form of deficit dollars flowing through expanding Federal programs which are undermining the will of individuals, regimenting the production of agriculture and labor, controlling the practices of business, curtailing the sovereignty of States and reducing the self-determination privileges traditional in our local government.

Make no mistake. It is socialism which lies at the end of this rainbow and the predominating color in the spectrum before us is the red of 19 Federal deficits in 21 years, including the one now proposed by the President in this time of highest prosperity.

When debt destroys confidence, insolvency sets in. Our private-enterprise system cannot survive in an insolvent nation. The private-enterprise system is fundamental to our form of government, and without it democracy, as we know it, cannot exist. The alternative is socialism.

THE FOUNDATION

The foundation for socialism in this country has been well laid by legislation enacted over the past 20 years usually in the name of temporary expedients to meet emergencies. But almost invariably it has been this type of legislation which opened the gate leading to the socialistic destination now looming ahead. A few of these Government programs—not many—have been repealed but their objectives almost without exception have been picked up and reincarnated in the legislation for the next emergency.

AS WE STAND

As we stand today there are 100 different programs spreading out from among 60 principal Federal departments and agencies (with a thousand units), and the President has just announced that payments to the public through these programs this year will total $46,500,000,000.

These payments are being made in Federal aids, grants, subsidies, pay rolls, pensions, and virtually every other form of government advance, contribution, and expenditure.

Too many of us regard this deluge as easy money overlooking the facts that a great

part of it is in deficit dollars from borrowed billions, and that binding strings are attached.

It is through these give-away programs that Federal plans, administration, control and regimentation are extended over individuals, their private lives, their agriculture, their labor, their business, their State and local governments, and their general welfare.

The extent to which we have gorged ourselves is indicated by the fact that 17,000,000 individuals are now receiving regular direct payments from the Federal Government, and Government payments to business are equal to more than half of corporate profits after taxes are paid. The number of people receiving regular public payments increases to 25,000,000 when State and local employees and other recipients are included.

A LOOK IN THE BRITISH MIRROR

Those who think they are benefiting from Federal payments and expanding federalized programs should take a look at England. In all that great country there are 70 Britons with net incomes of $16,800 after taxes. The so-called well-to-do in England have already been liquidated. But the worst of the British situation is that the liquidation of the middle-income group has extended to an alarming degree. There remain only 320,000 Britons with income of $2,800 to $5,600.

If we like what we see in English socialism, we are justified in stuffing ourselves with gratuities from a paternal Central Government until we bankrupt the greatest nation in all history.

If socialism is what we want, there are three more Federal programs pending in Congress at this moment which, if enacted, will irrevocably commit us to a state of socialism from which there is no retreat.

The first of these clincher programs is for more socialized housing. Part of this vast public-housing program has already passed, and exclusive of the new proposals, the program as it stands is estimated to cost $20,000,000,000.

The second clincher program is socialized medicine, which within 10 years will cost $20,000,000,000 annually.

The third and crowning program is the Brannan plan. The most accurate thing Mr. Brannan has said about this plan is that he cannot estimate the cost. The American Farm Bureau estimates that its application to milk alone would cost $2,000,000,000, and both of the great farm organizations—the American Farm Bureau and the National Grange—are opposed to it. Despite this, politicians are exerting their most powerful effort to force this highly socialistic plan upon farmers and consumers as sop to labor leaders.

EVIL COMPANIONS

While insolvency resulting from deficit-financed Federal programs which stifle individual initiative and private enterprise will be the overpowering force behind our capitulation to socialism, if that is to be our fate, evil loves company.

The evil companions of this unbridled deficit ogre are: (1) Confiscatory taxation; (2) Government competition with private enterprise and business; (3) Federal usurpation of State and local prerogatives; (4) Government invasion of private privileges; and (5) disregard of constitutional processes.

Continuous deficits and growing public debt in company with these natural sidekicks are virtually synonymous with socialism.

GOVERNMENT COMPETITION

We have already discussed confiscatory taxes as such, but they should be considered in conjunction with the fact that along with higher and higher taxes goes more and more Government competition such as that which results from the development of huge valley projects and tremendous so-called business loans such as those to Lustron and Kaiser.

The spenders make capital of this type of expenditure, and have been influential in having a whole section set up in the Federal budget to list them. They claim they are capital investments in the form of loans. The Government is not in business for profit and therefore it has no reason for capital investments. If they are sound loans they are in competition with private business, and if they are not sound loans, they are expenditures and must be regarded as such on the Federal books.

As if this were not enough Government meddling in business there is also the continuing threat of Government controls such as those requested at the beginning of the Eighty-first Congress on prices, wages, commodity allocation, consumer credit, bank requirements, and employment practices.

STATE, LOCAL, AND PERSONAL PREROGATIVES

If you think these threats are dormant, your attention is invited to the pressurized maneuvers for the so-called civil-rights program which in its entirety would be the greatest mass invasion of States' rights, local prerogatives and the privileges of individual self-determination ever perpetrated on this Nation.

I am a southerner but I think my record will clearly show that I have never been guilty of any public act or attitude persuaded by racial intolerance. I think also the fact that as Governor of Virginia I was instrumental in the enactment of the tightest anti-lynching law of all time, along with my public advocacy of poll-tax repeal by State action, demonstrates that I speak without bias on this subject. Following this preface, I assert that the civil-rights program as proposed by the President and his Committee of Advisers, would invade the States' prerogatives with respect to the franchise and invade local prerogatives with respect to police power.

As to invasion of personal privileges, the FEPC would establish another costly powerful and inquisitorial Federal bureau to extend the strong arm of the National Government from Washington into the daily transactions of virtually every man's private business, dictating to employers as to whom to hire, whom to fire, and whom to promote.

CONSTITUTIONAL PROCESSES

Government regimentation of individuals and Government control of business is socialism, whether you choose to call it welfare state, collectivism, or give it some other meaningless name.

There is no retreat from socialism once it is entrenched, primarily because the state usurps not only the machinery of agricultural, mineral, and industrial production but also the sources of wealth and capital which would be required by private enterprise to recapture its vitality.

And with socialism goes frequent disregard for our constitutional processes which have made ours a Government of laws and not of men.

We have just experienced a foretaste of this byproduct of our socialistic tendencies when prompt invocation of the law in the case of the coal strike would have averted an unnecessary assault on the general welfare.

THE KEY IS SOLVENCY

I do not believe the people of the United States want socialism. Despite the fact that we are moving rapidly toward this end, I hope the American people, as always in the past, will awaken to their danger, and when they do they will smite down all Government programs and actions which can lead only to socialism.
